Subscriptions and Payments received by

JOHN RICHARDSON,

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

From the "Coralhill Magazine."

## The Loss of the Steamship "London."

(Continued from page 416, vol. xxxix.)

While we were at tea this evening (Monday, the 8th,) the ship commenced to roll (it is often marked at sea that a ship generally commences roll and pitch at meal times,) and shipped a great deal of water, which soon found its way down through the skylight on to our heads, and after we shipped another heavy sea—or rather dipped it in out of the Bay of Biscay; and came rushing down our hatchway in a body, issuing quite a scene of consternation among the ladies, many screaming at once, "Oh, we are sinking!" others crying, "Shut down the lids of the hatch!" My man who had come home in a boat from Melbourne said, "Oh, you must not mind this, it is an old trick of the *London's*; and one that, if the lids of the hatch are shut down, it will not prevent the water coming down they are not made properly; the sides of the covering of the hatch don't fit close to the combings, and also the water floats up the lid, and comes down nearly the same as though there were no lid of which proved true. After a time we were all suffocated. Then the men had to fall to and carry up the water in buckets out of the state-rooms, to save their clothes from being drenched. This continued nearly all night; for by the time the rooms were free, down would come another supply. All the women, excepting a few, remained up all night; not that there was any danger—or rather I did not consider there was—until twelve o'clock I went to bed, as our side of the ship was dry, we being then on the windward side. At four in the morning (of Tuesday, the 9th,) I found that the ship was then on the other tack, that we had the leeward side, consequently the water; and I heard a lady in the next state-room asking some others, her companions no had remained up all night, to come and assist in keeping the state-room dry, saying they could pray and work too, as she did; I at once got up and assisted her.

When daylight came in, we learned that the ship was still ahead, the weather heavy, the ship down on her beam, and making very little progress. About ten o'clock I went on deck, and found that the fore-jibboom was carried away, and the fore-royal-mast broken in two and hanging down: soon after the foretopgallant-mast broke off, then the foretopmast, and all hanging down a wreck. That day, no time after, the main-royal-mast was carried

away. The first part of the day rather pleasant: I remember the sun was shining when I went on deck to see the wreck of the foretop-mast. But towards the latter part of the day the wind increased—the ship labouring very much, and a prospect of a wild night. Many now began to express fears, and question the propriety of the captain still forcing the ship in the face of a head-sea. We had several passengers on board who had been sailors. One, I remember, John Hickman, from Ballarat, had his wife and four children on board. He told me he had been brought up to the sea, and was, if I remember right, fourteen years at it. In the afternoon of this day, I saw Hickman come down from the deck, "Well, Hickman," said I, "how do matters look on deck?" He said in reply—"I have been a good deal at sea; I have been in a good many vessels, and I know something about them, but I never yet saw one behave as this. She frightens me—I don't know what to make of her." The same opinions were expressed by others. The women all this time were in a constant state of fear; but their fears were no proof of danger. By seven or eight o'clock matters grew worse, the gales increasing. One of the lifeboats was carried away—lifted out of the davits by the sea. Shipping a great deal of water, our hatches had to be closed; but, as I have said before, this did not prevent the water coming in, and by nine o'clock in the evening all was confusion and terror in our second-class cabin: ladies clinging to you, and beseeching you to stay beside them; some in their rooms reading and praying, but the majority out in the open cabin. Fear at this time was not confined entirely to the females. Most of the men had fear in their faces. I myself began to feel very uneasy, for I heard expressions of doubt and fear from many who understood nautical matters. Munroe, one of the surviving passengers, and who had formerly been at sea, came down about twelve o'clock. I asked him how things looked on deck. He said, "I have been on the poop all the night, and the sight up there is really terrible—seems unaccounting right over her." "Do you think there is any danger?" I asked. "Yes; not so much from the violence of the gale, as the behaviour of the ship." He added that Captain Martin had been on deck all the time, and it was plain to be seen that he was not at rest in his mind as to the fate of his ship. He (Munroe) said, "I dread to be down here, but I am nearly perished by being on deck so long." And no wonder he dreaded being below. Apart from the horror of being in the company of nearly frantic girls and women, who thought that every roll would be the last, and not quite clear on that point yourself, there was the discomfort that at every roll of the ship the water would shoot down the hatchway, first one side, then the other—then was to and fro for the same as on the upper deck. Then worse than all was the steam, produced by water that went down the engine-hatch on to the hot machinery: this steam came forward and lodged in our cabin, which was very suffocating. During any lull of the sea we lifted the lid to get some fresh air, but most of the time we could not see each

other five feet apart. Most of the passengers were sitting on the tables. That night was really terrible, but the next was worse. The ship at this time was hove to, and oh! how she would roll! It was no gentle, undulating motion; she would roll on her side until you were in doubts of her ever coming up again. Then up she would come with a jerk; and when she did rise there was a general displacement of boxes, trunks, chairs, buckets, and other movable articles, placed on board in confusion at Gravesend and Plymouth. How the passengers fared in the other parts of the ship, or what their fears were, I can't say. Those in the afterpart, I think, would not see the same danger as we; at any rate they would not be so inconvenienced as we were. We could now see that we had more than the dangers of a gale to contend with. It was quite evident our ship was deeply, if not over laden. She was a ship built for speed, of great length for her breadth—belonging to a class of ships that cannot be loaded with safety in proportion to her tonnage, like those of the old style. She was, perhaps, safe enough when properly loaded, with less top-hammer, not so heavily sparred, and properly equipped. And besides, it was the prevailing opinion on board that she was not prepared for a gale. It appeared as if she had been forced to sea in a hurry, and there was confusion above deck as well as below. Work was always ahead. The sailors were continually at work, and yet the ship was never "snugged," as the saying is at sea. The crew had not got used to the ship; and, another difficulty, many were foreigners, and did not understand English. Once I saw—Angel, one of the officers, directing a man to do something; the poor fellow was anxious to do it right, but every attempt was wrong; at last I discovered that he did not understand a word that was said to him. I also noticed a want of regularity and discipline in the ship. I make this observation with no desire to throw discredit on any one, or insinuate that the loss of the ship was in any way attributable to this; but I think it will all tend to show that there was not that sufficient preparation, or that proper regard to life, at the outset, and in the despatching of the ship, that there ought to have been; yet I feel fully convinced as I now write this, that had the same gale overtaken us two months after, on the last week of our voyage, the *London* would not have succumbed to it as she did. I believe she was a good, strong, well-built ship; but that is not where the fault rests; it's in the eranting her so full of goods that even the space allotted to the passengers was encroached on. This interfered with the working of the ship when trouble overtook us.

As I said before, fear was not confined to the females; we all experienced it more or less. Of course we men endeavoured to disguise our real feelings from them—going from one room to the other cheering them up as best we could. This state of things continued all night. About two in the morning (Wednesday) I went to my room, and had a short sleep, the last I had in the *London*. When I awoke I then found a slight im-

movement in the cabin—not so much water coming down, and the ship rolling less: she had been put round an hour before to return to Plymouth, and was running close-hauled.

When daylight came in, the wind had somewhat abated, but the sea was very heavy. We then had to go to work, and carry up water out of our rooms. I went on deck at nine in the morning, and looked over the side just abaft the main rigging, and saw the two pieces of broken booms that had been carried away the previous day, still towing by the iron rigging and thumping against the ship's sides. I was told by one of the firemen that night that there were one or two forward dead-lights knocked in by these booms. The most of this day, say up to three o'clock, the crew were engaged in getting in-board the wreck of the boom, for what purpose I never understood, nor do I know now, unless it was fear of its coming in contact with the screw. Even so I think that in towing it to the stern, and then letting it go adrift, there would have been no danger. As it was, it proved a cause of trouble to us: it was lashed that afternoon just alongside of the engine-room skylight, and at night, when the gale increased, it got loose from its lashings and was knocking about, there always being a deal of water on the deck; and by the action of it and the sea the skylight over the engine-room was carried away, which was the immediate cause of the ship's loss.

(To be continued.)

For "The Friend."

### The Juvenile Column, No. 19.

Those of our young readers who are familiar with Bunyan's Pilgrims Progress, may remember in the account of "Christian and Hopeful," that the way, ever straight and narrow, in which they, at this particular part of the pilgrimage alluded to, had to walk, is described as rough; and their feet being tender withal, they became discouraged and wished for an easier path. Too often is this the case with those who set out on the heavenly journey; and who, through mercy, are enabled to make some promising steps therein. But by and by, when tribulation or persecution ariseth, like the seed, in the dear Saviour's parable, that fell into stony places, these are offended or turn aside out of the way. Now, to return to the pilgrims, they saw a little before them, on the left hand of the road, a pathway over a stile into a meadow, that looked more smooth and easy. Over this they went. But found to their sorrow, that this easier way, called "By-path Meadow," was only a stratagem of the enemy to allure from the straight-forward course to the Celestial City. Here they overtook a man named "Vain-Confidence." Who not seeing far before him soon fell into a deep pit, dug by the Prince of these grounds to catch "turners-aside" and "vain-glorious" professors in. This astounding circumstance, with the approach of night, together with lightning, thunder and rain coming on, so alarmed these pilgrims that they groaned within themselves, saying, Oh, that we had kept in the right way, rough and painful though it was! In their return, (the only safe course when we get wrong,) they, with all their skill, missed finding the stile over which they had passed, and thence fell into the hands of "Giant Despair," who thrust them in a dungeon of his called "Doubting Castle." Here they were kept several days, and so sorely beaten by this cruel fellow, that they spent their time in nothing but sighs and bitter lamentations. This was the legitimate fruit of their disobedience—what turning aside at the calls of fleshly ease and indulgence led into. And so much were they

under the dominion of the giant, that they many times despaired of ever making their escape; which, at last, was only effected, through long, and earnest, and persevering prayer. So after their escape was made, they stopped not till they were wholly out of the dominion of the Giant, and were safely back in the King of kings highway.

We have written this for our junior readers, that they may see what seeking an easier way, as in "By-path Meadow," leads to. And to warn them as they value every thing dear to them here, and every thing loved and hoped for in the world to come, not to turn aside, through any of the devices of the enemy, from that way, which leads through self-denial and the cross, to everlasting blessedness; and which ever was, and ever must, despite all change, with every boasted "march of reformation," be known by being self-mortifying, straight, and narrow.

We have an unwearied enemy through this pilgrimage journey of life to war with, who is ever watching to draw younger and older aside, he cares not whether on this hand or on that, so he can but entice and entangle them in his dominions, and in any wise frustrate the grace of God concerning them. For he well knows that it is only through submission and obedience to this grace, that any can be saved. If he cannot settle in supineness and lukewarmness, he will try to draw into creaturely activity; and open before his listening, ease-seeking followers, a field for much usefulness, whereby they shall, presumptively, not only obtain favor in the Celestial city, but reputation among men; and in which also the offence of the cross will very much cease.

Another snare of this artful foe, and one very plausible and taking to the youthful fancy, is procrastination. His arguments are apt to run thus: 'Thou art young, and it will be time enough to be religious, and to serve the King of heaven after thou hast taken thy enjoyment in the gratifications of this life, and in the wages of sin. How many jovial friends and acquaintances, thy equals around thee, are eager and fervent in the like pursuit. See what a variety of pleasures are placed within thy easy reach to enjoy? and what do all these sensual delights, so alluring and what, bestrew thy path for, unless designed to satiate thyself with? So this arch-fiend tempted our first mother; and so also has he, with threadbare sophistry, plied every unwatchful ear since that day. Moreover did he not tempt our dear Exemplar and High Priest with "all the kingdoms of the world," saying, "all these things will I give thee, and the glory of them, if thou wilt fall down and worship me?" But stirring and arresting is the consideration of how that holy Sufferer and Redeemer himself walked through this world—how set us an example that we should follow His steps? "He is despised and rejected of men; a man of sorrows and acquainted with grief." His kingdom was not of this world; and though Lord of all, bore this ever memorable testimony: "Foxes have holes, and the birds of the air have nests; but the Son of Man hath not where to lay his head." And of whom again it is written, "Who for the joy that was set before him, endured the cross, despising the shame," &c. For what? But that we might follow, in meekness and lowliness and watchful restraint, His steps; and thus escape the pollutions of a world that lieth in wickedness, and which at the same time are so congenial to the natural propensities of our poor, fallen, unregenerate hearts.

Be persuaded then, dear young friends, not to be "like the deaf adder that stoppeth her ear;" but instead of making this transient and unsatis-

fyng world, in this choosing period of life, y idol or portion, seek after youthfully easy as y first and only choice. Then will partly de should it overtake, be early blessedness. On life should be prolonged, as this kindness of y youth is kept to, it will be to His honor and o who died for you; and whom not being asha to acknowledge, in all your ways, before me, also will acknowledge you before His Father y holy angels. But do not put off to a n convenient season that all essential espousal t Christ, which the tenderly striving influen His Holy Spirit in the heart, wos and iny unto. This putting off is ever lamentable always dangerous: making repentance, if it ever found, more bitter, and conversion more c. Troubling Felix said to the inspired a tle, as he reasoned and pleaded with him, "thy way for this time; when I have a coven season I will call for thee." But we no w learn that this ever came to him. We remen reading somewhere of a young person calling u an aged man who was ill, and hastening to grave; the youth spoke of the blessed Savi and His calls to salvation; for a few minute listened with serious attention, then burst in flood of tears, and exclaimed, "Ah! my yo friend, had I thought on these things thirt forty years ago, what a happy man might I have been; but now (wringing his hands) too late; hell must be my portion for ever!"

"And shall I say, 'Tis yet too soon  
To seek for heaven, or think of death?"  
A flower may fade before 'tis noon,  
And I this day resign my breath.

If this rebellious heart of mine  
Despise the gracious calls of heaven,  
I may be hardened in my sin,  
And never have repentance given."

For "The Friend."

"Thy watchmen shall lift up the voice; with the y together shall they sing: for they shall see eye when the Lord shall bring again Zion."—Isaiah chap. 6th verse.

This represents a healthy condition of church, one wherein all the watchmen are at t posts; for the walls of Zion were of a zigzag i and could not be well guarded, unless the wa men travelled to a certain point, and met the of the other coming from the portion of the under his immediate charge, and by this scr lous and careful guarding, all the wall was l in safety, so that no inroads or depredations e be made upon it, ere the watchmen could lif their voices; and it is a comfort that even has been made strong enough to lift up the v or testify against the inroad that the abund of likeness-taking is making in a Society, that endeavoured, heretofore, to follow the advic not being conformed to this world." Sum concile it from the discovery made in chemen; the shortness of time it requires to them taken, and other pleas that are the friends and children presents; but are the an excuse for this inconsistency? When witness the time spent in dressing and arra for them, the many hours frittered away in idling and commenting upon them, which might otherwise employed, either in solid reading, e the poor, or waiting on the aged, sick an firm, how can the watchmen but lift up their v against this increasing practice. What lang could the watchwomen of 1840 find now to press herself in, were she to see the Photog Albums, conspicuous in gilt, lying on our p tables? She might not cry "abomination," a did to pictures on the walls, but "inconsist to have household idols placed upon our p

bles; and what respect are we paying to the scruples of those who have gone before us?

**Remarkable Meteorites.**—The French Academy of Sciences has received an interesting account, by M. Daube, of the meteorites which fell in the neighbourhood of St. Mesmin, department of the Yonne, on the 30th of May last. The circumstances, a very incorrect account of which was given by the journals at the time, were as follows: On the day stated, at about forty-five minutes past three A. M., those who were up at that early hour remarked a luminous mass moving in the atmosphere with extreme rapidity, between Mesnigny and Payns. Its shape was globular, and accompanied by a long train of fire; its size was inferior to the apparent one of the moon. A few seconds after it had made its appearance, three reports, like that of cannon, were heard, the first being the loudest, and these were followed by a number of more indistinct ones like the roll of musketry. All this noise did not last longer than a minute or thereabouts. These phenomena were observed by many people at Monteraud, Maison Rouge, and La Chapelle St. Luc, along an aggregate distance of eighty-five kilometres (about thirty-three miles English.) Some witnesses declare that the reports caused the walls of cottages to shake, and others say they thought there were people knocking at their doors, and got up to see them.

The light was not white, like that of lightning, but reddish, and some people mention a whitish cloud that followed the luminous globe, and disappeared with the last report, which was followed by a hissing noise, and immediately after a tongue of fire," as a witness described it, was descending from the globe to the earth. A watchman, named Carre, at this moment heard something heavy fall behind him; he looked out, but saw nothing, and it was only afterwards that he perceived a spot where the earth seemed to have been recently dug up. Upon examination he found a large black stone, which had penetrated to the depth of twenty-three centimetres below the surface, which was very hard, and part of a gravelled path. The stone weighed 48 kilogrammes.

Another stone, weighing two kilogrammes, was seen on the following day by a geardame of the name of Fromont; and a third, weighing somewhat less, was picked up on the first of June by J. Protat. This stone fell at 1432 metres from the first, and at 1850 metres from the second, the distance between this and the first being 660 metres. These stones are fragments of the same meteorite, containing particles of nickeliferous iron, yellow flint and chromated iron. As usual, the outer crust is black, and vitrified by superficial fusion. The density of the meteorite is 3.56; among its other ingredients it contains silica. One of the fragments is remarkable for having its surface arranged in veins, so as not to cover the face entirely. This meteorite resembles those seen at Paraulsee, in India, at Bronerwerde, in Norway, and at Honolulu the capital of the Sandwich Islands.—*N. American.*

**Improvement of Time.**—The hours of a wise man are lengthened by his ideas, as those of a fool are by his passions. The time of the one is increased, because he does not know what to do with it; and that of the other, because he distinguishes every moment of it, with amusing thoughts, or other words, because the one is always wishing it to pass away, and the other always enjoying it.—*Johnson.*

## Benjamin Bishop.

(Continued from page 410, vol. xxxix.)

"To

"29th of 1st month, 1845.

"It is a low season with me. I have lately written to \_\_\_\_\_ to encourage her to bear up, and now I want bearing up myself. Through the tender mercy of our God, and the Day-spring from on high which hath visited my soul, I seem to abound in a good degree to a dominion over many evils that are in the world; and when the love of God prevails over all within me I have a peaceable habitation, a sure dwelling, and a quiet restful place. But for all this there is a something left unconquered, and though through holy aid I have often bruised his head, yet again he tears and bruises my heel; it is of the flesh, and I can plainly see, so long as anything of the flesh is alive in me, there will be a lodging-place for Satan. And now my dear friend, if I who have been brought up from the lowest hell, and have in possession, by promise of the word of God, all that my soul desireth, and yet have thus to war and fight, to watch and pray, or become a cast-away, ought I not to feel deeply for my fellow-creatures, who are sitting in darkness and the shadow of death, carried away captive by the devil at his will? Thou knowest, my dear friend, I do feel a little, but my burden is greater than I can bear alone; and as thou, and all whose faces are turned towards Zion, are as dear to me as my own soul, I believe I may, in that liberty we have in Christ Jesus, pour it out into thy bosom. It does appear to me that the call of the Lord is going forth, and will go forth louder and louder through His Church, in the words of the 50th Psalm, verses 5 and 6, 'Gather my saints together unto me; those that have made a covenant with me by sacrifice. And the heavens shall declare his righteousness, for God is judge himself.' Hath not the Lord already called, and is calling His servants, to go as unto the highways and hedges, to draw them by the compelling cords of His love to come unto His supper; and God Himself is the only judge, when to send, and whom to gather. And whilst my heart rejoiceth in all this; for this is the first step, (I mean to call them with the drawing cords of love,) yet there appears to be something further, to see that they or them on the wedding garment before they go in, or they will assuredly be rejected; but who is sufficient for these things? And now is brought to my remembrance the word of the Lord to me some years since, 'Go softly, lest thou wake the children.' I have gone softly many years, washing my face, and anointing my head, whilst inwardly I have been clothed with sackcloth, mourning and weeping over the desolations of our Society, and now I am ready to think it is time to touch some of the strongest of the children and wake them up. The Lord is sufficient for his own work. Now we believe that the Lord will gather by those whom He hath gathered; these must stand still as servants in waiting, and follow Him whithersoever He leads them, and He will lead these according to their several gifts, in perfect order and harmony, to His own glory. Now the Lord hath given the word, and great is the company of those that are publishing it. Our first Friends were born of the incorruptible Seed of God, they were baptized by one Spirit into one body, and counted nothing too near or too dear to part with for the Lord's sake. They laid the axe to the root of the corrupt tree. They slew both on the right hand and on the left, and put to flight the armies of the aliens, for the Lord God was their King, their Lawgiver, and their Judge, and He brought them through fire and through

water; but they delivered neither son nor daughter, they only delivered their own souls by their righteousness; for though they had children of the flesh, yet these were not children of the Spirit, until they were born of the same Holy Spirit. Thus it was in the morning of our day, with those that were born of God; being created anew by Christ Jesus unto good works, they became as a 'city set on a hill,' and meetings for worship and discipline were set up among them, by the Spirit, power, and wisdom of God; and for a season Truth reigned over all disorderly spirits, for their rock was the inward revelation, light, and power of God in their souls, being 'built upon the foundation of the Apostles and Prophets, Christ Jesus himself being the chief corner stone.'

"To Joseph A. Gillett.

"29th of 7th month, 1845.

"It is truly comforting to a soul wading in the deeps, to feel the sympathy and unity of a fellow traveller towards the rest and kingdom of God. This is a day for all who have made a covenant with the Lord by sacrifice to gather unto the anointing within them, and often to speak one unto another that there may be no schism in the church, and every man may be prepared for the task assigned him in harmony and love. . . . I am aware of the startling question, 'Who is sufficient for these things?' God is sufficient for His own work. Christ hath not died in vain, neither have we believed in vain. I could write much on the state of the poor, but at present I forbear; for their sakes I feel thankful that I am poor. When young I did nearly all I could do as a man to become rich, but could not, for the hand of the Lord was against me, for my violence to convictions. I am the man that had been wounded almost to death, when one whom I knew not before as a Saviour, took compassion on me and made a covenant with me; through Him I am in a manner rich, though without the burden of wealth, having none of my own, and yet wanting nothing. Unity in the faith is a very precious thing; our strength consists in it.

"With dear love to thyself and your circle, thy sincere friend,

BENJAMIN BISHOP."

Selected for "The Friend."

The following is an extract from a testimony prepared by Nottingham Monthly Meeting of Friends in Pennsylvania, concerning Dinah James, who deceased the 1st of First month, 1766, which may not be considered inappropriate at this time.

About the thirty-fourth year of her age she appeared in the ministry, and being faithful to her gift, though she did not increase in many words, and but seldom appeared therein, being rather a pater of awful silence, yet her testimony when she did appear, was remarkably seasoned with the baptising power of the Spirit, which made it truly acceptable to Friends. She was often heard to express her apprehension of the danger of words increasing in the church, without sufficient weight and awfulness; and at different times, especially in the latter years of her life, both in public testimony and in private, she spoke of a window-time at hand, wherein she apprehended the chaff was to be blown away, and the church restored to as great, if not a greater degree of purity than heretofore; which is now fresh in the memory of divers persons."

He that is sensible of no evil but what he feels, has a hard heart; and he that can spare no kindness from himself has a narrow soul.

## THE QUIET, HOPING HEART.

Whatever my God ordains is right,  
His will is ever just,  
How'er He order now my cause  
I will be still and trust.  
He is my God,  
Though dark my road,  
He holds me that I shall not fall,  
Wherefore to Him I leave it all.

Whatever my God ordains is right,  
He never will deceive;  
He leads me by the proper path,  
And so to Him I cleave,  
And take content

What He hath sent;  
His hand can turn my griefs away,  
And patiently I wait His day.

Whatever my God ordains is right,  
He taketh thought for me,  
The cup that my physician gives  
No poisoned draught can be,  
But medicine due;  
For God is true,

And on that careless truth I build,  
And all my heart with hope is filled.

Whatever my God ordains is right,  
Though I the cup must drink  
That bitter seems to my faint heart,  
I will not fear nor shrink;  
Tears pass away  
With down of day,  
Sweet comfort yet shall fill my heart,  
And pain and sorrow shall depart.

Whatever my God ordains is right,  
Here will I take my stand;  
Though sorrow, need, or death make earth  
For me a desert land,  
My Father's care  
Is around me there,  
He holds me that I shall not fall,  
And so to Him I leave it all.

S. Rodigast, 1675.

## ISAIAH iii. 10.

What cherishing words are these;  
Their sweetness who can tell!  
In time and to eternal days,  
"Tis with the righteous well."

In every state secure,  
Kept as Jehovah's eye,  
'Tis well with them while life endures,  
And well when called to die.

Well when they see His face,  
Or sink amidst the flood;  
Well in affliction's thorny maze,  
Or on the Mount with God.

'Tis well when joys arise,  
'Tis well when sorrows flow,  
'Tis well when darkness veils the skies,  
And strong temptations grow.

'T is well when Jesus calls,  
'From earth and sin arise,  
To join the hosts of ransomed souls,  
Made to salvation wise."

It is stated that the salt mines of Nevada throw into the shade all others known in the United States. One bed is reported to cover 15,930 acres, yielding 2,000,000,000 tons annually of salt, per cent. fine. No bottom to this salt bed has ever been discovered. As deep as any work has gone the bed is solid rock salt, and from a depth of thirty-five feet the salt water comes so rapidly as to prevent work without efficient working arrangements. The salt water swells up to the surface and overflows the large floor, from which the fine white salt is continually gathered. This floor, several acres in area, has been so well levelled that the water flows evenly over it, and thus by exposure to the atmosphere it rapidly evaporates, leaving a stratum of fine white salt. The yield and production go on continually, and

the more rapidly it is removed the better the quality of this salt.—*Late Paper.*

God is Alpha and Omega in the great world, endeavour to make him so in the little world; practice to make him thy last thought at night, when thou sleepest, and the first thought when thou awakes; so shall thy fancy be sanctified in the night, and thy understanding rectified in the day; so shall thy rest be peaceful, thy labours prosperous, thy life pious, and thy death glorious.

*Degeneration of the Human Race from Residing in Crowded Cities.*—There can be little doubt that about the great centres of civilization man is carrying out his sociable tendencies to such an extent as to detract considerably from the enhancement of his personal welfare, looked at in a physiological or medical point of view. He has become so fond of his neighbour, and his neighbour so fond of him, that they are almost inseparable. Their friends are in the same way of thinking, and hence all join company and form compact fraternization. But the consequence is, that they are in too close contact, and so continually add to their number that at length they scarcely allow themselves room to move. There is no fresh air for them; they are forced to breathe their own and their neighbours' exhalations over and over again. If anything in the shape of an infectious disease attacks one, it spreads like wildfire, of course, amongst the others; and even moral delinquencies are found to be in the same way catching. If the consequences, then, of this social agglomeration be, on the one hand, increase of political power, of wealth, of commercial and social prosperity, and successful competition with other nations, they are, on the other, an overtaxing of the physical and mental energies at our disposal, and a premature consumption of national life-blood. To see all this we but to scrutinize the character and results of that which has been called in recent days the "great town system." To witness it in perfection we should observe the effects of this system on the physical condition and modes of life, particularly of the industrial poor of a great city. If we do this it will certainly be found just as the honorary secretary of the Manchester Sanitary Association and physician to the Salford Hospital assures us is the case. There will be observed, as he states, amongst this class a singular want of stamina manifesting itself either in the gait, bearing, voice, or frame. The muscular system is rarely developed or well strung. Few men are of that calibre from which we might expect either vigorous or healthy offspring, or arduous and sustained labour. Cases of deformity, along with actual distortion, are far from unfrequent, while minor physical defects, many of them denoting no trifling constitutional ailments, are deplorably common. The pulse, telling of the power of the heart, assures us the great central organ of the circulation is weak and flabby. The extremities are often cold in the younger people; the veins prominent and tortuous in the adult, and the elders complain of vertigo. Bleached lips and colourless cheeks are common to men as to women, whilst hysteria and neuralgia are to be met with under potent and abundant forms. In fine, the blood is proved to be impoverished, and the nervous system devoid of that well-balanced tension on which the easy and harmonious working of the whole system so mainly depends. In the children of this class, again, the teeth are no sooner developed than they begin to decay; enlarged glands protrude from the neck; the skin looks dry and parched; the hair scanty, scabby,

or withered. If we extend our enquiries, shall find too, that of the number of military crufts derived from the population of our towns, nearly four out of five fail to come up that standard of bodily fitness which the medical referees are instructed to insist on.

Idleness is more troublesome to a good man than labour; for, beside the furtherance of estate, the mind doth both delight and rest itself with exercise. There is this consequence, then, betwixt labour and idleness, labour a profitable and pleasant trouble, but idleness a trouble, both unprofitable and comfortable.

For "The Friend"

## Thoughts for the Times.—No. 40.

John Churchman's account of his religious exercises and trials during this visit, is deeply instructive. After landing, he remained nearly six months in the city of London, sitting mostly silent in the meetings for worship, "under a great ease of mind from a sense of a too forward mimic which rather disturbed the solemn quiet than ministered instruction to the humble wayward children, of which number I thought there were many in that city; though it seemed delightful to those who loved to hear words eloquently delivered and to have the itching ear pleased, yet in him were liberties, and in practice disorderly walks. I sometimes thought that my silent sitting was ordered for an example to others, for a steady waiting in their own gifts, to know life arise into dominion in meetings. My exertion increased so, that my sleep seemed to depart from me, and I remained as one sealed up as to misery, nor had I freedom to go from home to house to dine, or to make many acquaintance. Amidst the trials which were thus his lot he said: "I also remembered what came into my mind the second meeting I was in after my landing which I had but a few sentences to speak, the motion of life ceased, and I sat down, I have always found it safe to do, and felt my poverty and weakness, yet a quiet and attentive mind; but my brother, William Brown, had service, and an open time among the people which I did admire, and said in my heart; how fit to be sent abroad; but alas! I am one of the meanest servants that was ever sent over to preach the gospel; when this gentle came before me; mind thy own business, and faithful in thy gift; thou hast a great journey before thee, and thy store is small; I'll therefore frugally, and spend carefully, and covet not other's, and thou shalt not want what is convenient for thyself, and something to spare needy. Whereupon I desired, with an hurt heart, to be preserved in patience and meekness, becoming a disciple of my great Lord and Master, and therein to wait for renewed instruction and ability, to labour in mine own gifts, without pining, however small."

Many were the instances in which John Churchman's close attention to the Divine voice, guided him rightly amidst perplexities and doubts on outward journeying, and kept him in the bosom of the Almighty hand, from the strife of tongue. It was thus, often sitting in silence or speaking a few words from meeting to meeting, that travelled through Essex. "My service for Truth," he said, "in this country was in a close, plain, modestly with but few words; for it often appeared to me, that there was a greater desire to be invited to put in practice those things that were thought to, for which I often mourned, and had

strong sympathy with the few sensible, baptized Friends amongst them."

After visiting most of the meetings in Great Britain, Ireland, and Holland, he paid his final visit to London, of which he thus speaks: "On my coming here, I felt great fear to possess my mind, having at sundry times before, spent about thirteen weeks in that city, mostly under a close exercise of spirit, without an openness to some kind in public or private to obtain relief; so that to go thither again appeared to me like entering into a cloud, although I was secretly bound in spirit to proceed; but attending all the meetings as they came in course, I felt a gradual openness and strength to declare those things, which before had been sealed up, being now made sensible that every opening or vision, which the Lord is pleased to manifest to his servants, is not for immediate utterance; but the Lord who gives judgment should be carefully waited upon, who only can show, by the manifestation of his heavenly light, the time when, and by the gentle putting forth of his arm of power, abilitates in the opening of his spirit, which giveth tongue and utterance, to speak the word of Truth, in the demonstration of the Spirit and power, that openeth a door of entrance in the hearts of them who hear. Our dear Lord said, 'for it is not ye that speak, but the spirit of your Father, which speaketh in you.'

"Now as my service opened and strength increased, I was invited by some to their houses to dine, who had before looked on me with indifference, but now said, they should be glad to see me there to be more acquainted; but as I felt on my first arrival in this city, a secret prohibition now going much from house to house without outward leave, so now the same restraint continued with me, lest by going to such places I might somewhat contradict by example, the precepts which Truth had directed me to deliver in public, to wit, a life of self-denial and temperance in eating and drinking, with a steady inward attention to the teachings of Grace, in order to know an establishment of heart thereby, as being the certain duty of every follower of Christ Jesus our Lord.

"Thus I think I have seen that there is great need to be exceedingly careful, when the Lord is pleased to reach unto and convict disorderly workers by instrumental means, that we do not lessen the weight of Divine reproof, by being familiar with such as if all was well; for they are apt to be fond of the instrument through whom they have been reached, and if by their fondling they gain the esteem of such friend, it seems to seal them before their wounds are searched to the bottom; so that I rather chose retirement, and to live as private as I well could; now I also saw, that if I had sought many acquaintance, and thereby beheld the conduct and behaviour of some in their families, my way would not have been so open as it now was.

"In many meetings the love and power of Truth was felt by the humble dependent children, whose eyes were fixed on their heavenly Helper, and at some of the last in London, I had with an innocent boldness to appeal to Friends to bear witness of the manner in which I had spent my time in that city; that I had not sought to be popular, nor endeavoured to gain the praise of any, but the friendship of those who were not the real friends of Truth, keeping in a good degree under the innocence and simplicity thereof; yet with a dear affection I felt my spirit united to the children of the heavenly family amongst them; but had never sought to steal their love from the great Parent to whom they did belong; my prayer and heart's desire having been, that their abode might

be to the truth and their affection placed on God, and the whole delight of their hearts to meditate on his sacred law; that if through me as an instrument they had received any benefit, the praise belonged to the Lord, the only supreme good; and if in future they did but love, fear and serve him, it was little to me whether they ever remembered that I had been amongst them. Nevertheless a participation of the love of God by the members of the true church, has taught them to know the communion of saints, and the deeply engraven unity of the one spirit, which makes them as epistles written in one another's hearts, whose time or distance can never erase."

The time of John Churchman, after his return from Europe, was chiefly occupied in visiting the churches and attending to the services to which he had been appointed. He bore his faithful testimony to the necessity of being afresh anointed before venturing to preach the gospel, never trusting to former favours and illuminations of Divine wisdom for the service of to-day. "My month," says he on one occasion, "was opened in fear, even to trembling, yet with a secret hope and confidence that the Lord would be mouth and wisdom, with desires that he would bind my attention to his own immediate instruction, that the language of his Spirit might be only uttered by me, and he was pleased to magnify his own Truth in the opening of these passages: I give this hint, that they who are concerned in the ministry may humbly trust in God, and not lean to their fears, knowledge, experience or wisdom, in opening the mysteries of the Gospel, but confide in the key of David, which when it opens none can shut. Next day we were at Providence, or Perkiomeno meeting, which though poor and the Truth low, peace was afterwards measurably enjoyed, from an evidence of having been honest according to the ability given; and the day following at Plymouth, faithful Friends were comforted in the gracious condescension of our holy Head, who was pleased to favour with the aboundings of the life and love of Truth."

During a severe illness, with which he was visited in 1761, he said, "Alas! how dimness has overtaken us, when we compare ourselves, and our practices with the temperance and moderation of our forefathers, and the early settlers of this Province! How sumptuous now are the tables, how rich and costly the apparel, the diet, and the furniture of many of our Friends even in the country; but more especially in the city! How is the simplicity and plainness of Truth departed from, and pomp and splendid appearances taken their place! And how much cost and time might be spared from needless things, and applied to better uses, to the bettering of our country and helping to turn away the judgment which hangs over us, in part occasioned by these things.

"I desire that my grandchildren may be brought up in a plain simple way, accustomed to industry and some useful business in the creation, not aiming at great estates, nor following others in that way; but give them useful learning and rather choose husbandry, and a plain calling for them in the country, than endeavour to promote them to ways of merchandize; for according to my observation from my youth up, the former is less dangerous, and less corrupting: I observed when I was in England, that some of the greatest and wisest men in a religious sense, were brought up at the plough till, or in some laborious occupation; where the mind is less liable to be diverted from an awful sense of the Creator, than in an easy idle education. How many great men there are, whom I could name, whose way of living is mean and homely in this world's account, so that

they have little more than necessity requires; and yet they are rich in the best sense."

About three years before his death he was confined at home by a fever, "during which time my mind was often much humbled under a sense of the prevalence of a dull, lukewarm spirit, as to the life and power of Truth; earthly mindedness and the cares and cumbrous concerning the things of this life, having drawn the minds of many into death. I never more clearly saw the necessity there was for us who profess the Truth, singly to attend to the gentle instructions of the Holy Spirit thereof, which only, doth, and ever will lead and guide into all Truth, and preserveth from those errors and fallings which are so abundantly evidenced among us, whereby our hands are weakened in respect to a careful exercise of the discipline of the church."

"Such, to the end of his valuable life, was the careful and watchful walk of this man of God! He died in his seventieth year, almost his last words being, 'the sweetness I feel.'"

#### Providential Preservation.

I must now tell you of a rather singular circumstance which took place whilst at Zmeinogorsk. This time we occupied the same apartments we had on our first arrival. Some few changes had taken place on account of a visit they had received from the wife of the Natchalnik of Barnaoul. I found, for instance, a bed put up in a room where no bed had been before, and we slept in it for several nights. You must understand the building we occupied was very large; it was what is called the Gospodsky Dom, which is devoted expressly to visitors, and is capable of accommodating a considerable number. A courtyard separated us from the house of the Natchalnik, where we used to take our meals, with the exception of breakfast, which was served to us in our own rooms.

On our arrival from the steppe, we found the host and hostess absent at Petersburg. The former was daily expected; meanwhile we were entertained by the gentleman who occupied his post until his return. My husband spent the first evening with him, and I sat in my bedroom awaiting his return. The servant entered to ask if I required anything further before she went to bed; I told her I would take the child into my arms, if she would make the bed in the next room. I had a sudden fancy to change it. She did as I bade her, but was, I think, a little surprised at my caprice. Hour after hour passed, not a sound was heard in any direction, all was still as death, within and without the building, with the exception of the voice of the sentinel. I was reading, and the witching hour of night was close at hand, when I heard a peculiar sound which rather startled me. Although no coward, I own to a strange feeling passing over me. I was alone in the house; I knew not where the servants slept, or whether they slept there at all; I was completely ignorant of their movements. Hearing nothing further, just as the deep-toned bells tolled forth the hour of twelve, I again settled myself to read; still, not without taking a look at Alatau, who was calmly sleeping. I had not been long absorbed in my book, when I again heard a sound which made me start, when I rose and I was sure it was in the room; this being very large, I shaded my eyes, and tried to peer through the aperture, when there was a creaking and a creaking followed by a smash. I started to my feet, but for a moment I was unable to distinguish anything, for the room was filled with either smoke or dust. When it cleared off, I looked in the direction whence the sound proceeded, and saw

that the greater part of the ceiling over the bed had fallen; had the child been there, he would have been killed to a certainty.

After the affair was over, I could not help reflecting how mysteriously we are at times directed. Of why I had had the desire to remove the bed I could give no account; it appeared to me strange. Something of a similar nature had once happened to me in Petersburg. I was in the habit of dining of retiring to my room in company with a young lady to read; but one day we did not do so, but lingered amongst our elders, gossiping and talking. All left but three, and still we sat on, when we were suddenly startled by a great crash. We rushed through the rooms and found the maids pale as death, standing near my door. None of them knew what was the matter; it was something in my room, but no one dared to enter. Going in we found the ceiling had fallen, not exactly over the sofa, but large pieces had fallen on it, which would have given any one sitting there a serious blow, even if it had not proved fatal. So you see how the hand of Providence is stretched over us mortals.—*From Atkinson's "Recollections of Tartar Steppes and their Inhabitants."*

#### Letter of John Thorp.

22d of Third mo., 1788.

Being, contrary to my expectation and endeavours, prevented from attending the ensuing Monthly Meeting at ———, of which I was the more desirous, for the same reason that I hoped and still hope thou wilt be there; I find freedom, and that I trust after having maturely considered it with a desire to do right, to communicate to thee what passed in my mind long before I knew or expected what would have happened, which prevents me.

It hath not been usual for me to think beforehand of the affairs likely to come before such a meeting, but the mention made by the friends of ———, of the application of a certain person to be admitted a member of our Society, occurred again and again to my mind, and connected with it the parable of the leaven which a woman hid in three measures of meal, till the whole was leavened. It was "hidden," but its operation, though secret, was gradual and progressive, till there was a total assimilation; "till the whole was leavened," the process was from within to without; the exterior part was the last affected, the last whose appearance was altered; but though the last, it was as completely changed as the rest; the "whole" was leavened.

This seemed to convey instruction to my own mind, as setting forth the prior necessity of an inward change, for the proper regulation of the outward deportment: I thought too, it might be applied not improperly to the case, nor, perhaps, unprofitably to the consideration of the party alluded to. I do not doubt his having been sensible of the secret influence of the divine principle in his own conscience, or that his judgment has been measurably convinced by the testimonies he has heard borne to the Truth, as professed by us as a people. I as little doubt the sincerity of his desire to be considered as one believing in the same principle, and desirous to walk by the same rule. But whether there is yet that thorough conviction, that perfect harmony of faith and practice, as would justify a conclusion that, "the whole" is leavened, I hope he will not be offended if I recommend to his serious consideration, rather than he should desire a premature admission; for as he that believeth will not make haste, so a waiting for the right time, when perfect unity will be experienced, will not retard his growth in

the Truth; nor lessen the tender regard of his friends toward him, or the peace of his own mind.

I desire to be as brief as possible. I have nothing but good-will in my heart towards him; and if under the influence of that wisdom which alone, in such cases, is profitable to direct, friends shall admit him a member of the Society, I shall freely give him the right hand of fellowship, and desire to be his companion in the regeneration and in newness of life.

JOHN THORP.

*Sorghum Sugar.*—Much importance is attributed by some of the Western papers to a new invention by which sorghum molasses is almost instantly converted into sugar. The syrup is driven off by centrifugal power and granulation effected. The *St. Louis Democrat* speculates upon the results as follows.

This discovery must, of course, work a considerable change in the saccharine trade of the country. Sorghum flourishes pretty much in all the States and Territories of the Union. Wherever corn grows it may be made to grow, and farmers, through this simple process, will now be enabled to supply themselves with all they need in the way of sweets. As the machinery is by no means costly we presume the improvement will generally be made available.

Sugar must become cheaper and its consumption greatly increased. Fruits, large and small, which now, on account of the cost of saccharine matter, are greatly wasted, will be preserved to a much greater extent, and healthy and invigorating food thereby secured. This invention may be considered as one of the greatest of the age, remarkable as the present era is for its utilitarian application of scientific discoveries and principles. The forces employed are without cost, and require no education to govern and direct them. After the molasses is prepared in the usual way, which every one comprehends, the turning of a crank completes the process, and consummates the entire work most perfectly. No heating is necessary, no evaporation or delicate manipulation or chemical mixtures. The cold sorghum is converted in two or three minutes into refined sugar and molasses.—*N. American.*

For "The Friend."

#### Christian Counsel.

The following extracts are part of an epistle addressed by John Gratton to Friends in Pennsylvania, in 1693:

"My dear friends, let us look inward, and wait for what the Lord pleases to manifest, and take counsel of him, and abide in him and in his counsel, and strive not at all without him; but see that we do all in the meek and peaceable spirit of the Lamb, for the Lamb shall have the victory, yea, hath it and reigns, glory to God, for ever.

"Dear, friends, as it is said, the Lamb shall have the victory, so it is observed and plainly seen in all places, where his life, light, love, meekness, patience, gentleness, long-suffering, purity, wisdom and truth are manifest and kept in, victory is obtained by the Lamb of God, that takes away the sin of the world, and saves out of it all that truly receive him, and gives them power to become the sons of God, and to obtain conquest and victory over the evil one. Oh, therefore, friends and brethren, abide in him, and be seen to live in a sensible knowledge that he abides in you, as you may remember he prayed to his Father that we might be in him and be in us; this is precious, Christ in us the hope of glory, the great mystery of God. Hold this fast, hide him in your hearts, let him be head in you, secretly

ruling in your souls, yield obedience unto him and live in a sensible feeling of his life, light, joy and comfort.

"Friends, keep here and you will know enough you cannot want any thing if you enjoy this; but if you had all knowledge without this, all languages, mysteries, yea, faith to remove mountains and have not this love, all is worth nothing. This is he whose lips preserve true knowledge; he teaches the way of God; truly, never could any man speak like him. In hearing him keeps us in communion, unity and fellowship with God and one with another, and in peace it passes the understanding of the wise knowledge of this world. This is the best knowledge to know God to be our God, Christ Jesus to our Lord and Master, our Head and Law-giver and wonderful Counsellor: Oh! let us see to be our knowledge, and wait, watch and pray to grow in it; and flee contention, strife, and disputations and janglings, for the victory is the Lamb, and all they shall overcome that abide therein; therefore watch and pray in his name and suffer with him.

"Behold the Lamb of God; feel his divine nature in your inward man, and be gathered therein and put him on, and be clothed with him, that he may make you comely with his own comeliness; thus shall you know the armor of light, yea, the whole armor; though many a sharp arrow a keen dart have been shot at you, yet it still remains armor of proof. Keep it on, dear friend, neither say, nor do, nor think any thing contrary to the divine will, but learn in silence and stillness; watch to know what the Lord speaks, if he works the work no other can, nor can any of the sons of men do what he doth; let him therefore have the pre-eminence that is due to him and be all in all, and then there will be an end of strife, and peace on earth, good-will to all men will ensue, and glory to God on high. As we experience this, we are by him redeemed out of the earth, and out of the evils thereof, being followers of the Lamb wheresoever he goes, as whatevers riseth up against these shall not prevail for no weapon formed against such shall prosper, neither shall the gates of hell prevail against them. The Lord is known at this day by a remnant, blessed be his name, to be both Lord and Christ, yea, our sure Rock of safety, strength, power, life, righteousness, sanctification and salvation; yea, all we are to God we are in him, as him only.

"Dear friends, keep close with him in spirit; his tabernacle is here with us, and we find he dwells in the sons of men, and to make his abode in the habitable parts of the earth. Therefore dear friends, come into the temple, and tarry the with him, and look unto him; and if another sees more of him than you do, be still and do not at man, but take heed; for Christ saith: 'Many shall say unto you, Lo, here is Christ! Lo, he is there! believe them not.' But wait and pray, and let nothing separate you from him and what he shows you plainly of the Father, thankful for; enjoyment is the best knowledge and keeps the soul low, humble, meek, patient, gentle, holy, harmless, quiet and peaceable, with the knowledge that is without enjoyment, pure, exalts, is not gentle, nor holy nor harmless, but hurtful and dangerous, carrying the man quite away from God, like the raven that flew from Noah's ark, which returned not again.

"What is man out of Christ Jesus the true truth and the life, the power of God? We do nothing, worse than nothing; but in him we come again to stand up in the image of God. He is the unspeakable gift, stand fast in him; qu

ourselves like men, be strong in the Lord and in the power of his might; remember his noble acts; he made the weak strong who had faith in him, though they were weak; he quenched the violence of fire, stopped lion's mouths, made armies of lions flee, yea, death and the grave were conquered by him who is the true Conqueror, and gives victory to all his true disciples and followers, and enables them to overcome, and his promises are such as great and precious. Read then the spirit, as follows: 'To him that overcometh,' saith he, 'will I give to eat of the tree of Life, which is in the midst of the paradise of God; he shall not be hurt of the second death; to him will I give to eat of the hidden manna, and I will give him a white stone, and in that stone a new name written, which no man knoweth, save him that receives it; he shall have power over the nations, and he shall have the Morning Star, he shall be clothed in white raiment, and I will not blot out his name out of the book of life, but I will confess his name before my Father, and before his angels: him will I make a pillar in the temple of my God, and he shall go no more out, and I will write upon him the name of my God, and the name of the city of my God, and I will write upon him my new name. I will grant him to sit with me in my throne, he shall inherit all things, and will be his God, and he shall be my son, saith the Lord.'

The Twenty-sixth Report of the British Emigration Commissioners has been published. It appears that in the fifty-one years that have elapsed since 1814, there have left the United Kingdom 5,901,510 emigrants, of whom 3,597,899, or nearly 61 per cent., have gone to the United States of America, 2,177,850 to British Colonies, and 125,871 to other places. The emigration during 1865 was 209,801, of whom there were: English, 61,345; Scotch, 12,870; Irish, 136,676. In the first three months of the present year the number of emigrants who have left the United Kingdom from the ordinary ports was 2,672, of whom 32,613 went to the United States. With the exception of the year 1864, this is the largest emigration during the same period of any year since 1854, the increase being principally in the Irish emigration to the United States. The migration to the Australian colonies and New Zealand amounted in 1862 to 37,288, showing a decrease of 3659 compared with the previous year.—*Late Paper.*

Selected.

## Robert Scott.

Robert Scott was convinced of the Truth, as held by this Christian people [Friends] at Montrose, the place of his nativity, where he several times suffered imprisonment; enduring his share of ill usage which largely fell upon them in that way, for their testimony and allegiance to the living God, who is ever worthy to be waited upon, worshipped and adored. Afterward he settled at Stone Haven; here it is stated, that the public teachers, in like manner as at Montrose, began persecuting him, with a view of inducing him to move away from the spot. But, by the judicious counsel of David Barclay, he was induced to stay, and to endeavour to *lie down*, or wear out so early unworthy a disposition. This he most comely effected by patient continuance in peaceable and upright conduct, for, betaking himself to merchandizing, by honest dealing and blameless conversation, his influence won upon his neighbours, and actually prevailed over his opposers, that the most of those called clergy, round the country, sent to him for goods; and the Lord

helped his endeavours with such success that he was reckoned one of the best traders in the place. Yet was he not in any wise puffed up, but abode in humility, thankful to the Giver of every good gift, and often praising him for his mercies. He was a great lover of the assemblies of the Lord's children and people; often, in the throng of business, leaving all to attend the meetings held in the middle of the week, and would frequently remark that *he never lost, but often gained by this practice, saying, these meetings were made to him the best of any.* After his wife's death, advancing in years, he wisely retired from business; and his only son dying, he was kindly cared for by a daughter-in-law, to the end of his days. Thus freed from anxiety about the things of time, he was often giving glory and praise to the Lord, who had bountifully provided for him, and had graciously afforded him both care and also contentment in his old age; so that he had now nothing to do, but to make up his accounts with his heavenly Master. In this, the first business of his life, he was very diligent; often in his closet, three times a day, would he pour forth his prayer to Almighty God; and a living power attended these ministrations, whether more privately or in the public gatherings. At length, about the seventy-fifth year of his age, feeling exceedingly bound to this blessed privilege, and now, on account of bodily infirmity, no longer able to meet his friends in their usual place of resort, he begged they would come and sit with him in his own apartment; which request was readily acceded to, and the practice continued for a month previous to his removal. Indeed, it so occurred, that one of these solemn opportunities of worship was held in his chamber only two hours before he expired, on the 31st of the Third month; when he was so filled with the power and presence of the Lord, that, with a clear and audible voice, he presented his supplications unto Him who had been with him all his life long, greatly to the tendering of the hearts of those present, both Friends and others. After which, in a fervent manner, he several times recommended his own soul to God, *desiring him to finish that great work of gathering his soul, for he could do nothing but "stand still and see," or "wait for his salvation."* Then, with clasped hands and uplifted eyes, calling upon the Lord to take his spirit to himself, he yielded it up to Him who gave it.

In the year 1779 William Savery accompanied a Friend on a visit to the meetings of Friends in Virginia and Carolina, and some circumstances seem to have made such deep impression on his feelings, as occasioned him to notice them with much concern. The following is related in his journal at that period.

A Friend had been drafted to serve in the army, but being conscientiously scrupulous against bearing arms, could not comply with the requisition. He was therefore tried by a court martial, sentenced to be whipped, and received forty lashes on his bare back with a whip of nine cords. Although he had no friend to sympathize with or to encourage him in a faithful testimony to the peaceful kingdom and government of Christ, he meekly and patiently suffered his flesh to be thus barbarously mangled in the presence of some thousands of persons.

William says: "Great endeavours were afterwards used, both by threats and persuasions, to induce him to comply with some service in the military establishment, such as waiting on the sick, or some other employ that they might take hold of, so as to answer their purpose; but remaining steadily fixed, he could have no free-

dom to countenance their measures let the consequence be what it might. I think it is worthy of remark, that his prudent wife appeared to be more concerned on account of an evil report that her husband had been brought to a compliance, than for all his suffering, or all they were worth in the world. After the time had expired for which he had been drafted, he returned home. Here I may mention the reasons offered by a certain Major Roberts, in the American army, why Friends ought not to suffer; he said the Quakers had not deceived them, they had borne their testimony from the beginning, and never were known to bear arms on any occasion; they also paid taxes, which were three-fold more than their proportion; those treltaxes were in consequence of their not uniting in warlike measures. It may also not be improper to take notice of a remark made by a young woman of the church of England, that she observed some of the Quakers' children had departed from the plainness of their profession and got about half way into the fashions of the world, which rendered them ridiculous in the eyes of others, and a reproach to their own Society."

*Primitive Beehive.* The following mode of keeping bees has been practised in India for a long period, and is said to be very successful:

"As honey forms a favorite article of food among the Himalaya highlanders, they have a very extensive sale for it; it is therefore with them a great article of internal commerce, in fact, the staple of their bazaars, where it always finds a ready vent. They obtain the honey without destroying the bees, by means of a hollow cylinder of wood inclosed in the wall of their huts, on the side most sheltered from the weather, and in which there is an opening without for the bees to enter. In the centre of this hive there is a movable division which is kept open while the bees are making their honey; but as soon as the combs are full, the busy family is driven out by a noise made through the inward extremity. As soon as they have retreated, the central partition is closed and the combs are drawn out of the cylinder from the opening on the inner wall. The honey being secured, the hive is again opened and the bees commence their interminable labors of reproduction."—*Late Paper.*

## THE FRIEND.

NINTH MONTH 1, 1866.

## SUMMARY OF EVENTS.

FOREIGN.—A London dispatch of the 25th says, advices have been received to-day, in official circles here, announcing that a treaty of peace between Prussia, Italy, Austria and Bavaria, was concluded by the plenipotentiaries in session at Prague on the 23d inst. The treaty was officially signed, on behalf of the respective governments, on the same day. Among the provisions of the treaty is one that the troops now at different points shall evacuate their respective countries and retire to their respective homes within three weeks. A Vienna dispatch of the 25th says: The Emperor Francis Joseph, has determined to strengthen his empire as well as his hold upon the affections and loyalty of his subjects, by granting a new constitution and ministry to Hungary. It is officially announced that a new ministry will soon be formed for Hungary upon the basis of the constitution of 1840, the revocation of which caused the Hungarian revolution in 1848 and 1849. The application of the Mexican Empress Carlotta to the French Emperor, for further aid to Maximilian, has been declined. It is authoritatively stated that if only a few French troops are sent to Mexico, it will be only in sufficient numbers to protect the subjects of France during the fall of the empire, and to secure a quiet evacuation of Mexico. They will not be used to sustain the dynasty of Maximilian.

The cession of Venetia to Italy has been fully accomplished. Before the treaty of peace between Prussia and Italy was signed, Austria freed, and unreservedly ceded Venetia to Italy. A Berlin dispatch of the 26th says: "The King of Prussia has received a deputation from the Chamber of Deputies, who presented the address voted by that body. The king made a speech in reply, in which he professed to feel great joy at the success of the legislative negotiations, and he said, however, that if another conflict arose with the deputies on the questions of the budget and the army, or the other subjects which are vital to the interests of the State, he would act precisely as he did before." Prussia has determined to destroy the independence of Hanover, Hesse, Nassau, Holstein, the Free City of Frankfurt, and incorporate them into the Prussian kingdom. The population thus annexed numbers over four millions.

The Bank of England reduced its rate of discount, on the 23d, from 5 to 7 per cent.

The cholera has slightly decreased in London. Its ravages continue in many places on the continent.

The French commercial returns for the last six months show increased activity, and a considerable augmentation in exports and imports.

A large and influential meeting, which was held in Leipzig on the 27th, declared in favor of a union of the kingdoms of Saxony, Prussia, and Hanover.

On the 27th the quotations were as follows: Liverpool.—Breaststuffs dull with a downward tendency. Cotton steady, middling uplands, 13 $\frac{1}{2}$ d. London money market easier. Consols, 89. U. S. 5-20's 72.

A very large reform meeting, held in Birmingham on the 27th, passed a resolution of the following tenor: "The platform adopted by the immense assemblage was in favor of residential manhood suffrage.

UNITED STATES.—Philadelphia.—Mortality last week 476. Of cholera, 91; cholera morbus, 15; cholera infantum, 61; diarrhoea, 23. The mortality in the corresponding week of last year was 280.

New York.—The Board of Education for this city states the number of public schools to be 268, with 219,000 pupils. This is an increase of 11,665 scholars over last year. The cost of maintaining the schools was \$2,377,988. The number of deaths in New York city for this week was 748, of which 145 were from cholera. This is 198 less than was ascertained, and 131 more than the corresponding week of last year.

St. Louis.—A dispatch of the 26th says, official reports from seventeen cemeteries, for the week ending on the 24th inst., gave a total of 1156 interments, 918 of which were cholera cases. As the returns from the city cemetery include only the present week, the city board of health is estimated that about 1300 deaths from cholera actually occurred during the week.

The Cholera.—Telegraphic dispatches from various places in which the disease has appeared, represent it as decreasing every where except at St. Louis. There were only thirteen deaths of cholera reported at Cincinnati on the 26th inst.

The Cotton Crop.—The prospects in all parts of Georgia are reported to be gloomy on account of continued drought. The reports from Mississippi, Alabama and Florida are of similar tenor. The Houston (Texas) Telegraph says, two things in regard to the cotton culture, no longer need to be ascertained: First, that very nearly as much land is planted in cotton this year as ever before. Second, that the cotton up to this time, (8th mo. 11th,) is as promising as was ever known in the State.

Pest as Fuel.—The St. Paul, (Minn.) papers contain accounts of the success of a new pest company which is preparing pest for use. They are at work in a bed containing several million tons, and there are others equally large near St. Paul.

The Atlantic Cable.—At a recent meeting of the French Academy of Science, a distinguished member expressed the opinion that the present electric communication between Newfoundland and Valencia, would have but an ephemeral duration. As a reason for this opinion a piece of heavy telegraph cable, which had been five years at the bottom of the British channel, was exhibited. The exterior metallic covering was completely eaten off by the salt water, which had also completely eaten away the internal wire.

Texas.—The time having arrived "when, in the judgment of the President of the United States, the care and conduct of the proper affairs of the State may be re-mitted to the constitutional authorities chosen by the people thereof, without danger to the peace and good order of the United States," Andrew S. Houston, Provisional Governor of the State, was, on the 11th ult., relieved of the trust, and directed to transfer the papers and property of the State to J. W. Throckmorton, the Governor

elected by the people. The transfer ordered was effected on the 19th.

Legislation.—An extra session of the South Carolina Legislature has been called for the purpose of adopting the State laws to the recent acts of Congress, and for the relief of the financial embarrassments of the people of the State.

The Selma (Ala.) Messenger says: We hear of factories springing up all over the country. At Camden, Wilcox county, a wealthy company has taken steps to erect a large building and fill it with the most approved machinery. At Carrollton, Miss., a factory is now in operation, which in a short time will employ 180 spinners. In Marengo county and Sumter county, large factories are about to be put in operation.

Last year the sum of \$54,000 was set apart to pay the expenses of the Commissioners sent to hold conferences and negotiate with the Indian tribes west of the Arkansas. The commission was absent about two months, and had interviews with the representatives of 75,000 Indians. The accounts have just been settled, from which it appears that all the expenses, including presents to the Indians, amounted to only \$10,000, a very small sum, considering all the circumstances connected with that important mission.

The Interior Department is in receipt of favorable reports from most of the agents of the General Land-office in the western States and territories, in regard to the great demand for public lands under the Homestead acts, and by cash settlements. They represent the influx of immigrants this season to be unusually large.

The Markets, &c.—The following were the quotations on the 27th. New York.—American gold 148 $\frac{1}{2}$ . U. S. 5-20, 1862, 112 $\frac{1}{2}$ ; ditto, 1865, 50 cents, five per cents, 104-103; Treasury notes, 73-10, 107 $\frac{1}{2}$ . Balance in the Sub-Treasury, N. Y., \$88,865,709. Superfine State flour, \$5.80 a \$7.00. Shipping Oil, \$8.80 a \$10. Baltimore flour, \$10 a \$11.40. Amber State wheat, \$2.75 a \$2.83; spring wheat, fair to choice, \$2.25 a \$2.32; Chicago No. 2, \$1.50. Western rye flour, 92 a 95 cts. Flour, 80 a 85 cts. Western mixed corn, 81 a 82 cts. Middling uplands cotton, 33 $\frac{1}{2}$  cts. Philadelphia.—Superfine flour, \$8 a \$8.75; extra family and fancy, \$10 a \$10. Red wheat, fair to choice, \$2.75 a \$2.85. Oats, rye, \$1.16. Yellow corn, 42 cts. New southern corn, 51 a 52 cts. Clover, \$1.50 a \$1.50. Timothy, \$5 a \$5.50. Flaxseed, \$3.75. The arrivals and sales of beef cattle, reached about 1800 head. Sales of extra at 17 a 17 $\frac{1}{2}$  cts., a few choice at 18, fair to good, 15 a 16 cts., common 12 a 14 $\frac{1}{2}$ ; the market closed dull. The sales of sheep amounted to 10,000, prices ranged from 6 a 6 $\frac{1}{2}$  cts. per lb. gross. Hogs sold at \$15 a \$15.50 the 100 lbs. net.

RECEIPTS.

Received from H. Knowles, Agt., for A. H. Knowles, lo, A. A. Knowles, Mich., and J. J. Peckham, G. Carpenter, and Susan Collins, N. Y., \$2 each, vol. 40; from R. Penrose, O., per E. Hollingsworth, Agt., \$2, vol. 39; from R. Miller, O., and for J. Reeder, Ind., \$2 each, vol. 40; from J. Hall, Agt., O., \$1, to No. 26, vol. 39, and \$2, vol. 40; from G. S. Penrose, Pa., \$1, to No. 11, vol. 40; from J. J. Wood and R. Cox, \$2 each, vol. 40; from Christiana Smith, lo, \$1, from N. Warrington, \$6, vols. 37, 38, and 39; from J. Tyler, N. J., vol. 37, 39.

FRIENDS' INDIAN INSTITUTE.

A suitable Friend and his wife are wanted to superintend and manage the farm and family under the care of the Committee for the gradual Civilization and Improvement of the Indian natives at Tennessee, Cattaraugus Co., New York. Also, a female Friend to teach the School.

Friends feeling their minds drawn to either of these services, will please apply to Joseph Eikintou, No. 783 South Second St. John M. Kaighn, Camden, N. J. Aaron Sharpless, West Chester, Pa. Richard B. Bailly, Marshalltown, Chester Co., Pa. Joseph Scattergood, 413 Spruce Street, Phila.

WESTTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the Boy's Second MATHEMATICAL SCHOOL, to enter on his duties on the opening of the Winter Session. Apply to SAMUEL HILLS, Wilmington, Del. Thomas Evans, 817 Arch St., Phila. Joseph Scattergood, 413 Spruce St., Phila. Charles J. Allen, 304 Arch St.

WESTTOWN BOARDING SCHOOL.

The list of Boys entered as pupils for next Session believed to be full. There are, however, still several vacancies for Girls. It is requested that applications be forwarded east to Dubré Knight, Superintendent (address Street Road P. O., Chester Co., Pa.) or Charles J. Allen, Treasurer, No. 304 Arch St., Philadelphia mo. 25th, 1869.

EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Schools. Applications may be made to Isaac Morgan, Jr., 622 Noble street; Samuel Allen, 524 Pine street; or J. Wister Evans, 410 Race street.

ADELPHI SCHOOL.

An Assistant Teacher is wanted in the Girl's Room. Application can be made to Benjamin H. Pitfield, No. 306 Walnut St.; or Caleb Wood, 524 South Second St.

WEST GORE BOARDING SCHOOL, Chester County, Pa.

Will be open on Second-day the first of Teenth month. For circulars, &c., address, TOS. P. CONARD, West Grove, Pa. Eighth mo. 1866.

WANTED.

A male Teacher is wanted for Friends' School Haddonfield, New Jersey. Apply to Samuel Nicholson, Haddonfield, N. J. Charles Rhoads, No. 36 S. Seventh st. Phila.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, — J. O. W. WORTHEN, M. D. Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, C. of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, at Friends' Meeting-house, in Smyrna,

the 8th of Second month, 1866, EASTWOOD C. ALLEN SKARLETTS, to PASCILLA PEACOCK, daughter of Ja and Marion Purdie, deceased, of Smyrna, Chesaeng New York.

—, on the 5th of Fourth month, 1866, at Fries Meeting-house, in Smyrna, DAVIO NARAMORE, SO Joshua and Anna Naramore, of Westmoreland, Ont Co., N. Y., to ELIZA D. KNOWLES, daughter of Henry and Mary Knowles, of Iowa.

DEAD, in Westmoreland, Onida Co., N. Y., the 1st of First month, 1866, ASHLEY wife of Joshua Naram in the 77th year of her age, a member of Westmoreland Particular and New Hartford Monthly Meeting. For her youth, her Saviour and his cause had been precious to her.

—, at Coal Creek, Keokuk county, Iowa, on 13th of Eighth month, 1866, HANNAH wife of Sam Dixon, in the 69th year of her age, a much esteemed member of Coal Creek Monthly Meeting. Having early years submitted to the cross of Christ, it may be said she adorned the christian profession by an un- upright life. She bore a protracted and a very painful illness with much patience and resignation, often saying, "I have no will but the will of my Divine Ma; his presence has been round about me almost constantly; and I have craved that all may feel the same of his love that I have witnessed." She was much concerned for the youth, particularly those of the neighborhood, that they might early be made willing to be under Christ's teaching; and thereby exert an inducement for good; then on reviewing their past lives they would, she said, have to mourn over misspent time, would have the reward of peace. Several time speaking of her approaching dissolution, she said had great comfort in looking to the mercy and grace of the "Jered in the Lot, and rejoiced in the God of salvation." In this happy state of mind she passed this world of suffering, and we doubt not has beenmitted to enter the rest prepared for the righteous.

## Coal in the United States.

Whatever may be the future product of the all mines of Great Britain, it is certain that the United States possess a supply which many generations cannot exhaust. The whole extent of coal area in the United States has been usually divided into four principal coal-fields or tracts, viz: The Great Central, Alleghenian or Appalachian coal-field, extending from Tusculossa in Alabama, through Eastern Tennessee and Kentucky, West Virginia, Maryland, Ohio, and Pennsylvania, and respawning in New Brunswick and Nova Scotia. This field has been computed to cover within the United States an area of 50,000 to 60,000 square miles, of which about 40,000 square miles, or 25,630,000 acres, are considered workable area. It is subdivided into eight minor divisions productive of bituminous coal. The coal-field occupies the greater part of Ohio and Indiana, and in extent is nearly equal to the first. A third field covers a large portion of Missouri, and the fourth the greater part of the State of Michigan. The Chesterfield bituminous coal-field, a detached district of small area near Richmond, Virginia, contains the oldest-worked collieries in America, and for many years furnished the only supply of coal for the seaboard States. The greater part of the area of workable coal in the bituminous coal-fields above mentioned basins as yet undeveloped. The detached basins of anthracite coal in Pennsylvania, which form one of the most interesting of this great coal-producing territory, though limited in aggregate area, as yet produce considerably more than all others put together.

The coal area of the United States, according to Taylor's "Statistics on Coal," a work published in 1855, was estimated in 1845 to cover 133,132 square miles, or 85,204,480 acres, which was only one-fourth of the total area of the twelve States in which the coal formations lay. It was equivalent to nearly three-fourths of the coal areas of the principal coal-producing countries of the world. Of this area 8,397 square miles were on the west side of the Missouri River, and 124,372 square miles east of the Mississippi River, whilst 15 square miles were occupied by the anthracite basins of Pennsylvania. More recent estimates from the report of the Commissioners of the General Land Office have made the American coal-fields, so far as they have been developed, to cover nearly 200,000 square miles, or one-tenth

the entire area of the kingdom. The coal formations of British America are computed to have an area of 18,000 square miles.

In 1845 the production of the British coal-fields was set down at 31,500,000 tons annually. The product in 1858 was stated to be upwards of 65,000,000 tons, worth at the pit's mouth 16,700,000*l.*, and in 1863, 86,292,215 tons, valued at 20,572,915*l.* An eminent geologist estimates the average thickness of the workable coal of Great Britain at 35 feet, and the total quantity of workable coal at 190,000,000 tons. If the whole area of the productive coal-fields of North America be taken at 200,000 square miles, and the average thickness at 20 feet, — Kennedy calculates that their product will be 4,000,000,000 tons. The relative size of the coal measures of the United States and other countries has been made more appreciable by taking the amount of workable coal in Belgium as 1, then that of the British Islands becomes rather more than 5, that of all Europe 8*1*/<sub>2</sub>, and that of North America 3. Professor Rogers, in a work on the coal-fields of the United States as compared with those of Europe, calculates that the United States has 1 square mile of coal-field to every 15 square miles of territory; Great Britain 1 to every 30 of surface; Belgium, 1 to every 22*1*/<sub>2</sub>; and France, 1 to every 200 miles of surface. The relative superficial magnitude, he observes, of the coal-fields of the countries possessing coal will be recognised if we compare them by some simple unit of measure. Let this be 100 square miles. In this case—Russia will be represented by 1; Spain, 2; anthracite fields of Pennsylvania, 4; Westphalia and Bohemia, 4; Belgium, 5; France, 10; Rhenish Prussia, 10; British Provinces of North America, 17; British Islands, 40; Europe, 75; Pennsylvania, 126; Appalachian coal-fields of the United States, 2,200. Whichever way the foregoing figures are taken they clearly represent the enormous coal-producing power and the vast mineral wealth of North America.

In view of these extensive coal fields in every part of the country, it would seem hardly possible that the exorbitant prices of the last two years could be much longer sustained. And yet we must remember that our supply at present comes from a very limited region, and is under the control of a few transportation companies. Previous to the war the Pennsylvania product had supplied fuel for half the continent, meeting the requirements of our seaport and frontier towns, and even underselling the colliers of Nova Scotia in the markets of Canada. This was due to the facility with which it was quarried and conveyed to different places. These facilities were steadily increasing. Canals and railroads were extended from New York and other parts of the country to the coal regions of Pennsylvania to bring away their product to new districts. But the demand was also steadily increasing year by year when the war began. The war having at once added largely to that demand in supplying our greatly increased steam marine, and the extensive manufactures which were kept in operation to furnish material for military use, which aided by the

Government issues of currency immediately gave an upward impulse to prices.

This impulse was aided by the flood of 1862, which suspended operations, and led to the exhaustion of the stocks in hand. These and other causes continued to operate sending prices up as a matter of course till the conclusion of the war; at which time indication appeared of a decline. These indications, however, were doomed to disappointment. The attempts during last season of the colliers of the Lackawanna and Wyoming coal districts to reduce the wages of the miners, were followed by an extensive strike, which enabled the companies to sell their stocks at such enormous profits as to suggest to many the possibility that they had secretly connived at the affair. Certainly the strikers only obtained penalty for their part of the transaction, and the consumers, by reason of it, have been compelled to pay exorbitant prices during the entire winter. There are symptoms now of the approach of better times, and yet we do not look for any permanent change for the better until the financial system of the country is placed in a healthier condition, and railroads for the transportation of coal to the different parts of the country where it is required have been multiplied.

The present difficulty is exaggerated by the peculiar fact that the transportation business is done principally by the owners of the mines; the mining companies and railroad corporations are substantially identical. The following illustrates the mode by which this state of things was brought about: In Elk county, Pennsylvania, until within a few years the lumber business engrossed every thing. In 1858, however, Joseph Veazie, a young man from Boston, a graduate of the Lawrence Scientific School, heard that there were bituminous veins of coal in Elk county. He induced his father to come out with him and "prospect" a little. In a few days they discovered quite a number of outcroppings, which confirmed all that had been reported of the property. At that time the geological survey of the State of Pennsylvania, made by Professors Rogers and Lesley, had not been published. That report describes the coal lands thus prospected by J. Veazie as the fourth bituminous coal basin of Pennsylvania. Soon after discovering the coal property and learning its value, J. A. Veazie, of Boston, and some of his wealthy friends, secured a title to six thousand nine hundred acres of these lands, lying in a compact body. At first a company called the Pennsylvania Coal Company was organized under the laws of Pennsylvania; then followed the organization of the Shawmut Company; then of a railroad company; and finally all these companies were consolidated, under a special charter, into one company, called the Pennsylvania Cannel Coal and Railroad Company, with a capital of \$1,500,000; thirty thousand shares of fifty dollars each. There are now seven different coal companies in the county of Elk, not one of which existed seven years ago.

A correspondent writing last fall, shows the way in which the Cannel Coal and Railroad Company manage to realize large profits. Their rail-

road, 14 miles long, connected with the Philadelphia and Erie Railroad, two and a half miles east of Ridgway, is completed to an opening which now produces about 100 tons a day, and, when fully manned, will produce 200 tons a day. It is graded 1,300 feet to another opening, which can turn out 150 tons a day, and from which a tramway of 1,200 feet leads to still another opening, also capable of turning out 150 tons a day. The railroad—tramway and all—will be completed by Christmas, when the company will be able to fill orders for 500 tons a day. These coal people will not tell their most hidden secrets, but the coal costs the company not over \$1.25 in mine and deliver at the terminus of their road near Ridgway, and as they are selling it for \$1.50, it will be seen they have a solid margin of at least \$3 per ton; so that by January next they can count a daily profit of \$1,500 a day, or \$150,000 a year. All this from three openings in one vein. But there are twelve veins of bituminous coal and two of canal coal. About 300 openings have been made, some of them 800 feet in length and reaching through the hill some 600, and reaching through in the same way, but all deep enough to show the inexhaustible supply of coal on the estate.

(To be continued.)

### Benjamin Bishop.

(Continued from page 3.)

"To J. A. G.

"Strood, 13th of 9th month, 1845.

"My very dear Friend.—Seeing that Great Head of the Church was pleased to draw thy spirit into sympathy and travail with mine, and through thy obedience in the simplicity of a little child, the way was made clear before me to accept the offer of the fellowship of thy spirit, in discharging myself of a debt of gospel love I owe to my poor neighbours, I feel bound in the renewed springings thereof to salute thee as a brother beloved, and to acquaint thee how it fares with me towards the objects of our earnest solicitude after so long a lapse of time. As we had both to acknowledge that it was "the Lord's doing and marvellous in our eyes," that our hearts were united in this labour, so I have still to acknowledge the continuation of His marvellous loving-kindness, His mercy, and His truth to me, and which I feel persuaded flows also towards all the human race, giving unto every one according to his works; that either by loving-kindness and tender mercy, or by judgments, He may draw every one unto the measure of grace in his own heart, that all may hear and obey, and come unto the baptism of His well-beloved Son, and know His blood *without* them and *within* them to cleanse them from all sin. Now God the Father of all hath made His Son Jesus Christ Lord of all, and put all things under His feet, and given Him to be the head of the church, through whose quickening Spirit we live unto God through faith in His requirings and in the revelation of His Holy Spirit within us. His eyes are going to and fro throughout the earth to show himself strong in behalf of those whose hearts are perfect towards Him. Truly, my dear Friend, there is great cause for those to rejoice in Him whose hearts trust in Him. My soul feels humbled before Him to this present day in remembrance of His mercy and of His truth to me, and also in the gracious fulfilment of His word to my soul, when it was labouring for clearness in the united travail of our spirits, 'My presence shall go with thee, and I will give thee rest.' I mention it now for thy encouragement, that thou mayest trust in the Lord's open-

ings at all times, walking in His holy Light, whithersoever He leads thee.

"Considering my infirmities, I may not have much to do for His adorable name but to sympathize with the afflicted, but the Great Head of the church may have various fields of labour for thee, and I have believed that our little labour of love was intended for our strength and encouragement as well as for those we visited. The trials and discouragements we met with at the onset; the secret power which attended us throughout in my extreme weakness; the precious unity I felt with thy spirit; and the peaceful close we were favored to make; the quiet resting place which my spirit sensibly feels; all proclaim His wisdom, power, and love. And now with respect to my feelings towards my *p-o-er* neighbours, I feel the gracious promise fulfilled, 'I will give you rest'; for whilst my heart continues to flow towards them in the drawings of our Heavenly Father's love, and to sympathize with them under their various temptations and accumulating distresses, through the Prince of darkness who reigns over them, I feel peace in leaving them unto Him whose mercies are over all His works, being satisfied that His servants without Him can do nothing. 'O the depth of the riches both of the wisdom and knowledge of God,' 'Who maketh the clouds His chariot, and walketh upon the wings of the wind?' What is man that He should take account of Him? Doth He not visit and re-visit? Were it not for His adorable name and nounterable mercy, where would some of us be, to whom He hath often manifested Himself 'as the clear shining after rain.' 'To whom much is given, of him much will be required'; and truly we can give Him nothing but what He first gave us. And now words fail to express the raptures of my soul in the contemplation of the wonderful love of God in the gift of His only beloved Son, even unto death, for the sins of the whole world. I am a believer in the words of the Apostle Paul—that nothing without us will be able to separate us from the love of Christ, and that all the trials and temptations of this life are not worthy to be compared to the glory which is at seasons revealed in us. Speak, ye who have made a covenant with Him by sacrifice, and whose feet have through Him stood firm in the bottom of Jordan, and who have brought up stones of memorial thence, is there any joy comparable to the joy of God's salvation? Is there anything too near or too dear to part with for His sake, who asks, that He may give in this life an hundred fold, and in the world to come life everlasting; yea, eternal joy, no doubt beyond the power given to finite man to conceive? My heart salutes thee and all thine in the love of the Gospel of life, peace, and salvation; and my spirit rejoiceth with yours in the hope of the glory of God, through faith which is in Christ Jesus our Lord. May we for ever be each others joy and rejoicing in the Lord, is the prayer of thy sincere little friend,

BENJAMIN BISHOP."

"To ———"

"17th of 9th month, 1845.

"I write to manifest my affectionate remembrance of you all, desiring for you all, as well as for myself, a steadfast abiding in the light of the Lord, which assures a fellowship with the Father and with the Son, and one with another. I have but little to inform you respecting our outward affairs, which to me evidently appear to be in the hands of Him who doeth all things well; we know but little variation, neither do I know that I have a wish, or an anxious care about them. I meditating on our outward blessings I am often led

sweetly, thankfully, to query 'Who made the differ?' For plainly I know who made me differ, and that it is of His mercy alone that taste those gifts with joy.' But inwardly I not live under this serene sky; many are changes my soul passes through, and that oftens than the returning day, and this I find also good for me; for who can look up to God for blessings and precious consolations of the God without being willing to be a partaker of the afflictions of it also? And who can turn away from the bitter cup, when we remember how our holy and ever blessed Redeemer drank it for our sakes?

"I think I gave thee in my last some account of the little labour in which J. A. G. and myself have been engaged, since which I have felt greatly relieved of the exercise of my spirit, and I had sweet peace. I was helped with a little from the Sanctuary in returning my minute, a precious covering I thought was over the thing. Yet I have not wholly lost sight of read and instructive conversation with those who are poor that have an ear to hear, which this visit, may open a door for, feeling now perfect at liberty to exercise myself in this way; there is much to suffer and endure, patience I have her perfect work. Some hesitate; some too forward. I intend to visit a poor man evening with whom we met, and will give thee brief account of him. Through a blow received from a vessel coming to the wharf, the spine hurt, and he is unable to move his lower limbs and is otherwise afflicted, besides being so that he keeps a slate by him for communication with those around. I was struck with love awe to find so heavenly-minded a man. He had had not one pain too many, his deafness more a blessing than an affliction. To live and die, he had no will of his own, Christ's will his. His prayer was to be with Him, and know more of Him, and to be made more like Him.

"It is probable thou hast been looking for letter from me, my dear friend, earlier. I have been thinking of thee; but in gathering up fragments, such have been the precious inroads of heavenly love, that I was fearful of writing much, lest I should exceed or give my strength away; and since I have been so stripped and exposed particularly in meetings, sometimes even to distress. I have written now and then a letter and that in great weakness. I feel it a weighty thing to know the God of Jacob to be my Father and my shield. Were not His mercies great, must sink under a sense of my unworthiness to look up unto Him in times of trouble, but is, 'He prevents me with the blessings of goodness,' and does not mark all mine iniquities. Who can utter His marvellous loving-kindness who can show forth all His praise? He is gracious in all His ways, and holy in all His words.

"It will be pleasant to hear of your welfare; sometimes come and sit with you in spirit, my heart overflows with thanksgiving and praise unto the Author of all our mercies, on your behalf, believing He will teach you, and guide you with His eye, and preserve you unto His heavenly kingdom."

**Growth of Popery.**—The large emigration of many years has been in progress from Ireland and Catholic Germany to the United States, and has caused a vast increase in the number of professing Roman Catholics. It is stated that they now number about 4,400,000, with 2,500 priests. Eighty years ago there were in this country 60,000 Catholics and only 25 priests.

From the "Coralhill Magdalen."

## The Loss of the Steamship "London."

(Continued from page 2.)

When it was known in the morning that we were returning to England, everybody appeared much pleased. Then commenced new speculations, many saying they would not return in this ship, they didn't like her, some would go by another vessel, some would give up going to Australia altogether. Several asked me what I intended doing. I said, "if the ship goes I go. I am not afraid of the *London*" (although I was a nervous night), "if she is properly managed, when she gets repaired and put in proper season, she will go all right. She was started this week before she was ready. I think the owners of this ship will have learned a severe lesson not attempt the like again."

We had a scramble dinner that day, which was the last meal we had together. It was very good, under the circumstances,—thanks to a good ward.

A small vessel passed near us. I did not see her, not happening to be on deck at the time. I heard many speaking of having seen her. People have since asked why Captain Martin did not request this vessel to remain near us. That is a question no one can answer. He may have had, "I have perfect confidence in my own ship," and I know the feeling in our cabin was perfect reliance on his judgment. The whole day (Wednesday) was dull and gloomy; heavy cross seas, labouring, no comfort anywhere. Darkness came on early, the wind increased, the sky looked dull, everything bespoke a terrible night; and anxious countenances of all seemed to have forebodings of danger. I dreaded the thoughts of another such night as last. I thought of the *Delaware*, and said to *Munroe*, "Here is night coming on, and a prospect of a severe one, and nothing has been done to prevent the water coming down." He said, "I know it. I have heard—Harris (the first officer) about it, and all the females, say, 'Let it go down.' If they would only let me have canvas and pumps, I would do it myself. I will try again."

After a while I heard some one hammering overhead. When he returned, I said, "Well, you were succeeded at last." He said, "No, only partially. I got enough canvas, but could get only four or five pump-tacks. Everything is alike on board, excepting in confusion, nothing can be done that is required."

At length night set in: hatches were closed and fastened on the inside, to prevent the water from floating them up; but still the water came in—first one side, then the other—with every roll. By seven or eight o'clock we were in a great state of terror as on the previous night, and with more cause, for the gale was more violent. The steam was so troublesome that we could not open the lids for a moment to let in air. The situation in the cabin then was really awful. I never shall be able to convey any idea of it, to imagine what your feelings would be, waiting and expecting every moment to meet death. Add to that the dismal sound of water rushing in. You could not see it through the cloud of steam and lights, and were not sure whether the ships were filling or not; in fact, a foot of water washing and fro, carrying with it every moveable article, engendered your fears that was hers. Then at length a heavy roll a woman shrieked. There was a young girl nearly frantic. By nine o'clock we were in a worse state than ever; when the ship listed there would be nearly two feet of water in the cabin. It would come in with a rush, then back again to the other side, carrying with it any-

thing that was not lashed. The boards of the lower berths were washed out, and the heading would drop down, and then, by the roll of the ship, was carried out into the cabin, and there floated about. There was a lady in the next state-room—about the only one who remained in her berth—and when I was assisting to prevent her trunks being broken; both of us up to our knees in water, in which various articles, such as buckets, pieces of boxes, clothing of every description, apples, books and papers were swimming. A few of the women were quite collected—talking as calmly as on land. One in particular I remember,—*Mrs. M.*, who had come home in this ship on her last voyage from Melbourne; she said to me, "I feel as if I never should see land again. I am loth to give up life, but it is not so much on my own account as for those I leave behind. I was married only two months before leaving Melbourne. I know my husband will mourn my death very much. I came home to settle some property. And another thing I regret very much is, that I have brought this little niece of mine with me." (a nice girl of about twelve or thirteen years.) "I induced her father and mother to let her come with me." "Never mind," says the little niece, "I am a happy, aunt, and we will die together." And I think they did. They were the last whom I spoke to in the cuddy, just before leaving the ship. They were then close together, sitting at one of the tables, and the water nearly up to the seat, and not far from Dr. Draper.

I often stood that night watching the port-hole in the state-room—when the ship would take those awful lurches. I would see the water dark and still against the glass of the port; it would remain so for half a minute or more. I would say to myself, "Is she sinking now, and twenty feet under water, or is she at her old tricks?" Presently I would see the water in a foam against the glass, and then I would say, "She is all right yet."

So the evening wore on—all of us more or less frightened; with the females, some reading and praying, some their husbands comforting. In one cabin where there were several congregated, one woman had five children: two of the smaller ones were playing about in the bed as happy as could be: some one remarked that their innocence and happiness were to be envied. The children at no time showed much fear—even those of eight or ten years of age did not seem to realize their danger. Several females, still seated on the tables, had never been in bed since Sunday night; their clothes wet, their eyes red from the hot steam. Occasionally a man would come in from the deck, and his report would be anything but consoling. Our means of getting on deck now was through to the afterport and up through the cuddy.

About ten o'clock, the purser of the ship came into our cabin. I spoke to him about the water being there. "Oh, you have nothing to complain of," he said, "we are just as bad as it: we have been carrying it out of the state-rooms all the evening." I said it was very wrong that it should be there when it could have been so easily prevented by securing the hatches—not on account of the danger, but for the comfort of the passengers: they had plenty of warning—last night was nearly as bad. He said, "There is no danger of it; it runs aft to the engine-pumps, and is pumped up." But what was the consequence? its weight all told with a heavily-laden ship; it all tended to bring her deeper in the water. In a few minutes after, the fires were out—the engine stopped—what use were their pumps then, and where was the water? Still there.

While the purser and I were talking, there

came some sailors, and rushed past us going to the room where the sails were kept. I heard one say to another, "Let us make haste with a sail, or she will sink." At that moment I heard an order from one of the sailors that all men were wanted on the poop. I knew this applied to the passengers, and felt there must be something very serious now. Immediately we left to go aft, leaving the women alone; only a few men having children remained behind, their wives begging of them not to go. In getting there we had to grope our way through a long dark passage, say sixty or eighty feet in length, and over the top of stores, luggage, &c., that were piled in some places with in two feet of the deck. Once through, and in passing the engine-room, we could see there was water rushing down. A short time before, the skylight over the engine-room hatch had been washed off, and this was the cause of the consternation. At this time I was not aware of it, but hurried by to get up on the poop, the place we were ordered to. There a dismal sight presented itself, and one I shall never forget. The gale was at its height. The night was very dark; but from lights held at the cuddy windows to give light on the deck in front, and which reflected up the mainmast, could be seen the half of the mainmast still standing, and the other half blown away, the shreds blown straight out at right angles with the yard by the force of the wind. The winds whistling through the wire rigging produced a dreadful sound. Waves lashed the sides of the ship—now and then one breaking over her, she laying over very much. There was a boiling foam level with the railings, and a little farther off could be seen seas ten or fifteen feet above us, with a phosphorescent crest showing through the dark. While standing there, viewing this scene of wild fury, and supporting myself by the companion-way, others were coming up the steps; so I let go my hold, and reached across to catch hold of a railing round the screw-shaft or opening, where it was drawn up out of water when disconnected, but I found nothing to hold on by but a smooth wall. All at once I found myself sliding down to leeward, and nothing to prevent me going over the low iron railing into the boiling foam below, when suddenly I caught hold of something in the dark that brought me up. No one but myself knew what a narrow escape I had—even to the present day it sends a thrill through me when I think of it.

(To be continued.)

Selected for "The Friend."

There is a general respect for consistency, and Thomas Waring was respected. He was concerned to speak a pure language; he adhered to a form of sound words, his yea, was yea and his nay, nay. When quite young in life, he submitted to the cross in these respects, and found peace as the reward of obedience. He was occasionally under the necessity of attending the courts of law in his own county, in which, his testimony against uncovering the head to give honour to man, brought him under some trouble. The officers would direct him to take off his hat, and on his declining to comply, it would be taken from his head by authority of the court. One day he entered the court room, and whilst diffidently remaining near the door, one of the officers came to him and asked him, "Are you a real Quaker?" Thomas replied, "I profess to be a Quaker." The officer then added, "If you are a real Quaker you may keep on your hat." Thomas then said, "By what authority dost thou give me this information?" "The court has taken it into consideration, and concluded that all who are real

Quakers may keep on their hats." The officer then turned to a member standing by, whose appearance and demeanor were not consistent with his profession, and said, "But you shall take off your hat."

*The Stature of Americans.*—Dr. B. A. Gould lately read a paper before the American Academy of Sciences, giving some interesting facts in relation to this subject. They appear to have been derived from the army measurements during the late war. The men from Iowa head the list, with an average height of 69 inches; next come those from Ohio, 68.8; Indiana, 68.7; Maine, 68.9; Missouri, 68.5; Minnesota, 68.3; Vermont, 68.1. No other soldiers were of a greater average than five feet eight inches tall. New Hampshire heads the second group of States, with men 67.9 inches; New York, Pennsylvania and Michigan all have the average of 67.8 inches; Wisconsin, 67.7; Connecticut and Rhode Island, 67.5; Massachusetts, 67.4. The coloured troops of Louisiana, 67.3. The New Jersey troops were the shortest of all, averaging only 66.7 inches. If these returns may be trusted, the average stature of the men of the Northern States, taking the shorter men of the Atlantic coast with the tall inhabitants of the West, is about five feet eight inches. It is a curious fact that men born in America increase in height until they are 28 years old. After this time a small loss of stature occurs, men being perceptibly shorter at 35 years than they were at 29 or 30, and this Dr. Gould attributes to the consolidation of the cartilages of the back bone.

Selected for "The Friend."

The following is to be found in Kendall's selections of letters on religious subjects, under date of Eighth month, 1791.

"This life is the field of battle, and our most dangerous enemies are those of our own houses. May the lamp of God in the temple of our hearts, be kept still renewed and replenished with heavenly oil, that we may have a clear sight of what is doing within us, lest we should think otherwise of ourselves than we really are. Purity of heart is a main qualification for being of any service in the church of Christ. Let us then, use all diligence to obtain and to retain this precious state. Blessed are the poor in heart, for they shall see God;" they shall clearly discern the things which belong to his kingdom, and when they speak of them, it will be of what they have seen with their (spiritual) eyes, and what they have "looked upon," what has been brought by the holy spirit before their internal view, as an object of contemplation for themselves, and a subject which they are authorized to handle with clean hands, and with hallowed lips to communicate to others."

For "The Friend."

#### For the Children.

Thomas Scattergood, when about leaving Britain (England), says:

"Set off about seven o'clock. On taking leave of a daughter about ten years old, I told her my desire was that she might be dutiful to her parents, loving to her brother and sisters, and particularly to set a good example to her younger sisters; and that when the evil one tempted her to do what was not right, she should resist him and not yield, and then he would leave her, and she would feel sweet and comfortable. She broke forth into tears, and said, 'Oh, he does tempt and try me!' and I learned by her parents that she complains of the temptations wherewith she is beset. I have not often met with such a child."

#### THE GOOD SHEPHERD.

Selected.

Yes! our Shepherd leads with gentle hand,  
Through the dark pilgrim-land,  
His flock, so dearly bought,  
So long and fondly sought.

When in clouds and mist the weak ones stray,  
He shows aginst the way,  
And points to them afar  
A bright and guiding star.

Tenderly He watches from on high  
With an unwearied eye;  
He comforts and sustains,  
In all their fears and pains.

Through the parch'd, dreary desert He will guide  
To the green fountain-side;  
Through the dark, stormy night,  
To a calm land of light.

Yes! His "little flock" are ne'er forgot;  
His mercy changes not;  
Our home is safe above,  
Within His arms of love.

#### GOD KNOWN BY LOVING HIM.

Selected.

'Tis not the skill of human art,  
Which gives me power my God to know;  
The sacred lessons of the heart  
Come not from instruments below.

Love is my teacher. He can tell  
The wonders that lie least our eye;  
No other master knows so well;  
'Tis Love alone can tell of Love.

O, then of God if thou wouldst learn,  
His wisdom, goodness, love, see;  
All human arts and knowledge spurn,  
Let love alone thy teacher be.

Love is my master. When it breaks,  
The morning light, with rising ray,  
To thee, O God! my spirit wakes,  
And love instructs it all the day.

And when the gleams of day retire,  
And midnight spreads its dark control,  
Love's secret whispers still inspire,  
Their holy lessons in the soul.

Guyon.

#### The Freedmen.

The final report of Gens. Steedman and Fullerton has been made public. Their foregone conclusion is that the Bureau is a nuisance in itself, and is served by unworthy agents; its continuance will be productive of discord and oppression. It is in behalf of the blacks that these commissioners most urgently call for the dissolution of the Bureau. Forgetting the old cry of the slaveholders, that a negro would not work at all except under compulsion—forgetting the outrageous vagrant acts of the past twelve months, to which it was half believed, more than half hoped, and unqualifiedly asserted, the freedmen would soon become amenable—forgetting that the Bureau enforced the making of contracts (whose terms were not prescribed) partly to bridge over the disorganization of labour, partly in deference to the opinion that the freedmen would avoid labour, but chiefly in the interest of the planters themselves and the entire South, that the country and the people might be saved from ruinous impoverishment and even starvation—these Presidential fault-finders accuse the Bureau of en-slaving the blacks by contracts which impose wages far below those obtainable in open market by competition. The very success of the Bureau in restoring labour, and in enhancing the value of the labourer, is thus turned against it as a crime; and while to-day it is feeding more whites than blacks, and with what little support is still allowed it by the President, is doing its best to promote industry, security, good morals, and substantial justice

among all classes of the population, it is subjected to these assaults, and that, too, after the representatives of the loyal people have decided, it shall live for two years longer, because it is needed. No one less than the friends of the Bureau will object to the most rigid, so it be impartial and disinterested, scrutiny of its age and its operations; nor is it to be denied that, from the very necessities of the case, as well as through errors of judgment, many incapable, if not a few corrupt officers have been taken from the army into places under the Bureau. But evidence palpably one-sided and inconclusive with motives undisguisedly hostile, to denounce the very existence of a legally established institution, resembles nothing else than the Presidential superfluous message concerning the Constitution amendment—that is, both are acts calculated to intended to weaken the popular respect for it, simply because certain enactments are not conformable to the "policy" of the Executive.

A report of Gen. Tillson, from Georgia, which has appeared since the above was written, affords a very exact confirmation of our criticisms:—"When I assumed charge of the Bureau here in June, 1865, freedmen's wages ranged from to \$7 per month, and a general opinion prevailed that at Christmas the lands, mules, &c., would be apportioned off among the negroes; consequently indulgence was very prevalent, and the planters were disheartened, regarding the Bureau as the champion of the freedmen and unfriendly to them. My first efforts were to correct these mistaken opinions in which I met with flattering success. Preparations for planting began early in the following February, and wages advanced to \$12 and \$15 per month. The testimony of the Hon. Alexander Stephens before the Reconstruction Committee in proof of the restoration of confidence and organization of labour by the Bureau.

"Schools have been established, valuable property gathered up and accounted for, that we have been lost to the Government. Local law have been secured to the freedmen, protected his rights and property, but the continuance of the agency of the Bureau is still a necessity, as planters depend upon it to obtain labour—the freedmen to receive their wages. The experience of the past year warrants the conclusion that twenty per cent. of growing crops would be lost were the Bureau in force to secure justice."

According to reports from South Carolina, freed people on Edisto are in a prosperous condition. All who are able to work will earn sufficient to feed and clothe them comfortably during present year, until they can make contracts the ensuing year. Many of them will make four to eight hundred dollars, if no accident happens to the crops, and about one-half of them in addition to their cotton crop, raise sufficient provisions to support their families during next year. Two plantations on Edisto and on James Island are held by freedmen on possessory titles, and are worked on their account. They have large crops in good condition. As a general rule, on these islands, freed people are working for one-half the cost of crop, though in some instances on more advantageous terms than these. There are about six thousand freed people on Edisto, and yet during the last four months a dozen cases of petty cruelty and trifling assault and battery are only crimes that have occurred. On Edisto, Wadmelaw, Johns, and James Islands are at three hundred freed people who are unable to support themselves, and who should be cared by the communities where they live. They are the old, crippled, and orphan children.—Nat

## Letter of Samuel Scott.

Ware, 23d of 24 month, 1747.

My dear Friend, Herewith I send thee a few sheets intended to prove, that scripture knowledge, without Divine aid, is insufficient to conduct a christian safely on his way; for mankind since he fell, and the consequent degeneracy, have for the most part centred in a wretched neglect and ignorance of their real duty to the Creator. And though no duty is more emphatically pressed upon those who profess to own and revere the mission and messiahship of the Son of God, than that of loving the Divinity with the most pure and generous affection (even in that which they seem their rule) yet that being of itself a dead letter, and unable without fresh participations of life and virtue, from a living and energetic principle, to inspire or furnish the creature either with sensations of, or faculties for the perception and performance of so sublime a duty, and so opposite to their natural tastes, they have generally held the precepts relative thereto with superficial and fallacious views; so that although they have gathered from the letter apprehensions of other duties, as worship, &c., yet that of Divine love hath remained too much discarded, or at least disregarded by them.

Yet blessed be the Father and fountain of love and consolations, through the several series of me, he hath been graciously pleased to discover himself to a remnant, who by the lively influence and manifestation of divine favour have been led to love him again. And although perhaps they may not have a distinct discursive and explicit knowledge of some truths, yet the sincerity of their love and affection, the product of the Divine principle, hath ever been acceptable. And He, who ever remains diffusive and bountiful in communications to his creatures, is now, through the emanations of his divine light and life, imparting to his little ones, his waiting, dependent, and pined children, glorious discoveries of himself, and vouchsafing to reveal those mysteries which have been hid for ages from the wise and prudent, even to babes and sucklings; no doubt for their real and glorious purpose, that by them, in his own time and way, his praise may be perfected.

The doctrine of the internal and immediate revelation of Divine light and life, (which we profess) operating by love (and productive in the soul) reformed to its influence and guidance of a proper love to the Creator, and to the creature for his sake) is the most noble and beneficent sentiment that ever mankind was blest with. It is this, as comes to have a rightful pre-eminence in the world, and prevaleth over the mind, which alone could regulate all disorders, by subjecting all to the will and order of the Creator. It would demonstrate to the devoted soul, the impossibility of loving God too much, or of denying ourselves too much for his sake, who denied himself of too much for our sake, by humbling himself and becoming subject to the shame and death of the cross; condescending to dignify the meanest of mortals with invaluable blessings. It would teach us to renounce the most secret acts of infidelity and dishonesty towards Him, and to abandon the most harmless gratifications of self and nature, when they tended to obstruct and retard that state of abstraction and purification, necessary to the discipleship of love. It would perfect in us, the divine and moral virtues, and qualify to answer every purpose of civil and religious society, of which it would make us bright and useful members, and lead into every particular duty, which either convictions in ourselves, or the precept and example of good and faithful men, might now be to agreeable, to the divine will. It would

renew the face of the church; array Zion in beautiful garments, render her fair as Jerusalem, "concomly as Tirzah, terrible (for her power and strength) as an army with banners." It would invest hoary heads with crowns of glory, and induce our youth to a strict and religious emulation of the virtues of their ancestors, and in our faithfulness, replenish each particular with that sensation and enjoyment, which infinitely surpasseth the conception of natural powers.

This alone can support in the most depressing and calamitous of human circumstances, by favouring and with the hope, that nothing (however trying) shall ever be able to separate us from the principal object of the soul's desire and affection; a fear which awaits and frequently allays the most joyous and delectable of human prospects and grandeur. That this Divine principle may have its proper scope and influence, in thy tender and favoured breast, is my sincere desire, and the design of my submitting these mean and unpolished papers to thy perusal; and may thy breathings, as thou finds access, be on my behalf, that while I am led to press these truths on others, I myself may not become a castaway therefrom; but in holy travail, and united exercise of spirit, may we approach the house of God, and ascend his holy mountain Zion, his sanctuary, from whence "his law shall go forth, and his blessing be commanded, even life for evermore."

I am thy friend, with true regard,

SAMUEL SCOTT.

For "The Friend."

## Musings and Memories.

## DEATH SOMETIMES NOT TERRIBLE.

I have been much touched and interested in an anecdote which, narrated originally in the *Moine Press*, has found its way into some of the religious papers. A little girl, not quite ten years old, was drawing near to the close of her life. Her friends who were gathered around her dying bed, found from her broken words, that she felt a dread, a natural dread, at passing alone through the awful river of death. She may have felt that the dear Saviour had died for her, and that he would receive her; but on this dark river, this mighty mysterious river, must be passed. Before the close came, however, she ceased to speak of its loneliness and darkness, and just as she entered it, her face brightened suddenly, a sweet confiding smile lightened her features, and with accents of trustful courage she exclaimed, "Oh, it is only a brook!" Happily she entered and passed over to the Heavenly Canaan, for her Saviour, the true Ark of the Covenant, gave her gentle spirit a passage as upon dry ground.

James Simpson, that able minister of the Gospel, was a nervously eccentric man. To him death was a very fearful thing in prospect—a river turbid and tumultuous, which produced terror whenever he dwelt upon it. Yet when his last sickness came, and the solemn moment of departure drew near, through the merciful condescension of his dear Saviour he, too, found the dreaded river a mere brook. His pulse having sunk, he was enabled to pray that if his day's work was done, his hands might be loosed, and he received into rest. In the feeling of his Lord's sustaining presence he then exclaimed, "It is done! It is done!" and almost instantly, in holy, humble triumph, had passed over the brook.

It sometimes pleases the Lord, in his infinite wisdom, to cause that death should appear more and more terrible to his faithful servants, as they approach its waters. He would drive them to trust in himself for comfort, he would show them that they were not to rely upon past services in

this solemn hour for hope. Yet when these have endured all their fearful forebodings of the dark, bitter, overwhelming flood—they find, to their eternal rejoicing, that the Lord upholding them, Death was only a shallow brook, quickly passed, into the Heavenly Canaan.

## A KIND AUNT.

In the basement of the Eclectic College in Philadelphia, the entrance to their habitation being from a poor alley, resides Maria Raymond and her son Jacob. She has charge of keeping the college rooms in order, and with the salary paid for this service, and washing clothes for others, she endeavours to make an honest living in the world. She is the widow of Joseph Raymond, a respectable coloured resident of Chester county, who during his lifetime worked for his temporal living on week days, and exhorted his coloured brethren and sisters on First-days, to amend their lives, and to earnestly seek after durable riches and righteousness. He was one with whom I had some acquaintance, and I believe he left behind him an un-stained reputation as an honest, industrious citizen, and as one who had through life endeavoured to fill up his duty towards his Heavenly Father and his fellow mortals. After he had been gathered home in peace to his everlasting rest, his widow removed to this city.

Her son Jacob having some education, has been engaged to keep school at Freehold, near Long Branch, this coming winter, and about two weeks since, having been there to make some necessary arrangements connected with this appointment, returned in the cars to Philadelphia. Whilst thus travelling he overheard an anxious looking man informing some of his white fellow passengers that he was then in a very destitute condition. As his narrative ran, he was from California, had brought plenty of money with him, but had just been robbed of two thousand dollars. He was now without means, but was going to Philadelphia where he had a friend, who, if he could be found, might relieve him. He did not know the place of residence of this man, neither had he any money to obtain a night's lodging, or any food to sustain life whilst seeking for his friend. The people in the cars who sat immediately around this distressed stranger, gentlemen we may suppose they thought themselves, and were esteemed by the world, listened with apparent interest to the needy man's narrative, and without doubt wasted some useless sympathy, and there let the matter end. When the city was reached, one and all arose,—not a pocket book was opened to tender pecuniary aid, not an invitation to a dwelling house was tendered, but away they hurried, to the enjoyment of luxurious hotels, or to the still more desirable comforts of home, leaving a man, who probably at his own residence, stood as high in the community as any one of them, without the means of obtaining food or shelter.

Jacob Raymond, whose sympathies had been awakened for the distressed one, lingered until all the white listeners had departed, and then stepping forward, he offered him such food and such lodging as their humble home could afford. Gratefully the Californian, who had been wont to carry his pocket money by thousands of dollars, to satisfy his every wish, now accepted the invitation of this coloured friend in need. Kind-hearted Maria soon spread him a supper—furnished him a bed to repose on, and in the morning gave him a breakfast, before sending him forth to seek his friend. What success he had in the search, we have not heard, but he will doubtless through life remember the coloured man who, alone of all

the listeners to his sad story, proved by his acts a neighbour to him who had fallen among thieves.

The anecdote is a pleasant one to me, and I deem it worthy of record. Had one of the rich white listeners opened his pocket book and kindly placed in the hand of the robbed man sufficient to enable him to obtain suitable accommodations for a day or two, whilst hunting his friend, or had he even offered him food and temporary shelter in his own residence, I should have deemed it so in accordance with the common promptings of christianity, as that no notice need be taken of it. But it required no small amount of that kindness which true charity only can give, to embolden a coloured man, who had not money to give away, to come forward with such an offer of assistance to a white man in temporary distress.

For "The Friend."

Letter of George Dillwyn to Sarah Fresson.  
Burlington, First mo. 21st, 1809.

DEAR SARAH.—The Scriptures say that "Old men shall dream dreams;" and accordingly I last night dreamed that I was at a large meeting with thee; though I do not remember any other of the company or any other particular circumstance, than that it was pleasant to see thee. Perhaps I should not think it worth while to tell my dream if it had not been the means of continuing thee upon my mind most of the time since, in such a degree of Gospel fellowship as inclines me to salute thee with an, all hail! and in hope that if it does thee no good, it will not be permitted to do thee harm. For although, like diseased Zion of old, thou mayst at times, be ready to take up the language of bemoaning, I have no doubt that her Holy King is the Watchman of thy walls, and his care over thee is incessant. Try then, to cease from all bewildering surmises, and cast thy care upon Him, thinking of nothing but resignation to His will and disposal, that when patience has had its perfect work, He may show thee, and to others who are passing through similar exercises, that He is indeed, "A God, high at hand, and a present help in the time of need;" and that He never forsakes any that truly trust in Him. Entertain not an idea that thou art such an extraordinary body that no one ever tread the path thou art in, before thee, for depend upon it that without such humbling afflictions, our gifts would be dangerous treasures, and we could not say much to the purpose of the bitter waters and their medicinal virtue.

These few lines, as a token of brotherly love, I send thee, believing thou wilt yet be enabled to say with David, "The sparrow hath found an house, and the swallow her nest, where she may lay her young, even thine altar, O Lord of Hosts, my King and my God."

In near affection I remain thy friend and brother.

GEORGE DILLWYN.

There is no neutral ground, there can be no truce on earth, between the kingdom of God and the kingdom of Satan. If we do not invade and attack him, he assuredly will invade and destroy us. It is only by our members (Friends,) awakening to their military duties, that the battle can be turned from the gate, and our Jerusalem besieged from the besiegers. We must not sit placidly at ease, behind the ramparts, erected by our ancestors, fancying them impregnable or perfect, waiting until our very walls are thrown down before we arouse from our torpor; but we must sally forth again, as of old, under the conquering banner of that Prince and Saviour who giveth power to the faint, and to them that have no might He increaseth strength.

For "The Friend."

I have marked with much satisfaction the course pursued by "The Friend," and am glad to see it entering on another year of its long career, with intrinsic evidence that its spirit and usefulness are undiminished. I have been a constant reader of its contents for many years, and have often been both animated and edified by its original and selected articles. There is much in "Thoughts for the Times" published in the last volume, to recall the attention of the members of our religious Society to its great fundamental doctrine of Universal Saving Light or Grace, the unspeakable gift of God for man's salvation through a crucified Redeemer; and to exemplify its indispensable necessity and ample sufficiency, in carrying on the work of sanctification, by the lives, labours and experiences of those eminent men and women to whom reference has been made therein. I trust the author, whosoever he or she may be, will not grow weary in well doing, but complete the work, thus far so well performed, by further demonstration of the true and only way, whereby any among us can become branches of the true Vine, and bear fruit acceptable to Christ and to his church.

It has been gratifying also to observe the effort making to prepare suitable matter for the juvenile readers, and much, both instructive and entertaining, has been given them; but I would suggest whether an improvement would not be made, by introducing more variety of incident and clothing it in a style less grave, and more adapted to the vivacious spirit of childhood. I venture to say this, from no fault-finding spirit, but with the hope that it may induce more contributors in this department, especially among the many women Friends who are interested in "The Friend," and in the children of our Society.

While desirous of strengthening the hands of the Friends who are engaged in conducting "The Friend," and to encourage them in maintaining the course they have pursued in promulgating and defending the doctrines and testimonies of our religious Society, I wish they may guard against taking too gloomy views of the state of the Society. I am sometimes cheered with the belief that the time may be nearer than some are aware, when there will be a more general and practical return of the members to the primitive principles professed by us as a people, and our consequent increased usefulness in the militant church. There are indications here and there, in America and Great Britain, that a feeling of distrust in many of the innovations on the testimonies and discipline of Friends, has sprung up in the minds of many who have heretofore appeared indifferent about them, and of some who were favourable to them. There is also, I think, on the part of others a clearer discernment of the evils to which they lead, and more freedom of expression of disapprobation.

There has always been, and will continue to be in the Society, while the right of membership is conferred by birth, a spirit that cannot bear the offence of the cross; which urges those yielding to it to contend for a broader and easier way to salvation, than the straight and narrow path cast up by Jesus of Nazareth. Such will always bring suffering on those who cannot compromise the truth as it is in Jesus; but though they make not a little show and noise, their inconsistency and conformity to the world, will betray the sandy foundation on which they build, and their work will finally come to naught. It is the doctrine of Holy Writ, and it will prevail, that everything pertaining to the work of religion in the soul, or to the promotion of Christ's government amongst

men, must be the fruit of the Spirit, fruit born by branches of the true Vine. It is therefore vain for any to suppose they can be rightly effectively engaged in disseminating the gospel labouring in the church, who have not given evidence by denying ungodliness and world lusts, living soberly, righteously and godly, that they are grafted into Him who has declared "Without me ye can do nothing."

Many may be deceived by the notion that because a thing is good in itself when it is done "unto the Lord and not unto men," by the rightly called and qualified, they are performing a religious duty by engaging in it in their own way; but they may thereby be making as great a mistake as those did whom the prophet declared "though they say the Lord liveth, surely they swear falsely."

This doctrine, that man is nothing, Christ all, and that the christian's course from the first step to the last, must be under the guidance and by the help of his Spirit as manifested in his heart, has always been held dear by the Society of Friends; and by walking conformably thereto devoted men and women have been raised among them, who have been used eminent instruments in the Divine hand to proclaim the gospel of life and salvation, and bring others into the kingdom of the Prince of Peace.

And however it may be lightly esteemed and disregarded by many who prefer working in the own will and strength, it is, I believe, felt to be increasingly precious by a goodly number through out the Society, who are striving to yield to government of their thoughts, words and actions to the great Head of the church, as He is pleased to reveal his will concerning them. These it is that they are not their own, and may not hurt themselves, and therefore are bound to labour for the restoration of the Society to its original faith and faithfulness, and there is reason to hope and believe that the Lord Almighty will multiply their number and finally give them the see of the travail of their souls and to be satisfied.

To all That Profess the Truth of God.

"My desires are, that you may walk in liberty in it." For when the Lord first called you forth, he let me see, that young people grew together in vanity, and the fashion of the world and old people went downwards into the earth raking it together; and to both these I was to a stranger. And now, Friends, I see too many young people that profess the Truth, grow up in the fashion of the world, and too many parents indulge them; and amongst the elder, some are going downwards, and raking after the earth. Therefore, take heed, that you are not making your graves, while you are alive outwardly, a loading yourselves with thick clay. (Heb. ii. 1) For if you have not power over the earthly spirit and that which leadeth into a vain mind, and a fashion of the world, and into the earth, thou may have often had the rain fall upon your field you will but bring forth thistles, briars and thorn which are for the fire. Such will become brittle, fretful spirits, that will not abide the heavenly doctrine, the admonitions, exhortation and reproofs of the Holy Ghost, or heavenly spirit of God, which would bring you to be conformal to the death of Christ, and to His image, they might have fellowship with Him in His resurrection. Therefore it is good for all to bow the name of Jesus, the Saviour, that all may excess Him to the glory of God, the Father. I have had a concern upon me, in a sense of the danger of young people's going into the fashion

of the world, and old people's going into earthly things, and many going into a loose and false spirit, till at last they go quite out into the spirit of the world, as some have done. The house of such hath been built upon the sand on the sea-shore, not upon Christ, the Rock, that they are so soon in the world again, under a pretence of liberty of conscience. But it is not a pure conscience, nor in the Spirit of God, nor in Christ Jesus; for in the liberty in the Spirit there is the unity, which is the bond of peace; and I am one in Christ Jesus, in whom is the true liberty; and this is not of the world; for He is not of the world. Therefore, all are to stand fast in Him, as they have received Him; for in Him there is peace, who is the Prince of Peace; but the world there is trouble. For the Spirit of the world is a troublesome Spirit; but the Spirit of Christ is a peaceable Spirit; in which God plentifully preserve all the faithful. Amen."

GEORGE FOX.

Selected.

*Concerning the True Church and ministry under the Gospel, and the maintenance thereof; some few questions answered in Truth and plainness of heart, and left to the witness and testimony of God in other men's consciences.*

Question 1st.—Which is the true church, or the gospel church, or the church according to the new covenant? For there was an old covenant, and a church according to that, under the law, and there is a new covenant, and a church according to that, under the gospel.

Answer.—For the clearing of this to the hearts and consciences of people, let us enquire and consider what the new covenant is, and then it will more easily appear which is the church according to the new covenant. The new covenant, according to plain scripture, and according to manifest appearance in this blessed day of the shining of the gospel light in men's hearts, is a covenant of God's, putting his law in the inward parts of people, and writing it in their hearts, and of his blessing their God and making them his people; and of teaching them all to know him, (inwardly and experimentally,) from the least to the greatest, and of being merciful to their unrighteousness, and remembering their sins and iniquities no more, Jerem. xxxi., 33, 34. Now, if in this new covenant, the covenant of the gospel church, then they are the gospel church who are the people of God according to this covenant, who have the law put by God into their inward parts, and writ in their hearts; and so according to this new covenant, have God to be their God, and are his people, and are taught by him to know him, (as it is written, all thy children shall be taught of the Lord,) and whose unrighteousness and had been merciful to, and whose sins and iniquities he remembereth no more, being washed away from their consciences by the blood of the everlasting covenant; which the blood of bulls and goats could never do; so that this is the New Testament church (or Gospel church); a church of us inward; a church of inward worshippers, or worshippers in Spirit and in Truth, as the law church was a church of worshippers outward; a church of inwardly circumcised ones, as the law church was a church of outwardly circumcised, Rom. ii., 29; a church of such as are inwardly holy, as the law church was to be a church of such as were outwardly holy; a church such as offer inward incense and sacrifices, as the law church was a church of such as offered outward incense and sacrifices; a church of inwardly redeemed ones, from the inward Egypt, and the inward darkness and power of Satan, as

the law church was a church of such as were redeemed from the outward Egypt, and the power of Pharaoh outward; a church that hath the inward ark, (Rev. xi., 19,) the inward presence, the inward manna, &c., as the outward church of the Jews had the outward.

Ques. 2d.—Which is the true Gospel ministry, and who are the true Gospel ministers?

Ans.—Those whom Christ sends forth, in the spirit and power of his father, to gather and build up his church. Christ had all power in heaven and earth given him, even to this very end, to gather, defend, and build up his church; and he bid his apostles wait for the same power, and sends forth his ministers in the same power, that they may be able ministers of the Gospel, which is not in words but power, even the power of God unto salvation, (Rom. i., 16.) The new covenant stands not in the letter, but in spirit and power; and they that are the ministers of it, must receive life, spirit and power from Christ, (the head,) and minister in that spirit, life and power, to the members, or they cannot nourish and build them up; yea, they must preach and minister to the world in it, or they are not able to gather out the world into it. Christ, the Lord of his church, the foundation of life in his church, the everlasting Rock, is a living stone; and his church is built of lively stones; and how can any minister live unto them, or build them up in the life, spirit and power, but who are in the life, spirit and power, and who receive life, spirit and power from the Head, to further, quicken and build up the living members with? The milk which nourisheth the living babe, is living, which must come pure from the breast of life, and not be mixed with man's wisdom or brain inventions, or it cannot yield pure nourishment. What then must the bread, and wine, and water of the kingdom be, whereon the children and heirs of the kingdom must feed, or they cannot be satisfied? And the ministers of the Gospel are stewards of this heavenly life, this heavenly spirit, this heavenly power, this heavenly treasure which they have in the earthen vessels, and which God enables them to bring forth, for the feeding of his lambs and sheep. Christ said unto Peter, Lovest thou me more than these? Peter answered him, yea, Lord, thou knowest that I love thee. If it be so, feed my lambs, feed my sheep, said Christ unto him. But how should he feed them? In what should he feed them? With what should he feed them? All power, saith Christ, is given me in heaven and in earth; and I am to ascend to my Father, and to receive the fullness of his Spirit; and do ye wait, and ye shall receive abundantly of the same spirit and power, and then in that spirit and power, ye shall be able to feed my lambs and sheep, that are begotten and gathered to me, in it; but out of it none is able to feed and build them up; for that is the very thing they are to be fed with and built up in. Indeed a man may be a minister of the letter, a minister of the law, without the spirit and power; but of the Gospel he cannot possibly; for that consists not in letter, but in spirit, and the faith that is to be begotten there, is not to stand in the wisdom of man, but in the power of God. The Gospel state, the Gospel church, the Gospel building, begins in the power, and is carried on in the power, and finished or perfected in the power; and the whole ministry of the Gospel is to partake of this power, and minister in it, or they can do nothing in this work. Christ Jesus our Lord began in this power, and none can carry it on without this power; the Lord God of Glory laid the foundation; Behold, I lay in Zion for a foundation, &c., (Isaiah xxviii., 16.) And the quickening Spirit alone is able to make

living stones, spiritual stones; and the Lord alone is able to build them up by the operation of this Spirit and power; and they that are the true ministers of the Gospel, minister in this, and are to wait for it daily from God that they may minister in it.

Ques. 3rd.—What is the maintenance of the ministers of Christ, or what is to be the maintenance of the true ministers under the Gospel?

Ans.—Christ, who hath sent them forth to minister in his name, hath provided for them; and they that are his true ministers, are satisfied with what he hath provided for them, (Matt. x., 10,) being careful not to make the Gospel, which is to be an inward blessing, outwardly chargeable to any. The mind of the true ministers is about the service of Christ; how they may be faithful to him, gather souls to him, feed them with the bread of life from him; not what they shall have from men for so doing, for such covet no man's gold or silver, &c.

ISAAC PENNINGTON.

*Bad Company.*—Sir Peter Tely made it a rule never to look at a bad picture, having found by experience that whenever he did so, his pencil took a hint from it. Apply this to bad books and bad company.

"I am persuaded the anguish we feel, in the removal of these we love, arises from a mistaken view of this state of existence; could we always realize the idea, of its being merely a pilgrimage, we should rather rejoice than weep, when those to whom we are fondly attached, obtain a mansion in that heavenly country where all tears will be wiped away. Jesus wept at the grave of Lazarus! divine, compassionate Redeemer."—D. W.

## THE FRIEND.

NINTH MONTH 8, 1866.

Our readers will have observed that "The Friend" has entered its fortieth year; an age which its originators—few of whom are now living—had little expectation it would attain. It has passed its years in a generation that has passed away, and to those in another now on the stage of action. In this extended career those who have conducted it have found need, amid the varied conditions of our religious Society, to examine and re-examine; to reason and reflect; to be open to evidence and to decide with caution; and while acknowledging that they have been, like others, liable to error, we think we may say, they have laboured faithfully for the good of the Society they dearly loved, striving to maintain its original faith unaltered; to throw no stumbling block in the way of earnest and diligent seekers after Truth, and to disseminate instructive and interesting reading among its subscribers. The consciousness of this brings its own reward with it; nevertheless it is gratifying and encouraging to note a decided increase in the number of those who take our journal, and to receive testimonials of approbation from many in different Yearly Meetings whose judgment we value.

We would again remind all our readers and well-wishers, that the continued existence of "The Friend," is in measure dependent on their continued interest in its welfare, and the support given by them to its "Contributors;" and we afresh invite the co-operation of all those who approve the objects for which it was originally established, and which those who volunteer the labour and care necessarily to conduct it, have endeavoured to keep steadily in view.

## SUMMARY OF EVENTS.

**FORSEX.**—A Liverpool dispatch of the 3d inst. says that two steamships of the Union Line have sailed for Canada with troops. The *Telegraph* says, the only object in sending these troops to Canada is to take the spirit manifested by the colonists in the late rebellion. The *Times* of the 2d says, that the solution of the Roman question will quickly follow the cessation of Venetia to Italy.

The Austrian government has given orders for a reduction of the army to a peace footing, and the work has already commenced. The *Austrian Emperor* has ordered a large portion of his retinue as a measure of economy. The Court expenses will be materially reduced the present year. The French Emperor, in a letter to King Victor Emmanuel, rejoices at the restoration of peace. He says, he accepted the cession of Venetia from Austria, in order that the people of that district might be enabled to choose their own destiny. He declares that France has exerted her influence in favor of humanity, and the best interests of Venetia and Italy. The Russian government, prior to the negotiation of peace, proposed to the French Emperor and the other Powers, that the neutrals should participate in the territorial changes made by the results of the war. This proposal was not supported by France or England. The Prussian Diet is engaged in the discussion of a bill to indemnify the king for his violation of the constitution in imposing taxes and raising funds for the support of the war without the consent of the Legislature. The Bavarian Chambers have formally approved the treaty of peace concluded with Prussia by the Bavarian Plenipotentiary. The cholera is spreading in Russia. Affairs in Turkey are in a very bad state. The revolt in Candia progresses. The inhabitants have asserted their independence of the Turkish empire. The Italian army is being rapidly disbanded. The Emperor has extended his reign to the departure of the Emperor's troops from Mexico, until the first month 1867. The Emperor Carlota also obtained an extension of time in which to pay the French government 10,000,000 francs now due by Maximilian.

The weekly returns of the Bank of England show an increase of over £1,000,000 in bullion. The rate of interest has been reduced, and the London market is easy. Consols, 89½. U. S. 5-20's 73½. Middlings cotton, 12½. Breadstuffs dull and unchanged.

A new ministry has been formed in Brazil, which is in favor of a vigorous prosecution of the war with Paraguay. On the 11th of September the Paraguayans were repulsed by the United States troops. The forces from China state that the rebels had assembled in considerable force in the province of Nanking, and that the Imperial troops sent against them had been defeated with great loss.

The war in New Zealand is reported to be nearly over, most of the natives having either surrendered or been captured.

**The Atlantic Cable.**—Early on the morning of the 2d inst., a telegraphic despatch was received at Heart's Content, from Valencia, announcing the success of the attempt to recover the cable lost last year. The Great Eastern and her consorts had previously made a number of unsuccessful attempts to raise the cable, and when being found, sometimes breaking or slipping off the grappling when brought to the surface. It was finally succeeded to go about 100 miles east, where the water was not so deep, and here, in latitude 51 degrees 52 minutes, longitude 36 degrees 3 minutes, about 700 miles from Heart's Content, the cable was again found. The news reached Valencia at forty minutes past five o'clock. Signals are now sent through the cable with perfect accuracy, and constant communication is thus kept up between Heart's Content and the Great Eastern. About three hours after the recovery of the cable, the attempt to raise the cable started from Valentia, and the lowering of the cable into the sea immediately took place. The latest dispatches say, that the "big ship" is now paying out the wire, and approaching Newfoundland at about the same rate of speed as she maintained in the previous expedition. It was hoped that in a few weeks there would be two continuous cables at across the bed of the ocean.

**United States.**—Philadelphia.—Mortality last week 450. Of cholera, 58; cholera morbus, 6; cholera infantum, 49.

**The Cholera.**—The dispatches from all quarters report an abatement of the disease. The interment in 82 weeks last week was 206, the number of the number of the previous week. On the 2d inst. there were only 48 cholera interments reported in that city.

**Convention of Southern Loyalists.**—On the 3d inst. this body of patriotic men assembled in Philadelphia, and

were received by the citizens and public authorities with unusual demonstrations of respect. The delegates from the South met and organized in National Hall, where they would be met by those from the Northern States, as soon as all the preliminary arrangements were effected.

**Miscellaneous.**—It is stated that the corn crop of Virginia, this year, will be a bountiful one—larger than any raised for ten years past. The crop of oats was also unusually large. There were 714 deaths in New York, last week ending Sept. 28, of which 126 were of cholera. A great conflagration has been raging for some time in the Dismal Swamp, and has destroyed immense quantities of timber. Numbers of bears and other wild animals have been driven from their lairs by the fire. Gov. Ward, of New Jersey, has called an extra session of the Legislature for the 10th inst., to consider a constitutional amendment proposed by Congress, and to fill the vacancy in the United States Senate. Forty-five miles more of the track of the Union Pacific Railroad has been examined and approved by the U. S. Commissioner. This great work appears to be making satisfactory progress. It is now finished for 150 miles. The total amount of the U. S. western revenue receipts for the Eighth month amounted to \$38,043,549. The wires of the Russian American Telegraph have been stretched a distance of 715 miles above New Westminster, British Columbia.

**The South.**—The most careful estimates of the cotton crop of 1867 place it at 1,200,000 bales. The present constitution of North Carolina has been rejected by 182 majority. Mayor Moore, of New Orleans, has been relieved by General Sheridan, and his successor appointed under martial law. The collection of the United States direct tax in Louisiana has been suspended until the first month, 1868.

**The New York Gazette.**—The financial statement of the year is unexpectedly favorable, the receipts for tolls amounting to \$4,187,731, and the expenditures to \$1,453,000. The surplus, amounting to \$2,700,000, will be devoted to the sinking funds for the payment of the canal and State debts.

**The Regulations.**—The following circular was issued by General Howard on the 22d ult.: "In accordance with the instructions of the Secretary of War, it is ordered that on and after the first day of October next, the issue of rations be discontinued, except to the sick in regular organized hospitals, and to the orphan asylums for refugees and freedmen, already existing, and that the State officials who are in the habit of making lists of the poor be carefully notified of this order, so that they may assume the charge of such indigent refugees and freedmen as are not embraced in the above exceptions."

The New Orleans massacre has been followed by the holding of a new Methodist meeting-house, built for the colored people in the suburbs of the city, at an expense of four thousand dollars. The *New Orleans Tribune*, a loyal paper, owned and edited by colored men, has been compelled to suspend publication by the fear of mob violence. The reports from most parts of the South are unfavorable respecting the treatment of the freedmen. Instances of cruelty, and of the most atrocious murder, appear to increase in frequency. Thirty murders of freedmen are said to have been perpetrated in the vicinity of Vicksburg, within a space of six weeks. In some other districts a comparatively peaceful state of affairs prevails, and the freedmen were working industriously. Commissioner Wren, of Mississippi, thinks that the best means of securing a general improvement of the State of the settlement at Davis Bend, he says, "Not a case of drunkenness among the freedmen, all very harmonious; the schools self-supporting. Much of all the property here is held as abandoned, and leased in small lots to the freedmen. Their crops are among the best in the State."

**The Markets.**—The following were the quotations on the 3d inst.—*New York*—American gold 145. U. S. sixes, 1867, 130½. U. S. sixes, 1881, 112; ditto, 5-20, 109. Superfine State flour, \$5.00 a \$7.00. Shipping U. S. \$8.80 a \$10.15. Baltimore flour, \$10.20 a \$11.25. Cotton—41s. Yellow, \$2.50 a \$2.62; white, 28c. Liverpool State oats 38 a 39 cts.; western, 45 a 52 cts. Corn, western mixed, 79 a 80 cts. Middling uplands cotton, 32½ a 33 cts.; New Orleans and Texas, 34½ a 35. Philadelphia—Superfine flour, \$7.50 a \$9; higher grades, \$10.25 a \$16. Red wheat, \$4.75 a \$2.82; white, \$2.85 a \$2.95. Hye, \$1.15. Yellow corn, 92 cts; mixed, western, 81 cts. New oats, 51 cts. Clover seed, 82 cts. Flax seed, \$6.50 a \$7.50. Timothy, \$3.50 a \$4. Flaxseed, \$3.80. The arrivals and sales of beef cattle reached about 2400 head. The market was dull and prices rather lower, extra selling at 17 a 17½ cts.; fair to good, 15 a 16 cts., and common 12 a 14 cts. The market for sheep

continues very dull, owing to the large receipts, which reach 20,000 head. Extra fat sheep sold at 63 a 64 cts. per lb. gross, and fair to good at 6 a 6½. Hogs sold from \$14 a \$15 the 100 lbs. net.

## RECEIPTS.

Received from C. Albertson, Pa., \$2, vol. 39; fr. Ann Kaighn, N. J., \$2, vol. 39; from T. Newlin, I. \$2, vol. 40; from H. Knowles, Agt., N. Y., and D. B. B. R. Knowles, A. Knowles, R. Knowles, and D. N. Moore, \$2 each, vol. 40; from Elizabeth S. Thomas, I. \$2, vol. 40.

## NOTICE.

A Stated Meeting of the Women's Aid Association will be held at No. 112 North Seventh St., on Seven day the 8th inst., at 5 P. M.

SARAH LEWIS, Secretary.

## EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Schools. Application may be made to

Isaac Morgan, Jr., 622 Noble street.  
Samuel Allen, 524 Pine street,  
J. Wistar Evans, 410 Race street.

## WEST GROVE BOARDING SCHOOL,

Chester County, Pa.,  
Will re-open on Second-day the first of Tenth mo next. For circulars, &c., address,

THOS. P. CONARD,  
West Grove, Pa.

## WESTTOWN BOARDING SCHOOL.

The list of Boys entered as pupils for next Session believed to be full. There are, however, still several vacancies for GIRLS. It is requested that applications be forwarded early to Dubré Knight, Superintendent (address Street Road P. O., Chester Co., Pa.) on Charles J. Allen, Treasurer, No. 304 Arch St., Philadelphia mo. 25th, 1866.

## FRIENDS' INDIAN INSTITUTE.

A suitable Friend and his wife are wanted to intend and manage the farm and family under the of the Committee for the gradual Civilization and improvement of the Indian natives at Tunnesassa, Chesnut Co., New York. Also, a female Friend to be the School.

Friends feeling their minds drawn to either of the services, will please apply to

Joseph Elkinton, No. 783 South Street S.  
John M. Kaighn, Camden, N. J.  
Aaron Sharpless, West Chester, Pa.  
Richard B. Bailey, Marshallton, Chester Co., Pa.  
Joseph Scattergood, 413 Spruce Street, Phila.

## WESTTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the BOY'S SECOND MATHEMATICAL SCHOOL, to enter on his duties on the 1st of the Winter Session. Apply to

Samuel Hilles, Wilmington, Del.  
Thomas Evans, 817 Arch St., Phila.  
Joseph Scattergood, 413 Spruce St., Phila.  
Charles J. Allen, 304 Arch St.,

## FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent,—JOSUAH H. WORTON, M. D.

Application for the Admission of Patients made to the Superintendent, to CHARLES ELLIS, C. of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

## MARRIED, at Friends' Meeting-house, at Butter

Ossego Co., N. Y., Sixth month 13th, GEORGE M. EIGHTON, of Philadelphia, to FREDERICK A. WEEDEN, daughter of Samuel and Phebe Weedon, of the former place.

## DIED, on Fourth-day, the 13th of Sixth month

ELIZABETH L., wife of George Rhoads of this city, the 40th year of her age, daughter of Elizabeth and late Robert Letchworth.

—on Fifth-day, the 12th of Seventh month, at Frankford, Philadelphia, E. ELIZABETH, widow of Robert Letchworth, in the 73d year of her age.

WM. H. PILE, PRINTER,

No. 214 Pear street, between Dock and Third.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XL.

SEVENTH-DAY, NINTH MONTH 15, 1866.

NO. 3.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN RICHARDSON,

at No. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

From the "Cornhill Magazine."

## The Loss of the Steamship "London."

(Continued from page 11.)

Soon after getting on the poop I saw there was nothing to be done there, and with the others went down again. I then went into the cuddy, which was well lit up; it was full of people. There was a clergyman praying at the time, very devoutly, and all joined in with deep and earnestness. It was a solemn and trying moment; I waited there about five minutes until prayers were ended, when all arose and with one consent showed a willingness to assist in any way for our safety; even some of the ladies were very energetic—assisting the best they could, and encouraging others. Of course there were some quite strated with fear. Very much has been said on the remarkable coolness and resignation shown by all, which certainly was the case during the last twelve or fourteen hours; but when our present position was first apparent to every one, a fear and excitement showed itself more or less in every face; but there was no raving, no shouting and frolic in the way of assisting. Several were advising what the captain should do. I heard one gentleman, a first-class passenger, saying out, "Tell the captain to shut the water-tight compartments and run to land." I said to myself, "That request is useless now, as the ship is drifting through the openings in the deck; if there is a hole knocked through her bottom, these compartments might be of some use. As for going to land, 'tis too late; we have to go wherever the wind takes us." As soon as prayers were over, I heard one of the officers order more boats to be held to the windows to enable the crew to see how to secure the engine-room hatch. I got two swing-lights from the after-part of the cuddy, and took them to the windows. There were several holding lights at the time; a lady came to us—she was rather tall and exceedingly handsome—and proposed that the ladies should hold the lights if we could assist in anything else. As we were being got up at the time from the poop cabin. I went below 'tween decks to assist with the sails. As I passed along by the engine men, — Greenhill, the chief engineer, sung out the firemen below to come up. Soon I saw a man come, who said, "It's useless to try longer; the fires are out and the water up to middle." All this took place in a short time, say about ten minutes from the time I went on the poop, then to the cuddy, and then to the

engine-room, 'tween decks. Water was coming down at the time, but the mass of it was stopped by sails, &c., placed over the opening. While I stood by the engine-room holding a light for the men who were seeking sails, I had an opportunity of learning our actual condition from the captain, officers, doctor, and engineer, who frequently met there. They had little hope, though they endeavoured to disguise the actual danger. The engineer, — Greenhill, took a light from me to go down into the engine to have a look. It seemed to me a very dangerous undertaking, as there was water still going down, and I could hear it washing about below. He was a very active and able young man. I did not see him return, and felt very uneasy about him—some time after I was relieved to see him, he had come up without my noticing him. At this time, almost all the passengers were assisting; among them was G. V. Brooke, without coat or hat, working with a will. I then helped with a sail which they were getting through to take up on deck; when it was up, I heard an order to bring mattresses, beds, &c., to put in this opening over the engine-room, to prevent it going down in a body; then afterwards to be covered over with sails. The ladies immediately went into their rooms and turned up their beds to get at the mattress. The conduct of some of the ladies were certainly heroic in aiding, directing, and encouraging. After the mattresses were passed out on deck, I went below again. It was then proposed that the passengers should get buckets and pass up water from between decks, as every little would lighten, though two were coming in for one taken out. Buckets were accordingly produced, and fifty or eighty men were soon employed in passing along buckets of water. Some time after, say half-past one o'clock (Thursday morning, the 11th), as we were arranged along 'tween decks, the captain came to us and said, "Men, put down those buckets, and come and try to secure the engine-room hatch, for that is the only chance to save the ship." It has been thought that there must have been some other leak than the engine-room hatch,—the captain's words do not favour the supposition. Immediately some one sung out, "More sails wanted." A very large one was brought, the last one of the lot (as I was told.) It was very heavy, and they had great difficulty in getting it along.

The sails were kept in a store or state-room, on the starboard side about the main-mast; they could not be taken aft by the passage-way on that side of the ship, as it was blocked up with freight or luggage; consequently they had to be taken forward around the mainmast and down the passage-way on the port side, where there was just a narrow enough left to crawl over; and here is where the detention was, a truly painful one at that time. As the sail was thus delayed, some came down to see what was the cause; first the captain, asking, "What is detaining you? hurry it along!" then — Tyeelsther, the second officer, singing out, "Hurry up that sail!" then some one else, "For God's sake bring along that sail, or the ship will sink!" I mention this to show how every space was choked up that should have been clear, and

also to show the unprepared state of the ship for an emergency. At length the sail was got over (I think the passage way had to be cleared first,) and brought on to the deck. There we could best understand our hopeless condition. There was much water on deck, perhaps never less than two feet on the lee side; though she was not taking much over on the weather side, she would roll over and take it over the lee rail; then when she rolled to windward, up would come a tide two to three feet deep, carrying everything before it. It is no wonder, then, the skylight was carried away, particularly when there was a piece of a spar striking against it.

About fifty men were on deck assisting to put the sail where it was required, and where there were already a pile of them about three feet high. The great difficulty appeared to be in preventing the water from floating up the whole pile of sails and getting down. The one we had just brought up was spread over all the others, and nailed to the deck on the lee side with great difficulty. I saw — Harris and the carpenter driving nails in a foot of water. We were about half-an-hour at this job, and oh, how it did blow, and how cold was the water, and what a medley of dismal noises there was—men hailing, the sea roaring, and the rigging whistling! At this time I heard the captain give orders that the pumps should be kept going. When the sail was placed over, I went into the cuddy, and passed on down below to assist in carrying up water—fully convinced that the ship must sink. I did not expect her to keep afloat till daylight, and am astonished to this day that she floated as long as she did. I remember saying twice that night to a young man, "This ship will sink before morning, and there will not be one left to tell the tale." My prophecy did not prove true. It was an error in judgment, a thing which few like to own to, but I am happy to do so in this instance.

Again below, I joined in the ranks of those passing buckets of water. Presently — Grant, one of the junior officers, came round raising volunteers for the pumps. At this time there was a great difficulty in getting men to go to the pumps; not but what they were willing to work, but they dreaded going on to the deck—the night dark and cold—and a danger of being washed out to sea. I consented to go, though I dreaded it as much as the others; moreover, I felt very weak and fatigued, having eaten little that day. On my way up, I noticed that the stern ports on the starboard side were knocked in, and the water coming in; later in the morning those on the port side were also in. On my way out, through the cuddy, I noticed that almost everybody had become very quiet. Ladies were sitting together talking, some reading. Those from the second cabin were there also, as well as the children. Men had become much more calm than they were three or four hours previous; there was very little conversation; every one seemed wrapped in his own thoughts. I got to the cuddy door to go out, watching an opportunity when the ship was over to leeward to open the door, so that the water should not rush in. Once on deck,

what a sensation it was! Water whirling round you up to the knees—wind piercing cold—night intensely dark. I felt my way along in the darkness, again steadying myself by the ropes, &c., on the weather bulwarks, to about midships, to where the pumps were. I found about a dozen men there. I could barely distinguish figures in the dark, though I recognized a few voices. It required six to turn the wheels that worked the pumps, three at each handle. All were passengers there at the time, excepting two of the officers,—Angel and—Grant. Angel was placed to see the pumps were kept going—and nobly he did his duty. I saw him there after we had left the ship, still at his post, encouraging and assisting. There were no sailors at the pumps at any time after I went out. I do not think worse of them for this. They had had a hard week of it—most all the time at work—all the time wet; poorly fed for the last day or two. Some were disabled by so much lumber on deck; I saw several who had bad wounds. —Munroe went to the forecabin to get men for the pumps, and twenty pleased illness. The work at the pumps was very laborious. We had to take brief spells, being short-handed; occasionally we would have a fresh hand, whom Grant had persuaded to come, while others left off, quite done up; and indeed it was a trying place. The sea broke over us so roughly, that sometimes I felt the water up round my neck. At those moments the pumps would have to stop; but as soon as the tide had receded, then would be heard Angel's voice, "Round with the pumps, keep them going." There was a good deal of talking and encouraging to keep up pluck and make the work go lighter. I felt much happier here, away from the women, for seeing so many frightened made me feel worse, and when inside you did not know how matters stood, whether she was sinking or not; and I had a great horror of being shut up inside when she did go. After being about an hour there we were getting fatigued—wanted a stimulant—and wishing we could get something to drink. One said, "I will try and get some." He went to the cuddy and returned with a bottle of whiskey, which was fully appreciated. It gave us new life. Some time after, —Main, a passenger, and I were sent to the cuddy to raise volunteers, as we were getting worn out. When we got in I saw a good many men sitting there, and asked every one; some went out, some were not well, some sitting beside their wives and children. The mother would say, "Oh, do not take him from me!" Most of the passengers were still below, carrying up water.

"To ———"

"12th month, 1845.

"Thy letter was reasonable and valuable unto me, who am unworthy of the least of all the Lord's mercies; but so it is, the Lord doth think of me, and petheth it in the hearts of those that love Him, to think of me also, so that our blessings abound, both spiritually and temporally. ——— Words are insufficient to set forth the gracious dealings of my God to me; His loving-kindness and tender mercies over all my weakness and fears. The enemy is, indeed, very near, and very troublesome, but there are seasons where He who is omnipotent reigneth over all. I speak of His righteousness, even of His only, for surely I am of myself more brutish than any man, and have not the understanding of a man. I am lost in wonder, love and praise; and fully persuaded I

am, that all that will come, may come, and know the Lord Jesus, to be made unto them of God, wisdom, and sanctification, and redemption. When thy salutation reached me, I was under some cloud of spirit because of the adversaries, but in Christ Jesus, we do rejoice, and in Him we will exceedingly rejoice; and whatsoever he saith unto us, let us do it. My heart rejoiceth and my tongue sings for joy, in believing that glory inconceivable to man, awaits the church; but she hath a baptism to be baptized with, and how is she straitened until it be accomplished.

"It is very pleasant to hear that ——— has had a valuable letter from ———. It is no new thing for 'deep to call unto deep,' at the noise of the Lord's waterspouts; and whilst with thee, my prayer to God is, that all His baptized servants may be preserved far from a party spirit, I earnestly crave that they may know a patient waiting for His Word, and a faithful surrendering of themselves unto His blessed will in all things. I trust I feel for, and with our deeply tried friend, and hope that ——— has been enabled to send him a present of the fruits of the land, 'a little honey, a little balm, and a few spices,' that may prove cordial and healing to his wounded spirit. I cannot say whether the Lord's time is fully come to turn His hand upon us, to purely purge away our dross, and take away all our tin, but I believe that He is preparing instruments among us, by, and in whom, if they are faithful, He will arise, and shake, not the earth only, but also heaven; and with fear and trembling, my spirit is striving to say, 'even so, come Lord Jesus,' until there is nothing remaining but that which cannot be shaken."

"To ———"

"10th of 1st month, 1846.

"I feel not only unworthy but incapable also of entering into that sympathy with thee, which the contents of thine seem to call for, from a brother in travail of spirit for the promotion of truth and righteousness in the earth. My spirit can answer, Amen, to thine, in believing that not a finger must be put to the shaking ark, unbidden. But I would not have thee to be at all discouraged because all do not see alike that love the Lord in sincerity; for by these things, the faith, the wisdom, and patience of the saints are brought into exercise and proved. God seeth the spring and motive of the action, and regards the first more than the last, and as the eye is kept single, and the ear open to the precious adoptions of the Holy Spirit, we shall all be gently and safely led on, until we all see eye to eye, and know that union which Christ prayed for, 'that those whom Thou hast given me, may be one, as we are one.' And it appears sealed upon my spirit, that this oneness of heart and soul, with a unity in the faith, is the first and principal thing that must be laboured for by the baptized servants and handmaids of our Lord; and that they must take heed to their own spirits, and keep their own hearts with all diligence, that they may be prepared, either to stand with the Lamb upon Mount Zion, or to follow Him whithersoever He goeth; and in quietness and confidence shall be the strength of these. I believe that deliverance to the wrestling seed of Jacob will be wrought through an inward travail of soul before the Lord. Israel was as perfectly safe when in their tents under the cloudy pillar, as when it was taken up, and they marching towards the promised land. My dear friend, I could write of weaknesses, of unworthiness, of ignorance, and of blushings and confusion of face; but I leave all this to God, and feel great peace in being willing to appear as a fool. One thing

have I desired of the Lord, and that will I suffer, that I may have fellowship with them that walk in the Light. May these stand as servants waiting for their Lord, with their loins girded and their lamps burning, keeping their habitations in the Light, then their dwelling will be safe. I am unable to express what I feel on half of the wrestling seed of Jacob. My heart desire and prayer to God is that He will not suffer them to be dismayed; and fully persuaded I am that nothing without us can harm us, so long as Christ Jesus is within us."

"To ———"

"25th of 4th month, 1846.

"Thy truly consoling salutation of affection and Gospel love I received this morning, and heart unites with thine in ascribing honor, that giving, and praise, unto Him whose tender mercies are over all His works. The words forcibly with me, 'Except I wash thee thou hast no part with me.' The mercy and loving-kindness of the Lord in this outward afflictive dispensation of His unerring wisdom, is unutterable unto me, who am of myself altogether filthy, unworthy of the least of all His mercies. ——— My endeared friend, I feel unworthy to utter precious peace and solemnity which is the portion of my cup from the hand of the Lord. My wife is borne up surprisingly, and her part resignation is an evident token of divine support.

From "Hunt's Merchants' Magazine"

### Coal in the United States.

(Continued from page 16.)

The operation of mining is very similar in mines. In the one referred to above, visitors allowed seats in the little cars in which the is sent out of the mine. The driver is a boy, a small lamp hung to his cap, in front. A no mine, called a pusher, whose business it is to coal out of the mines, accompanies. The floor of earth about the entrance is nearly sloped, well-fitted timbers protect the roof and sides. The roof is of coal, and the sides of coal down three feet, where a layer of fine clay comes followed by slate. Through the slate water percolates, and so renders the passage wet and slow. A light rail is laid all through the mine for cars to run upon. Every 25 feet occurs the entrance to a side room or chamber. These are 25 feet, and are then enlarged to the six 18 feet. Leaving the car and walking in chamber, we find the miners at work. The flat on their backs or on their sides, and dip the shale under the coal, thus undermining. Then with wedges they split off great pieces large as possible, sometimes several feet long and two feet thick. Thus the miners work until in the afternoon; the work is excessively hot but they earn good wages. Returning from mines, we must walk out, for the car is not for business. The laden coal cars descend their own gravity to the platforms, through which it is dropped upon a screen or sieve which allows the smaller pieces and the dust to pass and the large to rest runs directly into the car, an hour or so is delivered to the dealer at junction. Mining in all the other bituminous and even anthracite coal mines, is the same as used here, only that in all the anthracite and many of the bituminous the coal lies in the watercourses, and so wells have to be shafting put down, and a vast amount of pumped, thus enhancing the cost of mining at the coal.

The former practice, in opening a vein of coal was to begin at the "outcropping" and clear the earth, or make a large number of open

his was found to be too expensive and laborious. The more convenient method has been adopted of making an opening on an inclined plane or slope, and laying upon it the two tracks before mentioned—one for the loaded cars, which are drawn out by an engine, and the other for empty cars to descend into the mine. The dimensions of these openings are generally five feet in length and three in breadth.

The more common process, however, is to sink shaft into the mine. Entrance and egress are made by a bucket or "carriage," which is let down and drawn up by a rope and windlass. Accidents sometimes happen from the breaking of the rope, and sometimes a person in the carriage is seized with dizziness and falls from the carriage to the bottom of the mine. To prevent accidents from the breaking of the rope, hooks are fixed to the carriage, which fasten, in such cases, to the sides of the shaft, enabling the rescuers to get the persons inside from their perilous situation.

At the Baltimore mines, at Wilkesbarre, Pennsylvania, two veins of coal, one immediately beneath the other, are worked at the same time. The upper one has been excavated clear to the Black Diamond Mines, "a distance of two miles. The first the coal was taken from the Baltimore mines by several cuttings, opening out upon a row of gorges, at the bottom of which flows a little stream of water. Only a footpath lies between these cavernous portals and the edge of the descent, exciting our curiosity to learn how the coal could be removed in any considerable quantities. Upon this point the floor of the mine slopes gradually to the furthest extremity of the excavation. The miners may be seen in the distance, with a little lamp in his visor, moving hither and thither, and appearing in the darkness like shades of denizens of the outer world. In the distance the spectacle is fully as impressive—evergreens in the little gorge laden with snow, streamlet flowing rapidly along, the entrances of the portals hung with icicles, the floor and roof covered as with stalagmites and stalactites, of ice, coloured by the carbonate of iron, the lights and shadows made by the pillars of coal which have been left to support the roof, and the lights of the dusky labourers gliding hither and thither far away down there beneath the earth.

These pillars of coal, usually about six feet in diameter, are always left to support the roof of the mine: and when the vein is worked out they are removed, and wooden pillars having been put in to take their place, sometimes the roof falls, and a falling-in may happen to be within the mine. The town of Pittston, at the confluence of the Lackawanna and Susquehanna, has been ruined in this manner; but as yet of those fallings-in have taken place. A few years ago, however, the public school-house sunk into one of these places.

These chambers, many of them within the veins, are really very fine. Some of them are so that a person of medium stature must stoop to go through them, and so narrow that two persons can barely pass each other. But others are eight feet from floor to roof, and fifty feet in depth; the roof consisting of slate smoothly bedded, and beautifully indented with perfectly even fossils, and the walls being rough where coal had been in contact with the slate, with stems of fossil trees here and there in half relief, one to three feet in diameter. A fossilised top of a tree, four feet high, three feet across the top, and six feet at the but, was found in Baltimore mine, and removed with great care to the Court House at Wilkesbarre. The mines

abound in beautiful and perfect fossils, principally stems of plants; quartz crystals are also found in the rock which covers the coal.

The anthracite coal is removed from its bed by blasting. It is then placed in cars and drawn by mules. Sometimes it is taken to the portal of the mine in this manner, but oftener is drawn up the slope by pulleys and "gravity cars" into the "cracker," a lofty building where it is unloaded, broken to pieces, screened, and the slate picked from it by children. It is then poured into troughs or conductors of iron, which discharge it into railroad cars and canal boats for transportation. Among the piles of slate and "screenings" which are rejected by this operation are considerable quantities of good coal, which is generally given away to any one who will take the trouble to gather it out. It is no unusual thing to witness boys, and even girls and grown women, ragged and unclean, barefooted and bareheaded, gaunt and sunnied, filling their baskets, bags and pails, lifting the dirty burden to their shoulders and staggering away to their wretched homes.

These miners are paid by the quantity of coal got out by them. They seldom work later than three or four o'clock in the afternoon. Some of them, especially the Welsh, are frugal and industrious. Their homes are well kept, and their families interesting. Shelves of books, and newspapers, show that they are intent upon improvement; and in some of the larger towns, they have established reading societies and lyceums. In several instances they have in this way collected a valuable library and cabinets of geological specimens from the mines where they are employed. They have also strong religious tendencies, and do much toward correcting the disposition and manners of their ruder associates.

But too often the miners are of a different class, and spend as fast as they earn. In a time of scarcity, as during the late great "strike," they are reduced almost to want through their improvidence, although they may have been earning a hundred dollars a month. Yet they never seem to hesitate, however well they may be doing, to break off work and demand higher wages. They are organized into secret societies—a measure often necessary as a protection against the exactions of the companies, who are often unregarding of their rights and welfare; and when these strikes occur, they are thus pledged to stand by each other.

Many of the miners are rude, ignorant, and even dangerous. Some of them speak a patois or dialect which requires interpreting to render it intelligible. The children acquire their vicious ways, swearing, insulting persons who happen to speak to them, throwing stones at animals, destroying fences, and doing mischief maliciously. Their appearance, coarse and ragged in dress, dirty and black with coal dust, corresponds with their manners. They seldom attend school or learn to read; and the indications of their future career are not very encouraging.

It is of the utmost importance, it will be seen, that this dying-out of industry shall be somewhat modified. The acts of this class have been able to create high prices of coal everywhere, in other mines as well as at home, and indicate possible consequences of the most serious character. The multiplication of companies would tend to ameliorate their conditions, also the construction of avenues of transit, the managers of which would not have their interests identified too closely with the mining as well as the production of coal.

There is no other way than whole-hearted and honest-hearted christianity to attain the heavenly

kingdom. If every individual member of a church would do his duty, the church would do right as a whole.

For "The Friend."

#### Thoughts for the Times.—No. 41.

When George Fox was under the preparing hand for the service to which his life was dedicated, he was under great temptations sometimes, and his inward sufferings were heavy, but he could find none to open his condition to, but the Lord alone. He cried to the Lord saying, "O Lord should I be thus? seeing I was never addicted to commit these evils," and the Lord answered, "It was needful that I should have a sense of all conditions, how else should I speak to all conditions?" In this, says he, I saw the infinite love of God. Similar deep baptisms, have always been the portion of those who were under the same preparing hand for the same service; and if some of the autobiographies of our eminent ministers are more full upon this point than others, we are not to suppose that the preparation was not undergone by all who were truly called. Many of the records of their trials which these faithful servants preserved, were, we cannot doubt, written under the Divine guidance, for the instruction and consolation of succeeding generations.

One of the fullest in these respects, of all these narratives, is that of Thomas Scattergood. He was one of those, says the short notice prefixed to his memoirs, "who knew what it was to be 'in depths of it'; to be brought very low after seasons of divine favour, and often to partake, according to his measure, of that bitter cup which was drunk in its fullness by his Lord and Saviour. But these seasons of conflict and suffering, painful as they might be at the time, were blessed to him as a means of preservation, and to prepare him not only to minister more effectually to the suffering and oppressed seed of God; but also to partake more largely of those consolations which are in Christ when he, in whose hands are the times and seasons, saw meet to change the dispensation and permit him to partake, with his blessed Lord, in his resurrection into dominion and glory. Few persons, it is believed, were preserved more steadily in a state of inward exercise and retirement of spirit, waiting on the Lord; or given to see more clearly, or minister more pertinently to the states of meetings and individuals; and few have left behind them more seals to the baptizing and convincing power of their gospel ministry." Seldom if ever has a more faithful, unflattering record been left of the close exercises and deep baptisms through which the true disciple has to pass. To a superficial observer his whole life might seem to be clouded with gloom and melancholy; but many still living, while they remember his habitual awful reverent frame of mind, and the solemnity and authority of his ministry both in meetings and in families, also recall—when the weight of his burden was somewhat lifted—his sweet benignant smile, and his innocent, cheerful conversation.

Thomas Scattergood was acknowledged as a minister in the 35th year of his age. "He endured many fiery baptisms and close conflicts of mind," says the memoir of his life, "which tended to deepen him in the root of divine life, and prepare him for more extensive usefulness in the solemn service whereunto he was called. Being brought into a state of humble dependence upon the openings and leadings of the Holy Spirit, and reverent waiting upon Christ Jesus the minister of ministers, he was made of quick understanding in the fear of the Lord, and careful to wait for the fresh extending of heavenly help before he

engaged in testimony; and thus keeping, in simplicity and singleness of heart, to the gift bestowed upon him, he was often enabled as a good steward of the manifold grace of God, to bring forth out of the treasury things new and old, to the edification and comfort of his hearers."

How full of instruction are the following entries in his diary, and what holy watchfulness and deep self-abandonment do they show!

"12th mo. 30th, 1782. A day of sorrow; yet this evening I feel a broken heart and am baptized into tears. For such an one as I, this is a great favour, worthy of recording. O Lord, my God, thou hast not forsaken me, though I have strayed far from thee. Renew thy promises as in former years. I am unworthy to ask for thy blessing, yet I desire to wait for it.

"1st mo. 10th, 1783. O what pain a small deviation from the strict law causes to a quickened, feeling mind. Lord, help me to know and keep thy mind more and more.

"11th. How apt is one deviation, though it may seem as only from a tittle of the law, to beget another. When an old beloved lust, in some degree mortified, puts up its head, what is there to be done but to know it bruised. O, when shall I know my beloved lusts so put down, as not to be able to rise. Lord! enable me to bear the rod and suffer it to do its office, that peace may again spring up through it.

"17th. What wouldst thou have me to do, Lord? When wilt thou be graciously pleased to favour with the lifting up of the light of thy heavenly countenance, and destroy my enemies? Be pleased to preserve me through the close exercises of my soul; manifest thy will clearly to thy servant, and uphold me in it; enable me to bear and spare not, O Lord! that I may experience thy goodness, as in the land of the living.

"2d mo. 13th. Attended meeting, and near the close had something to say. How an I tried with presentations of false visions, and at times narrow is my escape. Oh that my gracious Master may preserve me from putting forth a hand to steal, in the poverty that is necessary for me.

"14th. Felt my enemy gaining upon me by lulling into ease. Thanks be to the Lord, I feel more animated and holy to resist him. This is an old and sore evil; slothful in business, and not enough fervent in spirit serving God. O for more animation in time to come, and forgiveness of past defects.

"3d mo. 10th. I am indeed a buffeted and sifted servant. O Lord! forgive me the sins of my youth. I have often and again slid into folly, and what have I to lean upon but thy arm of mercy. Be graciously pleased to open a way where there appears none; preserve me from dishonouring thee! continue to send a little help, and enlighten my darkness. O my feebleness! I hardly dare say I trust in God, though I desire to do so.

"4th mo. 9th. O wretched man that I am, who shall deliver me from this body of death and sorrow of heart? Is there not virtue in Him who is called the Prince of Peace, to dispense peace to such a poor cast down one? O yes, there is, but I cannot command it. Lord preserve me from taking flight in this winter season. Preserve me in the faith, and be pleased to increase it; make me worthy to receive redemption and mercy by thy washing, preparing hand; be pleased to blot out thy remembrance of the sins of my youth; my frequent backslidings and my neglect of thy law. O Lord, I am miserable without thee! look down upon me. I dare not seek pleasure away from thee,—I believe thou canst change

my misery into comfort in a moment, if thou please. I hope in thy tender mercy, and though I am thus cast down, I will endeavour to trust in thee.

"14th. Through mercy I feel my way more clearly cast up. I have not walked enough with full dedication of heart,—and have been too uneasy under the fiery law that must be submitted to, for removing all my corruptions. O Lord, that thou wouldst animate, enlighten and keep me under it, until its office is finished.

"16th. Hope I have felt something of the same healing virtue, that went forth to him, whose withered hand was healed upon stretching it out at the divine command. Under the cross springs the crown of peace; but nothing is due to the creature, neither is it of him that willetth, nor of him who runneth,—although there is much required for the poor creature to do."

In the years 1792 and 1793, Thos. Scattergood paid a religious visit to Friends and others in the Southern States, from Maryland to Georgia. The notes which are preserved of his trials and services during that visit, show how cautiously he journeyed—in what implicit reliance on his divine guide.

At Augusta, in Georgia, "I saw a pretty large number of people, both male and female, carrying dirt on hand barrows to make a causeway. At first sight of them, I felt pity flow in my heart towards them, under a sense of their burdens,—and after expressing my sympathy with them, I found a necessity laid on me to pull off my hat and preach to them the gospel of Jesus Christ, their suffering Lord and Saviour. It was a solemn time; and when I took off my hat, they did so likewise, and threw aside their tools; and there was loud weeping among them. In this unexpectedly labouring among this Ethiopian congregation, (not having the least thought of such a thing five minutes before) there was no want of words, or of that seasoning sweetness which makes right words reach the heart, and under this precious sense, it would have been as my meat and drink, to have spent myself in labours of love, if instead of twenty or thirty there had been as many hundreds: great was the sweetness which attended on my mind after leaving them."

At a small Friends' meeting at Edisto, he sat most of the meeting in silence, "taking a view of our poor desolate Society here; how she sits as a mournful, bereaved widow, her walls thrown down and her gates burned with fire. It has appeared to me that Truth, the pure unchangeable precious Truth, will not flourish in this dissipated place, until the righteous God of Truth rises up to assert his own sovereignty."

"3d mo. 1st, 1793. Very poor and distressed this morning, hardly ever felt more so than on the road: a wilderness ride indeed, both inwardly and outwardly. Lord be graciously pleased not to leave me in my distress, but help thy poor servant; is the cry of my soul. O that I may be more and more redeemed, and my body made a temple for the Lord my God. What is man when deprived of the sweet incomes of his love. I have borne chastisement and I desire not to offend; that which I see not teach thou me, and if I have done any iniquity purge me, and enable me to do so no more."

"3d mo. 6th. I went to meeting in great poverty, and after a time apprehended I felt a little opening to stand up, but found it hard work to get along, and after I had stood some time, the carelessness and inattention of the people appeared great, insomuch that I was defeated in my first prospect, and I was under a necessity to sit down, believing it safest so to do, as Truth rose not. But toward the close of the meeting, I ventured

to stand up again, and then had close and searching things to deliver, to a state that is already ready and full of activity, in the will of the creature, and had to tell them that there were signs and groans which at seasons cannot be uttered which were more acceptable than a multitude of words, songs, prayers, &c., in man's will at a time."

In a letter which he wrote from Lynchburg, Elizabeth Henricks, a Friend who had been the means of gathering a meeting at Bannister, Va., he tells her "Therefore keep true in her; be sincere, remember that the Lord sees us at a time; *sincerity is the life of all our graces, or puts life into all our duties. If we have no sincerity and truth of heart then all our performances will be no more than a dead thing, offers in the nostrils of God, who will not then smell offerings as a sweet savour.*"

"4th mo. 14th. Went to meeting; wait O Lord, to be found doing the will of thy God, this thy lonely state. O for preservation to be out to the end of this journey! more depth, more patience, more stability are wanting to carry through and over all."

"4th mo. 16th. I am blind and poor this morning; not knowing which way to take or what to do. O that I may be preserved in that patience which gains the victory, and be so kept as to nothing against the Truth.

"5th mo. 3d. I have spent this day in an excited condition; who is so blind as thy servant, or so deaf as thy messenger. Oh what a fear thing it is to incur that reproof from the Lord, 'thou hast run and I have not sent thee, therefore thou shalt not profit the people at all.' May I be kept subjectly given up to do his will; y humbly and patiently to wait for the pointing of my heavenly Master's finger, and that more stability and gravity may be the girdle of my loins.

"4th. If thy presence, O Lord, go not with me, take me not hence, is the language of my soul. All I desire is clearness of sight, and thy will be done.

"9th. O what a singular path I tread! yet not one murmuring thought arise, but wait patience to see the end of every trying dispersion. My body is weak and reduced by exertion of mind. May I be favoured to hold on the way that is cast up; for all these sufferings are not my own account,—there is a cause. Zion's waste, her walls are thrown down, and her gates are consumed as by fire, her sons gone into gross captivity for which I mourn day by day. Yet amidst this distress he writes, "I have been delighted frequently since we have been with the singing of birds, particularly between daylight and sunrise."

#### An Unintentional Error Corrected.

To the EDITOR OF THE BRITISH FRIEND.

Dear Friend,—I wish to call thy attention to a quotation in thy last number from *The Philadelphia Friend*, explanatory of the recent course of action, and present condition of Philadelphia Yearly Meeting.

Alluding to separations from that and other co-ordinate bodies, is this statement:—"More than in either of these (Ohio and Philadelphia) have withdrawn from London Yearly Meeting." This statement, occurring in conjunction with what is supposed to have taken place in America during the past seven years, conveyed to me an entirely erroneous impression to the state of things in this country. An unequivocal and unambiguous testimony was felt to be called for on behalf of some, against the changes recently developed within our borders; and a work to be

fect, entitled "An Expostulation on behalf of the Truth, against Departures in Doctrine, Praise, and Discipline," has been received with approval by many; but the disunity thereby manifested with recent conclusions of London Yearly Meeting, is not in accordance with "first principles," has in no case, that I am aware of, resulted in a cessation of membership with the body. Whilst I should hope there are many who feel that a worse thing than a separation would accrue to being amalgamated with a totally corrupt and postulated church, I believe that those who have secured the greatest obloquy for a faithful exposure of our declined condition, are of the number—such as are still exercised in a travail of spirit for the welfare of Zion, and for the preservation of a living remnant in our borders, until a bright day shall dawn upon us as a church, and who at up the petition in filial fear, "Spare thy people, O God, and give not thine heritage to reproach." J. A.

London, 7th month 28th, 1866.

[Our "unintentional error" was in supposing that those Friends who are alluded to in the above communication as bearing "an open and unequivocal testimony" against the changes recently developed within" the limits of London Yearly Meeting, and who, we knew, had held some meetings of their own, considered themselves as separated from that Yearly Meeting. We are sincerely glad to find that such is not the case, and would strongly and affectionately urge upon them to avoid all separation, and to be willing to suffer patiently for the Truth and their testimony.]—EDITORS.

For "The Friend."

#### German Wines.

The following account of the manufacture of wine in the valley of the Main, is furnished by a correspondent of the *Nation* under date of Hochim, June 12.

"In walking from Frankfort to Mayence on the right bank of the Main, about half an hour's walk from the latter, one passes the little village, and famous by its wines. I left Frankfort yesterday at noon, and walked down the wide and easant valley of the Main, stopping at a little place over night, and reached here at noon. The Main Valley is far wider than I thought, on ten to fourteen miles, beautifully variegated by sandy plains, and wide low bottoms, all gradually sloping upwards to the distant hills, at look to-day, in the smoke, like a chiselled cement of the heavens, only of a little darker hue. It is a fertile valley, with fields of generous wheat and potatoes, and on every sunny side of a lock is a vineyard giving promise of plenty of grapes."

"The process of wine making is more simple than I had supposed, but requires considerable labour. The factory was in full operation when I was there, employing between eighty and ninety workers. When the grapes are picked in the vineyards they must be pressed at once, else there is a slight fermentation, and they are useless for the best wines. If red grapes are pressed the same day they are picked, a white wine can be made from them; but if they lie a week the juice ferments very slightly, and receives the color of the skin of the grape, and red wine is the result. The steinberger factory has presses scattered over the country, to which are sent the best workmen in the factory, and in this manner a better juice is secured than if it were purchased of the growers. The grapes are bought of the latter by the pound, fifty-five pounds making, ordinarily, fifteen casks of wine. When the juice is pressed out

it is put into large vats, and allowed to ferment till spring. In the spring a small portion, (the factory only knows how much,) of white sugar is mixed with the juice, and it is put in bottles in the 'hot room,' to wit: up stairs. The bottles remain here on their sides eight or ten days, when they are carried below into a first, then a second cellar, where they lie at first horizontal, but finally inclined at an angle of about thirty degrees. In the last position they are turned over every day to allow the sediment to accumulate on the cork. If less than one sixth of them are broken by fermentation the workmen are dissatisfied. In the fulness of time they are brought up stairs to be 'disgorged,' the operator carefully keeping the bottle upside down, so as not to disturb and remix the deposit that has accumulated during the six, eight, or twelve months that it has lain in the cellar. The operation is one of delicacy and requires considerable skill. The operator holds the bottle still a little inclined, and pointed from him, while with one hand he cuts the strings, and gradually loosens the cork, which presently flies out suddenly, and is followed by the gas and a few spoonfuls of wine, which completely carry away the sediment. All this happens before the workman can arrest it with his thumb, and he must be quick or he loses too much wine. He then passes the bottle to the next workman, who fills the remaining space with *liqueur*, to wit: a mixture of melted white sugar, a little very old wine and some Cognac. The proportion in which these three are mixed was withheld from me as a secret of the trade; the amount put in each bottle varies very slightly, though it is generally over a gill. The bottle is then ready to be recorked, wired, labelled and packed. That which is to be sent to India is fastened and packed with the greatest care. Every box of bottles is weighed and numbered, so that, should a bottle be taken out between here and Calcutta, it can be discovered on investigation.

"I have said nothing about the various mixings that take place in the casks before the juice is put in bottles, since that is kept secret. In the vicinity are grown many qualities of grapes, some good, some indifferent, and, for the manufacture even of champagne, some must be 'mixed up,' and others 'mixed down.' All this is done while it is in the casks by an ingenious system of pumps and hose. I will not say that nothing else is added besides what I have mentioned above; one of the proprietors gave me his assurance that the admixture, first of white sugar before bottling, second, of white sugar, old wine and Cognac at the end of the process, completed the whole list.

"The grape from which the Hochheimer itself is made is a white grape, called the *Kiesling*; the other varieties are made from red grapes, called the *Earl of Burgundy*, and the *Klbroth*.

"But the king of German wines is the *Steinberger*. It is grown near *Bubrich*, in the Rhine, in a vineyard of one hundred acres in extent, owned by the duke of *Nassau*. The vineyard stands on the summit of a gentle hill, about two miles back of the Rhine, on the right bank. It is naturally a very favourable locality, and the duke has brought it to perfection by the greatest care and attention through many years. The *Steinberger* wine is the pure juice of the grape, unadmixed with any other article whatever. There is, of course, but little of it in circulation, and all that is offered is eagerly bought at great prices."

"About the twelfth year of my age, my father being abroad, my mother reproved me for some misconduct, to which I made an undutiful reply; and the next First-day, as I walked with my fa-

ther returning from meeting, he told me he understood I had behaved amiss to my mother, and advised me to be more careful in future. I knew myself blamable, and in shame and confusion remained silent. Being thus awakened to a sense of my wickedness, I felt remorse in my mind, and getting home, I retired and prayed to the Lord to forgive me; and do not remember that I ever, after that, spoke unhandsonably to either of my parents, however foolish in some other things.—*J. Woolman.*

#### REJECTED OF MEN.

"The foxes have holes, and the birds of the air have nests, but the Son of Man hath not where to lay his head." Matt. viii. 20.

Birds have their quiet nests,  
Foxes their holes, and man his peaceful bed;  
All creatures have their rest,  
But Jesus had not where to lay his head.

Winds have their hour of calm—  
And waves—to slumber on the voiceless deep;  
Eve hath its breath of balm  
To hush all senses and all sounds to sleep.

The wild deer bath its hair,  
The homeward flocks the shelter of their shed;  
All have their rest from care,  
But Jesus had not where to lay his head.

And yet he came to give  
The weary and the heavy laden rest—  
To bid the sinner live,  
And soothe our griefs to slumber on his breast.

What! then, am I, my God,  
Permitted thus the paths of peace to tread?  
Peace—purchased by the blood  
Of Him who had not where to lay his head.

I—who once made him grieve;  
I—who once bid his gentle spirit mourn—  
Whose hands essayed to weave  
For his meek brow the cruel crown of thorn—

Oh! why should I have peace?  
Why?—but for that unchanged, undying love,  
Which would not—could not cease,  
Until it made me hear of joys above.

Yes! but for pardoning grace,  
I feel I never should in glory see  
The brightness of that face,  
That once was pale and agonized for me.

Let the birds seek their nest,  
Foxes their holes, and man his peaceful bed;  
Come, Saviour, on my breast,  
Deign to repose thine oft-rejected head!

Come! give me rest, and take  
The only rest on earth Thou hast—within  
A heart, that for Thy sake  
Lies bleeding, broken, penitent for sin.

#### GIVE US OUR DAILY BREAD.

Day by day the manna fall;  
Oh to learn this lesson well  
Still by constant mercy fed,  
Give us, Lord, our daily bread.

"Day by day" the promise reads;  
Duly strength for daily needs;  
Cast foreboding fears away;  
Take the manna of to-day!

Lord, our times are in thy hand:  
All our sanguine hopes have planned,  
To thy wisdom we resign,  
And would mould our wills to thine.

Thou our daily task shalt give;  
Day by day to thee we live;  
So shall added years fulfil  
Not our own, our Father's will.

Oh, to live exempt from care,  
By the energy of prayer;  
Strong in faith, with mind subdued,  
Glowing yet with gratitude!

Cowder.

For "The Friend."

## The Juvenile Column, No. 20.

The following awakening and powerful testimony of William Penn is commended to the serious attention and application of our juvenile readers.

"Here," as another pen conveys, (in allusion to words without power and life, and those that are put forth in the ability which God giveth,) "Here is a true apostle of Christ, telling me *where* to seek for my beloved! Oh, here is indeed a feeder of the flock—a faithful ever-seer!—Here I am met with bread—not with the dry, hard stones of words and notions; here I am turned to the *life within—the light within*—and not drawn out into a labyrinth of confused conceptions about it." &c.

One word of affectionate entreaty remains before concluding these essays! Dear young Friends, let not, I implore you, the temptation to turn your hearts away, to barter them for any deceitful worldly birth-right, to put off their surrender to a mere profitious or more convenient season, neither in anywise, to resist such testimonies as the subdued to the power and goodness of the adorable Jesus, ever be permitted to rob you of that sweet and enduring "recompense of reward," which is laid up in heaven for all the Lord's humble, seeking, and obedient children. But yield yourselves wholly, in the kindness and pliability of your youth, as the *willing and obedient*, who shall eat of the good of the land, unto the God of all grace; and then He will wash you thoroughly, anoint, and sanctify you; then His beauty shall be seen upon you; then the great mystery of God—which the apostle designates as "Christ in you the hope of glory," shall be made manifest, to your own unspeakable joy, and to the help and comfort of all who are enquiring the way to Zion; and then also, the Lord on high will establish the work of His hands, even the transforming, glorifying power of His Holy Spirit to your present and eternal peace, and to the honour of His ever worthy and adorable name.

William Penn thus movingly pleads: "And you, young convinced ones, be you entreated and exhorted to a diligent and chaste waiting upon God in the way of his blessed manifestation and appearance of himself to you. Look not out but *within*; let not another's liberty be your snare: neither act by imitation, but sense and feeling of God's power in yourselves: crush not the tender budgings of it in your souls, nor overrun in your desires and your warmth of affections the *holy and gentle notions* of it. Remember it is a *still voice* that speaks to us in this day, and that it is not to be heard in the noises and hurries of the mind, but is *distinctly understood in a retired frame*. Jesus loved and chose out solitudes, often going to mountains, to gardens, and sea-sides, to avoid crowds and hurries, to show his disciples it was good to be solitary and sit loose to the world. Two enemies lie near your state, imagination and liberty; but the plain, practical, living, holy truth, that has convinced you will preserve you, if you mind it in yourselves, and bring all thoughts, imaginations, and affections to the test of it, to see if they are wrought in God, or of the enemy, or your own selves: so will a true taste, discerning and judgment be preserved to you, of what you should do and leave undone: and in your diligence and faithfulness in this way you will come to inherit substance, and Christ, the eternal wisdom, will fill your treasury. And when you are converted, as well as convinced, then confirm your brethren, and be ready to every good word and work that the Lord shall call you to, that you may be to his praise who has chosen

you to be partakers with the saints in light of a kingdom that cannot be shaken, an inheritance incorruptible, in eternal habitations.

"And now, as for you that are the children of God's people, a great concern is upon my spirit for your good, and often are my knees bowed to the God of your fathers for you, that you may come to be partakers of the same divine life and power, that has been the glory of this day, that a generation you may be to God, a holy nation and a peculiar people, zealous of good works, when all our heads are laid in the dust. Oh, you young men and women, let it not suffice you that you are the children of the people of the Lord! *you must also be born again* if you will inherit the kingdom of God! Your fathers are but such after the flesh, and could but begot you into the likeness of the first Adam; but you must be begotten into the likeness of the second Adam by a *spiritual generation*. And therefore look carefully about you. Oh, ye children of the children of God, consider your standing, and see what you are in relation to this divine kindred, family, and birth! *Have you obeyed the light, and received and walked in the Spirit, that is the incorruptible seed of the word and kingdom of God, of which you must be born again?* God is no respecter of persons: the father cannot save or answer for the child, the child for the father, 'but in the sin thou sinnest thou shalt die, and in the righteousness thou doest through Christ Jesus thou shalt live': for it is the willing and obedient that shall eat the good of the land.

"Be not deceived, God is not mocked; such as all nations and people sow, such shall they reap at the hand of the just God. And then your many and great privileges above the children of other people will add weight in the scale against you, if you choose not the way of the Lord; for you have had line upon line, and precept upon precept, and not only good doctrine but good example; and which is more, you have been turned to and acquainted with a *principle in yourselves* which others have been ignorant of, and you know you may be as good as you please, without the fear of frowns and blows, or being turned out of doors, and forsaken of father and mother for God's sake and his holy religion, as has been the case of some of your fathers in the day they first entered into this holy path: and if you, after hearing and seeing the wonders that God hath wrought in the deliverance and preservation of them through a sea of troubles, and the manifold temporal as well as spiritual blessings that he has filled them with in the sight of their enemies, should neglect or turn your backs upon so great and so near a salvation, you would not only be most ungrateful children to God and them, but must expect that God will call the children of those that knew him not to take the crown out of your hands, and that your lot will be a dreadful judgment at the hand of the Lord. But oh! that it may ever be so with any of you! The Lord forbid, saith my soul.

"Wherefore, O ye young men and women, look to the Rock of your fathers; choose the God of your fathers: there is no other God but him, no other light but his, no other grace but his, nor spirit but his to convince you, quicken and comfort you, to lead, guide, and preserve you to God's everlasting kingdom; so will you be possessors as well as professors of the Truth, embracing it not only by education but judgment and conviction, from a sense begotten in your souls through the operation of the eternal spirit and power of God in your hearts, by which you may come to be the seed of Abraham through faith, and the circumcision not made with hands, and so heirs of the promise made to the fathers of an incorruptible

crown; that, as I said before, a generation you may be to God, holding up the profession of that blessed Truth in the *life and power of it*. Formality in religion is nauseous to God and good men; and the more so, where any form or appearance has been new and peculiar, and begun and practised upon a principle with an uncommon zeal and strictness. Therefore, I say, for you to be flat and formal, and continue the profession without that salt and savor by which it is come to obtain a good report among men, is not to answer God's love nor your parent's care, nor the merit of Truth in yourselves, nor is those that are wild out; who, though they will not obey the Truth have sight and sense enough to see if they do the make a profession of it. For *where the divinity of it is not felt in the soul, and waited for, and lived in*, imperfections will quickly break out and show themselves, and detect the unfaithfulness of such persons, and that their insides are not seasoned with the nature of that holy principle which they profess.

"Wherefore, dear children, let me entreat you I shut your eyes at the temptations and allurements of this low and perishing world, and not suffer your affections to be captivated by those lusts and vanities that your fathers, for Truth's sake, long since turned their backs upon; but as you believe it to be the truth, *receive it into your hearts*, that you may become the children of God; so that may never be said of you as the evangelist writes of the Jews of his time, that Christ, the true light came to his own, but his own received him not: but to *as many as received him*, to them he gave power to become the 'children of God; who were born, not of blood, nor of the will of the flesh nor of the will of men, but of God.' A most close and comprehensive passage to this occasion you exactly and peculiarly answer to those pressing Jews, in that you bear the name of God people, by being the children, and wearing the form of God's people; so that he by his light in you may be said to come to his own, and if you obey it not, but turn your back upon it, and wait after the vanities of your minds, you will be those that receive him not, which I pray God may never be your case and judgment; but that you may be thoroughly sensible of the many and great obligations you lie under to the Lord for love, and your parents for their care; and *in all your heart, and all your soul, and all your strength, turn to the Lord, to his gift and spirit in you, and hear his voice and obey it*, that you may seal to the testimony of your fathers by truth and evidence of *your own experience*; and your children's children may bless you, and the Lord for you, as those that delivered a *faithful example*, as well as record of the truth of God unto them. So will the gray hairs of your dear parents, yet alive, go down to the grave with joy to see you the posterity of Truth, as well as they and that not only their natures but spirit shall live in you when they are gone."—*Penn's R and Progress.*

## THE FRIEND.

NINTH MONTH 15, 1866.

The sanguinary contest that has recently terminated between Austria on one side and Prussia and Italy on the other, has been no less extraordinary for the rapid and uniform success of the belligerents, than for its important and unanticipated results. It ought to teach the sovereigns of Europe that injustice and oppression or later, will meet with punishment, and

vince them, as well as their subjects, that the word is not to be trusted for the award of right and equity.

Perhaps among its most momentous, if not most alarming consequences, is the destruction of the obligations imposed by the treaty of Paris entered into by the Allied Powers in 1815, and thus, the imminent risk involved, of breaking up the system of nationalities and territorial boundaries adjusted and guaranteed by that treaty, and preserved, nearly intact for half a century; thus opening the door for other unscrupulous statesmen, whenever prompted by cupidity the last of power, to attempt their gratification, though incurring the odium of disregarding the litigation of what has been so universally accepted public law. The high contracting Powers, which had suffered so long and so severely from a tremendous military force wielded by Napoleon the first, and had felt so grievously the evils resulting from opposing interests and separate enmities, sought to establish by that celebrated treaty, a peace that should be lasting, instituting a purpose among the continental States the maintenance of their individual independence and territorial limits as then conceded and affirmed.

Although, from the bias of temporary motives of the stipulations of the treaty of 1815, or the fears and excitements of the preceding and destructive wars had passed away, were considered by prominent statesmen open to improvement; yet, so obvious were the general interests of the several European nations involved their observance and support, that, notwithstanding occasional outbreaks among some dissatisfied communities, and the heartburning created by the Crimean war, the fundamental provisions of the compact have heretofore been preserved, and the horrors of war, when it broke out, diffused within narrow limits. Most of the despotic monarchs who were parties to the treaty, actuated by fear lest the advancing intelligence and awakened inquiry of the people would overthrow the irresponsible power claimed by them as a Divine investiture, within a few years of its date, united together in what was profanely denominated the Holy Alliance, secretly framed in a spirit of hostility to popular liberty and the demands of an increasingly christianized civilization. At this unrighteous combination was gradually integrated by the odium it elicited and the irresistible strength of those principles of right and truth it was designed to crush or prevent interfering with the assumed inviolability of the prerogatives of kings.

The conclusions of the Congress of Paris were accepted and guaranteed by the different sovereigns individually, and were to be maintained by them jointly, and they have heretofore been respected and observed, except that in some few instances, modifications evidently tending to promote national settlements and mutual interests, have been proposed, discussed by the interested Powers, and settled by general consent. Such was the treaty of 1852, which confirmed the Duchies of Schleswig and Holstein to the crown of Denmark. Such the feeling of stability and repose arising from the hoped for irrevocability of this treaty in mere force or stratagem, and so urgent was the desire expressed to maintain its authority as national law binding on all the contracting parties, that it was proposed by some of their plenipotentiaries, and received with almost universal approbation, that future differences, especially so likely to affect boundaries and the balance of power, should be submitted to duly authorized referees, and be determined by friendly arbitra-

tion. Such a proposition could not fail to give joy to all who sincerely desired the progress of the human family, and the extension of the kingdom of the Prince of Peace, and both in Europe and America its probable adoption was hailed with delight, under a too sanguine hope that christian nations were at length about to adopt a policy consistent with the religion they professed, and substitute arbitration and mutual justice for the barbarities and uncertain decision of war; thus freeing their citizens from the miseries and demoralization of brutal contests, while they secured their own stability and prosperity as members of one great commonwealth.

But while these pleasing hopes were fondly indulged, and peace conferences, composed of many of the foremost men in Europe, were annually held, a revolutionary and destructive opinion was constantly cherished and promulgated by nearly all those who claimed to be preachers of the gospel, which, since the first gathering of the darkness of apostasy over the professing church, has blasted, and as long as it is tolerated, will continue to blast these reasonable expectations, and frustrate the demands of the christian philanthropist. This is, the opinion that war is consonant with the religion of Christ, the merciful Redeemer of men, who came not to take life but to save it, and that all its blood-stained horrors and atrocities are justifiable and may be enacted by christian nations, whenever these in power within them, may declare they are called on, to resort to arms for the maintenance of their rights. This anomaly once admitted, and no tribunal existing competent by absolute power to restrain hostilities, national peace and amity most necessarily depend on the uncertain disposition to abide by the imperfect obligations of national compacts, valued and interpreted by each State according as they are felt to bear on its individual interests. Hence mutual jealousy and distrust are constantly kept alive, destroying confidence one in another; and as no nation knows where another may assert that its honor or its material well-being require it to resort to rapine and murder in their defence or support, the dangerous theory that the time of peace should be occupied with preparing for war, receives a plausible justification and universal support. Hence hundreds of thousands of young and able bodied men are dragged from their homes, subjected to all the demoralizing influences of camp life, and trained to the wholesale destruction of their fellow men; human ingenuity is tasked to perfect the most murderous implements of warfare, while the people are heavily taxed to meet the onerous expense, and all peaceful pursuits obliged to pay tribute to a system that injures and degrades them.

With the minds of men imbued with a pseudo-christianity, robbed of the peaceable principles of the true, and sanctioning violence and revenge; with nations kept armed cap-a-pie, and on the watch for a summons to the bloody arena; there will, in the ordinary course of human events, opportunities present inviting ambitious and designing statesmen to seek their own selfish ends by playing upon the passions of the people, until they blindly submit to their commands; by mistakingly constraining or disregarding the obligations of treaties to which they have been parties; and then employing the military strength at their command to seize that which they covet, without respect to the rights of others or the common interests of mankind.

If we may believe the representations made almost universally by the press in Europe, the war just terminated had its origin in the aggressive and ambitious spirit of the bold and able

minister of the Prussian king; though not on Prussia alone rests the guilt of the great crimes of violating treaties solemnly affirmed, causing the death of thousands of human beings, and despoiling principalities of their long conceded rights. It is a striking circumstance that all the German parties in this war had violated the sanctity of treaties, and set at naught the principles of justice and honesty by robbing a neighbouring kingdom but a short time before. When, under the pretence of securing greater liberty for the people, the German Diet claimed the severance of Schleswig and Holstein from the government of Denmark, to which they had been long before assigned, Austria and Prussia, rival heads of the Germanic Confederacy, and jealous of each others aggrandisement, volunteered to execute the Federal unrighteous demand, and united their colossal power to wrest from a weaker sovereign, who had given them no just cause of offence, two provinces which by treaty they had publicly confirmed to him. May we not now see that in national affairs as in individual conduct, the wrong secretly or more openly committed, often, in the overruling of Divine Providence, works out its own punishment. It is confidently and publicly stated, that the wily minister of the Prussian king, under cover of his assumed arbitrary authority, has, for the last two or three years, overridden the constitution of his country, in order to enlarge and consolidate a well-drilled standing army and accumulate improved material for war, preparatory to striking a blow he had long contemplated for acquiring, at the expense of Austria, a wider domain and augmented power. When prepared to attempt the realization of his schemes, the appropriation of the two Duchies they had seized and held, was made a pretext by Prussia for quarrelling with her guilty accomplice and traditional rival, and to hurry on a war, for which she had been carefully making ready, so as to take her antagonist at disadvantage. There was the usual form of protestations and manifestoes, each side claiming to be right and aggrieved, and though the people of Prussia, at first, manifested unwillingness to engage in the conflict, they were urged and enticed into it, and the claims of right and justice, if either party could substantiate such claims, were left to the decision of the sword.

The decision is now known. The tyrannical and aggressive king of Prussia has triumphed, and takes one of the first positions in Europe. He has bisected the Germanic Confederation, subjecting several of its States to his sceptre. Obligated Austria to give up Venice, resign the Presidency of the Diet, and yield all influence north of the Mayne; and after thus despoiling his neighbours, he imposes on them the expenses of the war. The treaty of Paris has been deprived of its vitality, and henceforth has no binding force. The stipulated conditions of power and territory among the nations of Europe are alarmingly changed, and no one Court can know with certainty, what may be the future policy of others; how far it may rely on their assurances, or how soon, singly or in alliance one with another, others may attempt to alter the map of that continent.

All these evils, and more than time will admit to enumerate, are fairly attributable to the insane policy of war; a policy to which the civilized world is kept enslaved by the corrupt passions of the people, and the teachings of most of the professed ministers of Christ, the Prince of Peace. Had the latter not perverted his precepts and betrayed his cause, by teaching the people they may sacrifice their children to Moloch, we should not, in this nineteenth century of the New Dispensation, see men trained to destroy each other like wild

beasts, glorying in the rapidity and certainty with which they can take the largest number of human lives, and thus outbalance justice and right by heaps of slain. Is it any wonder that we hear loud complaints from these sources of spurious doctrine, that infidelity is spreading on all sides? If it is true that the commands of Christ and the peaceable spirit and principles of the Gospel, are not applicable to the present state of society—so many centuries after their first promulgation—or if it is conceded that it is necessary for those who claim to be Christ's ministers, and to spread his religion, to abstain from inculcating his plain and undeniable teachings as recorded by Apostles and Evangelists in the Holy Scriptures, until the people have, by other means, become so much better as willingly to adopt them; if religion is represented as consisting mainly of a system of outward observances; need we be surprised that those who choose to live as they list, think they see such inconsistency and deceit among its priesthood, as satisfies them in believing that christianity rests on no other foundation than human contrivance, and cannot fulfill its promises? When will the different denominations in the professing church have their eyes opened to the magnitude and folly of this stupendous evil! and when will their pastors and teachers, freed from the fear of man and the policy of this world, universally preach the gospel of life and salvation in its purity and simplicity, that the people may learn that all war is contrary to it, and rebellion against its Author, and thus its glorious purpose of bringing "glory to God in the highest, peace on earth, good will to men," be more effectually promoted by them.

#### SUMMARY OF EVENTS.

**FOREIGN.**—Since the expiration of the armistice between Prussia and Austria, the negotiations have been continued between the two countries. The reduction of the Prussian army commenced on the 5th inst. In addition to the three millions of florins paid by Hesse Darmstadt, in compliance with the demands of Prussia, that Duchy has been required to cede twenty square miles of its territory. The peace arrangements between Austria and Italy were being perfected. The cholera is making sad ravages in Italy. The Bank of England on the 6th inst., reduced its rate of discount to 5 per cent. The Prussian governor of Saxony has prohibited the holding of public meetings throughout the kingdom during the state of siege which now exists. The Prussian Chamber of Deputies has passed the bill for the annexation of Hanover, Hesse, Nassau and the free city of Frankfurt. A bill for the annexation of Schleswig and Holstein has been sent in by Bismark. W. C. Gladstone, in a speech delivered on the 7th, urged upon the Liberals to support any good Reform Bill which should be brought forward in Parliament by the Derby administration. A quantity of Fenian munitions of war have been seized in Liverpool. The Prussian Diet has passed the government indemnity bill. It passed the upper House by a unanimous vote, and the Chamber of Deputies by a large majority. The latter body has rejected the government proposal for an issue of sixty millions of Treasury notes, and adopted in its stead an amendment authorizing the issue of thirty millions payable in one year from their date. It is reported that the king of Saxony has decided to resign in favor of his son.

The Italian government has issued a decree which disbands 55,000 men of the Italian army. Austria has invited Italy to send Plenipotentiaries to meet others appointed by Austria, for the purpose of adopting measures for the improvement of telegraphic and postal intercourse between the two countries.

A dispatch from Athens of the 8th, says the Greeks have rejected the terms offered them by the Turkish Government, and continue their revolt. The people of Epiruz also claim their freedom from Turkey, and have abandoned their habitations and taken to the hills.

The Bank of France has reduced its rate of discount to 3 per cent.

The Liverpool cotton market on the 10th, was steady but for middling and fine. Prices are rather firm. The weather is less favorable for the crops. Consols, 89½, U. S. 5-20's, 72½.

**UNITED STATES.**—*The Public Debt.*—On the first instalment of the United States, according to the statement of the Secretary of the Treasury, amounted to \$2,738,314,835. On the first of Eighth month it was \$2,770,416,698. The reduction during the month was \$42,101,773. From the total debt may be deducted the balance in the Treasury, which consisted on the first inst. of \$1,100,000,000 in coin, and \$1,777,777,777. This would make the amount of the debt \$2,599,688,168. The amount of debt bearing no interest is \$441,567,810, it consists of United States notes, fractional currency, and gold certificates of deposit. The public debt has been reduced \$ 61,570,107, since 8th mo. 1st, 1855. The contraction of the currency goes on slowly but steadily.

*The Southern Loyal Convention*, held in Philadelphia, adjourned on the 7th inst. after a session of five days. The Convention as a whole adopted an address to the people of the United States, and a series of resolutions, in which the most material point is an endorsement of the Congressional Union. The Convention also changes the basis of representation, but leaves the question of suffrage to the individual States. A portion of the delegates, chiefly from the Gulf States, acting by themselves, adopted another address, in which they declare that Congressional action, extending the right of suffrage to the negroes of the States, is the only remedy for the existing evils in the South. The discussions in the Convention showed a wide difference of sentiment among the members. The delegates from the border States were generally averse to introducing the negro-suffrage question into the pending elections, while those from the Cotton States insisted that it was the most important of all the questions involved.

*The Atlantic Telegraph.*—The steamship Great Eastern arrived at Heart's Content, N. F., on the 8th inst., having accomplished the laying of the second line of cable with entire success. Its electrical condition is said to be perfect, and messages are now being received and sent. A second cable will be immediately laid from Port au Basque to Aspy Bay. The receipts from messages are said to be at the rate of £90,000 per annum.

*Philadelphia.*—Mortality last week 370. Of cholera, 41; cholera morbus, 9; cholera infantum, 31.

*Vermont.*—At the annual election for Governor, Charles F. Johnson, a member of the Legislature, took place on the 23d inst. The Republican candidate for Governor was elected by a very large majority. The Senate will be all Republican. The Democrats elected a few members of the House of Representatives. In one of the Congressional districts there was no choice, the votes being equally divided between the two principal candidates. In the other two districts Republicans were elected.

*The Freedmen and the South.*—The Selma (Alabama) Messenger, of a late date, contains a letter from a planter of that State, in which the writer says: "More money may be made by growing cotton for the benefit of the freed man, than was at ten cents in the days of slavery; and this, too, by working hirelings as at present, or by tenants upon small farms. The failure to cultivate the land this year, is owing more to the incompetency of men engaged in the business than to the untowardness of the season or the influence of the weather." Judge Ballock, Presiding Judge of the County Court at Natchez, Miss., has decided the State law, denying colored persons the right to carry arms, to be a violation of the provisions of the State constitution.

The Assistant Commissioner of the Freedmen's Bureau for North Carolina, states that upwards of 50,000 freed men of reach of work for the coming year. Most of the freedmen's camps scattered over the State have now been broken up, and the needy collected at a few central points. All cases of outrages between whites and blacks are now referred to the North Carolina State Court.

*Maine.*—The State election held on the 10th, resulted in the choice of the Republican candidates for Governor and members of Congress, by largely increased majorities. The State Senate will be all Republican, and the House of Representatives nearly all of that party.

*The University of Kansas.*—By a treaty made two or three years since, the Ottawa was given twenty thousand acres of land, from the centre of their rich reservation, for the establishment of this University.

The present population of Rome is 210,701. This has increased since 1811 to 30,600,000. The increase has been chiefly owing to the concentration of emigrants from other parts of Italy from political motives.

At the end of the war there were 18,085 wounded

soldiers in the Prussian hospitals, of whom only 5 were Prussians.

*The Markets, &c.*—The following were the quotations on the 10th inst. *New York*—American gold 14 U. S. sixes, 1881, 111½; ditto, 5-20, 1862, 111½; ditto, 1865, 108½; ditto, 5 per cents, 10-46, 98. The market easy at 4 a 6 per cent. Superfine State Flour \$8 10. Shipping Ohio, \$9 a \$10 75. Baltimore flour, fair to extra \$9 50. \$12 50. New prime wheat, \$3 11; middling Ohio, \$2 75 a \$2 77; choice spr wheat, \$2 14; ordinary, \$1 51. Oats, 58 a 69 cts., State, Chicago, do. 47 a 50 cts. Western rye, 82 a cts. Mixed western corn, 83 cts. Middling up cotton, 32½ a 33½ cts. *Philadelphia.*—Superfine flour \$7 50 a \$8 75; extra family and fancy \$9, \$10, \$11, wheat, fair to choice, \$2 65 a \$2 80; white, \$2 50. Rye flour, \$1 a 91; western, and \$1 05 a \$1 10 for Pen Yellow corn, 91 cts; western mixed, 87 a 88 cts. Southern oats, 47 a 48 cts. Cloverseed, \$6 50 a \$7. Timothy, \$3 25 a \$4. Flaxseed, \$3 50. The arrivals and sales of beef cattle reached about 1800 be. Market dull and prices rather lower. Extra sold at 14 cts.; fair to good, 15 a 16 cts., and common 1 a 17 cts. Sales of 10,000 sheep at 4½ a 6½ cts. for good and 5 a 5½ for common for per lb. gross. Hides \$13 50 a \$14 50 per 100 lbs. net.

#### RECEIPTS.

Received from T. Twining, N. Y., \$2, vol. 40, and Ezra Nichols, and Moses Huntington, N. Y., \$2 per vol. 40; from J. Horstis, O., \$4, vols. 39 and 40; A. Scott, Pa., \$2, vol. 39; from S. R. Wilkins, N. S., vol. 40; from J. W. Hibbs, Pa., \$2, vol. 40; J. F. Fawcett, A. G., O., for Jane Heild, T. Heald, A. W. and Sarah Heild, \$2 each, vol. 39; for J. H. Crow, S. No. 18, vol. 40, and for J. Taylor, A. Fawcett, Mary Woolman, B. Antram, Rebecca Woolman, and A. Stratton, \$2 each, vol. 40; from S. Shaw, O., \$2, 40; from M. T. Webb, Pa., \$2, vol. 40; from James Davis, Pa., \$2, vol. 40; from J. Elfreth, N. J., \$2, 40; from Jos. Masters, O., per E. Hollingsworth, \$2, vol. 40.

Received from Joseph W. Hibbs, Pa., \$8; from Friend in Ohio, per Jehu Fawcett, \$5; from Sam Shaw, O., \$75.05, less Express charges, \$1; less \$74.05, for the Relief of Coloured Freedmen.

#### WESTTOWN BOARDING SCHOOL.

The list of Boys entered as pupils for next Session delivered to the Board of Trustees, shows a number of vacancies for GIRLS. It is requested that applications be forwarded early to Duhré Knight, Superintendent (address Street Road P. O., Chester Co. Pa.); or Charles J. Allen, Treasurer, No. 304 Arch St., Philadelphia, Mo. 25th, 1856.

#### WESTTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the BOY'S SECOND MATHEMATICAL SCHOOL, to enter on his duties on the opening of the Winter Session. Apply to Samuel Higgs, Wilmington, Del. Thomas Evans, 817 Arch St., Phila. Joseph Scattergood, 413 Spruce St., Phila. Charles J. Allen, 304 Arch St., Phila.

#### EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

Principal and Assistant Teachers are wanted for the Schools. Application may be made to

Isaac Morgan, Jr., 622 Noble street  
Samuel Allen, 524 Pine street, or  
J. Wistar Brown, 410 Race street.

#### FRIENDS' ASYLUM FOR THE INSANE.

SEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent.—JOSEPH H. WORTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

#### MARRIED, at Friends' Meeting-house, Greenwood

the 23d ultimo, WILLIAM C. HOLLOWAY, of Philadelphia, Co. Ohio, to MARGARET, daughter of Samuel Mary C. Scattergood, of Srenco, Columbia Co., Pa.

WM. H. PILE, PRINTER,

No. 214 Pearl street, between Dock and Third

# THE FRIEND.

VOL. XL.

SEVENTH-DAY, NINTH MONTH 22, 1866.

NO. 4.

PUBLISHED WEEKLY.

Two Dollars per annum, payable in advance.

Subscriptions and Payments received by

JOHN NORTHARDSON,

at No. 116 North Fourth Street, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

From the "Cornhill Magazine."

The Loss of the Steamship "London."

(Continued from page 18.)

Daylight at length came in, and then we could see what a helpless log our ship was. She was on a pretty low at the stern, and when she rolled overboard went right under. The sensation to any one on deck was truly awful. None seemed to see Captain Martin, and at no time did I hear him reproaching him. But the expressions of the owners were quite different: they were anything but blessings.

The weather in the morning was very dull and settled. The wind was not so furious as in the night, but the sea still heavy. A few new boats had been put on, though none entertained much hopes of them,—of those remaining—for life-boats were both gone. The last one had been washed away the evening previous, and one of the cutters was stove, and hanging down at the end of the ship by the stern-fall from the davit. A mate to it on the opposite side was still good, with two iron pinnaees, capable of carrying sixty tons each, and a small wooden boat forward near the fore-castle. The two iron boats were swung from davits on board. About nine o'clock in the evening, and while I was still at the pumps, I then making ready the starboard iron boat. The captain had given orders to get the boats ready. I did not leave the pumps to seek a chance for the boat, although there was one whom I knew was helping in preparing her for sea. I had previously made up my mind to stop by the ship the last, in case any vessel should come to our aid, although we had no distress signals up; why, I cannot say. I am puzzled to this day why Captain Martin did not have up signals, as, as usual, if she did happen to sight us, and we were, of course would take no notice and pass her.

Another reason why I was so indifferent to the boats was this: I thought that where a ship could not live, a small boat could not. When the boat lowered, and several jump overboard to get in her. Soon I saw them climbing again. The boat had been swamped in the night, and she sunk. I think, but am not sure, that one or two were drowned at that time. I had now been got up in the donkey-boat, which was a house on deck forward, and it was connected with the pumps, and I was relieved. I then climbed up on the poop, where everything presented a gloomy appearance; the boat sinking had destroyed all hope. We

had still three boats, but they were on the weather side; the ship would have to be brought round before they could be lowered. There was no effort made at that time to get them out. People were walking about, very quiet and very anxious. I saw the captain then, also—Tycehurst; several ladies walking about bare-headed, their hair flying about with the wind, but calm and resigned, and very little being said. They were walking about just as you see people at a railway station when they are waiting for a train. I saw and spoke to the young girl who was so frantic at first: now she was as reasonable and calm as any body. I then thought, as a good many thought, that we were not long for this world; death was staring us in the face. I felt loth to give up life; I enjoy life. There was also the uppermost thought of all, the uncertain hereafter. I said to myself, "Well, I suppose I am as prepared now as I should be twenty years to come." I regretted most for those I was leaving behind, and whom I had come on a visit half round the world to see; and now to be drowned in returning, and that in such a stupid, unsatisfactory way! There appeared to be no excuse for it whatever. True, we had a severe gale, but I fancied I had seen as heavy a one before. It appeared to me that a new, strong, well-built ship had been thrown away. Had our ship been driven out to a rock, or had taken fire, or met with some unavoidable accident, I should not have felt so bad. I always dread to think, or to get talking on this part of it; for my feelings of sorrow become mixed with feelings of regret and reproach against some one for so cruel a sacrifice.

Whilst on the deck at this time I saw the sailors going about throwing overboard any articles they could—henceoops, useless gear, &c. I then looked about to see what prospect there was of saving myself. Hope had not altogether deserted me. I looked out on to the sea, and asked myself the question, What boat could live there but a lifeboat? There was no vessel in sight. I then turned my eyes to the deck. I saw a piece of a board or side of a henceoop, and said to myself, "I shall keep near that when she sinks." It appears now a ridiculous idea to expect that to save me, then 190 miles from land! I remained on deck about half an hour, and then went below to the cuddy, to see how far my lady acquaintances, it then being about ten o'clock. Just as I was turning to get down, I noticed the sailors were beginning to get the port-entree ready, and I heard one say, "This boat is for the captain and ladies;" so any hopes I had from this boat were destroyed then; for I would not try to get in it, and destroy the chance of any of the ladies. So took no notice of it, and passed on below, intending to keep a pretty sharp look-out when she was going to sink, to rush on deck to where my board was.

When I got to the cuddy the usual question was put by the women, as it was to any one coming in from the deck, "What hopes now?" I said, "We are about still; and while we are about we are alive, is all I can say." At this time I thought it wrong to disguise our actual condition; in fact, the captain did not. He had been in the cuddy some time previous, and told all to prepare for the worst, nothing but a miracle would save us now!" which dreadful assertion was received with no fresh outburst of terror. All the women from the second cabin were sitting by themselves. Those from the steerage part of the ship were in the cuddy also. No distinction now. There were fathers and mothers, with their families of three, four, and five, grouped around them—the children very quiet. They did not seem to understand why their fathers and mothers were crying so; and, poor little things, many were standing up to their knees in water. Dr. Draper was standing about the middle of the cuddy, at one of the tables, with many round him, reading and praying unceasingly. Now and then would be heard a voice, saying, "Oh, Dr. Draper, pray with me." There were also to be seen men by themselves, reading the Bible. I remember seeing a newly-married couple sitting by themselves, weeping bitterly. He had lately returned from Australia, had got married, and had induced many of his relations to return with him. They were on board—in all nine, I have heard. He appeared to be reproaching himself for having taken her away from her home. She was consoling and comforting him as best she could, saying she was happy, and they would die together. One poor young girl was writing a message on an envelope. I little thought I might have been the bearer of it. She probably intended putting it in a cask or keg that was being got ready by a friend of hers, as I learned afterwards. A young man whom I know was instrumental in starting it; his name was Row, of New Zealand. This keg has not yet turned up.

I conversed with many I knew; every one seemed fully to understand that there was no chance of being saved. A few clung to the hope that a vessel would yet come. Some of the sailors circulated a report that a vessel was in sight, to quiet them. I remained there until say twelve o'clock. Matters getting worse and worse, I could not remain below, but went upon deck again, bidding some whom I knew good-by. As I went to the door to go up the steps I found a number of people standing on the ladder-way, apparently bewildered. I turned round and took the last look I ever had of the cuddy; the sight is indelibly stamped on my memory. I found some difficulty in pushing my way through the crowd to gain the deck. The day had brightened up a little, the sun would occasionally show out. The wind and sea were still heavy, but I think had abated since morning. I noticed the sailors were still about the same boat, intending soon to lower it; but as I had previously heard this was for the ladies and captain, of course I never looked to it with any hope for my safety. I glanced at the state of the ship, wondering at the length of time she kept together—which raised false hopes with many, not that she would ever get to land, but that she might live long enough for a vessel to come to take us off. For my part I thought she might keep afloat four or five hours yet (at this time I would not ask anybody's opinion for fear

of being misled,) and concluded I would go down to my state room to put on a dry coat. I thought I might as well live comfortably for a few hours, if I had to die then. Before going, I satisfied myself she would not sink while I was below, as I had a long distance to go, and had a particular horror of being closed in. I went down to the company-way to the cuddy-deck, then around and down to between decks. At this time the passengers had ceased with the buckets, thinking their labour useless. There was no one there but the captain. He had been having a look at the engine-room. I spoke to him, and asked him if he thought it any use to still continue carrying up water; if so, I would go and try and get them together. He did not care about answering me, and walked back to the engine-room, and I with him. We looked down, and a frightful place it was: the water coloured black with the coal, and washing about and breaking up the iron floorings or platforms, and producing an unearthly noise. And a great pool of water it appeared to be. We stood looking for a minute or two. When he turned to go aft, I said, "Well, captain, what do you say?" He replied, "You may, but I think it's no use." We then went up the steps on to the cuddy-deck. There was a division between the after-staterooms and the cuddy. In passing these rooms we saw some sailors and firemen in their opening cases of liquor, and some with bottles of brandy in their hands: there were several drunk at the time. The captain said to them, calling some by name, "Don't do that, boys! don't die onwards!" I saw a sailor down on his knees, feeling about in a foot of water for a sovereign he had dropped out of his mouth: he was as cool and eager looking for it as a street Arab would be for a sixpence he had seen fall. I saw standing at the cuddy-door a first class passenger with a life-preserver strapped round him. I then turned and went down again to go to my room, opened one of my trunks, took out a coat, saw my watch and purse; thought to myself, well, I may as well take them; laid them out, but the trunk was particular in locking it (such is the force of habit:—) then put my watch in my pocket. At that moment the ship gave a roll, the water covering the port, which darkened the room, and in picking up my coat, my purse fell into the water. There was about a foot and a half there at the time. I put my arm down, and felt for half a minute, like the sailor for the sovereign, but could not find it: then walked out into the cabin; there were about half-a-dozen there at the time. I saw — Lemmon, of Melbourne; I spoke to — Harding — he shook his head as much as to say he did not wish to be interrupted then: some sitting with their heads resting on the table — almost all preparing for death, and patiently waiting. I saw an elderly person strapping up a railway rug into a bundle; shortly after he was seen on deck with it, when the captain, with a faint smile, asked him if he intended taking it with him. I have since been told by friends of this gentleman that he had a thousand sovereigns with him; and probably these were in the rug. On my way back to the engine-room, I was alarmed at seeing that a serious change had taken place — a deal more water was rushing down. From what I saw, I thought the pile of sails over the opening above had floated up, the water pouring in underneath. I looked over into the engine room below, and noticed that the water had increased considerably since the captain and I were there: it was now within two or three feet of the deck on which I was standing. I got on the poop as soon as I could, knowing now that the end was near. I had some difficulty in getting up the staircase be-

tween the cuddy and the poop, as it was crowded with the people, who were all mute. It was then about one o'clock or half-past one in the day, Thursday, 11th January. Just as I got on to the poop I saw an elderly couple, man and wife, with three children, two little girls about eight or ten years of age, and an infant. I am not sure, but I think they were the same who were wrecked a short time previously in the *Dunbar*, and this was the second, if not the third, attempt they had made to get to Australia. The mother and the two girls were sitting on the lee-side, close to the mizzen rigging, and the father alongside of them, holding an infant in his arms, and shielding it from the spray that was blowing clean over from windward. I took the mother and two girls up, and set them midships in the lee of the after companion-way. In about half-an-hour after, and just before we left the ship, I saw the mother and two girls washing about on deck, drowned.

(To be continued.)

For "The Friend."

## Musings and Memories.

## SET UP BEACON MARKS.

I have somewhere read of an Indian who when passing through a swamp, if he found any spot particularly difficult to cross, invariably set up a stake in it as a Beacon Mark, to warn others of the danger, as well as to enable himself to recognize and avoid the place. It was a wise as well as kind act in this man, and it were well if, in our every day walk, we were concerned to set up Beacon Marks to enable others to see where we had met with difficulties and dangers, spiritual as well as temporal. If we really and truly are actuated by the spirit of the petition "Lead us not into temptation," it is certain that we shall feel bound, as far as we can, not only to avoid placing incitement to evil in the way of others, but that we shall desire that they may be preserved from the sins into which we have been led.

After Lee, of the rebel army, had fortified Richmond by forts and batteries of various kinds, he buried all around its approaches, torpedoes, which would explode if a heavy man or a horse trod over them, and scatter death and terror around. To prevent their own army, and those who came with provision for his needs, from falling victims to the murderous power of these hidden instruments of destruction, marks were placed over them to designate the places: which marks were to have been removed should Grant's army approach. On the morning of that day when Lee fled from Richmond, too many other things claimed attention, and the little Beacon Marks were left unmoved, and thus many hundred lives were probably saved.

It sometimes happens that individuals moving along in the paths of vanity and frivolity, are suddenly arrested by severe illness, and being in mercy brought to a sense of their sad fallen state, and the need they have of the washing of regeneration, and the saving, soul-cleansing baptisms of the Holy Spirit, they are introduced into much mental agony, and are taught to cry mightily to the Lord Jesus for help. His mercies are over all his works, and it pleaseth Him, at times, graciously to regard the supplications of such, and through the powerful operations of his grace, to prepare the spirit through a few days of agony and remorse, to receive that inward cleansing in which it finds pardon for past transgressions, and a preparation for an admission into the kingdom of glory. Such persons being thus introduced into the christian family, — being made partakers of the salvation which comes by Jesus Christ, often attain before the close comes, to great peace.

Although abhorring themselves, as they look on their past lives, yet in the consciousness that mercy of God in Christ Jesus cleanseth from sin, they, in happy, hopeful humility, enter valley and shadow of death. All this is in full accordance with the mercy of our God. It is thro' deep tribulation we must enter the kingdom, is through obedience that we grow in knowledge and experience; yet He who is perfect in wisdom sees meet, in some cases, to cut short the way righteousness. He sees that deep agony of war has been felt, that the saving change has wrought in suffering and remorse, through fiery baptisms of the Holy Spirit, and as the creature is subdued, he receives it rest. The soul is prepared for obedience, tribulation has been experienced, and faith in Lamb of God who taketh away the sins of the world, being in dominion, they are prepared through his merciful condescension, to join spirits of the saints and angels in the eternal ecstasies of "glory, honour and salvation to Lord God and the Lamb."

These redeemed ones, before they put off shackles of mortality, in their honest open remorse, wish to set up Beacon Marks, to pre-empt others from making shipwreck on the shoals sin where they themselves were long ago. Oh the earnestness of their desires, that their dear friends and relatives should not resist convictions of grace, should not follow the wrong notions, the manners and the customs of this world. But oh, how seldom are such Beacon Marks known to their fashionable friends. It removes them before they have time or opportunity of spreading the warning themselves. Friends in preparing obituary notices, often commend themselves to the expression of a hope through the mercy of God in Christ Jesus, have been admitted into rest. This is distressing as beacon marks which their sudden removal from time might have erected in the view of thoughtless friends. They knew them as thoughtful and gay as themselves, — they have seen but a little while ago, flaunting with ribbons mingling with them in vanity and folly. Now a few days, they are noticed as having entered the heavenly city, of purity and peace. Then, instead of erecting a Beacon Mark to survivors of the dangerous places they frequented, secures an encouragement to survivors to follow them in their course of folly and vanity, which has had so happy an end. The obituary seldom refers to the days of sore grief, and of agony these poor sinful ones have endured; they have felt that pardon and peace of their friends delight to make mention of. Did we only bear in mind the duty that devolved upon us of setting up "Beacon Marks," we should more frequently dwell upon the agony of the deep contrition of those who having done so, or shrunk from bearing the cross of the Saviour, in health, have found upon a sick bed the subjections of their own will, as to dress, address, as to manners and walk amongst men an absolute necessity to every one seeking to the kingdom. It is but a few weeks since a friend mentioned to me a concern of this kind and the necessity of making our obituary modest and brief.

But when there is any Beacon Mark to set up, let not a false delicacy prevent its erection. Surely, if through the Lord's merciful provision one soul should be rightly warned by such a notice, or should be encouraged to take up the cross whilst health and vigour are granted, it would amply repay whatever cost the effort might be to our feelings.

## Shrinkage.

Most men are familiar with the fact that a rope, upon being wetted, will contract in length and become materially shorter, and that a rope made at or at both extremities and hauled taut when wet, will slacken and hang loose upon drying. Few women are unacquainted with the shrinkage of woollen goods in the process of washing. Every mechanic, and many a householder, is familiar with the shrinking and swelling of unpainted or seasoned lumber.

In spite of the familiarity of these and a multitude of kindred facts, it would not be easy to find persons able to offer an explanation of the appearances in question, or conscious even of ever having thought about their rationale. Singular as it may appear, it is a fact that scarcely anything has ever been written upon the subject of shrinkage. Most of the books on similar subjects may be searched in vain for information concerning it. There is a new subject for the makers of encyclopedias. The chief difficulty in treating the subject probably lies not in any intricacy proper inherent therein, but in its exceeding multifariousness. Upon careful scrutiny, it will appear to the members of almost every one of the various arts and trades have their own peculiar conditions and sets of facts regarding shrinkage, and that the term has a meaning and application no means identical in the different trades, but, the contrary, more or less various and dissimilar.

In a general way, the term shrinkage is frequently used as synonymous with contraction, to denote any reduction of size in any substance, such as when a hot bar of iron or any other metal contracts as it becomes cold, it is said to shrink. It is, too, when a bit of moist animal cartilage becomes dry, the diminution of size—the shrivelling caused by loss of water—is often called shrinkage. In the sake of clearness, it is much to be wished that the term shrinkage could be restricted to the peculiar contractions which are exhibited by vegetable and animal fibres, and by various textile fibres, when these are subjected to the action of water or of other liquids and chemicals. It is desirable that the term should not be used with reference to changes of bulk caused solely by changes of temperature or simply by desiccation. Expansion and contraction with heat and cold depend upon the unending contest between the force of cohesion always drawing the particles of matter together, and the force of heat as incessantly driving them apart. When a bit of dry wood swells through absorption of water, and shrivels again upon desiccation, the increase of bulk, which is simply due to the added water, is not when the water is subtracted.

Shrinkage, properly so called, may depend upon several causes. It may result from the imbibition of fluid by twisted fibres, or from the twisting or "pling" together of fibres of wool or hair, as in the operation called "fulling;" or, finally, from the action upon the fibre, as when cotton fibres are soaked in a lye of caustic soda or potash. The simple case of shrinkage falling under the first-mentioned of these headings, and a fair type of the category, is presented by the well-known shrinking of dry ropes when they become wet. This contraction depends entirely upon the twisted condition of the fibres which constitute the rope, and is, in fact, a result of the swelling or expansion of these fibres. If, instead of the finished rope, mere straight, unspun fibres of flax, hemp, or the like, were soaked in water, these fibres, which are in reality hollow tubes, would take up a quantity of the water by force of capillary attraction, so that each particular fibre would

be surcharged and distended with the liquid. The swollen wet fibres would now be not only much larger and thicker than before, but it is conceivable that they might even be a trifle longer than they were when dry, just as a sponge when charged with water is larger, in all senses, than when the moisture has been expressed from it. But when the vegetable fibres become wet and swell up after they have been twisted into a cord, each strand of this cord necessarily becomes larger and thicker in accordance with the swelling of the fibres of which it is composed, and the other strands in going around it are compelled to traverse a larger space than before, the cord, as it were, around which each strand is twisted being larger than it was originally. The longitudinal expansion of the fibres, if any there be, is, meanwhile, vastly less in proportion than the lateral swelling, and is altogether insufficient to compensate for the increase in diameter. Hence it happens that each portion of the rope is pushed outwards from the centre toward the circumference, and the strain thus brought about goes to shorten the rope, which is, of course, drawn in from the two extremities towards its middle. The wet rope shortens as it becomes thicker—loses in longitudinal extension as it gains in circumference.

The swelling of wood upon being wetted has this much in common with the case just cited, in that the wood swells laterally, *i. e.*, across the grain. It is here as with the loose flax: the pores of the wood become distended and swollen with water; but as the fibres are not twisted in the wood, as in the rope, there is here no force to bring about any contraction in either direction. As the wet wood dries it simply shrivels from loss of moisture.

The operation called fulling, alluded to above, is employed for the purpose of "thickening up"—of rendering more compact loose and open cloths, or those composed of short wool. In the fulling-mill the cloth, immersed in water in a vessel of a peculiar shape, is continually turned over and compressed by the falling of large wooden beaters, in such manner that the position of the cloth is constantly undergoing change, and that the fibres of which the cloth is composed are made to "felt" together, and to enter into more intimate combination than before. In the course of this operation a very considerable amount of shrinkage occurs, the cloth being reduced as to its linear dimensions at the same time that the thickness and stability of the texture are improved. Wool and some other kinds of hair or fur may be thus thickened by fulling, but the process has no value as applied to cotton or flax. The efficacy of the process depends mainly upon the fact that the surfaces of the fibres of wool are covered with imbricated scales in such manner that the fibres are endowed with a peculiar roughness which permits or even solicits them to twine around one another. By repeatedly rolling, beating, and changing the position of the cloth, the fibres of the wool are at last rolled up or felted together in the desired way, the cloth shrinking meanwhile because of the more intimate union and coalescence of its constituent parts.

The tendency of fibres of wool to felt together is, in any event, so great that special precaution must always be taken to prevent the shrinkage of woollen cloth while in the process of manufacture. In the operation of spinning and weaving wool must be oiled, in order to prevent it from felting. For the same reason, woollen cloths are always kept tightly stretched upon rollers during the various processes of cleaning and colouring at the mill. The value of the common household for-

malas for washing flannels and other woollen goods will doubtless be found to be great precisely in proportion to the smallness of the opportunity afforded for the fibres of the cloth to felt together.

In the washing of woollen goods, perhaps the best instructions for an intelligent operative would be given by describing accurately the system of fulling as practised in the finishing of cloth, and then enjoining the adoption of a course diametrically opposed to this. As it is, the empirical methods of washing appear to agree among themselves, and with theory, in advising celerity, the use of hot water (all changes of temperature, as from warm to cold water, being carefully avoided), and care that the goods shall be rinsed, rubbed, twisted, or stirred as little as possible.

It is noticed that different samples of woollen goods shrink to very different extents upon being washed, though to all outward appearance the goods are identical in texture. One piece of cloth will cease to shrink appreciably after having been washed a few times, while another will continue to contract through numerous washings. This probably depends upon a difference in the length of the fibres of the wool of which the two samples of cloth have been manufactured. As a rule, cloth made of short wool will shrink much more readily than that in which the fibres are long.

Shrinkage by chemical means, in so far as animal fibres are concerned, is intimately connected with that brought about by fulling. In both cases the result depends upon the felting together of the fibres of the cloth, the chief difference between the two systems being as to the manner in which this felting is brought about. The power of felting, which is so highly developed in the fibres of wool, is far less strongly marked in many kinds of fur. But it has been found that, by appropriate chemical treatment, almost any kind of hair or fur may be made to pass into a certain harsh, roughened, crisped, curled, and twisted condition, and so rendered susceptible of being felted. A practical application of this occurs in the process known as *secretage* in the manufacture of hats from fur, where the fur is treated with a solution of nitrate of mercury. As a general rule, animal fibres, such as wool, silk, and hair, are liable to shrink upon being treated with weak alkalis or with solutions of the metallic salts, the natural felting power of the fibres being increased by the action of these chemicals. It is remarkable, however, that acids have less action upon wool than most other chemical substances.

Cotton and flax, when taken by themselves, are not liable to shrink, their fibres possessing none of the peculiar roughness to which wool owes its felting power. But both cotton and flax can be made to shrink by chemical treatment. When cotton or linen cloth is dipped for a moment into concentrated nitric acid, and then copiously washed with water, very decided shrinkage occurs, and the cloth becomes stronger than before. In this case, however, there is actual chemical combination. The cloth now contains one of the constituents of the nitric acid. It has, in fact, been transformed into a sort of gun-cotton. Shrinkage of the vegetable fibres occurs also under the influence of sulphuric acid which has been somewhat diluted, though in this case the ultimate chemical composition of the fibre remains unchanged. A solution of chloride of zinc will produce similar effects. But perhaps the most remarkable instance of shrinkage produced by chemicals is seen in the action of a solution of caustic soda, applied as recommended by Mercer some years since. Upon immersing cotton cloth in cold soda-lye the cotton shrinks at once to a very considerable extent, and remains shrunken

after the soda has been washed out. Cloth which originally showed sixteen threads to the quarter inch, when examined with a lens, can by this treatment readily be made to exhibit eighteen, twenty, or even twenty-two. At the same time that it shrinks, as regards length and breadth, the cloth becomes thicker, even to the extent of a fifth or a third of its original thickness. The strength of the cloth is also increased; a square yard of it weighs more than before, and its power of absorbing and retaining colouring matters is distinctly greater than before. Concerning this sort of shrinkage, however, we know only the empirical facts; no rational explanation of it has yet been offered.

New cotton and linen cloth will shrink, to a certain extent, when washed for the first time—a fact from which it would be natural to infer that these cloths shrink, like woollen goods, by felting; but, in reality, this shrinking appears to depend entirely upon the removal of matter extraneous to the cloth, added to it at the mills during the process called finishing. This foreign matter once removed, as it is by the first washing to which the cloth is subjected, neither cotton nor linen is subjected to further shrinkage.—*Nation*.

## RECONCILED.

O years gone down into the past;  
What pleasant memories come to me,  
Of our untrodden paths of peace,  
And hours of almost ecstasy!

Yet would I have no moon stand still,  
Where life's most pleasant valleys lie;  
Nor wheel the planet of the day  
Back in his pathway through the sky.

For though, when youthful pleasures died,  
My youth itself went with them, too;  
To-day, ay! even this very hour,  
Is the best hour I ever knew.

Not that my Father gives to me  
More blessings than in days gone by,  
Dropping in my uplifted hands,  
All things for which I blindly cry;

But that His plans and purposes,  
Have grown to me less strange and dim;  
And when I cannot understand,  
I trust the issues unto Him.

And spite of many broken dreams,  
This have I truly learned to say—  
Prayers which I thought unanswered once,  
Were answered in God's own best way.

And though some hopes I cherished once,  
Perished untimely in their birth,  
Yet have I been beloved and blest  
Beyond the measure of my worth.

And sometimes in my hours of grief  
For moments, I have come to stand  
Where, in the sorrows on me laid,  
I felt the chastening of God's hand;

Then learned I that the weakest ones  
Are kept secure from life's harms;  
And that the tender lambs alone  
Are carried in the shepherd's arms.

And sitting by the wayside blind,  
He is the nearest to the light  
Who crieth out most earnestly,  
"Lord, that I might receive my sight!"

O feet, grown weary as ye walk,  
When down life's hill my pathway lies,  
What care I, while my soul can mount  
As the young eagle mounts the skies?

O eyes, with weeping faded out,  
What matters it how dim ye be?  
My inner vision sweeps untired  
The reaches of eternity!

O death, most dreaded power of all,  
When the last moment comes, and thou  
Darkenest the windows of my soul,  
Through which I look on nature now;

Yes, when mortality dissolves,  
Shall I not meet thee here unawed?  
My house eternal in the heavens,  
Is lighted by the smile of God.

## Benjamin Bishop.

(Continued from page 18.)

"To John Dunstone. "13th of 5th month, 1846.

"My very dear Friend.—Thine of the 6th inst. I duly received, and it was most seasonable and savoury to my taste, such as my soul loveth; and in that love in which it was indited, doth my heart salute thee, and respond to thy faith in, and testimony to the love and power of redeeming grace in Christ Jesus our Lord, and in the faith of Him. We are brothers in tribulation, unknown in the flesh, but well known in the Spirit, in watchings, in fastings, and in prayer, in which we are companions and fellow travellers towards the rest and kingdom of God. And through redeeming love, we are able to sing together of mercy, and of judgment; Thy rod and thy staff comfort us." Thine to me speaks strongly in the words of the Psalmist, "Come and magnify the Lord with me, and let us exalt His name together;" and my heart responds unto God, "Open thou my lips, and my mouth shall show forth thy praise." I have said we are brothers, companions and fellow travellers together unto the rest and kingdom of God: this we are on our own behalf, having met together in spirit by the way, we have passed through many similar outward afflictions and inward conflicts of spirit. Now let us also be brothers and companions on behalf of the church in watchings, in fastings, and in prayer; and when the Lord, by the Spirit of judgment and of burning, hath purified His Church from all her dross, taken away all her tin and reprobate silver, then shall she again look forth as the morning, 'clear as the sun, fair as the moon, and terrible as an army with banners.'

"Our religious Society has fallen from its first love, and the fire of the Lord's jealousy is kindled amongst us: and we unto them that are covering with a covering but not of the Lord's Spirit, unless they repent and humble themselves under His mighty hand. The Lord is gracious, slow to anger, and plenteous in mercy; 'His reward is with Him, and His work before Him.' The Lord is good, a stronghold in the day of trouble, and 'He knoweth them that are His;' and His eyes are running 'to and fro throughout the earth, to show Himself strong on the behalf of them whose hearts are perfect towards Him.' Many of us are now preparing to attend our Yearly Meeting, to look into the state of things amongst us, and we know not what may befall us there. May our Lord be gracious unto us, and may our God, who satisfieth the longing soul and filleth the hungry with good things, condescend to be our Lord, our Helper, and our Shield. And may'st thou, my dear friend, help the suffering Seed by fasting and prayer, that Amalek prevail not; yea, saith my soul, may all who know the Lord ery mightily unto Him day and night, that He will not suffer His hand to spare, nor His eye pity, until He hath made Jerusalem the joy of the whole earth.

"My dear wife, of whom thou so tenderly enquires, is going on far beyond all our expectations; her patience and resignation are consoling to all who attend upon her. I must strive against being too sanguine, but I think there is great hope of

her being spared to me a little longer. In all afflictions we are mercifully regarded from high. I am often very nicely, at other times very weak, and thus I am carried on from one day another, desiring to cast all my care on Him who careth for us. I sympathize with thee and thy dear wife under your bodily afflictions, but thou be unto God, who comforteth us in all our tribulations, and who will preserve all His humbly dependent children unto His heavenly kingdom unto whom, with the Son of His love, our Lord and Saviour Jesus Christ, be ascribed all His glory and glory, thanksgiving and renown, saith my soul. Amen."

"To ———"

"6th month, 1846"

"How wonderful is the love of God! I high, we cannot attain unto it, but we are held with a little from His Sanctuary to behold a part and the nearer we approach infinite purity, clearer the vision, and the fuller the enjoyment until all things become as dross and as dung, comparison with the knowledge of God, and His Son Jesus Christ. O! my spirit feels the love of God is love, and that all His fatherly chastenments are in love unutterable; let all His we praise Him, in the heights and in the depths.

From "The British Friend"

## The Ministry of Women.

To the Editor of THE BRITISH FRIEND.

Dear Friend,—The following, which appears in the *Review* (No. 354), contains so clear an exposition of Scripture on this deeply important topic, that I venture to ask insertion in the columns of *The British Friend*. Very gratifying is it to observe the spread of correct views on this subject, and to see one and other of the Lord's handmaidens exercising their spiritual gifts, and with such evident token the Divine favour. Surely we have abundant reason to thank God and take courage.

JOHN GROOP

Upper Norwood, S.

Paul is the only inspired writer who even seems to enjoin silence upon women in the public assemblies of the saints. The object of this paper prove, from his own words, that he has not done so, nor afforded, directly or indirectly, slightest shadow of authority for the unscriptural prohibitions which have been so long laid upon christian women.

The true utterances of Paul on this momentous subject are to be found, not in our authorized version of the New Testament, but in the original Greek. Let us examine the passages—only in number—in which he alludes directly to question.

1 Cor. xi. 5.—"Every woman that prayeth prophesieth with her head uncovered dishonoureth her head."

These words indicate a full recognition by apostle, or rather the Holy Ghost speaking through him, of the ministry of women in the church of Christ. "Every woman that prayeth or prophesieth with her head unveiled (thus involving violation of a national custom) dishonoureth head" (that is, commits an offence against conventional rules of social decorum, and so grades herself in the eyes of others.) She prays and prophesy without hindrance, only serving, in deference to the public sense of propriety among the Greeks, to have her head covered with a veil. That is all. And, if women liberty to pray in the church then, why are deprived of it now? As the Corinthian church was formed and established by Paul himself,

notice must have had his approval from the first, or probably it originated either in his express restrictions, or as a secondary result of his teaching as an inspired man.

If authority exists in any part of the Bible for a imposition of silence upon women in the public meetings of the church, it is undoubtedly to be found in the following verses; but the apparent difficulties of the passage speedily melt away on a close and dispassionate examination of a original.

1 Cor. xiv. 34, 35.—*“Let your women keep silence in the churches; for it is not permitted unto you to speak, but [they are commanded] to be obedient, as also saith the law. And if they will learn anything, let them ask their husbands at home; for it is a shame for women to speak in the church.”*

The same Greek word (*ἠσυχία*) translated “keep silence” also means to hold one’s peace, and it is usually so rendered in the 30th verse of the same chapter.—*“Let the first hold his peace.”* The Greek word (*ἀκούω*) translated “speak” also means “to talk for the sake of talking, to talk heed, to talk to no purpose or profit, to prate or prattle like children.” “Obedience” (*ὑπακούω*), voluntary subordination or subjection; it is, not to the other members of the church, it is to their own husbands. “As saith the law.” The law, in this application of the word, means the Divine original appointment (Gen. iii. 16), which a husband is constituted head of his wife. “The head of the woman is the man.” (Cor. xi. 3.) “Wives, submit yourselves unto your husbands, as unto the Lord, for the husband is the head of the wife, even as Christ is the head of the church.” (Ephes. v. 22, 23.) This intonation is remarkably confirmed by what follows: “And if they will learn anything” (if they wish to obtain further information upon any point stated or contested in the church) “let them ask their husbands at home,” instead of taking it in the unprofitable questions so often agitated in this assembly, and thus adding to the anarchy and confusion which prevailed. Moreover, it is evident, on the face of the text, that the restriction only applied to married women. What of those who had no husbands to ask? “For it is a shame” (*αἰσχρὸν*), an indecorum, an impropriety, an offence against the customs and feelings of the community, and therefore against the prescribed rules of female modesty “for women” (married men, for there is no reference to the others) “speak” (that is, to prattle, to enter into an unwar of words) “in the church.” It is remarkable that not a syllable is said in this passage relative either to teaching or preaching, so that it can never be properly used in ap-

“Let your women keep silence,” that is, “hold their peace” (*ἠσυχία*), as confirmed by ver. 30. The language is impositive, not prohibitory—not intended to suppress, but to regulate it. “Hold your peace,” is said to those who are thought to be speaking in an obsequious or sycophantic, or to keep one speaker from obeying on another who is entitled to a preference. “Keep silence” is a translation utterly at variance with the whole scope of the chapter in which the expression is used; still more so, with all the teaching of Paul on the subject; more so still, with the pervading spirit of the writings; and more than all with the general strain of New Testament teaching.

“When I was a child, I spake (prattled, *ελαλοῦν*), as a child.” (1 Cor. xiii. 2.)

The eleven places in the New Testament, *ἀκούω* is translated “talk.” The context plainly requires that it should be so understood here. Its literal rendering is “chatter,” or “chirp as a bird.”—*“Woman’s Duty in the Publication of the Gospel.”*

The words “They are commanded,” have no corresponding Greek.

plication to these questions one way or the other; and consequently, even if the translation of our authorized version be admitted as correct, it is an immense perversion of the words of Paul to employ them for the purpose of discouraging, preventing, or suppressing the public ministry of christian women.

The object of the apostle was very far different from this. To impose silence on the female members of the church as an absolute, permanent, and universal rule, was utterly foreign to his thoughts and remote from his intention. The amount of loss to the church of Christ and his cause in the world, resulting from this utterly unscriptural practice, will never be known on this side eternity. The labourers have ever been few, and yet men have bloodily and presumptuously taken it upon themselves to shut out, from the public service of Christ, a countless number marked out by his own hand to be fellow-workers in saving souls and building up his church. It is evident that, if the object of Paul had been to silence the women altogether, he would also have forbidden them to pray.

Nothing can be more obvious than the aim of the apostle in thus writing to the Corinthians. They were divided into various factions, each with its own leader; and the war of words, in which the Greeks as a nation delighted, and from which the believers were by no means exempt, was at its very height when this first epistle was written. The women of the church, using their new-found liberty, failed not to take an active public part in all those factious quarrels, and as such conduct was specially unbecoming in the married ones, and altogether offensive to the current feelings of the community at large, Paul was constrained to exercise his apostolic authority in the way that we have seen. To keep the women in silence, to extinguish their christian ministrations, was no part of his object, for we have already seen that he forbade them not to pray and prophesy; but he saw the necessity for preventing an undue exercise of their liberty, and decided that they should no longer mix themselves up in public with the unwholy contentions of the church to which they belonged. If the married ones wished to talk about those things, and to be more fully acquainted with the points at issue, it was not to be in the church, but at home, where they could learn from their husbands what they wanted to know.

The following is the only remaining passage that bears directly on the subject:—

1 Tim. ii. 11, 12.—*“Let the women learn in silence with all subjection. But I suffer not a woman to teach, nor to usurp authority over the man, but to be in silence.”*

These verses have no application whatever to the woman in her church-connection. There is not a word about the church or church-relationships throughout the chapter. The object of the apostle is simply to teach the married woman her true position in reference to her husband—to instruct her respecting her proper place of subordination as a wife, according to original Divine appointment—and to show her that it was not her part to assume the attitude or arrogate the authority of a teacher towards one naturally her head.

The correct translation would be thus:—*“Let the women learn in quietness with all subjection (that is, voluntary submission to her husband.) For I suffer not a woman to teach (her husband,) nor (by so doing, or in any other way) to usurp authority (to domineer) over the man (the husband), thus inverting the natural order of things,) but to be in silence”* (in quietness—a state of rest;

that is, as the Greek implies, a state of rest or abstinence from evil or dissension.)

The conclusions that necessarily result from the foregoing passages of Scripture thus rightly translated and interpreted are:—1. That the christian woman is under no obligation to silence in the church when she can speak to edification; and, 2. That she is perfectly free to teach and to preach Christ on every suitable occasion, whether in public or in private.

For “The Friend.”

#### Thoughts for the Times.—No. 42.

In the spring of 1794 Thomas Scattergood was released by his meeting to pay a religious visit to Friends in Great Britain. He was absent on this service for six and a half years, during which time he visited nearly all the meetings in the British Islands, and most of those on the continent. His diary is one of the most instructive records extant of the baptism and exercises of a dedicated minister of the gospel, anxious in all things to walk worthy of his high vocation. His ever present thought and prayer were “that my divine Master may cause his light more and more to arise and shine in me, that nothing which is wrong may be hid; for I see heaven is a clean and pure habitation. And now, O Lord my God, graciously condescend to the low estate of thy servant—open the way and go before me in this land; and if thou go not with me, take me not hence! Oh, guide my heart and my tongue, that I may not speak a false vision in this land.”

Almost every page of his diary—from which the following extracts are taken almost at random—shows how strictly he guarded the avenues of his heart.

“Tenth month 15th, 1794.—In a lonely walk this morning, I felt some brokenness of spirit, of which I was glad; the afternoon and evening were not so pleasant, yet I hope I have been measurably content, but fear I do not experience that advancement and firmness in the christian life which is desirable. My days are few and fleeting—Oh, for greater religious improvement and more wisdom and stability!”

“Tenth month 2nd, 1795.—I am shut up in spirit at I. Clibborn’s, near Monte, and may say, the pursuer seems at times near upon my heels, and surely, nothing short of the renewed extension of divine mercy and love will keep and preserve—I can do nothing: wait then, still wait, in patient resignation, Oh, my soul, and heed not what man shall say or think; the sufficiency of a gospel minister is of God.

“Eleventh month 4th.—To Mooste Meeting, and was enlarged especially toward the youth, and had to point out the dangerous situation some were in, and to encourage others; and if I have been favoured to engage some one to leave the tree of knowledge, of pleasure or carnal gratification, surely my being shut up for several days past, as in a prison house, ought not to be discouragingly looked at; and if only for my own mortification and instruction, with reverence may I say, so be it.”

“Eleventh month 11th.—On examination, though with thankfulness I can acknowledge, that the good hand has been near to help this day, yet am conscious that more care and circumspection in speech, less quickness and fewer off-hand remarks, would tend to more peace. When I am off my guard and slip but a little in conversation, it brings the rod.”

“Third month 20th, 1796.—A night of conflict, and was very poor and stripped this morning before I arose, under some painful apprehension that I had not kept the girdle of truth so close to

my loins as I ought. What a precious thing it is to be preserved tender—in this state we are favoured soon to see the outgoing of the mind and feel a check even in the thoughts. I went to meeting poor and humble, and to my admiration was strengthened to minister to the poor as well as to warn the unruly.”

“First month 1st, 1798.—Here is the beginning of another year; and Oh, if my life is preserved through it, that it may be spent to the honour and glory of my heavenly Master, Jesus Christ my Lord.”

“First month, 27th.—One word dropt last evening was an affliction to me. If for every idle word which my mouth shall speak he must give an account, how awful is the reckoning. Oh, that I could arrive at a more fixed habit of righteousness and purity of heart; for blessed are such, they shall enjoy greater union and communion with God. What are words or such memorandums as these, but as mementos to look back at. They are made in much simplicity, sometimes, it may be frequently, not remembering what passed yesterday, or not looking back to ascertain. I desire to be more industrious, and improve the time in these steps from travelling and ministerial labour. Singular indeed have been the stops and stays I have experienced in this land, and even in this house. O Lord, break or loosen the chain that has held me; not in my time or will, but in thine, and preserve my poor soul from sinking under the temptations, conflicts and trials that have so long been permitted to assail. O Fountain of mercy and life, did'st thou not enable thy servant when leaving that comfortable dwelling thou affordest me, parent, wife and children, and all, to follow thee whithersoever thou mightest be pleased to lead, and into what thou might be pleased to appoint. Oh, then, forsake me not.”

“Seventh month 13th, 1798.—On awaking this morning my exercise awoke with me. Oh, may I be favoured to believe that I am not cast out of the notice and care of my heavenly Father! May I be corrected, proved, sifted and tried, and brought into order at last. Cleanse me from secret faults, O Lord; thou knowest my heart; I cannot hide anything from thee. If more abasement is necessary may it be my portion.”

“Tenth month 30th.—Another humbling, heart searching, heart breaking morning. The gathering of manna is a daily work; and if I can be enabled to say, Thy will be done and not mine, morning by morning and evening by evening, this is manna enough. This has been a day of sorrow, and yet may I be truly content, or as much so as such a poor creature dare to look for. \* \* \* Why may we not believe that by and through the intercession of so great an High Priest, our prayers and our secret cries are heard and noticed; Lord, I believe; help thou mine unbelief.

“31st.—I crave to be favored to know an increase in this experience, to be careful for nothing, but in everything with prayers and supplications, with thanksgiving, to let my wants be known unto God. Notwithstanding all I meet with, there is abundance to be thankful for. Lord forgive me my frowardness and uneasiness in this sifting, proving time; wherein my faith and confidence in thy protection and care have indeed been proved.”

The following memoranda were made during a visit to Scotland and the Orkneys in the year 1799. He attended the half years meeting at Edinburg, and the week-day meeting held afterwards. “Several young people were laughing and talking together, with which my mind was grieved, and after a time I stood up and reproved them, and told them my employment in such

meetings was often in sorrow and tears; also mentioned the distress I had been witness to, when the pestilence that walketh in darkness, was going through the city where I dwell, and how different it would be in this place if the Lord should see meet to visit them in the same way, then they might have to mourn a father or mother, a brother or sister, &c., and say alas! for me. \* \* \* Friends afterwards remarked, that the meeting at this time never broke up so solidly before. In the evening I was brought very low, and retired to my chamber and offered up my prayers and tears, with strong cries in secret.

“3rd.—The accuser of the brethren is permitted to come up against me, and I see no opening to return, and greatly fear going forward unseemly. Thy sovereign will, O Lord, be done; only be pleased to keep the head of thy servant above the waters. Felt more contented and resigned this afternoon and evening. This is a favour even to sink down into nothingness, emptiness and poverty, and bear it in a becoming manner.

“4th.—I felt a little openness to give liberty to invite the neighbours to meeting to-morrow.

“5th, First day.—Very strict and poor indeed. I hope my soul longs in all things to be resigned and content; and were it not for such prevalent thoughts so continually coming up against me, (like this,) ‘Thou art deluded, thou art deceived, or it would not be so with thee;’ I am ready to think I could sink down and bear all things patiently. Indeed, it seems as if there was no other way for me, than to bear this unutterable conflict with patience and willingness also. O Lord, thou knowest all things—thou knowest that my soul desires to love thee and to do and submit to thy will. Went to meeting and after a time felt an openness in my heart toward the people, a number of whom came; and although there appeared much lightness at first, we had a solid meeting and it concluded so. I ventured to invite them to come again at six o'clock; which was a full meeting, and to my humble admiration I was favoured to hold forth the truths of the gospel. Tenderness and solidity were prevalent; the meeting closed well, and my soul was measurably filled with thankfulness. My dear companion on lying down, appeared much broken and tendered, under the sense that Truth had eminently prevailed in this last meeting.

“6th.—Comfortable and quiet in mind, but yet under exercise. Sat down with the family and several Friends, and felt my mind draw to supplicate the Almighty Helper to go with us, and to bless this family; my companion's and my own, were also fervently remembered. Took leave and rode to Queen's Ferry, nine miles, and two miles over, and may record with thankfulness that it had been a sweet ride, in the fulfillment of that promise, ‘For ye shall go out with joy, and be led forth with peace.’ Thanks for this morning's portion.”

After reaching Kirkwall, on Pomona, the chief of the Orkney Islands, he writes: “Fifth month, 29th.—Poor and blind this morning, and I cannot go forth unto work and service unless I feel the Lord putting me forth—great discouragements come up against me and I feel like one broken up. O Lord, enable thy poor servant to say, ‘Thy will and not mine be done, however trying my situation may be. Took up the blessed hook and opened on the forty-ninth of Isaiah. Oh, when shall my soul experience more of the sweet consolations of the gospel. May I suffer rightly for the seed's sake. Favour me, gracious God, to do thy blessed will on these islands, whether it be little or more; accept the free will offering of

my lips in a greater or smaller congregation, if mortification, stripping, and further abasement in poverty is good for me, grant that my li stock of patience and hope fail not.

“30th.—Lay down and slept through night, and felt pretty well upon awaking, yet am as a book sold. This is indeed a tragedy; never did my soul experience such plagues such descendings as into the depths when on licentious journeys in America, and why is it so? Hold fast, Oh, my soul, hold fast. Thou rememberest thy humble Lord and Saviour, suffered for thy sake and for poor lost rebellious man's sake. May I be accounted worthy to suffer my small measure for his sake—rather let my heart forget thy cunning, and my tongue cleave to roof of my mouth, than that I should not be will to do and suffer the will of my God. Oh, thou all-powerful One, help thy servant through; may not fall in the day of trial, and so reproach thy name and truth. I desire to love and hold thee; enable me to turn away from and to forget things past; put them out of remembrance; reanimate my soul, if any labour is allotted me this island. I believe thou art able to heal, raise up both soul and body; but if it is thy will that I should yet suffer in both, even tho thou hide the cause, may my soul sink down say sincerely before thee, ‘Not my will, but thine be done, O God.’

“Sixth month 1st.—All our religious duties must be performed in the name of Jesus in his power and strength. If this was for by active man, less would be done in appearance, but what was done would be done to no effect; the Lord will bless his own work. thousands of rams, not ten thousands of river oil, are what is wanted, &c., not a great apparatus of doing, and saying, ‘Lord, Lord;’ but do and suffering the will of God. This mystery work is confounding to man's wisdom and activity. Lord keep my feet from sliding in slippery places—grant thy power, mercy and love to go with that I may move with it and stay with it. thy seed under suffering—is religion low among men? Grant ability to say in sincerity: Whom thou art there let thy servant be, even if it is suffering and death.”

On his return to England he remained for several months in London and its neighbourhood and afflictions being still his portion. writes under the date of Eleventh month - 1799.—“Is there a baptism for me to be baptised in this land, in London? Is there a cup drink of; and am I yet to remain a prisoner bound? Lord, only grant me remission, wash all guilt and stain, and receive me graciously thy favour—point out the way and go before, behold thy servant, thy tribulated servant, I unto him according to thy will and thy word further steppings along in this land, and grant that I may clearly see the time to leave it, that it may be in peace after so many year deep conflict. All this thou can'st accomplish do it in thy own way and time, and humble soul into submission to thy sovereign will thank thee Lord and Master, for support in deepest trial; yet with blushing and confusion when I view my strugglings and want of thy exercising faith. O extend thy free mercy. Lord protect and preserve my children; let me be thine in life and in death. It has been a of some ease from that oppression and death I felt. I endeavoured to enoist my head and my face.”

“Twelfth month 25th, 1799.—My heart closed up and hid from me, and an humble weight yet rests on my soul, with respect to

habitants of this great city, and no opening to clear of it. May I with humility say why is your pain perpetual, and my wound ceased to be healed? Why do I mourning all the day, as with sword piercing my soul, and in the night season trembling of heart. Then, Almighty One, nearest, and my soul craves patience to endure till thou removest it."

"29th, First-day.—In the large assembly convened at two o'clock, I laboured some time, but it a stop and told the meeting so, believing it not right to exceed the gift and feeling; and after time Sarah Lynes stood up and was much engaged."

These deep baptisms were but the preparation for those eminent appearances in the ministry which marked his closing labours in England. The eighth month of that year (1800,) his long hoped for release was granted. On the 16th of that month he writes: "I feel at liberty to cross the great deep again and to look towards my native land."

For "The Friend."

Reading the editorial of Sixth month 23rd, reviewed an exercise and travail of spirit which I have many times felt for some of our dear young middle aged Friends. I believe I can say on a feeling sense that there is great danger of being carried away by the many "philanthropic enterprises and praiseworthy associations which aim the attention of our members in the present year." My feelings have yearned over some for fear they would take up a rest short of the true rest, these few lines should be read by any in that condition, I entreat of them not to turn indifferent or contemptuously away, but come down and run inward to that still small voice which will teach you of more glorious things; beware also of those promptings which would lead you into too great activity in the church, before you are prepared for the service: this is a temptation which accompanies the foregoing, and if encouraged, will lead to the feeling that you are as wise as more than many little ones, (as to this world,) to were in the Truth before you, and are before us. Remember your offerings are not acceptable except they be sanctified.

For "The Friend."

Most cordially do I unite with the remark in the Friend of Ninth month 8th, 1806, respecting the "Juvenile Reader's Column." I find it instructive to mature minds, but think quite beyond that of youth's of tender years to apprehend the terms used. I have taught schools, mostly consisting of young persons, much my time, for forty years. The capabilities of our minds of children has been my chief study. I have generally found the most simple but correct language the best. If practicable, it is well to press forward an object or an action to illustrate the assertion.

I am willing to send authentic accounts to the Editor for his insertion, if he thinks them worthy. Not be has only to omit them and it will be understood. I will however state one fact.

A little boy about four years old under my care, walking one day with a friend in front of the school-room said, "We have but two rules in our school. "To do as we would be done by" and "to go past that stone."

I believe the child did not know the rule of grace as we would be done by, included so much. I may say for him that in early life he gave many lessons of instruction by his carrying out the rule so truly. And I believe few ever lived so nearly up to it than he has done, now nearly six and twenty years. Respectfully,  
A SUBSCRIBER.

As death leaves us, judgment will find us; "for there is no work, nor device, nor knowledge, nor wisdom in the grave whither we are all hastening," and some of us apparently, with lengthening strides. Then let us endeavour to use all diligence to make our calling and election sure, before we go hence; that so we may be amongst the happy number who have an entrance ministered abundantly, into the everlasting kingdom of our Lord and Saviour Jesus Christ.—D. Wheeler.

## THE FRIEND.

NINTH MONTH 22, 1866.

It has been a common opinion among those who have devoted themselves to the study of the Apocalypse, that the latter part of the present century would witness the fulfilment of several of the more remarkable of those predictions therein recorded, which have not been previously accomplished. Many have been anxiously anticipating, and many are now eagerly looking for some extraordinary display of Divine power in the overthrow of the kingdom of Satan, and the liberation of mankind from his seductions; resulting in the widespread knowledge of the glory of the Lord throughout the earth, and the willing submission of the nations to the government of the Prince of Peace.

We fully believe that the revelations made to the beloved Apostle John will be brought to pass, in accordance with the will of Him who sees the end from the beginning; and who prefigured the events of succeeding ages by the types and symbols which were displayed to his servant while he was suffering for the testimony of Jesus in the isle of Patmos. Nor do we doubt that many of those awfully sublime manifestations refer to the overthrow of the power of Evil, and the final restoration of this world to purity and holiness, and the submission of its kingdoms to Jesus Christ, their lawful Sovereign and Almighty Redeemer. But as prophecy did not come in old time by the will of man, nor was given forth to excite or gratify his prying curiosity, and as we have good reason to believe that the time of its fulfilment, in ages that have gone by, has been revealed to mortal eyes only when it has passed, and the accomplished facts attested the meaning and certainty of the Divine prediction, so we apprehend it will be to the end of time; and that it is safest to abstain from what, in every uninspired mind is, at best but speculation, and to rest, with confiding faith, in the obvious teaching of that declaration in Holy Scripture, "Secret things belong unto the Lord our God, but those things which are revealed, unto us and to our children forever."

The present era is certainly one of uncounted commotion and extraordinary changes. A cursory view of the condition of the different races and communities of men, can hardly fail to bring home the conviction, that the unended contest between truth and error, between good and evil, is constantly assuming new phases and becoming more direct and decisive, as knowledge and light gain more and more on ignorance and darkness, and the removal of one obstruction to their general diffusion makes way for attacking another.

The law of progressive development, however unappreciated or misinterpreted by those naturalists who inculcate the notion, that the whole animal creation, as we now see it, is the result, solely, of that law, operating originally on monads, instinct with life, and perfecting the various complicated

organisms of each species, as required to meet the wants and aspirations of its individual members, is certainly proved to be true by all previous experience in relation to the progress of man individually, in natural and religious knowledge, and consequently of human society in civilization and christian refinement. "First the blade, then the ear, after that the full corn in the ear," beautifully typifies the gradual change of man from a state of nature to a state of grace, and also the progress of communities from the immorality and degradation of paganism to the purity and high attainments of the true christian church.

Man is too often the creature of impulse, carried away by influences external to himself, which may urge him to the avowal of opinions he is neither competent fully to understand, nor prepared to carry into practice; or incite him to undertakings for which he has neither the right spirit nor the proper qualifications. This is strikingly exemplified when acting conjointly or in masses.

Thus we sometimes see communities agitated by conflicting opinions respecting certain principles or course of action, good in themselves, and calculated to promote the well-being of all, but advocated or opposed on other ground than their intrinsic merit, and party spirit or the occurrence of some adventitious circumstance, will impel the multitude to their adoption and enlist them in their defence. But such improvement—if improvement it can be called—resulting from popular excitement is not reliable, and not unfrequently is followed by corresponding reaction, involving greater moral deterioration than before. The only trustworthy amendment in society at large, or in any portion of it, is that which is wrought in its members individually through the operation of the Spirit of Truth in the heart. By this means the world has advanced by slow degrees, to the point it has now gained, and by the same, we apprehend, are truth and righteousness to continue to be spread until they cover the earth as the waters cover the sea. Hence the responsibility resting on each one, that in the struggle constantly going on between good and evil, he may be found doing his part towards securing the triumph of the former, and thus be instrumental in upholding and enlarging the kingdom of Christ.

How is it with the Society of Friends in the present shaking among the dry bones of professing christendom? It has had an important post assigned it in the militant church, and a banner given to it to display because of the truth. It has possessed a faith consonant with primitive christianity, freed from the symbols and ritualism imposed by priestcraft on the great body of nominal believers. It has claimed to have been raised up to rebuke and restrain time-honoured departures from the purity and simplicity of the gospel; to exalt the standard of righteousness, and, as a visible church, to adorn the doctrine of God our Saviour, by its members individually exhibiting in their daily life the fruits of the Spirit; a manifestation of which, it declares, is given to every man to profit withal. Thus was it designed to be as a light in the world, inviting all honest hearted seekers, tired of lifeless forms and ceremonies, to come and have fellowship with it, as a church of which Christ Jesus alone is Priest and Lawgiver. Its distinctive mission is to enforce the acceptance of the glorious doctrine of an universal saving Light; the gift of God for man's salvation through a crucified Redeemer; the only heaven which can change the natural man, bring him into the kingdom of Christ, and thus fulfil the prediction in holy Writ, that the mountain of

the Lord's house shall be established in the top of the mountains, and all nations shall flow unto it. Is it as a united body walking worthy of its high vocation? Alas! how often is the banner given to it to be displayed, allowed to trail in the dust of the earth! how are its pure doctrines mutilated, and its righteous testimonies compromised by many; so that the shining example which was to be as a light to those who sit in darkness, is greatly obscured, and instead of drawing others upon essential rites and ordinances to the undiluted truths of the gospel, many of its members are giving their influence to lead it back to be entangled by the yoke of bondage for which Christ had set it free. Let its members ponder its condition under the conviction, that escape from its degeneracy, and a return to its pristine brightness and power, depend on their regeneration and faithfulness, individually.

## SUMMARY OF EVENTS.

**FOREIGN.**—On the 13th, the steamships Europa and Tarifa sailed from Liverpool for Quebec, with a regiment of hussars for service in Canada. The Londonderry sailed on the same day with troops for Canada. The government of Bavaria has determined upon endeavoring to obtain a loan of 28,000,000 florins by means of a lottery to be drawn in Munich.

The negotiations between Prussia and Saxony make very slow progress. It is said that Prussia demands the taking of the oath of loyalty to herself by the Saxons troops, the payment of 10,000,000 thalers as an indemnity to Prussia for the expenses of the war, and the right to garrison the fortress of Konigsstein and the cities of Dresden and Leipzig.

The French and English governments have conjointly made a representation to the Sultan of Turkey against the acquisition by the United States of an island in the Gulf of Ostio.

The Paris *Monitor* of the 13th, publishes a convention, which was signed in the city of Mexico on the 30th of Seventh month last, by which Maximilian transfers to the French agents one half the receipts from customs throughout the empire, for the purpose of paying the liabilities of Mexico to France. This arrangement goes into operation on the first of Eleventh month next.

Advices from Athens state that the Cretan Assembly have voted for the annexation of the island of Candia to Greece. It is said that the government of Great Britain has urged the Porte to give an amnesty to the Cretans, but the Porte has refused. Reinforcements of Turkish troops have been sent to Candia.

The Prussian Chamber of Deputies has voted an electoral law and a parliament for Saxony. It is stated that arrangements have been made for a meeting between the Emperor Napoleon and Count Bismark, and the interview will soon take place.

It is announced that the Plenipotentiaries of Austria and Italy have agreed on all points but the amount of debt to be assumed by Italy in connection with the acquisition of Venetia. On this point there is a difficulty, which places the execution of the treaty of peace in great doubt.

The French Emperor is about to issue a circular to the officers of Europe. It is said, will be very specific in its tone and character.

The cholera prevailes in Naples, Genoa, and various parts of Italy.

The Sultan of Turkey is about selecting an influential member of his government to reside at Washington, as Minister resident and Plenipotentiary for Turkey.

The whole Austrian army is to be placed upon a peace footing.

The London *Times* admits that the Empire of Mexico has withered away, and that the country should be left to itself. The Emperor Napoleon has sent a special mission to Mexico to confer with Maximilian. General Allouville has been sent to Mexico, his name has been recalled, and will go to Mexico to organize an army for the Mexican service. The correspondent of the *Times* thinks that Maximilian may be expected back in Europe in a very short time. San Luis Potosi, Jesuitin, in the State of Vera Cruz, and Guadalajara, have, it is reported, all been taken by the French.

Huyton advices represent affairs as very unsettled, and nearly the whole country in a state of revolution. The mail steamer from Rio Janeiro brings the important information that the troops of the allies have been badly defeated by the Paraguayans.

On the 17th, the Liverpool cotton market was active and prices had advanced  $\frac{1}{2}$  d. per lb. Middling uplands 13 $\frac{1}{2}$ d. Broadstuffs dull and declining. Consols, 80 $\frac{1}{2}$  U. S. 5-20's 72 $\frac{1}{2}$ .

**INTERNAL TRAVEL.**—*The South and the Freedmen.*—Gen. Howard, Commissioner of the Freedmen's Bureau, has addressed a telegram to the Assistant Commissioner in Alabama, informing him of a statement made that two freedmen had been sold in Clark county as slaves, one for \$500, and the other for \$700, and directing him, in case the statement be found true, to secure the release of the two.

By the census of the city of Mobile, just completed, the population is found to be 49,962, of whom 28,000 are colored.

Tennessee papers say the corn crop of that State is greater than during any previous year.

The export of the port of Savannah for the fiscal year, ending 6th mo. 30th inst. amounted to \$17,925,000.

In the 6th Annual Report the freedmen are reported to be suffering from the failure of the cotton and corn crops, many of them having contracted for part of the crop, and others from the harsh measures resorted to by the planters to drive them away before their wages are due. It is estimated that the cotton crop of the State will not exceed 250,000 bales. The crop of corn is quite deficient.

The South Carolina Legislature has postponed further legislation regarding the freed people, until the regular session. The Governor, in his message, had urged a modification of the laws so far as the jurisdiction of the civil courts over all classes of citizens. He also recommended the admission of negro evidence in all cases, as being both just and prudent. In South Carolina fewer outrages occur, and the condition of things is thought to be improving.

Large numbers of white women and children in North Carolina, who are Assistant Commissioner Robinson, need clothing and assistance, and an appeal for them is made to the benevolence of the North.

In York county, Va., there are about 6000 freedmen located on farms originally established by government, but to be delivered over, at the end of the present year, to their former owners.

**Philadelphia.**—Mortality last week 340. Of cholera, 38; cholera morbus, 10; cholera infantum, 29. The mean temperature of the Eighth month, according to the record kept at the Penna. Hospital, was 72.58 deg. The highest during the month was 85.50° and the lowest 56.50°. The amount of rain was 2.18 inches. The lowest temperature of the month was 48.00° and the highest for the past 77 years, is stated to have been 72.50 deg. The highest mean during that entire period was in 1863, 70.50 deg. and the lowest in 1816, 66°.

**The Vote of Pennsylvania.**—At the election for Governor in 1848, the number of votes polled was 336,744, of that of 1866, for the same office, the State vote had increased to 524,667.

**St. Louis.**—The cholera is abating. The deaths by that disease, for the week ending on the 14th inst., numbered 272.

**New Jersey.**—The constitutional amendment was ratified by the Legislature on the 11th inst. In the Senate it was 11 yeas to 10 nays, and in the House of Assembly the yeas were 34 and the nays 24.

**Miscellaneous.**—Advices from the Louisiana sugar region state that a fair crop will be gathered, but there will be a great demand for seed cane, which will make the crop of sugar small.

Samuel Rolland, a colored man, residing in Memphis, Tenn., has been appointed agent and farmer master for the recovery of \$1400, in gold, the savings of a life-time, which, before the war, was discovered and taken away by his master, who applied it to his own use.

A cotton planters' Convention was held at Mount Airy, Geo., on the 9th inst. Resolutions favoring immigration were adopted, and a committee appointed to memorialize the Legislature to aid in encouraging such immigration.

Some of the Texas cities are growing rapidly. Galveston which before the war had only 8000 inhabitants, now numbers 20,000. Others have increased proportionally.

The assessed value of property in New York City is as follows:—Real estate, \$1,196,463,416; personal property, \$334,862,220; total, \$1,531,325,636.

Large numbers of the coal miners and iron workers of South Wales are emigrating to the United States.

Two men, while attempting to cross the Niagara river on the 21st inst., were subjected to a furious storm, struck by a squall of wind and forced into the rapids. They were quickly carried over the falls.

**The Markets, &c.**—The following were the quotations on the 17th inst. New York.—American gold 145,

U. S. six per cents, 5-20, 111 $\frac{1}{2}$ . Superfine State 6 $\frac{1}{2}$  \$6.10 to \$8.70. Shipping Ohio, \$5.50 to \$11.35. Baltimore, \$11.20 to \$12.60. Spring wheat, mixed, \$2; rumber State, \$2.70 to \$2.72; white, \$3.05. State \$1.20. Yellow western corn, 86 $\frac{1}{2}$  cts.; white, 90. Western corn, 85 cts. Oats, 50 cts. Clover seed, \$1.00 to \$1.30. 33 $\frac{1}{2}$  cts. Cuba sugar, 10 $\frac{1}{2}$  a 11. Philadelphia.—Superfine floor, \$7.50 to \$8.70; extra, 9 $\frac{1}{2}$  a 11; family; fancy brands, \$14 to \$16. Red wheat, fair to good, \$2 to \$2.67; prime, \$2.82; white, \$2.85 to \$3. Penna. \$1.05 to \$1.10; western, 90 cts. to \$1. Yellow corn, 85 cts. Oats, 51 cts. Clover seed, \$1.00 to \$1.20. Tim. \$3.50 to \$4.25. Flaxseed, \$3.80. About 2300 head beef cattle sold on from 14 to 17 $\frac{1}{2}$  cts. for extra, the late rate for a few choice, 14 to 15 cts. for fair to good, 12 to 13 cts. for common; market dull. Hogs sold \$14 a \$15 the 100 lbs net. Sheep at a 6 $\frac{1}{2}$  cts. per gross. Baltimore.—Wheat, \$2.75 to \$2.80. Yellow corn, 85 cts.

## RECEIPTS.

Received from J. Hall, Agt., O. W. Hall, P. H. and J. M. Smith, \$2 each, vol. 46, and for Talisha Wharton, \$4, vols. 39 and 40; for Amos Cope, J. S. 2, vol. 40; from Phebe McBride, Jo., \$2, vol. 40; from P. Hall, Agt., O. W. Hall, P. H., \$2, vol. 40; from J. C. Hoge, \$2, vol. 40; from E. Hollifort, vol. Agt., O. W. Hall, P. H., \$2, vol. 39, and Masters, \$2, vol. 40; from P. Pratt, Pa., per J. Em \$2, vol. 40.

A Stated Meeting of the Women's Aid Association will be held at No. 112 North Seventh St., on Sunday the 22d inst., at 4 P. M.

SARAH LEWIS, Secretary.

## WESTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the Boy's Second MATHEMATICAL SCHOOL, to enter on his duties on the 1st of the Winter Session. Apply to

Samuel Hines, Wilmington, Del.  
Thomas Evans, 817 Arch St., Phila.  
Joseph Scattardough, 413 Spruce St., Phila.  
Charles J. Allen, 304 Arch St., "

## FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, — JOSHUA H. WORTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, C. of the Board of Managers, No. 437 Market St., Philadelphia, or to any other Member of the Board.

MARRIED, on the 6th of Ninth month, 1866, at Friar Meeting-house in Germantown, Philadelphia, JOHN GARRETT, to HANNAH R. HAINES, daughter of the Dr. Wm. E. Haines, both of Germantown.

DIED, suddenly on the morning of the 25th of Sept. month, 1866, at the residence of her son, Charles Cook, at Coatsville, HANNAH, wife of Thomas Cook, 81 years and two months, a member of New Gar Monthly and West Grove Particular Meeting, Co. Pa. She was an esteemed member, and one who loved the principles of the gospel as held by her friends; was careful and watchful over her child and frequently gave good advice to others. Her lot deeply felt by her family, yet she, not without believing she is gathered to her eternal rest, as a sh of corn fully ripe. She retained her faculties remarkably to the last, and we humbly trust has been admitted into the glorious presence of her righteous Lord.

—, on Ninth month 24, 1866, at the residence of son-in-law, Joseph H. Brooks, Mount Laurel, AMY JOCEL of Isaac Jones, late of Newton, Camden Co., N. J. aged 85 years.

—, on the 11th inst., at his residence in Germantown, LEAH HANNAH, the 50th year of his age. During a protracted illness of more than a year, mind was continued clear, and he was enabled to lie to the close with perfect calmness, and a firm trust through redeeming mercy, his sins were blotted. His close was peaceful as one falling asleep.

—, on Sixth-day the 22d of Sixth month, 1866, at the residence of her son, JOHN H. HAINES, in the city of Philadelphia, SARAPLESS, relict of the above named Jesse Sharpless in her 84th year. Members of Goshen Monthly Meet.

WM. H. PILE, PRINTER,

No. 214 Pearl street, between Dock and Third.

PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

From the "Leisure Hour."

## The Cultivation of the Silkworm.

Silkworms, to most of us, are only ugly caterpillars, that are kept as mere curiosities in paper mays, fed on mulberry-leaves (when they can be procured, or on lettuce, or any other vegetable the worm is obliging enough to devour in the absence of its favourite food,) and that finish their career by spinning themselves a silken wrapper, in a paper cone, pinned against a wall or hung on a string round the lumber-room. But, if we think or a second that the most costly velvets, satins, silks and ribbons, are the produce of these spinners, we shall to some extent realize the enormous importance of such unprepossessing worms, when considered in a commercial point of view; affording work to hosts of British artisans, of being meat, drink, money, and clothes to thousands who live in sunnier climes. There are two reasons why the silkworm and its culture are, not now, matters of more than ordinary importance. In the first place, a disease has of late raged terribly fatal to the mulberry-worms, in nearly every part of the world where they have been domesticated, so to speak, and that threatens, if not speedily remedied, to utterly exterminate them. In the second place, other species of silk-spinning worms have been recently introduced to France, as well as into other places; and, to some extent, these are replacing the diseased mulberry-worms. But what is of more direct interest is, that a silkworm I shall by-and-by describe has been (although as yet on a limited scale) tried at Essex and at Dankestun, near Eversfield, and the experiments hold out such cheering promise of being signally successful that we really begin to think "sericulture" in England will, in a few years, take its place alongside of agriculture, horticulture, pisciculture, or any other culture.

I propose, therefore, first to consider briefly the history, management, and diseases of the mulberry silkworm, the larvæ of the *Bombyx mori*, as this course will help the reader to a clearer comprehension of the important differences at separate it from the other species, to be afterwards described; in the second place, to give a short account of the silk-spinners that are likely to replace the mulberry-worm, in France and elsewhere; and, lastly, to describe the experiments which are being made at Colchester and Dankestun. I may mention, incidentally, that I have recently visited Dr. Wallace at Colchester,

and am indebted to him for much valuable information, and a view of all his most interesting experiments.

Silk has always been an expensive article. We read of its being valued at its weight in gold at Rome; that Julius Cæsar caused the stage of the theatre to be covered with a silken carpet; that the Emperor Tiberius forbade men to wear silk dresses, because he thought it effeminate; and that Aurelian was peevish enough to refuse his empress a silken robe. We read, in Kirby and Spence's "Entomology," that James I. of Scotland, begged from the Earl of Mar the loan of a pair of silk stockings; "for ye would not, sure, that your king should appear as a scrub before strangers."

China seems to have been the country from whence silkworms first found their way into Europe. In about the sixth century of the Christian era two Nestorian monks visited China in the capacity of missionaries, obtained all the requisite information as to the feeding and general treatment of the worms, procured some eggs, and, artfully concealing them in bamboo canes, eventually reached Constantinople, when the eggs were hatched, and the silkworms successfully reared. From this small beginning, silkworms gradually spread throughout Europe; and for six centuries the Greeks of the lower empire monopolized the trade. In the twelfth century the silkworm was cultivated in Sicily; and in the thirteenth century France, Spain, and Italy began the rearing of silkworms, and the manufacture of silken fabrics.

The silkworm moth (*B. mori*) is a whitish moth, with a brownish bar across the upper wings. The larva, or silkworm, is about three inches long when fully grown, and pale yellow in colour: on the last segment of the body is a horn-like appendage, common to most of the sphinx moths. Its favourite food is the white mulberry (*Morus alba*). It remains about six weeks in the form of a worm, changing its skin four or five times during that period, and, when so occupied, it becomes sickly, and entirely abstains from food. When first emerging from the egg, the tiny silkworm is black, and about the fourth of an inch in length. It begins to gourdize immediately it is born, and gets rid of its first suit of baby-clothes when about eight days have elapsed from its entrance into the world. When fully grown, the grub commences spinning an envelopment of silken fibres, choosing, in the absence of a paper bag, any spot suited to its purpose, and thence makes a silken ball about the size of a pigeon's egg. Thus enveloped, it changes to a chrysalis, and remains in a torpid condition for about fifteen days. The moths then break their way through the ends of the cocoons, and mate, and the female, having laid her eggs, dies.

Domestication appears to have in some degree produced varieties of *B. mori*, in a similar manner to varieties obtained and perpetuated in domestic animals. Major Bunsy exhibited silk at the Exhibition, produced near Bordeaux, of a pure white colour, spun by silkworms carefully selected and interbred. For example, the three varieties of Sina, Syria, and Novi may be instanced,

The Sina produces white silk, very fine in the thread, but weak and wanting in lustre. The Syria are of very large size, and produce a heavy cocoon, but the thread is coarse, and inclined to a greenish tint. The Novi, though small worms, spin a firm fibre, very lustrous and yellow in colour. The cocoon takes about five days for its completion after the worm has commenced spinning.

The silk is a secretion produced from a pair of long glandular tubes, which terminate in a prominent pore or spinneret, situated on the under-lip. Before their termination the tubes receive another secretion, supplied from smaller glands: this material is for the purpose of gluing together the fine filaments that issue from the two *secretoria*.

What appears to the eye to be only a single thread of silk is in reality composed of two or more strands, twisted, and stuck firmly together with this gummy secretion. The quality of the silk-spin is in a great degree dependent on the healthful state or otherwise of the two silk-forming tubes, or *secretoria*. When spinning, the worm moves its head from side to side, attaching the silk fibre to the sides of anything it selects, or that it is compelled to spin in, crossing and re-crossing the threads, until it finally spins itself into a cone without any aperture. Now it follows that the moth, to make its escape, must break through this network of fibres; and so in reality it does, by first softening the gummy material with a secretion which is specially provided for the purpose. The moth then forces its way out, and, in doing so, spoils the silk for reeling; that is, winding off in a continuous thread. I have been somewhat prolix, but I wish to impress upon my reader's mind, first, that the caterpillar of the *B. mori*, when spinning, interlaces the fibres, and spins a cocoon without any aperture, and that the moth, if allowed to escape, spoils the cocoon.

To avoid this damage to the silk, a few cocoons are selected, and put by for the purpose of obtaining the necessary supply of eggs; the others are then exposed to a temperature of about 202° Fahrenheit, either enclosed in tin tubes, and immersed in boiling water (a requisite precaution to avoid damaging the silk,) or placed in an oven and baked: this kills the pupæ that are enclosed, and saves the cocoons. The average weight of a cocoon is about three and a quarter grains, and should *reel* off about three hundred yards of fibre. It is said that sixteen yards of "Grus de Naples" of inferior quality, or fourteen yards if very superior, are made from one pound of *reel*ed silk.

It would occupy too much space to enter fully into the question of preparing the silk for market. Of course the quality of silk depends, in the first place, on the healthful state of the worm; but very much also depends on the process of reeling. The cocoons are first soaked in tepid water, to soften the gum, and the filaments are then wound off, or, as it is termed, "*reel*ed." Silk, on the other hand, that cannot be "*reel*ed" is first carded and then spun, in the same manner as cotton.

The value of skin-silk in a raw state is determined by first winding off 400 cils round a drum that measures exactly one ell in circumference; this skin is then very carefully weighed, and the

weight expressed in grains. If the "reeler" has wound five filaments of silk from off the cocoon, the skein of 400 eils ought to weigh two and a half grains, and so on, more or less, as a greater or smaller number of threads are reeled together.

Three kinds of raw silk are known in the trade, as "organize," "trame," and "floss." "Organize" is used for the warp of silks and stuffs of the best quality. "Trame" is silk of inferior value, very loosely twisted, in order to make it cover better in the weft. "Floss," or "bourre," consists of all the broken silk, carded and spun into "filature," similar to cotton.

The raw silk is skined or reeled in different ways, depending on the skill and intelligence of the silk-worm breeders, and arrives in this country in various kinds of skeins. Here we must leave it; although not the least interesting part of silk-worm culture is the wonderful skill man displays in manufacturing the raw material into the matchless fabrics that are produced from the looms of the silk-weavers. Who would ever think a Gen'a velvet dress, a costly ribbon, or a satin damask ever formed the wrappers of little worms, spun by themselves as a protection from harm whilst sleeping away the time occupied in passing from the grub to the winged state? The fabled skill of enchanters, fairies, kelpies, and bogies, if mixed together, would never create in the most visionary brain a more wondrous transformation than man, aided by steam and machinery, effects in the manufacture of silken fabrics.

Silk clothing is, to a great extent, beyond the pockets of any but the wealthy, who, when they find the price they have been accustomed to give is nearly double what it once was, simply growl, pay it, and never trouble their heads about the why and wherefore of the rapidly-rising tariff. Men, nor women either for that matter, whatever stations in life they may fill, are not similarly indifferent to the rinderpest, sheep-pox, potato disease, oyster failure, and vine blight: these scourges directly appeal to a man's senses, straight through his pocket to his stomach. We hear him say, "These are matters that must be looked to at once, or the poor will be starved, and the rich ruined." Quite as bad as any of these terrible afflictions have been and still are to us, is the "gattine," or silk-worm disease—at present ravaging nearly all the silk-producing countries—to the large section of the population engaged in producing and manufacturing silk.

(To be concluded.)

For "The Friend."

#### Religion in Early Life.

In the year 1819, Stephen Grellet and Wm. Allen were in Petersburg, the capital of the Russian empire, engaged in the prosecution of religious service, which led them not only into the abodes of vice and misery, but brought them also into frequent intercourse with several persons of rank and high official position. Among these was the Prime Minister, Alexander Galitzin, who showed them much kindness, and endeavored to promote the objects of their visit. The narrative of faithfulness to manifested duty, contained in the following extract from Stephen Grellet's journal, is truly remarkable, and will, we hope, raise feelings of religious thoughtfulness in the minds of some dear children on whom their Heavenly Father has bestowed many blessings. S. G. says: "At one of our late visits to the Prince Alexander Galitzin, he related to us an interesting circumstance that occurred lately in Finland. Some children, from seven to nine years of age, were so brought under the sensible influences of the Spirit of God, convincing them of their sins, that

on their going to or from school, they retired into the woods, and there put up their prayers to the Lord, with many tears. By degrees their number increased. The parents of some of them found them thus engaged, and with rebukes and stripes dispersed them; but the parents of others, who had noticed the increased sobriety and good behaviour of their children, encouraged them to meet together in their houses, and not to go out into the woods. The children did so, and some of these parents, observing their religious tenderness, and hearing their solemn prayers to the Lord, the Redeemer and Saviour of sinners, felt themselves strong convictions of sin. They joined their children in their devotions, and a great reform took place in that part of the country. This excited the angry feelings of the priest, who was a bad man, and a drunkard. He went to the magistrates to enter his complaints against both children and parents. The prosecution issued in their being all sent to prison.

"They had been some months in confinement when Prince Alexander Galitzin heard that *children* were in prison on account of religion. He thought it so strange an occurrence that he sent confidential persons to inquire into it. They found so much religious sensibility and tenderness in the children, that they were greatly surprised, especially at the simplicity with which they related how they had been brought into trouble because of their sinful hearts, and how they felt that they must pay to the Lord Jesus Christ, who alone could forgive them, and enable them to live in a state of acceptance before God. Being inquired of, if their parents or others had not put them on doing this, they said that so far from that, they were afraid that their parents or any one else should know how it was with them; and that they retired privately in the woods to pray and cry with tears unto the Lord. The parents also stated that the children had been the instruments of bringing them to a sense of their sinful lives, and to seek to the Lord that he might give them a new heart, and pour forth his Spirit upon them. Moreover, it was found that the conduct of these people and children had been such during their imprisonment as to comport with their christian profession. The prince ordered their release, and had the priest and magistrates severely reprimanded, and removed from their offices. The emperor having heard of all this, and of the great sufferings to which these families were reduced in consequence of their long imprisonment, which took place last year before harvest, ordered that all their losses should be liberally made up to them, making ample provision, also, for their present support. The prince told us of some other instances that occurred lately in Russia, of children who have been brought under the influences of the Holy Spirit, and rendered instruments of good to their parents and others; they felt it their filial duty so tenderly to plead with them, on account of their drunkenness, swearing, and other vicious habits, as to prevail upon them to forsake their evil ways."

**Liquor Consumed.**—The commissioners appointed to revise the revenue system of the country in their report estimate that from 42,000,000 to 45,000,000 gallons of distilled spirits are consumed in the country annually. In addition to this, they estimate that 186,000,000 of fermented liquors are consumed, and 10,000,000 of imported liquors, all costing as retailed at least \$500,000,000. In view of these figures, how much progress has temperance made in this country? The revenue derived by the Government from the liquor business is estimated at \$47,727,276.

From the "Cornhill Magazine."

#### The Loss of the Steamship "London."

(Continued from page 28.)

When I got on deck this last time, I found the ship being put round to bring the boats on the lee side, so that they could be lowered. The sun would show out occasionally—very heavy and troubled sea yet—people still walking about calmly watching the scene. The captain was walking up and down the poop with a long mackintosh coat on, and a cap of some material to close down under his chin. "Poor man! I pitied him. It was a trying moment to each of us, but how much more must it be to a captain at a time like that, when every one looks up to him as their head; when ladies come up to him and ask if there is any hope, and he has to say No; when one or more ask him if he would advise them to go in the boat, he has to tell them, "I think there is no hope for you," which amounts to saying, "No, you had better remain here, and be drowned at once." I felt very much for him situated at that moment; I felt at peace with every one, even the owners. The ship at this time was nearly on a level keel, and very low at the stern, and rolling much like a log—not those sudden tosses and jerks. There was no one at the helm, it (the wheel) was lashed with a rope. I looked around to see what prospect there was of being saved and saw that the small wooden box near the fore-castle had been got out to the ship's side to be lowered, the bows were just over the railing. At this time, nor at any time after did I see any men near it for the purpose of lowering it. The port iron pinnace was still hanging in its place; no order was given that I heard, or any preparation made for lowering it. I saw a young man in it trying to do something, but I knew nothing of a boat. There was only one boat being got ready—the same one I have mentioned before—that for the captain and ladies,—the po-cutter, a fine wooden boat, and still hanging in the davits, with several men in it. I stood I for a time watching the proceedings, when gradually dawned on my mind that the sailors in this boat in their own possession, entirely under their own control. I never saw any of the officer giving any orders or directions; and as for the ladies, I saw no preparation towards getting an on board. The facts of the case were, as I afterwards learned—that after the first boat swamped in the morning, there seemed not much chance of any getting lowered and cleared from the sea with safety; which would account for the captain's not having his first order in the morning carried out,—of getting the boats ready; for if I saw reason to get the boats ready then, surely must have seen more now. But a few of the sailors were evidently men who knew what could be done with a boat as men, and agreed among themselves to fit out this boat, and have a try for their lives. They got her ready with compasses, bucket, bailer, life-buoys, biscuits, &c. The captain may have directed, but I never understood so; and, for the half-hour or more that was on deck at the last, I did not see him interfere, and I was near the boat all the time. When I saw how matters stood with regard to the boat, I then and there determined to get in it if possible. Once that boat is in the water (I thought I) I will jump in, and I don't think they will put me out. Presently I saw a sailor step over, and get in the stern of the boat, which was still hanging in the davits; he was one of those who had helped prepare her, and one I knew by sight—the only one on board. Our acquaintance was very slight, and made by chance. When on my way from Fenchurch Street to Tilbury,

got in at Stepney, and sat on the same seat with me, and from that circumstance we spoke once or twice on board. I then went up to the side of the ship, and spoke to him in a free sailor-like way.

Though not a seafaring man myself, I had been thrown during my life very much amongst sailors, and fancied I understood them pretty well, and knew their dislike to ceremony or to a line of distinction being drawn between them and the rest of society; so I asked him in an off-handed manner, wishing to establish a fellow feeling. It had the desired effect. He said, "Yes, but take your chance when she is in the water," which was all I wanted; for if I had been allowed to have got in before, I think I would not, as I was afraid she might upset in the lowering, as the first did. I soon found that my plan for gaining a favour at that time was decidedly the best, as I heard men beseeching of them to let them go, also offering large amounts of money; the answer was, "We don't want your money." When my friend the sailor gave me permission to go, I thought of the ladies; and asked myself the question, "Am I robbing them of any chance they might have?" and said to my friend in the boat, "Well, I do not like going and leaving those behind," pointing to some that were standing near the mizen-mast. Not that I thought many could be saved; but should like to have a few in the boat, in case we were saved, to show we were not selfish. He said, "I am as sorry as you, but it can't be helped; try and save yourself;" which nerved me, and also showed to me the impossibility of saving any, unless they jumped after the boat was lowered. Anybody would say, "Why not lower them in the boat?" but that was where the danger was, in case she upset, as a great many expected she would. If this sailor had said to me, "Yes, get one or two, and put them in the boat," I would not have done it; for I could not have advised females to go where I was afraid to go myself. Many at this time were standing near; some passengers and some of the foreign sailors were trying to get into the boat, but were prevented by one of the sailors whose duty it was to see she was not overloaded, for if so they could not lower her with any safety. The assistant-surgeon was pleading very hard for himself and a young lady, and I heard one say to him, "Keep your money, and as for a doctor we don't want one." By the remark I judged he had been offering money, and I heard him say, "You must take care, you will want a doctor." This same young lady I saw soon after talking with one of the sailors; I heard after that she offered him 500*l.* if he would save her. I do not know her name. She was about middle height, and I think fair complexion and very pretty. He was anxious to save her, but I suppose he thought as others that it would not be advisable for her then to get in the boat. There was another young lady, also very pretty. She came to the side, and said to his sailor-friend of mine—"Young man, will you save me?" He said, "Yes, you jump as soon as you see the boat in the water all right;" and when the boat was in the water he held up his rus (she was then holding on by the mizen-rigging), and told her to jump, but she would not. Often during the night after I heard him regretting that she did not jump. In the troubled state of the sea at that time, it was a very dangerous jump; if you fell into the water, then good-by; no one would pull you in. I foresaw this difficulty, and provided against any such contingency, by asking my friend in court if he would ill me in case I should fall into the water, which he promised to do; luckily I did not leave

occasion to test his honest intentions, which I never for a moment doubted.

By this time, say five or ten minutes before the boat was lowered, and about half-past one or nearly two o'clock of Thursday, the 11th, the ship was settling gradually by the stern. Any one who was keeping a sharp look-out could not help seeing there was a great change within a quarter of an hour. People were still walking about—the number on deck increasing. I saw the captain amongst them, apparently giving no directions; now and then a lady would speak to him. A good many were standing in a group near the companion-way, scarcely a word being said. I saw some of those I knew, but did not even exchange a word with any one, excepting Munroe, when once he came near me. I said to him, "I intend to have a trial for this boat," not with the purpose of wishing to influence him, as I could not advise anybody at that time, but I wished to get his opinion as to the probability of a boat living in such a sea. All he said was, "Are you?" and walked away. I began to fear that the ship would go from under us before the boat was lowered, so said to my acquaintance in the boat, "Unless you lower soon, you will be too late." He said, "We can't lower till King comes." He was one of their party, who had gone below to see if any water could be got to take with them; presently he came up, and they told him to come in, and they would lower. He then walked a short distance to where Captain Martin was, to ask him if he would go with them. He declined, saying (which I did not hear, being too far away), "God speed you safe to land." Then King asked him for the course and distance to land; he said, "E.N.E., ninety miles to Brest." King must have misunderstood him, as we were then fully 190 miles off. King returned and jumped into the boat, and immediately they lowered, being about a dozen in her. I got on to the rail, holding on to the mizen rigging; as soon as I saw that she was safe in the water, I stepped down on to the mizen-chains, then watched my opportunity when the boat rose on the sea, and made a cautious leap right into her stern. I did not have far to jump, about four or five feet, by waiting until a sea lifted the boat. Immediately that I was in, I saw the boat was drawing under the channels of the ship, and was in imminent peril. I at once got out an oar, as did two others, and we pressed the boat off. When the sailors saw that the boat was safe, and there was a chance of getting away, then they were anxious to have a few women. Munroe was at the side intending to leap, when they sang out to bring a lady; he turned round and ran his eyes around the few to find, naturally enough, one he knew; not seeing one, he made a few steps to the middle of the deck and asked the nearest, a young girl of sixteen or eighteen, if she would go. She said, "Yes." They went to the side to jump; but when she saw the fearful sight below, the little boat being tossed about, with a prospect of being smashed at every heave of the sea against the iron wall of the ship, she said, "I can't do that." There was no time for delay or consideration; as she would not leap, Munroe, seeing the boat shoving off, leaped in himself. All this took place in about a minute or two—that is, the lowering and getting away. After the boat was shoved off the first time, she drew in again. There appeared to be a suction at the stern, and I saw when she drew in this time that she was drawing right under the stern—which would have been sudden death to us. The oars were again brought to bear against the side of the ship; we were then, I think, more in dread of being lost by getting

under the ship's side than in fear of too many jumping. At that time there was no atten pt made by any to prevent any one from getting in—no on board could have jumped. There was only one man prevented getting in, and that was one of the foreign sailors; he came down by the falls from the davits, and some one pressed them on one side so that if he dropped he would go into the water. The boat was apparently crowded full, and I heard one remark (which was very true), "Why don't they go and get out the other boats? why all look to this one, as if there was no other on board?" It still is an unaccountable thing to me why Captain Martin did not see and have those boats got ready, properly manned and officered, and then tell some of the ladies, "There is your only chance; accept it, if you choose." The second time the boat was shoved off her bows were got round, and soon we were pulling away on the port side, and running before the wind. Just then a heavy sea was seen to break over the ship's stern, and wash the people about the deck; but just before we saw a good many, both men and women, standing on the lee-side of the forward part of the poop, waving handkerchiefs and cheering. The sun had just shone out at that time, which made the scene appear worse to me. I thought dark and gloom more suitable for such a sad moment, and more in keeping with the feelings of those on board. Not that I rejoiced over my position, or considered myself much better off, for we did not know the moment we would be swallowed up.

(To be continued.)

Selected for "The Friend."  
Joseph Milthrop.

Joseph Milthrop, a member of Poutefract Monthly Meeting, in Yorkshire, was educated in the principles of the Church of England. But as he advanced towards man's estate, being of a thoughtful disposition, and unsatisfied with the principles of his education, he, after various researches among the different modes of profession, joined himself to the Romish Church, and for divers years constantly attended their worship, and strictly observed their ceremonial institutions, for some time firmly believing Christ Jesus to be the author thereof. At times he was led to believe there was a subduing of the passions and a renovation of heart, which the truly righteous experienced, also a fruition of inward peace, which they at times possessed; to all which he found himself, in great measure a stranger. This caused him many times secretly to mourn and pour forth earnest prayers to the Father of mercies, that he might become a partaker of the same happy experience.

While he thus exercised it came into his mind to go to a meeting of the people called Quakers, for an account of which take his own words in a letter, viz:

"I sat at ease a long time, yet earnestly desired that if the Lord had any particular regard to that people, or approved of their manner of worship, he would make me sensible of it. Being thus set and grown weary of silent waiting, divine power seized upon my body, soul and spirit, which caused me to break out into abundance of tears, and my body greatly to tremble. Then said I, O Lord! why am I thus? To which inward cry of mine, something which till then I knew not, though I had often felt a measure of the same power, though never to that degree, answered, If thou didst love the Lord thy God with all thy heart, mind and soul, that love would be so prevalent over thee, that it would teach thee what to do, and what to eschew. O the surprising state I

then found myself in! How was my heart then filled with love, peace and joy unspeakable and full of glory! Soon after, an honest Friend stood up to tears and much trembling, and said: It is an excellent thing if we can say of a truth Jesus Christ lives in us. These words reached my state, I then bowed in my mind, adoring the Divine power that thus influenced me, and said, Dear Lord! if thou art he that I have long sought and mourned for, tell me, O thou that hast ravished my heart! what I should do to be saved, or to continue in thy favour? Upon which the humble Jesus, the divine bridegroom of my soul, affectionately answered, I require no rite or ceremonial worship of thee, but that thou give up thy heart. It is there I would reign, it is there I would rule, and there I would be worshipped in spirit and truth."

It was some time before he could get from under the prejudices he had in favour of the Roman church, but continued to frequent both the mass house and Friends' meetings, until through a further visitation by an instrumental means, he was effectually reached, became a valuable and useful member, exemplary in conduct, careful to have the discipline maintained, and at times was concerned in a short testimony, which was very acceptable. [He was] a peaceable neighbour, and being of extensive knowledge, was capable of advising in many cases, which he was always ready to do, demonstrating that the living divine principle he had embraced, led him to the exercise of every christian virtue.

For divers years before his death, he was at times sorely afflicted with disease, the acuteness of which he bore with exemplary patience. His last illness was short, and apparently attended with no symptoms of death till near the close of his departure; and though he was suddenly called, yet not unprepared, for, being asked a little before his death how he was, he expressed himself thus: "I am pretty easy, though not without some bodily pain, yet inward comfort helps greatly," and added, "I am weary, of this world, if it would please Providence to take me to myself, O how acceptable it would be!"

He departed this life the 3d, and was interred the 5th of the Seventh month, 1760, in Friends' burial-ground at Burton; aged about 50 years.—*Pity Promoted.*

*Trapping Trout in Florida.*—A correspondent gives the following account of a singular method of trapping trout—it is not fishing—which has been invented in Florida:

"I assisted, as the French say, at quite a novel and amusing party, the like of which I never saw or read of before. The scene was a lake covering about two hundred acres, varying in depth from fifteen to fifty feet, and filled with the most beautiful speckled trout. When the party reached the shore a burly freedman appeared with a huge bucket of gourds on his shoulder. To the end of each was attached a short line, at the end of which was a hook, baited with a minnow. The freedman pushed off in a little canoe, and flung these gourds broadcast on the face of the lake, and then the guests who were to participate in the sport were invited to embark, each in a canoe propelled by one paddle.

The day was just such a one as would have gladdened the heart of Isak Walton, and the trout bit greedily. Soon the gourds were bobbing about in every direction, chased by the eager and excited fishermen in the canoes, amid the shouts of those who watched the fun from the shore. Down goes a gourd with a four-pound trout at the end of it, and away it flies through the water with

a couple of canoes in hot pursuit. The fishermen paddle with all their might, and when one or both come alongside, throw down their paddles and stretch out their hands to grasp their prize, away goes the gourd in another direction, and away go the boats in continued pursuit.

Soon other trout hook themselves to other gourds, and become as puzzled where to go as are the fishermen with the chase. Now under the bows, now to leeward, now to starboard, the gourds and trout are dancing about as if on purpose to confuse their pursuers, who occasionally, if inexperienced in the management of the peculiar craft in which they are all-art, miss their distance, and, gourd and trout, and fishermen are all in the water together, the canoe and paddle going it on their own hook.

The more knowing and more self possessed land their fish with considerable dexterity, but the novices have only the excitement of the chase without any of the fish.—*Late Paper.*

#### HUMILITY.

O! learn that it is only by the lowly  
The paths of peace are trod,  
If thou wouldst keep thy garments white and holy,  
Walk humbly with thy God.

The man with earthly wisdom high uplifted  
Is in God's sight a fool;  
But in the heavenly truth most deeply gifted,  
Sits lowly in Christ's school.

The lowly spirit God hath consecrated  
As his dwelling-room,  
An angel by some patriarch's tent hath waited,  
When kings had no such guest.

The dew that never wets the flinty mountain,  
Falls in the valleys free;  
Bright verdure fringes the small desert fountain,  
But barren sand the sea.

Not in the stately oak the fragrance dwelleth,  
Which charms the general wood,  
But in the violet low, whose sweetness telleth  
His unseen neighbourhood.

Round lowliness a gentle radiance hovers,  
Which charms the general crowd,  
Which even in its shrieking, evermore discovers  
The brightness on its face.

Where God abides, contentment is an honor,  
Such goodness Meekness knows;  
His peace within her, and His smile upon her,  
Her suitly way she goes.

The Saviour loves her, for she wears the vesture  
With which he walked on earth,  
And through her child-like glance, and step and gesture,  
He knows her heavenly birth.

He now beholds this seal of glory graven  
On all whom he redeems,  
On his own bright city, crystal paven,  
On every brow it gleams.

The white-robed saints, the throne-stars singing under,  
Which which he meekly wear;  
Their painless praise rises wells up from hearts which wonder  
That ever they came there.

#### MORNING.

O silence deep and strange!  
The earth doth yet in quiet slumber lie,  
No stir of life, save on your woodland range,  
The tall trees bow as if their Lord passed by.

Like to one new-created,  
I have no memory of grief and care;  
Of all the things which vexed my soul of late  
I am ashamed in this calm morning air.

This world, with all its band  
Of clamorous joys and griefs, shall be to me  
A bridge whereon, my pilgrim-staff in hand,  
I cross the stream of Time, O Lord, to thee.

Eichendorf.

#### John Ross.

John Ross, the Cherokee chief, was born on the 3d of October, 1790, in the Cherokee country which was then located within the bounds of the States of Tennessee, Alabama, Georgia, and North Carolina. His father was a Scotchman, his mother a Cherokee. In the neighbouring State of Tennessee he obtained what was then regarded a quite a liberal education, which was greatly improved in after years, by reading and observation. He early gave evidence of great energy and sound judgment, and thereby gained great influence in the nation.

In 1812 he went with a small party on a mission attended with some peril, the object of which was to prevent Tecumseh from enlisting the Western Indians in the war against the United States. On his return he took a commission in the Cherokee regiment, which fought in the service of the United States in the Creek war, and was in the battle of Horse Shoe.

As a prominent and influential man in the councils of the nation, one of his first efforts in the cause of civilization was to open public wagon roads through the nation. In this he had to contend against the prejudices of those who were jealous of the influence of the white man. He succeeded, however, and in this way an important step was taken toward giving the Cherokees their character of a pastoral people. Through his influence, about the year 1826, the Cherokee adopted a constitution and written laws. These were printed a year or two subsequently for the first time. This constitution was republican in form, and was modelled after that of the United States. It gave the Cherokees a Principal and an Assistant Chief, who were elected every four years, and a Senate and House of Representatives (called "Committee" and "Council") elect every two and four years, also a judiciary system much like that of the United States.

About this time, as a result of this growing as it were, of the Cherokee people after civilization one of the most remarkable inventions ever made by man was brought to light. George Guest, a untutored Cherokee, impressed with the superiority of the white race, and attributing it to the ability to "talk on paper," set himself to work to invent an alphabet. After the most persevering effort, he succeeded in giving his people the most simple and perfect alphabet perhaps extant, being a syllabic one, composed of eighty-five letter. Some of the characters were original, while others were copied from the English alphabet. When engaged in this work, Guest, became an object of ridicule with many of his people, and was charged by some with sorcery; but John Ross, on hearing of his efforts, visited him at his cabin and gave him his countenance and support. As a result of this invention a large portion of the [Scriptures] has been translated into the Cherokee language, and is printed in their own characters, at nearly every man, woman and child can read. Two or three years ago the American Bible Society printed and sent the Cherokees three thousand copies of the New Testament, beautifully printed in their own characters, to supply the wants of the people, as their own presses had been silenced by the war which had desolated the land.

Under the new constitution, John Ross was elected principal chief in 1828, since which time he has been regularly re-elected by vote of the people, every four years, to the present time. Soon after his elevation to the chieftancy, he that struggle with the State of Georgia, and ultimately with the other neighbouring States, at the United States, which ended in might prevailing over right, and the final removal of the Chero-

from their rightful domain east of the Mississippi to lands set apart for them west of that line. The real object of removing the Cherokees the extension of the area of slavery, and the session of some gold mines within the bounds of the nation, and the means made use of was a fraudulent treaty made with a few irresponsible individuals, by which the whole nation was bound to their solemn protest. This action of the Government very naturally created feuds in the north, which were, however, buried in the treaty of 1846, and but for the rebellion of 1861, would have been revived.

Through all these troubles John Ross was the stout, earnest, and able advocate of the cause of a people, counselling moderation and submission to the authority of the Government, when that peaceable resistance to its oppressions was vain. And when, in 1837, a law was forced upon his people, he succeeded in getting an arrangement with the Government which the contract for the removal was given to the Cherokees instead of to heartless white contractors, who, he knew but too well, would have hazled the funds at the cost of thousands of lives. As it was, the effects of this forced emigration of fifteen to twenty thousand people over a thousand miles, through a country in which they were beset, with wiles and temptations of every kind, could but be very fatal to both the body and the morals of the people.

It has been remarked, as a striking illustration of sterling qualities of the Cherokees, that their removal across the Mississippi, they sooner settled in their new home than all laws and the form of government they had at their removal, were immediately put into operation. — *From The Presbyterian.*

Benjamin Bishop.

(Continued from page 25.)

1st month, 1847.

Oh my friend, what can be done to draw the veil unto heavenly love? It would soon do with all the wretchedness that there is in this world. What can we do better than to suffer purify us from all filthiness of spirit, as well as of the flesh? May we wait upon God to know His meaning us, for without Christ we can do nothing. And blessed be His holy name, He preserved a little living remnant in this our world who do know their salvation to be come. I trust these broken sentences will do no harm. I believe it is well for us to get together in spirit, we may feel our fellowship one with another, in the Lord. I seem not to doubt, but thou, myself, and many others, art crying, "my leanness!" Well, my dear friend, Goddom is promised to the poor in spirit, and are exceeding great and precious promises that wait upon the Lord. He is gracious; consider our frame; He remembers that the dust, and He hears the desire of the humble.

BENJAMIN BISHOP.

% J. A. G.

13th of 6th month, 1847.

through adorable mercy He who is higher than the highest regards me, filling my soul with love to the whole human family, and though I outwardly as an empty vessel at the side of Jesus Christ, yet the increase of the kingdom of our chief joy. "The meek the Lord guides in detail, and the meek He teaches His way." I sit upon the mountains are the flocks that bringeth good tidings, that the prophet

peace, that saith unto Zion, thy God reigneth." And perhaps never more beautiful in the eyes of the Lord, than when they are in the deeps out of human sight, when wave upon wave, and billow after billow almost make shipwreck of faith; then it is that we see the wonders of the Lord, and from thence it is that we are strengthened to proclaim unto Zion, "Thy God reigneth." And that all the wrestling seed of Jacob may reign with Christ upon earth until all their enemies are subjected, and put under their feet by the Spirit of our God, is my fervent prayer."

"To ———"

"Stockport, 11th of 6th month, 1847.

"I may say that I am a worm and no man; so that while I feel incapable of doing any good; I strive to do no harm, striving to leave each day's work until the day comes. Poverty of spirit and peace of mind is my favoured portion. When I look at our manner of publicly assembling ourselves together to worship God, I am often ready to cry, "my leanness, my leanness!" How shall I present myself before the Lord? O! for a more watchful, humble frame of spirit out of meetings; then would His life-giving presence be more eminently witnessed in meetings, and the Lord would make many amongst us lively branches, bringing forth fruit unto the praise of His grace. O! there wants nothing but a total surrender of our wills to His holy and blessed will. His hand is full of blessings; I find it so."

6th of 7th month, 1847.

"One thing have I desired, that will I seek after, that I may always be in my right place, doing the right thing. As I am deprived of my books whilst here, I have much time for inward retirement of spirit, which I feel to need more than books. My hearing is not perfect, though better than it has been, and my memory fails much in temporals, so that I seem to myself to be of no use in the creation. The travail of my soul grows stronger and stronger that all the inhabitants of the world were as happy as myself. The longer I stay here, the more I am brought into sympathy with the suffering Seed of Christ hereaway, without at all lessening the duties I owe to my dear Kent friends; and the cravings of my soul are for us all, that we may more and more put on the Lord Jesus, until in the unity of the faith, and of the knowledge of the love of God, we bring forth fruits unto holiness, unto the praise and glory of the Father and the Son. Small as we are among the valleys, and low as the life of vital religion is among us, yet the unbelieving know not the thoughts of the Lord, neither do they consider that He is God of the valleys as well as God of the hills, and He has enabled a small army to put to flight the host of the Assyrians which filled the country."

"To ———"

12th month, 1847.

"My beloved Friend,—whom I love in the Truth, and for the Truth's sake: grace, mercy, and peace, from God our Father, and from our Lord and Saviour Jesus Christ, be multiplied unto all that love the Truth, and walk therein, to the praise of the glory of His grace, whereby and wherein He hath made us accepted in the Beloved. Worthy, saith my soul, is the Lamb that was slain, to receive power, and riches, and wisdom, and strength, and honour, and glory, and blessings! My soul travails for the fulfilling of that vision which John saw, when he heard "every creature that is in heaven, and on the earth, and under the earth, and such as are in the sea, and all that are in them, saying, blessing, and

honour, and glory, and power, be unto Him that sitteth upon the throne, and unto the Lamb, for ever and ever!" And what hinders the coming of the kingdom of our God and the power of His Christ? Is there weakness in Him? Do His exceeding great and precious promises in Christ Jesus our Lord fail towards the children of men? Nay; blessed, praised, and unquaffed over all the powers of darkness, be the ever adorable name of Israel's Shepherd, the Father of mercies, and God of all comfort, who is in His children of Light, and by His grace will work in them, through them, by them, and upon them, until the beast, the false prophet, and the whore is taken and no Canaanite be found in the house of the Lord. True it is that the Jews were taken captives out of their land which the Lord had given them to have inherited for ever; and every visible Church of Christ under the glorious gospel dispensation, hath to the present day been taken out of their inheritance in Christ by the combined powers of darkness, the beast and the false prophet. These have robbed every visible church, so that they can no more see Christ coming unto them in His inward and spiritual appearing, than the Jews could see Him in the days of His flesh. And in all, and by all that are under Egyptian darkness, Christ is persecuted and crucified in His second coming without sin unto salvation, as in the days of His flesh. He was rejected by some who profess to believe in Moses and the prophets.

But the foundation of God standeth sure, having this seal, the Lord knoweth them that are His!"

"My soul travails for the whole creation of God, it mourns under the hard unbelieving hearts of men, and it rejoiceth in the wonderful and inconceivable love of God in Christ Jesus our Lord. And seeing that a measure of the grace of our Lord and Saviour Jesus Christ is shed to every man, sufficient to make us meet to be partakers of the inheritance with the saints in light, from whence cometh this unbelief in Christ and God, and the hardness of men's hearts against the offer of His love and mercy? We read that the angels' not keeping their first estate, was the primary cause of our first parents being deceived. They fell likewise and fled from the voice of God, but God sought them and found them, and had compassion on them, and though they had lost their innocency and become dead to God, yet he promised them a Seed that should bruise the head of the serpent. And all that by faith live in Christ, the Seed of God's promise, by which they overcome the wicked one, are brought up again into the paradise of God. But some of these also have left their habitations in the Truth, and fallen through their own hearts lusting after forbidden things; and these are the greatest enemies on earth against the Truth as it is in Christ Jesus.

"Our Society is mixing with the people, and strangers are devouring our strength. Yet there is a little living remnant sighing and crying to the Lord because of these things.

"I do hope, trust, and pray, that the Lord will hasten the day when he will purely purge away the dross by the Spirit of judgment and burning, and take away all the tin, and restore judges as at the first and counsellors as at the beginning—that the mountain of the Lord's house may be established in the top of the mountains, and exalted above the hills, and that all nations may flow unto it. And then this song will be sung in our land, "This is our God, we have waited for Him, He will save us: this is the Lord, we have waited for Him, we will rejoice and be glad in His salvation." And now, my dear friend, I have written much, and perhaps to but little purpose, being pretty much to the same effect as that I have

written thee before, but Pharaoh's dreams were doubled unto him because the thing was certain.

BENJAMIN BISHOP.

For "The Friend."

### About Shields.

FOR THE CHILDREN.

All of you, my dear little friends, know what an umbrella is, don't you? I imagine every one of you has, sometime, been carried high and dry, through a pouring rain, under an umbrella. And it will keep the hot sunshine off, too, as well as rain. I saw some little folks lately make a play-house under an umbrella, and it was so big, and they were so little, they had plenty of room. It was fine fun for them, and they were so good-natured to their play, and pleased each other so prettily, that it was very nice to sit and watch their play.

Don't you like to play so that your mothers and uncles will enjoy it too? It is so nice for you little folks to begin to give pleasure to others while you are little, even in play; and the more pleasure we give others, the more, a great deal, we get ourselves.

Well, I began to tell you something about shields. A shield is anything that keeps off whatever will hurt us, and I think an umbrella, when it keeps off the rain or the hot sun, is a very good shield. Or supposing you were going by a house, and a cross dog was to run out and bark at you, but the fence kept him from getting to you, then the fence would shield you from the dog.

Did you ever see pictures of David and Goliath, and the great shield the man carried before Goliath? I remember seeing one when I was very little. But Goliath's shield did not save him, you know. In those days when men went to battle, they often carried shields to keep off the spears and swords and arrows of their enemies. They were mostly round, and made of wood covered with leather, or sometimes of brass or even gold. It was right in those days for good men to go to war when their Heavenly Father told them to; but when our dear Saviour came down and lived among men there was a change, and now everybody that loves Him must mind Him, and He said, "Love your enemies."

David had a great many enemies, and was often in so much trouble that he wouldn't have known what to do, if he had not felt sure the Lord would take care of him. And he did often feel sure of it—so sure that when everything else distressed him, he would stop speaking of his troubles, to praise God for His goodness and mercy and loving kindness.

The Lord himself said to Abram, "I am thy shield,"—that is, He would keep everything from doing him any real harm; and David felt sure of it often when things seemed to hurt him the most. It wasn't because nothing seemed to go wrong, but because he knew the Lord would make them do him good, if he loved him and served him; and this made David feel such trust in Him. And he seems to love to call Him his shield, and to speak of his trust in Him; and how many many people have been helped to trust in Him while reading David's words!

Now, dear children, you remember that beautiful text "The Lord God is a sun and shield!" And as I look out this lovely autumn afternoon, and see how the sunshine brightens the green grass and the sweet flowers, and everything it touches, I long for my dear little friends, that while they are little, the Light of the Lord may shine in their hearts: that they may come unto their Saviour and know how happy His love and forgiveness will make them; that they may love

Him more and more, and try to please Him, that so this Light may shine brighter and brighter, and they may feel, as David did, that the Lord is their shield, that He will not suffer any evil thing to hurt them; and as they learn more and more how good He is, be led like David, to praise Him "seven times a day."

Ninth month.

For "The Friend."

What living treasure are these letters of Benjamin Bishop! Doubtless his sweet humble feeling of thankful praise will enrich many hearts, and mourners will rise up with songs of rejoicing to renewed sense of the great mercy and love of God in and through His dear Son; and be enabled to acknowledge, that though while dwelling in the king's palace, they see much of "His glory and His beauty," it is a higher privilege to be admitted into the fellowship of His suffering, even when He has not where to lay His head; for to the suffering, not less than to those who are at ease, was it said, "To everything give thanks."

For "The Friend."

### Thoughts for the Times.—No. 43.

Thomas Scattergood remained much at home for several years after his return to America. Nearly four years after he landed he wrote to Susanna Horne, "I feel for my part, like a vessel much laid by; great thou knowest was the travail and exercise I had to wade through when amongst you, and great was thy sympathy and care towards me. None, perhaps have beheld me in greater weakness, fear and trembling than thou. I cannot forget the wormwood and the gall, and yet feel disposed to believe I could not have done without it; and have an humble hope that all my misgivings and want of faith and firmness, in seasons of deepest trials and seeming desertion, will be blotted out of the book. My little labours seem much confined to this place, having very little openness to go from home, and I esteem it a favour to have so comfortable a one."

I hope the disposition of an old soldier who has been in many a warfare, mercifully prevails, even a willingness to go forth anywhere at the word of command; but may my soul ever be favoured with this, and not attempt to uphold the ark unbidden!

Again, in the Fifth month, 1805: "There is a secret rejoicing accompanying my mind, in hearing of thy industry to get forward in thy day's work. It is a pleasant thing to look back and remember the willingness wrought in the mind to labour in the morning. I feel it so, as one to whom the afternoon has come; there seems little to open with me, except now and then to a Quarterly Meeting, but much at home. Go on in fear and trembling still,—expect to meet with thy various trials; wait I beseech thee, as one desirous thou may be numbered among the true born children—wait for the renewed touches of the live coal; wait for the seal and evidence; this will make thy language drop as dew, to the consolation of the mourners and tried burden bearers, and thou wilt grow in thy gift; sound judgment will be experienced also to know what is sealed or seasoned, where to deliver or seatter it, and also the time when; so living with carefulness, in due time the Lord gives a right issue."

He had been affectionately united to that excellent woman in England—had sympathized with her in her early preparation for the ministry, and was regarded by her with truly filial attachment as her father in the church. In the year 1811 this beloved friend made a religious visit to the churches in America, and the last journeys

that Thos. Scattergood made in the service of Truth, were those in which he bore her company from 1811 to 1813. The notes taken by these journeys are deeply interesting, and betray no confidence in his religious attainments trusting to past experiences; but dwell necessarily of continual watchfulness, of a day by day for the supply of spiritual food. Eighth month 20th, 1811.—"I lay down sorrow, in consequence of not keeping the light of Truth bright close enough. Ah! what a deviation affects a mind that is tender, cutting off but a small piece of Saul's garb David, when he was in his power; made him snite him, and so hath mine, and I begged almost immediately, and yet I feared should be set aside a time for this. Oh, my dear Saviour! I have covenanted to serve thy days, preserve my feet from falling."

"21st.—Meeting of ministers and elders to my admiration, I was exercised in it, in line of ministry. Ah! here was no room of altitude, neither in looking into myself, nor the flock; there is yet bitterness in my evening."

"Ninth month 14th.—A night of conflict awake; I seem broken up as to moving, oh, how am I vexed—I cannot go forth in prison. I have been thinking of the expressions, or the apostle quoting him, respect our blessed Lord and Saviour; "In his mind his judgment was taken away, and who declare his generation; for his life is taken the earth." Oh, that I might hold the measure of faith in a more pure conscience; then my soul hope for deeper and more lasting instruction by what is permitted to befall me."

"15th, First day.—Very close searching heart upon my bed this morning, and feel more peaceful and quiet; what need of pain and resignation to wait the Lord's time, cannot be hastened."

"17th.—Revised, I trust this morning, the arms of Christ, for protection and further who can succor my eye to see how to move what to do. Lord, I would most willingly my state, present and future, to thy disposal have been greatly distressed in this place, hear that there is a great profession of religion and a great variety in this little town; but the living eternal Truth is but one: the Life is one, and his name one; bow then unto oh, my soul, and serve him the remainder of days here on earth."

"19th, Fifth day.—To Paul Rogers' at Be where we had a meeting, made up of chief Friends. Dear Susanna had an open, entire time. It was a season of light, comfort and encouragement to me. I remembered the reble tendering time we had in this house with David Sands; how exceedingly I was into tears, which continued with me on the how all my prospects closed up after getting this house, so that David Sands had to w me until morning; the many baptisms I passed through in this eastern country, and how marvellously my way opened to go home the sweet peace I enjoyed for giving up services, together with prospects, conflicts and crises endured since, in Carolina and England and now of late continued. I feel proud humble acknowledgment to the great Austr all good; thanked him for mercy and deliverance past, and supplicated with brokenness of heart for the continuation of support in all the fit it was a day to be recorded, of release and r

"Eleventh month 18th.—We rode th that part of the country which David Brool

thirty years ago. I remembered the stope made at Watson's, whose house stood on a hill, before the door a very fine spring issued: was the place I first ventured to go down in a supplication in public. The precious feeling had at that time is remembered by me, and how marvelously I have been led since: "I am not worthy," said Jacob on his way back to his father's house; and so said I." Fifth month 12th, 1812.—The descendings y soul into darkness and the deeps, has been joyful great, and my trials such, as almost induce me to entertain a belief I am forsaken. I queried again and again, why it should be indeed I am not cast off and out of mind of heavenly Father; then surely, I have and have, fellowship with such who have lived in and caves of the earth; or with the profane who was fed by the ravens, and travelled in strength of the sustenance his Lord and Master ministered to him, until he arrived at his desolate place; where, after those alarming seasons of wind and earthquake, he stood in the eye of the cave, wrapt his head in his mantle, heard thy voice, O Lord, intelligibly one, and was further commissioned in thy blessed name. O Lord, my God, my helper hitherto, favouredst me in New England and also in thee exercise gone through, in the families of fellow members and others. If, at any time, servant exceeded, forgive; and wash and me, and make me more clean and pure; me in patient resignation to thy will, and anxiously pleased to open my state and conscience more to me; but yet in thy time, not; and thy will be done."

The Fifth month, 1818, he accompanied Ann Horne to Bristol and Trenton meetings, on to Burlington. "I was under great arrangement," writes he, "respecting this little and hardly knew how to leave home, several instances combining to hinder. But after going out I felt comfortable, and may record the 17th was a day of days. On my way to on I had not a sensation of pain either in or soul; and in the ride back in the afternoon both the heavens above, and the earth, to my outward view, were beautiful, bright and pleasant; and may I not venture to say, that such a holy sweetness and peace over all, that it was as heaven upon earth." I returned home peaceful, and with a rent reward, which, with thankfulness is recorded."

us were the deep humiliations and baptisms tried servant of the Lord continued to the of his days. He was as wise in counsel as exemplary in life. To a young kinswoman became an eminent minister of the gospel, note thus in 1796: "The desire of my soul at that, with all those who are called of our only Father to labour in his vineyard, may I stand to the work; for blessed are they keep their hands to the plough, looking and ag forward, under the direction of their Head and High Priest. These will meet sufficient encouragement by the way: remember then, dear child, the way to profit is see thyself wholly to the work; so will thy going apart to all; study to show thyself apud into the Lord thy God, a workwoman in use and family that need not be ashamed, fully dividing the word of Truth, unto which he thou art beyond any doubt in my mind."

Let not little acts of faith and love, in the Gospel of Him, who hath called thee and led thee for his work, pass by undone; for the full surrender of thy will and faculties in

little acts of obedience, will make way for more; so wilt thou know thy day's work keeping pace with the day, and then thou may'st look forward to the end, which crowns all, even a finishing of thy work and course with joy, and receive that crown, which is laid up in store for all such: as love the Lord Jesus Christ, and do his will. Love retirement and reading the Holy Scriptures. Treasure up such parts of them as forcibly strike thy mind, and then at seasons thou wilt witness the key of David handed to thee, which will unlock thy little treasury, and open the mysteries with more enlargement, for the help and benefit of others who are ignorant and unlearned. Here is the use and end of a gospel ministry, which is not received of man but of God; and that which is received in secret, quiet retirement, revives in meetings and families, and commandment is used to proclaim it abroad. Therefore as a beloved younger sister in the work, I charge and counsel thee to give thyself to reading, meditation and prayer, and may thy God and mine give thee wisdom in all things to go on and out before the people. Let no one despise thy youth; neither do thou let in discouragement from this quarter; but in humility and reverence, seek for a qualification to say: Here am I, Lord, first prepare and then send me."

And not four months before his death, one of his last letters was written to a young woman who was under the preparing hand for the service to which her life became dedicated.

"I rejoiced over thee in thy appearance in the meeting, and afterwards, as much as I could have done for a new born babe; yes, more so; and as I perceive by thy plaintive letter, thou art desirous of being preserved so as to abide in that lot which thy divine Master may apportion thee, and I have no doubt of the sincerity of thy humbled soul, it arises in my heart to encourage thee to be faithful; remembering it is the faithful who are to abound with blessings. Remember, dear child, in all thy movements in so weighty a work, how it was with thee that day; what carelessness to move aright. Well then, be watchful, be vigilant; wait in the assemblies of the Lord's people for the same renewed touches of the live coal; and after thou hast through holy help, turned the fleece, and tried it both wet and dry, and feels the evidence of the requiring, then hesitate no longer, and even if thy going forth in the work may be in fear and trembling—words thus spoke will reach the witness in others, and by faithfulness thy gift will be enlarged; and when it is so, render all the praise to the great and bountiful giver; seek his praise and not the praise of men. May the Lord preserve thee in humility, reverence and fear, all the days of thy life; so wilt thou have occasion to bless his holy name."

*Coffee Crushed vs. Ground.*—The following is from the Annual of Scientific Discovery:—"It is not generally known that coffee which has been beaten is better than that which has been ground. Such, however, is the fact, and in this brief article on the subject, Savaris gives what he considers the reason for the difference. As he remarks, a mere decoction of green coffee is a most insipid drink, but carbonization develops the aroma, and an oil which is the peculiarity of the coffee we drink. He agrees with other writers, that the Turks excel in this. They employ no mills, but beat the berry with wooden pestles in mortars. When long used these pestles become precious and bring great prices. He determined, by actual experiment, which of the two methods was the best. He burned carefully a pound of good Mocha, and separated it into two equal portions.

The one was passed through the mill, the other beaten after the Turkish fashion in a mortar. He made coffee of each. Taking equal weights of each, and pouring on an equal weight of boiling water, he treated them both precisely alike. He tasted the coffee himself, and caused other competent judges to do so. The unanimous opinion was that coffee beaten in a mortar was far better than that ground in a mill."

For "The Friend."

The remarks on *Obituary Notices*, contained in the article "Musings and Memories," in the last number of "The Friend," were very satisfactory, and I hope will receive the attention they merit. They reminded me of the concern felt on that subject by our late friend Robert Scott. A short time before his decease, he attended a funeral, and in conversation with the friend who accompanied him said, he thought his day's work was nearly done, and the time not far distant in which he would be removed from this scene of action—he had sometimes been tried with seeing obituary notices which he could not feel to be appropriate to the individuals of whom they were written—and he desired that nothing might be said of him, beyond his name, his age, and the date of his death. A valued friend who had heard of R. Scott's expressions, remarked, "This is a subject which has given me much uneasiness, and his sentiments are strictly in accordance with my own. How sad I have felt on seeing some accounts, calculated to give the impression to our young people and others, from the previous knowledge they have had of the individuals spoken of, that the way to the crown was *not* by the way of the cross, and that it is *possible, without holiness, to see the Lord and enter into His kingdom.*"

## THE FRIEND.

NINTH MONTH 29, 1866.

Those of our readers who attended the last Yearly Meeting of Friends held in Philadelphia, may remember the interesting Report, there read, from the Committee on the gradual civilization of the Indian natives. Under the direction of that committee, there has been issued from the press "A brief sketch of the efforts of Philadelphia Yearly Meeting of the religious Society of Friends to promote the civilization and improvement of the Indians; also of the present condition of the tribes in the State of New York." This pamphlet of fifty-six pages, embodies the substance of the information on the condition of the Indians, contained in the report read in the Yearly Meeting. It is interesting and valuable, giving much statistical, as well as other information respecting the remnants of tribes resident within the State of New York. As it is desirable it should be widely circulated, not only among Friends but others who may be interested in the aborigines of our country, a sufficient number of copies to supply the demand is kept on hand at Friends' Book Store, No. 304 Arch Street, where any Friend can obtain them, gratis, for distribution.

We are glad that attention is called to obituary notices, and that the objectionable features which they sometimes present, are pointed out by two of our contributors. It is often not a little embarrassing to decide what to retain and what to exclude of the many redundant accounts sent by affectionate and sorrowing relatives; knowing how sensitive most are, relative to any abridgment of what they think due to the character of

those they have loved and lost. The life of an individual should determine the estimate of his or her character. What may be said after death is fixed, his seal, can be of little avail, unless it is to mark the peaceful end of the perfect man, or show the power of Divine Grace in bringing to repentance and giving a well-grounded hope of salvation through the merits and mercy of a crucified Saviour. An obituary in the former case requires but few words, and in the latter, unless some striking evidences of the change produced, or some impressive expressions calculated to warn or instruct, can be given, brevity is its greatest recommendation. It is satisfactory to us to receive and publish notices of those who have deceased, members of our religious Society, and when any who may send them to us find them curtailed, they may be certain it has been done from no disrespect, but to bring them within the limits we can properly appropriate to them.

#### SUMMARY OF EVENTS.

**FOREIGN.**—A French circular says, the recent changes are favorable to France. Prussia and Italy are drawn nearer in ideas and interest. Austria has now no hostile intent, and the convention of Rome will be loyally carried out. A note justifies the offer of the emperor's mediation between Prussia and Italy and Austria, and hints at the annexation of people of the same language and interest to any of the Powers of Europe. It expresses a belief in a lasting peace in Europe. It is said that Napoleon has refused to allow the officers of the French army to hold office in Mexico, owing to a protest of the United States government. The Prussian army, returning from the war, made a triumphal entry into Berlin on the 21st inst.

The relations between Prussia and Saxony were in course of adjustment. It is proposed that King John shall abdicate the throne in favor of his son. Prussian regiments have been selected to garrison the principal towns of Saxony.

In Hanover there seems to be much dissatisfaction with the annexation of that kingdom to Prussia.

All the south German governments have formed the Prussian currency, and intend to introduce in their respective States the Prussian monetary system. By this means unity of the currency will be established throughout Germany.

A battle has been fought on the island of Candia between the Turks and the insurgents, resulting in the defeat of the latter. It is reported that King John urged upon the Turkish government the cession of the island of Candia.

A Paris despatch of the 20th says, "The Finance Committee sent here from Mexico to negotiate for a loan are disheartened, and have announced that the empire of Mexico is without funds."

The difficulty between Austria and Italy, respecting the debt of Venetia, is likely to be accommodated.

The King of Prussia has issued a decree of amnesty for sordid offences. Austria has sent a Charge d'Affaires to Berlin.

Negotiations are now taking place in England between the principal members of the radical and moderate Liberal parties, to effect a fusion on the question of reform. A number of Fenians were arrested in Liverpool on the 22d. Arms and munitions of war were also found secreted in various parts of the city, and were seized.

Advices from Mexico report further distress to the Imperialists. They now hold only two ports in the country—Veracruz and Acapulco. The roads between Vera Cruz and the City of Mexico were held by the Liberals.

The Brazilian and Paraguayan armies had a sanguinary engagement on the Rio Plata on the 16th and 18th of the month. Both sides suffered heavy losses, but the Paraguayans claimed the victory.

In some districts in India there is a scarcity of food, and the poorer part of the population are suffering grievously. In Orissa and Mithapoore, as many as 3500 persons had died in one week from starvation. Large quantities of rice had been sent from Calcutta.

On the 22d, the Liverpool cotton market was less firm. Middling uplands, 12½d. Breadstuffs firmer. The London money market quiet and steady. Consols, 89½, U. S. 5-20's, 72½.

**UNITED STATES.**—Receipts and Expenditures.—The receipts of the United States for the quarter ending Sixth

month 30th inst, exclusive of trust funds, loans, &c., were Custom House, \$46,175,151.39. Sales of public lands, \$176,719.63. Direct tax, \$488,630.67. Internal revenue, \$63,857,739.92. Incidental and miscellaneous, \$3,312.54. Total, \$120,049,792.22. The expenditures, exclusive of principal of public debt, were for interest on public debt, \$36,558,280.89; army, \$12,744,022.69; navy, \$9,218,474.44; civil, foreign intercourse, &c., \$11,853,399.55; interior, pensions, and Indians, \$2,983,302.02. Total, \$77,954,416.59.

**Economics.**—The Department has issued regulations for the payment of bounties under the act to equalize them. The act excludes those who were dishonorably discharged; those discharged as a favor or punishment; those discharged for disability not occasioned by wounds, or for original disability, &c. The Postmaster General has been instructed to communicate the payment of the said bounties.

**Philadelphia.**—Mortality last week, 325. Of cholera, 35; cholera infantum, 15; cholera morbus, 6. According to the annual assessment just completed, there are in this city 128,838 taxable residents. Most of the wards show a large increase since last year. **Legislation.**—The Legislature of South Carolina has adjourned. Among the measures adopted was an act securing to the freedmen the right to make and enforce contracts, sue and be sued, to give evidence, to inherit, purchase, lease and sell real estate and personal property, and to enjoy all legal remedies in the State, and to hold and convey the same, and the whites for the same offences. Measures were also adopted to supply corn to the destitute, to establish a penitentiary system, and to authorize a loan to aid of rebuilding the burnt portion of Charleston. In Louisiana and Mississippi the cotton crop is said to be nearly a failure, while very little corn and other breadstuffs have been raised. In the greater part of Arkansas the crops promise good returns. There are unfavorable reports of the state of things in Texas. Guerrillas are numerous in the interior, and murders and robberies were of frequent occurrence.

The whole number of freedmen and their children attending schools on the first of Seventh month inst, was estimated at 150,000. The better class of the white population manifest increased interest in the education of the freedmen, but oppression and outrage are still common among the ignorant and degraded, especially in Tennessee, Mississippi and Georgia. In Texas the schools are supported altogether by the freedmen. Florida is the only State in which no law is provided by law for the education of the blacks, who are taxed for the necessary funds to establish schools in every county, and to pay the salaries of a superintendent and assistants.

**The Equinoctial Rains,** which fell last week, were excessive in the west and north-west, causing freshets and the destruction of much property. Twenty millions of bushels of corn are said to have been destroyed by the flood in the Miami bottoms, Ohio. In Indiana, the corn in the low lands along the rivers and streams was greatly damaged. The railroads all sustained more or less injury, by the loss of bridges, the washing away of embankments, &c.

**Miscellaneous.**—A great many changes are being made in post offices, and other United States departments, by the President. The valuation of property in Boston, for the year 1866, is as follows: real, \$25,707,212; personal, \$189,569,130—total, \$415,362,345. The increase over last year is \$43,469,569. In the United States the Methodist Episcopal Church report 925,265 communicants; the Presbyterian (old school) has 233,455; the Episcopal, 154,118, and the Reformed Dutch Church 54,286 communicants.

The number of deaths in St. Louis from cholera, last week, was 202. The disease is increasing in Nashville, the number of deaths on the 21st inst, and 70 on the following day.

The Oregon House of Representatives has passed the constitutional amendment. It had previously passed the Senate.

A sea wall for the protection of a portion of the harbor of San Francisco, is to be constructed at a cost of \$2,500,000.

The deaths in Boston last week numbered 82. **Immigration from Canada to the United States** has commenced, and is progressing on a large scale. Quebec, Montreal, Toronto, Hamilton, and other towns are sending over large numbers of men, women, and farm laborers, it is said, constitute the bulk of the movement, which is chiefly directed to the western States.

**The Markets, &c.**—The following were the quotations on the 24th inst. *New York.*—American gold 144. U. S. sixes, 1851, 111½; U. S. 5-20, 1862, 111½; ditto,

1865, 168½. Superfine State flour, \$7.65 a \$9. Superfine Ohio, \$10.40 a \$11.70. Baltimore, fair to \$11.90 a \$13.75. New amber wheat, \$2.85 a \$3. white, Tennessee, \$3.10. Iowa oats, \$5.50 a Western yellow corn, 90 cts. Middling uplands 37 cts. *Philadelphia.*—Superfine flour, \$7.50 a \$8. Red, \$9 a \$11; family and fancy brands, \$12 a \$14; wheat, \$2.75 a \$2.85; white, \$2.90 a \$3.10 a \$3.15. Yellow corn, 98 cts. Oats, 55 cts. Flaxseed, \$3.60. Cloverseed, \$5.50 a \$8. 75 cts. a \$4. About 2500 head of cattle, \$3.00 a \$3.75 cts. for extra, 14 a 15 cts. for fair to good, and 13 cts. for common; market dull. About 800 sold at 5½ a 6½ cts. per lb. gross. Hogs, \$14 a 100 lbs. net. *Baltimore.*—Red wheat, \$2.85 a Yellow corn, 88 cts.; white, 90 cts. *St. Louis.*—Wheat, \$2.50 a \$2.55; spring wheat, \$3.00 a \$3.00, 68 a 72 cts. *Cincinnati.*—No. 1 red wheat

#### RECEIPTS.

Received from Lydia A. Handrickson, N. J., \$10; from Jonathan Fawcett, Jr., per J. B. Fawcett, \$3, 35, and 40; from Wm. S. Kirk, Pa., \$2, and from Mrs. R. Kirk, \$2, for 25; from Mrs. P. S., \$2, vol. 40, and from Elizabeth Bundy, \$2, from Alfred King, Agt., N. Y., \$2, vol. 40, and from King, Samuel Simkins, Jr., David Armistead, Armistead, and Winnifred Bayly, \$2 each, vol. Abel Gardner, \$2, to No. 8, vol. 40; from John N. M., \$2, vol. 39; from Esther Thompson, N. M., 40.

A Stated Meeting of the Women's Aid Association will be held at No. 112 North Seventh St., on Saturday the 29th inst., at 4 P. M.

SARAH LEWIS, Secy.

#### WESTWON BOARDING SCHOOL.

A Stated Meeting of the Committee who have of the Boarding School at Westwton, will be Philadelphia on Sixth-day the 5th of Tenth month o'clock P. M.

The Committee on Instruction meet at 10 o'clock and that on Admissions at 11 o'clock A. M., of 11 day.

The Visiting Committee meet at the Sch 23rd-day evening the 1st of Tenth month.

SAMUEL MOORE,

Fourth month 21st, 1866.

For the accommodation of the Visiting Conventions will be at the Street Road St. Second-day, the 1st of Tenth month, to meet th that leave Philadelphia at 2.30 and 4.45 P. M.

#### WESTWON BOARDING SCHOOL.

WANTED, A TEACHER for the Boy's SECOND-MATHEMATICAL SCHOOL, to enter on his duties on the 1st of the Winter Session. Apply to

Samuel Hiles, Wilmington, Del.  
Thomas Evans, 87 Arch St., Phila.  
Joseph Scattergood, 413 Spruce St., Phila.  
Charles J. Allen, 394 Arch St.,

**FRIENDS' ASYLUM FOR THE INSANE** NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSEPH C. WILSON, M. D.

Application for the Admission of Patients made to the Superintendent, to CHARLES ELLIS of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

DIED, near Moorestown, New Jersey, Fourth 12th, 1866, SARAH L. HOYLE, in the 83d year of her age, of a long illness, on the 23d inst, at the residence of her sister in Rahway, Jersey, Eighth month 25th, FIEBE MARSHALL, years, relict of Christopher Marshall, late of P. P. P. P., a beloved member of the Western District Meeting in this city. She was of a meek and spirit, which shed a sweet influence over her society, and she was the friend of her friends, who highly her love, and were strengthened by her example early submitted to the cross of Christ, and firmly upon her Saviour, she was enabled to be patient and resignation the trials of life that carter. Free from guilt, her purified spirit was ransomed without bodily suffering, and we die through mercy, is admitted into that Heavenly rared for the righteous of all generations.

## The Loss of the Steamship "London."

(Continued from page 23.)

I saw distinctly — Angel still by the pumps, my with their eyes turned towards us. The ensil was still standing, also the half of the intopsail. The mizzen yards were swinging out, not braced; the wreck of the foretopmast hilling, and swinging to and fro; the gangways knocked out, the bulwarks all standing as ad as when she left the docks. The stern very in the water, the bows pretty well out of it, that we could see the red painted bottom, or a coloured by rust; the jib-boom gone. Soon ran down in the trough of a large sea, and re hid from sight of her. When we came up could see she had changed her position very ch; we could not see the after-part of the sel—whether under water or hid by a sea, I not tell; her bows were high up out of water, by the pitch or rake of the mast we could see t she was sitting at an angle of about 45 de- grees. Soon another wave came, and we ran ro in the trough of another sea; when we came there was nothing to be seen of the *London*. Thus ended this fine ship and all in her. When ed were lifted on the wave this second time, and that that the ship was no more to be seen, it a gloom over our little party, though pretty I prepared to expect it. We still continued y, to see if anybody would be seen clinging to ar, boat, or anything; but nothing whatever to be seen. Although there might have been or more there, and we not able to see, even they could not have survived long, from the y that was flying.

One of the sailors (King)—then I did not know name of any—now sang out, "Boys, the *Lon-* is gone, and there is no help for those gone t her, so let her drop for the present. If we t mind what we are about, we'll soon be with e sea." Say nothing more about her, but attend e boat"—which was certainly a wise propo- sition, as our boat was in a similar condition to ship at starting—too heavily laden. She was e light, square-sterned boat, about twenty- feet in length, six in breadth in the widest y; her right complement I was told was twelve, there were now nineteen in her. Our party isted of three engineers, one fireman, one g midshipman, one carpenter, eight seamen, teward, one boy, and three passengers. We

had been thrown together mostly by chance, and were almost all unknown to each other, but all bound together by the same tie; for if one sunk all must sink too. We were entirely on our own resources, with no one to look up to, no captain to depend upon, and no officers to navigate to land. But we had what was far better, and the only thing to save us at that time: we had cool, skilful, and excellent boatmen; and, had we not, we would not have lived half-an-hour. I never had much experience in boats, and had no idea of what they could go through. No one could ever have made me believe that a boat could have withstood what ours did. I think some of our men must have been born and reared in a boat. Smith, a seaman, was the first who took the helm, and we all agreed to obey him, as there were not a good many giving orders. There were also other arrangements made: those who understood rowing were to work by spells, those who did not were to bale. I was one of the latter; two or three were to be on the lookout for vessels, one to be constantly watching behind to see when a wave was coming that had a crest on it, and tell the helmsman. Those were the waves we dreaded. And here was where the skill and judgment was displayed. One time we would have to back water so as to let the large sea break just in front of us. At other times the order would be pull quick, to get out of its way until its force would be spent; when along it would come and raise us up on the top, and as it would pass by would invariably give us a dash; then we had to bale out quickly. Three oars were out for the first few hours—as much to assist in steering as pulling. We were running before the wind, and the chief study was to let the seas meet us square on to the stern, for if the boat was allowed to broach to, or meet the seas on the side, she would fill or upset at once. As one sea would pass, then another would be seen coming from another direction, perhaps on our quarter. These were the cross seas, and the ones most likely to catch us; immediately the boat would have to be brought round to meet it. As the rudder could not bring her round in time, or it might be up out of water at that moment, then would be heard the man at the helm singing out, "Pull on the starboard, and back on the port,—quick, quick." The next moment it would be, "Pull on the port, and back on the starboard," as a cross sea would be seen coming to us. Then the next cry would be, "Pull, pull, all," that was to get out of the way of a sea that was going to break. After it had passed, then it would be, "Back, back, all." Sometimes all four orders would be given within the minute.

We also made arrangements as to the provisions, which consisted of about fifty pounds of biscuit; when anybody took a piece, all were to have alike. Soon we discovered that our little supply of water was mixed with salt. The cask was therefore thrown overboard to make more room, for we were very much crowded. After that the allowance of biscuit was restricted—they being so dry increased our thirst. Not long after getting away I learned that they had some brandy on board,

which I thought was a fortunate provision, as the weather was dreadfully cold, with water splashing over us every little while. On second thought I feared it might prove to our disadvantage, in case they should take too much at once, but my fears were soon set to rights when I found that all we had was three bottles. One was out and dispatched, but it was only a mouthful to each. The second bottle was drunk in the evening. The next morning when we most wanted the other, it could not be found. There was also one bottle of champagne, which was the amount of drinkables on board. About two or three hours after being at sea, our helmsman had to resign his post, as one of his hands was sore, or frost bitten as he thought. Steering was most trying work for the hands, there being no tiller to the rudder—he had to work the rudder by his hand, consequently one hand was almost all the time in water. King, another seaman, then took his place, which he kept until about three o'clock next morning. Just before dark, we sighted a vessel. We at first thought to run for her, but soon we found it impossible; she was out of our track, and we had to keep fair before the wind. Our chief study was to keep aloft, no matter where we went to. We had two of the ship's compasses on board, but they proved of very little use to us. I heard King say in the night that he could not steer at all by them, even though the sea would permit us. They had been adjusted for an iron vessel, which may have been the cause of their not working properly now.

Night was now coming on: I dreaded to look forward to it. Asked myself the question, how are we to see those curling seas that we so much fear? The sky looked wild; the wind still strong and very cold—the seas still very heavy. It was what you might call a troubled sea. All of us wet, cold, and hungry, and nearly worn out by the constant exertion, anxiety, and fatigue of the two previous days. I considered it about one chance in a hundred that ever we saw the morning. True, I was beginning to have more faith in our little boat and the good skill of our crew, but those high-crested waves in the dark rather shook my hopes. I could not see any possible way of escaping them, and I was rather puzzled to see that the sailors did not entertain any more fear of them in the night than day—that is, they did not speak of this great difficulty that troubled me. Presently the night closed in, and the mystery was solved by the phosphorescent tops of the waves, which, shining through the dark, showed pretty well their position, and the way they were coming. The first of the evening was rather clear; the stars shone out occasionally; by them we could guess pretty nearly the direction we were steering. Up to about nine, we thought we were going south. I said to King, "At this course we will not fetch the Spanish coast, much less the French coast—we shall go wide of Cape Finisterre." He said, "I can't help it, we must go where we are compelled to—the wind may change soon." And so it did. I had certain stars as guides, and by them I could see that we were coming round gradually, and by

about midnight were going pretty nearly east. We knew that any course that had cast in it would bring us to land, which at this time we thought was only ninety miles distant. But our chief hope was in falling in with a vessel. As the evening wore on, I found that we got on pretty nearly as well as before, but that great watchfulness was required; and King, who was then steering, was continually singing out to pull first one way, then immediately the other way, or back water. Then the next order would be, "Bale her out, keep her dry. Who is baling now?" So in that way he was constantly talking, and encouraging us, which was needed, for, cold as the night was, and drenched as we were, we were drowsy; in fact, we were quite done up with fatigue. I myself had had but three or four hours' sleep since Sunday night, and no doubt there were others who had no more. At times, while baling, I would be half asleep, but still dipping out the water. When in that state I could always see a vessel before me with her stern under water—her bows well up—her jib boom and fore-topmast gone, and her fore-sail shaking in the wind: it was the *London* as she last appeared to me. At any time during the night if I were to close my eyes, if only for a minute, the ship was always before me in this form.

A few hours after dark, King asked, "Who had the time?" I had. I had set my watch going at four o'clock. I pulled it out to look, but could not distinguish the hands in the darkness. By-and-by, I was asked about the time again; and we thought it must be getting on towards daylight. I opened my watch, felt the hands, and found it was only eleven o'clock. And so the long dreary night wore slowly on. We thought daylight would never come.

About midnight the weather became more squally. Heavy black clouds came down upon us, and sometimes we were running, as it seemed, right into a black wall. It was difficult even to discern the figure of a man sitting alongside. It was a night remembered in London for a heavy fall of snow,—the heaviest of the season, when the telegraph wires were broken down in many parts of England, and vessels were being wrecked by scores in Torbay. About this time, and a time that will never be forgotten by any in the boat, we experienced the most narrow escape of any during the whole of our disaster. A large sea was seen close behind us, and on the point of breaking, and it was impossible to get out of the way in time. There it was, eight or ten feet higher than our stern, and the next moment we should be all engulfed. Some quietly remarked, "It's all over with us now." I myself thought the end had come at last. Over came the wave, burying the after-part of the boat completely. She tumbled, and up she came; the sea had passed on and left us in all but a sinking state. The water in the boat was about a foot and a half deep; a bucket would dip in it. Immediately King sang out, "Don't move—bale out quick—we are safe yet." At once the bucket was going, and in a few minutes she was lightened, and on we went again. It was some time before we fully recovered from that shock. It was a providential thing that we had no more in our boat at this time, for I think the weight of one man more would have taken us down.

(To be continued.)

Our Lord says, except a corn of wheat fall into the ground and die, it abideth alone; universally, death comes before resurrection; sickness, pain, sorrow, are all *stepping stones* to the death of the body; we go on to death; we rise in newness of

life; so must the natural man die before he can rise in the image of Christ. The cross is the great instrument by which this is effected; it leads us to see the earth has not wherewith to satisfy the immortal soul—and then by Divine grace we turn for help—where help is to be found.

For "The Friend."

The following letter, without signature or address, is taken from John Kendall's collection of Letters on Religious Subjects, page 104.

"8th of 9th Month, 1773.

"Since the short conference which we had together, I have several times thought of writing to thee, but various necessary engagements much engross my time, and leave very little leisure for a correspondence with my friends; however I thought I would just hint to thee what might, without premeditation, occur upon the subject of our last conversation. I am a person of universal good will, and readily acknowledge that I am in a particular manner attached to the cause of my religious profession, therefore I cannot, without some concern, observe any friend of mine publicly desert and disavow this same cause which we have jointly professed; the only reason thou gave me for discontinuing to frequent our religious assemblies, as far as I understand the reason, (viz., a private offence taken at some individual) is in itself so unreasonable, that I cannot but look on it as only some ostensible cause, whilst the true reason lies deeper, and in the secret labyrinths of the mind. Search thee, dear friend, for the original cause, and I am mistaken if thou wilt not find it to be a disrelish for the limitations and singularities which our profession requires, and a propensity to the grandeur, the pleasures, and the vanities of the world, which lies in ignorance and wickedness. But suffer me to expostulate with thee; from what really good and useful enjoyment does our profession detract us? Are we not allowed all the conveniences and satisfactions of life, which the almighty, beneficent Donor, is pleased to favour us with? We are only restrained from the excess and abuse (which are known to destroy the true relish) of them, and to preclude those sensations of humble gratitude to our great Benefactor, which accompany a temperate, moderate use of his favours; and what will any of us get by joining in spirit, in covenant, in familiarity, with a deceitful, insincere world? In the first place, we do violence to that which is of God, in our consciences; we reject and cast behind our backs, the many visitations and invitations which have been in various ways repeated and graciously offered; we, tacitly, by our contracted conduct, reproach our ancestors, who lived and died in the faith, as deceivers and deceived; or else we bring reproach on ourselves, whose lives are diametrically opposite to theirs; we greatly endanger our property and our morals, by an intimate connection with those, who are not restrained by the fear of their Creator, from running headlong into various vices, and whose pleasure and profit it is to allure others that are in affluent circumstances into the same excess of riot (which often ends in the same distress and embarrassment) with themselves; by renouncing our religious profession, and forsaking our communion, we abandon that which is truth, and either adopt that which is error in its stead, or else joining from principle with no religious society, we become examples of irreligion, and settle in a profane course of life, injurious to our own peace, displeasing to God, and offensive to wise considerate men. Bear with me, dear friend, it is possibly the last time I may trouble thee on this head; thou art the father of

a pretty numerous flock of children; thou art successor of religious ancestors; thou art come into their place, and some of their possessions; thou wouldst walk worthily and acceptably before the great Benefactor, who sees all thy secret thoughts, as well as marks thy words and action, and will assuredly reward according to our work; it is (in my sense) highly necessary for thee come down in thy mind, and in humility and sincerity, seek for divine wisdom and strength, that thou may be preserved safe through this dangerous and uncertain state of existence; that thou may fill up the station in which all-wise Providence has placed thee, with rectitude and piety, as a man and a christian; and that thou may discharge that ponderous duty of a parent thy offspring, in such a manner as will render to thy own solid peace, and their substantial good that so when that awful period shall arrive (a hour near it may be at hand is quite uncertain when inquisition will be made into our lives and conduct, whether we have walked in the fear of our Creator, whether we have properly and gratefully received his favours and benefits, as usual and not abusing them; and whether we have stood uprightly and faithfully in our lots, spreading and enforcing the genuine principles of a spirit of christianity by our lives and conversations, and fulfilling every relative duty appertaining to our station; that at that solemn time, before that tremendous Judge, Witness, and Benefactor, thou may have to give up thy account with joy, and not with grief; that this may thy happy experience is the sincere desire of a affectionate friend."

From the "Lectures Hour

### The Cultivation of the Silkworm.

(Continued from page 5.)

In the time of Henry IV, of France, fifty thousand young mulberry trees were planted the grounds which at that time surrounded the Tuileries; the eggs of the mulberry silkworm "graines," as the French call them—were imported from different places; and, from that time to the present, the cultivation of silk through France has been one of her most valuable branches of commerce. France now grows over two millions of mulberry trees, and produces annually about two million pounds weight of silk; besides this, the imports needed to keep a hundred thousand looms at work are at least equal to twice quantity produced from her soil.

Turn we now to Spain, Greece, China, Italy, Russia, and India, all countries that are large and many of them much larger, producers of France; and if we roughly estimate the enormous number of human beings the tiny silkworm rears in daily employment, we shall awake to the importance and danger of the disease called "time."

There are two classes of persons in France who are dependent on each other to some extent: it is the worm, the feeder, reared, and superintended by the spinner; and the farmer, who specially cultivate the mulberry trees, upon the leaves of which the worms can only live so as to supply good food. Both are usually persons of limited means, and the worms die away the mulberry-grower finds sale for his leaves, hence both are reduced to a state of indigence; but what has been most apprehended, and, indeed, may yet happen is that the mulberry farmer will tear up his plantations, and appropriate the ground to a more profitable crop.

All kinds of hypotheses have been mooted to account for the origin and seat of the disease. Some attribute it to the deterioration of the

rom exhaustion, producing a sickly tree, with acid leaves and watery sap. Others assert the worm itself has become weakened from interbreeding; and there are those, again, who lay it to the sore of bad ventilation and the effluvia from the adjoining leaves, allowed to accumulate where the worms feed; then there are the believers in atmospheric causes.

If we take into consideration that there are very many artificial conditions under which the worm necessarily placed—for instance, that it is bred and fed in close rooms, always on plucked, and then on chopped leaves; that the mulberry tree itself is placed in an unnatural condition by having its foliage plucked, and in never being allowed to produce its fruit; and, further, that the management of the worm is, as a rule, intrusted to persons entirely ignorant of nature's laws and secrets—it is not by any means difficult to imagine that a weakened state of the constitution may be induced, and that fungoid growth might in a worm so weakened find a fitting nidus for development, and, thus aided by atmospheric or other causes, produce the fatal "gattine."

The disease generally makes its appearance when the worms have gone through their last transformation and are ready to spin. Then, instead of the promised harvest of cocoons, "gattine" walks in, and sweeps off the spinners by the ousand, leaving the poor breeders to lament a whole year's labour and expense snatched from them in a few hours.

A recent writer thus speaks of the disease as gardening France: "Some persons laugh at the cry notion of a return to a healthy state of affairs, and even call it eternal to hold out a hope that the silk worm will ever again yield a profitable crop; but these pessimists forget the fact that France has been twice before visited in the same manner within less than two centuries." Then he goes on to state that it appeared in Cevennes in 1688, and lasted till 1710; and reappeared in 1749, when eggs purchased from Italy were worth £1 per cent, the ordinary price being two francs. The pest epidemic lasted seven years, after which time each sericulture assumed its normal condition; hence, he says, "There is no good reason for supposing that the 'gattine' will endure for ever, or even continue much longer."

Be the cause what it may, the "gattine" still reads, and but one remedy appears likely to check its progress; that is, to get a new species of silk worm. Many experiments were tried, by introducing eggs and worms from distant localities, with varying success. The Société Impériale Acclimation engaged, through its agents in Japan, to supply fifteen thousand cards of seed to silk worm breeders of France. These eggs, it from Jeddo, arrived safely. They were sent "cartons"—this pieces of cardboard, covered with eggs. Each carton yields, on a high estimation, from sixty to seventy pounds weight of cocoons, worth 2s. 6d. per pound, in France. Each carton is valued at something like twenty shillings.

As a guarantee that the eggs were genuine, a card was stamped with Japanese characters over the eggs were laid on it. This afforded an opportunity to cheat the poor silk worm breeders; but the Japanese eggs were removed, the cards were bought up, and re-covered with French eggs, then re-sold as the genuine article. The mulberry-worm also suffers from another disease, called "muscardiné" in France, "calcine" in Italy. A whitish fungus (*Botrytis*) grows round the segments of the worm's body, and covers it with a white efflorescence that kills it. Though not nearly so fatal as "gattine," still a great many worms fall victims to this vegetable parasite. The worm attacked acquires a mealy look; hence the name of the disease (*calcine*, chalk). The only plan is to at once burn all the worms showing any symptoms of the fungoid growth; the fungus spreads with awful rapidity if allowed to disseminate its germs through the atmosphere.

To order to replace the loss caused by the "gattine" disease, an able naturalist, M. Guérin-Meneville, was commissioned by the French Government to inquire about other species. The result of a long and interesting series of experiments (far too lengthy to be described) is, that two new species have been acclimatized, and many more are likely to prove valuable to the silk culturists, in addition to the long-known *B. mori*. The two species that are at present proposed to answer so well are *B. Ricini*, so called because it feeds on the castor-oil plant (*Ricinus communis*), and *B. cyathica*, from China, better known as the silanthes silk worm moth; but it is more than likely these two are varieties of the same species.

Then comes *B. mylitta*, from Northern India, from which is produced the tough and everlasting "Tussah silk"; and another from China, *B. Pernyi*; both feeders on oak leaves. *B. Atene* is the largest known species; and from *Cyathes* comes *B. hesperus*, that feeds on the *cofi* diabolica. Senegal produces another silk-spinner, *B. babulina*, which feeds on the jujube tree.

From Japan we get perhaps the most magnificent insect of the tribe, the oak silk worm (*B. yamamai*). The moth measures six inches to the points of the wings, and is beautifully shaded with yellow, orange, and red. The larva, or caterpillar, is a bright green, mixed with blue and yellow, and marked in its latter stages of growth with small silver-like spots along its sides. These worms are likely, it is said by several who have bred them in this country, to answer well, as they feed entirely on the leaves of the oak. The cocoon it spins is very large, and the quality of its silk nearly equal to that of the mulberry worm. Experiments are being tried with the oak-worms this summer, and the probable success likely to attend the trial of acclimatization will then be better known. I believe the worm is considered the property of the Emperor in Japan, and the punishment of death is inflicted on any person known to sell it, or allow it to be taken out of the country.

The cecropia moth (*Attacus cecropia*), one of the nocturnal moths, is found from the Canadas to the Mexican Gulf. Its wings, when expanded, measure six inches in breadth, and are covered with dusky brown scales, and marked with four kidney-shaped red spots and a whitish band. It makes its appearance in the Southern States in May, and the female deposits her white somewhat oval eggs on apple, cherry, and plum trees. The worms feed on the leaves of either. The caterpillar measures from three to four inches in length, is of a light green colour, and has coral-red warts, studded with stiff bristles, covering its body. It remains on the trees till August, then descends to search for a spot fitted for it to spin its cocoon in. They generally spin between two twigs. The cocoon is very tough, brown in colour, about three and a half inches long, and one wide. The inside of this outer parchment like covering is thickly lined with soft, strong silk, which can be readily reeled. These cocoons, in the open air, will stand a temperature of 10° Fahrenheit, without sustaining any injury. When the moth is ready to escape, it throws out a caustic liquid from its mouth, which destroys the fibres of the silk, and thus enables it to break through the end

of its tough prison, out of which it creeps damp and crumpled. By constantly moving the antennae and wings, it soon dries, and is then ready for an aerial excursion. It has been ascertained that twenty threads of cecropia silk, twisted, will sustain an ounce more weight than the same number of fibres obtained from the common silkworm. This silk has been woven into stockings that are found to wash equal to linen.

Another silk-producing worm is the larva of the polyphemus moth (*Attacus polyphemus*). The moth is very like the cecropia, differing only in the markings on the wings. The larva is bluish green, covered with orange-coloured and purple warts. It feeds on the elm and lime trees. To spin its cocoon, the worm draws together several leaves of the tree with its silken threads, and, when enclosed within them, weaves an oval cocoon about two inches long, which is very strong, and falls to the ground with the leaves, where it remains until the following July. When the moth issues from her prison, she lays her eggs on the branches of an elm or lime tree, and dies. The silk is of the same character and quality as that of the cecropia.

Then there is another caterpillar, that feeds on the hickory trees—the larva of the luna moth (*Attacus luna*); and a fourth on the leaves of the sassafras, the larva of the promethia moth (*A. promethia*); but, as the same remarks apply to these two as to the cecropia, they need not be repeated. It may be as well to mention that the promethia caterpillar fastens the leaves with a silken cord to the twig where it spins the cocoon, and thus prevents it from falling to the ground when the leaves are shed. We have to consider in detail by far the most important; viz., the silanthes silk worm, the larva of *Bombyx cyathica*.

(To be continued.)

For "The Friend."

Let us Brethren.

Why should there be variance, discord, or enmity among children of the same great Parent? He has placed us here a little while together in order that, through self-denial, condescension, and the forgiveness of trespasses,—through repentance, amendment of life, meekness, living as brethren, humility and holiness, we should be made meet for that glorious Kingdom, where nothing that is impure or unholy, can ever enter. "Better," says one, "to have been a pagan, a blind ignorant idolator, than a disobedient christian, or an ungrateful believer."

The following, from the diary of a gifted, pious author, is commended, for close self-examination, to some of the readers of "The Friend."

"In the midst of my pain I have secretly been trying to reconcile friends whom trifles had set at variance. Oh! what an imperfect world it is! good people quarrel for very trifles! For my own part, I feel so much sinfulness in my own nature, that it makes me lenient to the faults of others. I say this now with more truth than having felt sinful tempers rise in my mind to-day about trifles. Shall I not then forgive my fellow sinner his hundred penance; I who have a debt of a thousand talents to be forgiven? May we bear one another's burdens, and so fulfil the law of Christ." And may I prepare for that period of pain, and weariness, and imbecility, which must be the attendants of that old age which is approaching."

It is not too much to assert, that no one lives up to the dignity of man, who does not habitually aspire to the perfection of a christian.

## GOSE.

For "The Friend."

A mournful echo on the air is ringing;  
The sad eolian of a requiem lay;  
For summer round her, her bright veil is flinging,  
And like a dream, is passing hence away.

And are they gone—those days of golden glory—  
The balmy morning—and still evident—  
The long, soft twilight hour, so calm and hoary,  
When by-gone shadows o'er the spirit glide?

Yes! by the coolness of the north-wind, rushing  
Through woodlands cheer'd more rarely by a song,  
By the bright hectic a chance leaflet flushing,  
We know that summer from our land has gone.

'Tis ever thus! the faintest hopes and fancies  
Are first to wither or to prove untrue!  
The brighter shine the dew-drops morning glances,  
The sooner will it vanish from our view!

Yet not repining will we say this, Father!  
'Tis well, the bitter, with the sweet, should come;  
Else might we, 'mid the joys that round us gather,  
Forget that earth is not our lasting home.

Forget that life is not for ease nor pleasure,  
And that full soon will fall our time's last sand;  
Forget the need to lay up hidden treasure,  
In the wide coffers of the Better Land.

And though we mourn the fading buds of beauty,  
As, one by one, they perish and depart,  
May it remind us of that holy duty,  
To keep alive the flowrets of the heart.

If as we ponder the past season o'er,  
Neglect and error to the mind are borne,—  
If dim the spirit-light—and we discover  
Heaven no nearer as the days go on,

Let us awaken to renewed endeavor,  
A higher hope, and purer life to win;  
And through the wintry hour, cast round us ever,  
A ray of gladness from the peace within.

Should spring buds, waking from their icy slumber,  
Find us no longer in the paths we trod,  
May dawn upon us the eternal summer,  
Bright with the glory of the living God!

## THE UNITY OF THE SPIRIT.

Selected.

The Church of Christ that he hath hallowed here  
To be his house, is scattered far and near,  
In North and South and East and West abroad,  
And yet in earth and heaven, through Christ her Lord,  
The Church is one.

One member knoweth not another here,  
And yet their fellowship is true and near,  
One is their Saviour, and their Father one,  
One spirit rules them, and among them none  
Lives to himself.

They live to Him who brought them with his blood,  
Baptized them with his Spirit pure and good,  
And in true faith and ever-burning love,  
Their hearts and hope ascend to seek above  
The eternal Good.

O Spirit of the Lord, all life is thine,  
Now fill thy Church with life and power divine,  
That many children may be born to thee,  
And spread thy knowledge like the boundless sea,  
To Christ's great praise,  
A. G. Spangenberg, 1747.

Selected for "The Friend."

## PRAYER FOR HOLINESS.

"My Father, let these thoughts of vanity  
Give place to thoughts of piety and peace,  
Empty my heart of everything but Thee,  
And let its restlessness forever cease.

Approach unto my soul, and let me see  
The glorious beauty of Thy holiness;  
In deepest stillness and tranquility  
My inmost soul, do Thou, O Lord, possess.

O let thy sanctifying presence pass  
Before my heart, and be reflected there  
Truly and faithfully, as on a glass,  
Until I see Thee as Thou art, and bear  
Thy image and Thy likeness, and become  
Christ-like and holy as the Holy-One."

J. E. B.

*Waves.*—It is not a little remarkable that an element like water, one of the prime principles of which is that it always tends to seek a level, should be so liable to agitation, and that when in large masses it should in reality so seldom be at rest. But its very fluidity, which is the cause of its tendency to a state of quietude, is also the reason for its almost constant agitation. It requires but a breath of air to disturb its placidity with ripples, and the increase of the breeze, especially where there is a large area, rolls it up in waves until the surface of the sea becomes alternate hills and valleys. One might suppose that the wind would pass smoothly over the face of the waters without exciting any great commotion, the contrast in the density of the two elements being so great; but it requires only a few moments for a strong wind to lash the ocean into fury, and to cause its waves to rise, as the phrase goes, mountains high. This expression, however, is mere hyperbole. The actual height of waves is far below the ordinary estimate. Easily as the surface of water is disturbed by the wind, and raised into waves, it appears that there is a certain height beyond which it is not liable to be raised by any ordinary gales. This height is seldom, if ever, more than ten feet, which, with the corresponding depression between the waves, would make the elevation above the trough of the sea twenty feet. Most persons who have been at sea in a storm, and who have carefully watched the approach of the mighty swells, which, as they are coming on, threaten to overwhelm even the largest vessel, would be ready to assert that they have seen waves at least fifty or sixty feet in height, but all above twenty, or at the utmost twenty-five feet, is in the imagination. Of course, no accurate measurement of the waves can be made at sea, but an approximation to gauging them has often been reached, and under the most favourable circumstances, with the above result. Where a wave strikes an opposing object, as upon a bold shore, or against a rock or lighthouse, the water is dashed up to a far greater height; but twenty feet may be set down as the height of the loftiest mountain wave that is ever seen at sea, the assertions of young and old voyagers to the contrary notwithstanding.

The velocity of waves is a far more curious and interesting subject of investigation. Of course, it is understood by all who have any acquaintance with the matter, that the water itself does not move forward with the wave, even when it attains the greatest velocity. Only the form of the wave advances, the wave itself seeming to have a separate existence from the water, and holding on its course with tremendous speed and power, while the particles of water, and the entire mass of the fluid, simply rise and sink, being made the sport of one wave after another, as the succession comes on. When waves come in from the deep sea and strike upon a shoal, or upon a shelving shore, they then make progress, not by the force of the wind, but only on the principle of the water seeking its own level. The velocity of the waves is in proportion to their magnitude, the largest proceeding at double the rate of the fleetest steamships, or about forty miles an hour. Those who are familiar with the sea have often, when running before the wind, watched their progress, seeing one after another, with regular intervals, sweeping by, and leaving the ship far behind.

The power of the waves is tremendous, and this force is almost a mystery when we bear in mind the fact just stated, that it is only the form, and not the substance, which moves. Those who have felt the successive blows of these mighty trip hammers against the sides or bows of a ship,

when the ocean has been violently agitated, can scarcely believe that the entire mass of water is not being hurled with immense velocity against the vessel. And when these waves come rolling upon a shallow bank their force is greatly increased, so that the bulkheads must be strained that can withstand their shocks.—*N. Jour. Com.*

Is it not a blessing of illness, and that no small one, that it is so much a means of drawing forth the love of our relatives? of giving evidence of its strength and reality, the sweet and refreshment of which, abides with us forever? I think that families are so bound together, in similarity of worldly interests, and these days of life belonging to time, that, were no illness ever to intervene, there might arise a danger of their intercourse becoming too exterior, too aetherial, too secular. Therefore, I think our Lord, mercy from time to time, takes one by illness misfortune, out of their pursuits. He calls it to gather round Him, to leave for a season *Mark much serving*—and like Mary, to come as a fan and sit awhile at His feet—that He may rest in sweetness, not only their blood to Him, their bond to each other, that is, may be deepened in Truth, warmer in love, and more tive to Heavenly, as well as earthly uses; so that when the trial is over, all concerned may what at the time they cannot well discern, that this illness was for the glory of God, and also the happiness of man.—*M. A. Schimmel's Nick.*

For "The Friend."

The Chinamen in California and Oregon said to show little or no disposition to assimilate to the community around them, or to give up habits and customs of their own class in their country. It would seem from the following circumstance narrated by a correspondent of "Cincinnati Gazette," writing from Oregon, they may sometimes introduce their home cast to the no slight annoyance of those on whom they are brought to bear. "In a certain county Chinamen had learned to know the tax collector and paid without suspicion whenever he came, but knowing that attempts were made to impose upon them, of course regarded everybody else as a swindler. An election resulted in another official being chosen, and when attempted to collect they refused to pay. He was rather peremptory, whereupon they sat him, tied his wrists and ankles together, thrusting a pole between them, several of celestial lifted the pole, and carrying him to town and handed him over to the cap authorities with a self-satisfied 'much extra wobbler,' conscious of having at the same time themselves of an enemy, and rendered good service to the community. The joke was a good one, and was so mercilessly kept alive by friends of the victim, that the poor fellow obliged, in self-defence, to resign his office just the neighbourhood."

"Upon a time, being weary of my thought a meeting of God's people, I thought none like me, and it was but in vain to sit there with such a wandering mind as mine was, although I labored to stay it, yet could not would. At length, I thought to go forth, as I was going, the Lord thundered through saying, that *which is weary must die*. I turned to my seat and waited the belief of God for the death of that part which was weary of work of God, and grew more diligent in seek

th, that I might be baptized for the dead; and I might know how to put off the old man by his deeds, and words, and imaginations, his passions and customs, his friendship and wisdom, all that appertain to him; and the cross of Christ was laid upon me, and I bore it."—*Steurop Crisp.*

For "The Friend."

### Thoughts for the Times.—No. 44.

All the great truths of Christianity are received freely and without reservation, by the Society Friends. By most professing christians these are regarded as a branch of knowledge, a dexterity in which is to be acquired by the study of the Holy Scriptures and the works of learned theologians who have devoted their lives to the task, and sought to establish a great and constant body of sacred learning, in harmony with doctrines of Christ and his apostles. Nothing to deny the usefulness and in their place necessity of such investigations, it is sufficient to remark that this is not the way by which Society of Friends approaches this great theme, that it is in our way of approaching it that great difference lies between us and other religious bodies.

It is not needed here to prove the truth of our fundamental doctrine that Christ is himself, his spiritual manifestation in the heart, the teacher and teacher of his people. The sincere perception of the words of our Saviour must relieve the doctrine from the charge of fanaticism or exaggeration, and whoever receives it can scarcely see to admit the consequences which flow from it, and which form the groundwork of Quakerism and practice.

The figure, so often used by our Saviour, of himself, as the shepherd, and his followers as his sheep, holds good, for all time, of his inward and outward appearance in the hearts of his disciples. When he putteth forth his own sheep, he goeth before them, and the sheep follow him: for they know his voice. And a stranger they will not follow, but will flee from him; for they know not the voice of strangers. "I am the good shepherd: the good shepherd giveth his life for the sheep." "My sheep hear my voice and I know them, and they follow me: and I give unto them eternal life; and they shall never perish, neither can any man pluck them out of my hand."

It is this following of the Good Shepherd, thus guided by the Holy Spirit, that so widely varies the path of the flock of the companionist, from that trodden by him who trusts in his own understanding; for the one is restrained by a sense of duty, informed by the Divine speaking Word—the other is impelled by passion and desire. Hence it is that the implicit confidence of the former produces a course of life which conforms, even when he knows it not, to the highest reason and the most comprehensive wisdom, and foolish as it may seem to the great hearted of this world, is at one with the eternal in the heavens.

The annuals of our religious Society furnish abundant evidence of the correctness of these views. Among us, who have heard and obeyed the voice of instruction, have had to pursue the path—to deny themselves of whatever inure, and to forsake whatever practice, the teaching of the Holy Spirit was against—to seek to be cleansed by the washing of regeneration from secret sins—to lead a pure and godly life: acquiring by reason of use, a finer sensibility to the Divine speaking voice, a fuller understanding of its teachings, and increased docility in obeying it. The simple requisites of discip-

ship being faith and obedience, all alike may, on these terms, share in its privileges. The way-faring man, though a fool, may walk in its path; and while he partakes of the baptisms and sufferings of the followers of Christ, will also share their consolations, and come to be endowed with the gift of spiritual discernment. Yet this precious gift—this divine insight, whether it be vouchsafed in a greater or lesser degree, is a treasure held by us in earthen vessels, which must be cleansed from the defilements of sin before being fitted for enjoying it.

"The steps of a good man," says the Psalmist, "are ordered by the Lord," and in the church of Christ it is his Holy Spirit which can alone qualify and appoint for service. The christian is not the chooser of his path to walk in, and no one can voluntarily perform any service in the church, to which he is not called and for which he is not qualified by the spirit. The duty of implicit obedience to the Divine voice weighs alike upon all. To some, the call may not go beyond the relations of domestic life and private neighbourhood, while to others it may point out more public services; and others still, may have their lips touched with the live coal from the altar to prepare them for public ministry.

Taking up the line of historical evidence which has been followed in these columns, it is clear that the ministry of the gospel, as understood and practised among us, is of a peculiar type, to which all the examples that have been given—and they form the rule and not the exceptions—conform.

But among all these instances, the cases of John Churchman and Thomas Sattergood may be selected as being, to use a modern expression, representative men; as having exhibited the typical character of the gospel ministry in its purest form and with its highest attributes. They felt, as did the Apostle of the Gentiles, a necessity laid upon them—under the penalty of a wage being pronounced, to preach the gospel, and that against their own will, a disposition of the gospel had been committed unto them. They were themselves assured by their own consciousness, that the words they uttered as ministers were given to them and not their own—a conscious knowledge, which all assuming to be ministers of the gospel should possess, and which has been the experience of all that have been truly gifted and ordained. So it was that Samuel Fothergill wrote to that friend whom he called "one of his boys," John Churchman: "The cause of my experience, since I left Philadelphia, hath taught me a practical paraphrase on what the Apostle meant by living by Faith, and at the same time all within me hath been repeatedly humbled, by the wide alterations of light and darkness. Seldom in my spiritual progress in my own individual case, am I more deeply poor out of meetings, and more reduced to a poor morsel of bread, and sometimes not that, except the word of patience; and in meeting not often, more opened to the powerful Word of Life; but, alas! I feel like a tube; some liquid crystal stream runs through me to others, but I doubt little remains. May the cleansing efficacy of the holy stream, purify the channels, and run into that reservoir constructed by Eternal Wisdom, out of my reach, but whence he can water my garden, even with his foot."

Both John Churchman and Thomas Sattergood felt the preparing hand of the Lord to be on them for the service of the ministry, long before the time came for publicly obeying the call; and under baptisms and trials almost beyond their strength to bear, before yielding to it. And we may observe in these as in other cases, the analogy of the Divine Government. The servants in the

parable were required to be faithful in a few things before being made rulers over more. So, likewise, the early utterances of our gospel ministers are limited to a few words, as if the fidelity of the servant was to be tried by committing them to him to deliver, before trusting him with a fuller message. Many of the deep baptisms through which they passed were no doubt preparations for understanding the states of those to whom they were to minister, and were in the end so understood by them.

And how careful were these faithful servants not to go beyond their Divine guide! This care has ever been one of the marks of the true minister. "One day," says John Woolman, "being under a strong exercise of spirit, I stood up, and said some words in a meeting; but not keeping close to the divine opening, I said more than was required of me; and being soon sensible of my error, I was afflicted in mind some weeks, without any light or comfort, even to that degree I could not take satisfaction in anything: I remembered God and was troubled; and in the depth of my distress he had pity upon me, and sent the Comforter: I then felt forgiveness for my offence, and my mind became calm and quiet, being truly thankful to my gracious Redeemer for his mercies; and after this, feeling the spring of divine love opened, and a concern to speak, I said a few words in a meeting, in which I found peace; this I believe was about six weeks from the first time: and as I was thus humbled and disciplined under the cross, my understanding became more strengthened to distinguish the pure spirit which inwardly moves upon the heart, and taught me to wait in silence sometimes many weeks together, until I felt that rise which prepares the creature to stand like a trumpet, through which the Lord speaks to his flock."

For "The Friend."

### A Mountain Home.

The beautiful vale of Catawissa, lies sheltered by a portion of the Blue Mountains, in Columbia Co., Pa., having a creek bearing the same name running through it, which empties into the North Branch of the Susquehanna river.

At the mouth of this creek, and within eight hours ride of Philadelphia, Wm. Hughes, a member of the Society of Friends, from Berks Co., Pa., laid out, in 1787, the town of Catawissa. Previous to this, some Indians had a wigwag, at the mouth of what was then called *Catawisa* Creek, and the river was celebrated for its sad fishery.

On both sides of this large stream are mountains terminating in abrupt bluffs, at the foot of which, on the right, runs the Lackawanna Railroad and Susquehanna Canal, via Wilkes-Barre and Baltimore, Md.; while on the left is the Catawissa Railroad, all used for transporting immense quantities of coal, oil and lumber, from the rich counties of the north and west.

The town itself is of little importance, having only about 1000 inhabitants, and no stirring business done, except at the machine shops owned by the Catawissa Railroad Company, which are fine large frame buildings located on the bank of the river. There are also a paper-mill, grist-mill, foundry and two tanneries, all situated upon Catawissa creek. Half a dozen country stores supply the inhabitants with all the necessaries for house-keeping, mere luxuries not having yet found their way to this unpretending settlement.

There are two schools, well attended, and four places of worship; the Methodist, Lutheran and German Reformed, all being built of brick, surmounted by cupolas, which at a distance add to the beauty of the landscape, peering above the

trees, and having the dark mountain back-ground. The "Quaker," as it is universally called, is simplicity itself, being a plain edifice of logs and plaster, situated upon a knoll on the border of the creek, and surrounded by oaks of ancient growth, whose wide spreading branches have shaded many a worthy, whose remains now moulder in the adjoining grave-yard. But one member of this original society of the town, is now residing within its precincts, and the building of by-gone days, is only opened occasionally in turn with others at a distance, or when a minister may chance to travel through the country.

The unpainted wood-work has grown dark with age, but is still in a state of perfect preservation, and looks as if it might last for years to come. It is now used by the "Hicksites." The burying ground, or as Longfellow gives it the old Saxon term of "God's Acre," is an attached enclosure surrounded by a stone wall, and is the only place of interment in the town, except one at the German Reformed Church, therefore it is used by any who may wish to deposit the remains of their loved ones within its bounds, and in one corner we find tomb-stones marking the spot where lie some of the sons of Catawissa, who left their mountain homes for southern climes, to fight for the freedom of the slave. It was in this grave-yard that the original ever-bearing Catawissa Raspberry was found, which is the only real good raspberry that bears fruit from the middle of the Fifth month until frost. It has been considered of late years too valuable to be allowed to remain in its secluded home, and the hand of man has torn it from its native spot, and transplanted it to various nurseries throughout the country; one of which is situated in the upper part of the town, and is owned by a gentleman of intelligence and taste, who, having become weary of battling with the vicissitudes of a city life, is now devoting his time to the cultivation and improvement of various fruits, particularly the vine, for which the soil of this country is admirably adapted. By his untiring labour and industry, during the last six years, he is now reaping a rich reward, as he can find a ready market for all the products of his superior skill. Few places afford more beautiful points of interest to the artist or any true lover of nature, who if only fortunate in securing a home among its primitive inhabitants, can spend weeks in quiet retirement, enjoying the independence which the absence of the ceremonies and fashions of city life will allow. The older inhabitants of this little town are a quiet peaceable and worthy class, generally retaining the old Pennsylvania German language when conversing among themselves. The younger generation are becoming more cultivated, but while there is so little activity and energy, Satan finds, even here, "some mischief still for idle hands to do," consequently the morals of the people are not so good as might have been anticipated in so unpretending a place. With little means they live comfortably, each family having a garden which supplies them with their vegetables and fruit, and as few keep assistants in their families, they care not to cumber themselves by accommodating citizens with a summer home, and the hotels which are suited for the passing traveller, are not suited for homes for the citizen. In some houses the spinning wheel may still be seen in "grand-ma's" room, whizzing round with its usual velocity; preparing for the household's comfort the wool or flax, the delicate blue flower of the latter decking the field of the thrifty farmer.

The situation of the town is admirably adapted for becoming the resort of those citizens whose means are limited, or who wish to find a place for

the accommodation of their families during the summer months, but as Catawissa now is, so it will remain, unless some of our enterprising wealthy capitalists, can stimulate the inhabitants by building houses among them and making it a summer resort.

With scenery so impressively beautiful, surrounded by mountains, from whose bluffs may be seen the windings of the Susquehanna, with Danville and Bloomsburg on either hand, the weary bridge that throws its lengthened span from side to side, with the island which daily changes its form with the rise and fall of the waters; the fields of golden grain and richest pasture, adding beauty to the landscape, while at our feet lies the quiet hamlet; a fine healthy country, with the most productive land at a reasonable price, fine roads for the equestrian or for drives, boating and bathing in the creek or the river, instant communication by telegraph, or twice a day by mail to the North or the South, what more can be wanted for a home for our citizens than can be found in the lovely, but as yet unknown vale of

CATAWISSA.

Benjamin Bishop.

(Continued from page 33.)

"To ———"

"The more perfect we are in love, the more the grace of the God of love will be seen about and among us; until we all come into the unity of the faith and of the knowledge of the Son of God, in whom is no death. The apostle Paul, when a strong man in the Lord, had to feel his weakness; and he was glad in being made sensible that he could do nothing of himself, that the power of Christ might rest upon him. Great and marvellous are the works of the Lord, and His judgments are a great deep. 'He hath His way in the whirlwind and in the storm, and the clouds are the dust of His feet'; and blessed, for ever blessed, will they be that stand still, until all that the Lord maketh to pass on before Him are gone by, and the still small voice is heard where to go, and what to do. Some formerly were commanded to keep a little way behind the ark, because the way which they had to go, they had not gone before. I want to see our Society (professing as we do to be led by the Spirit of Truth,) become members of Christ's mystical body, feeding only on the true bread which cometh down from God out of heaven, that the Lord may be the strength of our hearts, and our portion for ever.

"It is only when the Lord is exalted in judgment, and God that is holy, sanctified in righteousness, that the lambs can feed after their manner. Are there not many in our Society, who have been quickened unto God by His Word in their hearts in early life, but by not taking heed thereof are become like dry bones, without spiritual flesh and sinews? But oh! how encouraging to the Lord's baptized servants to labour in the little strength afforded, is the assurance that even these dry bones can be brought forth unto life and usefulness by the power of God, if they will but hear the voice of Christ in the day of His shaking and visitation. Oh, let us seek a close and closer fellowship with the Father in the Son, and one with another in Christ our holy Redeemer, Mediator, and ever-blessed Saviour, and we need not fear what man can do unto us."

"14th of 10th month, 1848.

"My frame is altogether very weak, so that I am now confined to the house, and through adorable mercy, feeling no burden upon my spirit, I am looking towards going to our everlasting home, bounded by 'not my will, but thine be

done.' My deafness increases very much, so that I cannot hear the words of the Lord, and I am about me feel the loss of my hearing, and it makes me dull, except my wife, but it is not."

"To ———"

"24 month, 1848.

"What shall I say to thee, and how poor art thou that thy wounded soul? The enemy of God is taking advantage of your distressed circumstances, to drive thee to despair. I see with you both; and it brings to remembrance the days of my affliction, the wormwood and gall which I have tasted. Thus it is God's will that I should be healed, and kills to make alive'; yet, in our present distress, 'considereth our frame, and remembereth that we are dust'; making our extreme His opportunity, to teach us wisdom and the will of the Lord. Thou acknowledgest that thou art in a tempted state, which is an evidence that the Lord is near, for it is the Spirit of Christ shows thee this, and if His Spirit is following all its leadings, He will bring thee through over all thy conflicts, trials and difficulties, freely give thee an inheritance among all that are sanctified. But will not thou say can these things be? I answer, by trusting in the Lord with all thine heart, giving up thy own understanding, thy own will; having trusted thy own understanding, thou hast found it to fail it will be thy wisdom to lean to it no longer. Now listen to the admonition of a tender friend who hath walked through (something like the valley of the shadow of death—who hath done of ever being able to lay hold of the mercy of the Christ Jesus, unto life eternal; and thus with thee; but now stand still, and gather up fragments that remain of the precious visitation of the love of God to thy never dying soul, from youth up. Let the reprofs of instruction their proper place and weight in thy mind. Him the reins, and let Him be the leader thou the follower, then thou shalt know how to be thy Saviour, a very present help in time of trouble, and that in faithfulness He afflicted thee. His fatherly chastisements were not for thy destruction, but for thy preservation. These things are foolishness to the wise and prudent in their own sight, but as thou hast put thy own understanding, so now prove that thy man despiseth, the gentle checks of the truthness of God, and thou wilt find hard things made easy, and bitter things sweet. Strive will be given thee to bear every trial with patience until the Lord saith 'It is enough.' Put your blessings, and employ them with thanksgiving."

"To ———"

"25th of 8th month, 1848.

"The love of God, shed abroad in the heart by the Holy Ghost, is a treasure hid with the Father, whose commandments are life lasting. Whosoever eateth His flesh, and drinketh His blood, dwelleth in God, and God in him, by whose power, invisible to the world, member moves in harmony, to the praise and glory of God the Father, and to the edification and comfort one of another. In this love, a gift to my measure, my heart salutes the family of Christ the world over, hoping and believing, that as the eye is kept single in the head, and the heart steadfast in God, will be no need of one member's saying to another, 'I have no need of thee.' Great is the mystery of iniquity, but its power is limited, its kingdom to come to an end, for glorious is the mystery of godliness,—the power of God working salvation in the earth, th-

which is in Christ Jesus our Lord. Now see Satan transformed into an angel of light, his ministers into the ministers of Christ, and cannot read the book because it is sealed, and *she* cannot read it because he is unlearned; not the fear of God is taught by the precepts in these. These kindle a fire, and compass themselves about with sparks of their own kindling, and deceived by means of the miracles which second best, with horns like a ram, hath or to do; and must receive of the plagues of actual Babylon, unless they repent and come of her. But grace, mercy and peace, from the Father, and from our Lord Jesus Christ, with all that stand fast in Christ, in whom the e body fitly framed and joined together, eth up into a holy temple in the Lord, in which is no schism, no confusion of tongues; for it is our Father, Christ our salvation, and the Comforter, namely, the Holy Ghost sent down from heaven, our guide, our life, and our Light, searches our hearts, and maketh intercession for us, according to the will of God. Oh my friend, it makes me exceeding joyful in all tribulations, to walk about in this Holy City, to which glorious promises belong, and in which excellency of wisdom is so marvellously displayed in the ascent of the house of God; the light of His servants, and the fellowship of the elect, causing every member to rejoice with their rejoicer, and to weep with them that weep of the same mind one towards another. It is on a Sabbath day, and I love to take a fourth day's journey sometimes. We have our carriages, and travel very swiftly, but not so swiftly as the wind. But how can we but when we turn our attention on the world; and but weep over the abominations, the cruel and oppression that are in the earth, our indignation bringing up another in the same dark and wickedness, deceiving, and being deceived. And when we meditate on the blessed privilege that we as a religious society enjoy,—that sitting down quietly together to wait upon the Lord for the renewal of our strength,—what cause we to humble ourselves in His holy sight, all His mercies past and present, and with hearts quivering, 'Lord, what wouldst thou have me to do?' Oh the beauty and safety of the eye single to the glory of God. I do not read of the children of Israel being in judgment, when to take their journey and when to abide in their tents. Now are running to and fro, and knowledge is used. May the God of all grace make the shine as the brightness of the firmament, they that turn many to righteousness, as the stars for ever and ever."

For "The Friend."

tical party spirit so blinds the eyes and the judgment of most of the writers in the papers of the day, that it is difficult to learn them what is the real condition of things in our country, affecting the coloured freedmen. It is very apparent from the general tenor of the letters furnished from various sources, that the former slaveholders have the power and opportunity to enforce their policy, very few of them are quite willing to use them, disclaim of the rights and wants of the poor.

In the ninth month number of "The Pennsylvania Freedman's Bulletin, &c.," we find a complimentary sketch of the report of "The Georgia Rights Association," made to a meeting of the Association recently held in Augusta, Georgia. It is composed of freedmen, who appear to conduct

their operations with no little intelligence and care.

From this sketch we take the following extracts, showing the condition of the several counties alluded to, there being reports from every county in the State. Owing to the determination at Washington to make the Freedmen's Bureau press as lightly as possible on the State of Georgia, citizens of that State have been appointed to execute the duties assigned to it by law, and they are called "Civil Bureau Agents."

In some of the counties not mentioned in our extracts, it is stated that the freedmen are fairly treated, and where that is the case the state of things is generally satisfactory with both employers and labourers.

"Pike County.—Getting on tolerably well. No murders. Some are driven away without pay. No schools. Two Sunday schools. Coloured people celebrated 4th of July; whites, by invitation, took part.

"Merriweather County.—Many dead bodies fished out of Flint River.

"Lyon County.—People driven away in great numbers without pay. Bureau agents do not use. Refers everything to civil courts, where no justice is shown. One man beaten over the head and shot in May. Seven schools. Great need of books.

"Hancock County.—Treatment bad. Some whipping. Some driven away without pay. Celebrated 4th of July. A few whites present. Bureau agent, Mr. Davis, addressed them. School house fired but saved. One planter charged hands five dollars for the loss of the 4th of July. Planters make it a point to bring hands out in debt.

"Simpson County.—Doing tolerably well. Some driven away without pay. Celebrated 4th of July. Some prominent white citizens addressed coloured people. Two schools. Pupils had a May-day party. Wanted to carry a United States flag. White people would not allow them. Mayor would not allow it.

"Clarke County.—Things generally going well. Some complaints in the country. Many in great need of food—several motherless children with no permanent homes. People at Athens had a barbecue on 7th instant. Mayor and other prominent citizens present and addressed the freedmen in a very acceptable manner.

"Morgan County.—At present there is a tolerably good feeling existing. Many old and poor. Some little assistance given them by the whites. In Madison, on the 4th of July, a public dinner was given. Quite a number of whites, by invitation, participated. On Christmas two freedmen chased by a very respectable white young man, and one killed. Two school houses burnt within a year.

"Baldwin County.—Want schools, but can get them only through the yankees. Applied and got two teachers—good, kind, Christian ladies. Two Sunday schools.

"Bibb County.—Cannot do without the Bureau. Captain Hill in Macon does his duty. Generally justice is done, as all coloured people watch the courts—examine the laws for themselves. Jailor shot a coloured man, killing him, for giving prisoner in guard house a chew of tobacco. Was held to bail. Have not much to complain of in Bibb.

"Oglethorpe County.—A Mr. D. C. Smith, who has about 100 hands employed, has two or three of them every week or two stretched upon the ground and whipped. Has arranged so as to bring all in his debt. Very few freedmen in the county are paid for their labour. Quite a number of old infirm persons destitute and suffering. Officers and others search freedmen's

houses without giving them any knowledge of their object, or presenting any legal authority.

"Jefferson County.—People rather badly treated. Some whipping done, some tied up by thumbs, and dogs made to bite them while so tied. Some shot. If freedmen are acquitted by civil courts, cases are taken to Bureau Agent, who generally finds a true bill, and fines them, and compels them to work it out. Lawyer Wilkins is friendly to the freedmen, and tries to secure them justice. Civil agent shot two freedmen—but not fatally. Agent has been removed. Present agent appears disposed to do right, but the Bureau, with Southern men to administer it, is no protection. Planters generally manage to keep hands in debt.

"Wilkes County.—Some freedmen well treated—generally have had treatment. Great deal of whipping—getting to be very common. Planters beginning now, since crops are partly gathered, to drive hands away to get rid of paying them. Bureau, as administered, no protection.

"Burke County.—One young man stabbed. Man who stabbed him was not arrested—no effort made to arrest him. House shot into, but fortunately no one hurt. On one plantation hands are whipped as in slavery. If any leave, the civil agent of the Freedmen's Bureau arrests them and returns them to the employer, who puts balls and chains on them.

"Warren County.—Much complaint that employers refuse to pay wages when earned. Large numbers get no pay for last year's labour. Some whipping done. Bureau Agent not very efficient. Colored school shut into by a white man within the past four months. Whites neither oppose nor assist in education. Freedmen generally working well. Rev. Wm. Harris deprived of his license as a preacher by the white Methodist Conference because of the interest he takes in the Equal Rights Association.

"Henry County.—White citizens teaching a school. House was stoned, but case reported to Bureau Agent, who gave proper protection. Agent tries to do his duty. Two men whipped. A crowd of white jayhawkers—140 of them—take pistols and other arms from freedmen. Shot one freedman—put thirteen balls in him—for reporting some of their actions to the Bureau. First whipped his brother to make him tell where he was."

*Ibbs.*—May I ever remember, that *whosoever* steps the mind from God,—that stops the heart short of heavenly things, however humble in itself, becomes sinful, by drawing the time and thoughts and affections from their purpose and legitimate objects.

## THE FRIEND.

TENTH MONTH 6, 1866.

We have received from a Friend in England a pamphlet containing "An Account of the Life and Religious Experiences of D. Caroline Hopwood, of Leeds, England, &c.;" sent we suppose for insertion in our journal. She appears to have lived in the latter half of the last century, and to have passed through many vicissitudes and trials.

It is interesting and instructive to observe the gradual progress of her religious experience as delineated in her narrative, and, how, under obedience to the unfoldings of the Spirit of Truth in her mind, she was led, step by step, into the adoption of the doctrines and testimonies of the gospel as held by Friends, and after being a zeal-

ous member of another religious society, to come, mind in the cross, and join with them.

But it is evident from occasional passages that her vision was not clear on some points which Friends have ever deemed of importance, so that her course became a source of concern to those who were watching over her for good, and it would appear, although frequently speaking among them as a minister, that she was not in full unity with the meeting to which she belonged.

We have said so much to explain to the Friend forwarding it, the reason why we doubt the propriety of republishing the account.

#### SUMMARY OF EVENTS.

**FOREIGN.**—The weather in England has been stormy and wet, and there have been disastrous floods in several midland counties. Much anxiety was felt for the crops which were still outstanding. In the north of England a large proportion of the harvest had not been cut. In other parts great quantities of wheat and barley, which had been cut, remained in the fields exposed to the rains. The potato disease was making sad ravages in some parts of England. A general meeting of Friends at a late meeting was held at Manchester on the 24th ult. The Bank of England has reduced its rate of discount to 4½ per cent.

It is said that Spain accepts the good offices of England and France as mediators between herself and Chili and Peru. General Baresand has been appointed Governor General of Cuba.

Count Bismark, the Prussian Minister, was ill, and there were fears that he would not recover.

A military commission has gone to Venice to take possession for the Italian government of the war material there.

At a meeting of the stockholders of the Atlantic Telegraph Cable Company, held on the 28th ult., it was resolved to raise the capital of the company, and it was promised that the toils for messages should be shortly reduced. Further shipments of troops to Canada were being made. The steamer *Hansa* was engaged to take about one thousand of the British and French troops to New York, with 2,000,000 francs in gold. The steamer *Bremen* has also sailed with 142,000 in gold.

The Prussian Chamber of Deputies has passed a bill authorizing a loan. The ministers agreed to a reduction to 30,000,000 thalers, but urged upon the Chambers that the government should be kept in a strong financial position.

France, Italy, Belgium and Switzerland, have agreed upon a common coinage, of which the franc shall represent the unit; and the coin of each government shall be received in the treasuries of the other, at their full and equal value.

According to the census recently taken for the city of Paris, the population of the capital, exclusive of foreigners travelling through it, is 1,700,000.

On the first inst. the Liverpool cotton market was very active and prices higher. Middling uplands were quoted at 14½. Broadstuffs firmer. Consols, 99½. U. S. 7½.

Later advices represent all quiet in Central America. Perez has been re-elected President of Chili. Matters in Peru are said to be progressing favorably and President Prado still enjoyed the confidence of the people. Free trade is about to be established between Chili and Peru. Business on the coast was active, and cotton-growing is on the increase. The return of the Spanish fleet was expected, and measures were in progress for the defence of Valparaiso. It is said that 150 cannon will be mounted for its protection.

**UNITED STATES.**—*The South and the Freedmen.*—Gov. Patton, in a letter to the President, represents that the actual sufferers from Alabama from want of food, are from seventy to eighty thousand, the larger portion of whom are widows and orphans. General Howard, in view of this state of things, has authorized the assistant commissioner to extend special relief for three months longer. About two-thirds of these destitute people are women.

The Roman Catholic Bishop of Savannah has addressed a pastoral letter to the Catholics in Georgia and Florida, informing them that one of the objects to be considered at the Catholic Plenary Council to be held next month at Baltimore, will be the means of educating and converting the freedmen of the South. He alludes to the Holy See and the Catholic Church in Europe, the liveliest sympathy in this new movement.

The freed people of Georgia are to meet on the 30th of this month, at Macon, in convention, in order to elect a State for the agricultural suffrage. A full representation of counties is expected.

The Savings and Trust Company for Freedmen has now nineteen agencies or branches in thirteen of the States and the District of Columbia. The aggregate of deposits, up to 7th month last, last, amounted to \$616,350.

**Philadelphia.**—Mortality last week, 327. Of cholera, 45; cholera morbus, 12; cholera infantum, 14; typhoid and other fevers, 22; old age, 7.

**National Bonds.**—No new national bonds have recently been organized, the whole number now in operation being 1,654, with an aggregate circulation of \$293,032,903. The United States Treasurer has in possession United States bonds valued at \$332,298,900, which he holds as securities for the circulating notes of the national banks.

**The Cholera** has abated in most places in which it has prevailed, but it is still continuing in Nashville and Memphis. The sufferers are chiefly the lower class of whites and coloured persons.

**Miscellaneous.**—During the present year, up to 9th month 22d, the foreign export of petroleum from the United States, exceeded forty-two millions of gallons. Last year, to the same period, it was only 15,565,996. It is, therefore, but little more than one-third of this year's export.

It is stated that P. Boswell, of Benton county, Ind., recently sold over \$100,000 worth of lat cattle, all of which were fattened on his own farm.

The Bishops of Madras, Calcutta and Bombay, have issued a circular, in which they state that the number of christian converts in India, Burmah and Ceylon, is 213,183, and the number of English and American missionaries is 541. The children of the mission schools within the same bounds, are 96,574. The number in all the schools is 500,000.

The Emperor of Russia has recently adopted measures removing some of the old restrictions and facilitating the immigration of Jews into the empire. The consequence is a considerable influx of Jews into the government of Kiel, most of whom devote themselves to agriculture. *The Gazette of the Provinces* states that 355 Jewish farmers have settled on the crown domain, their total holding being of 2,725 acres, and 6,820 men. Moreover, 41 Jewish families in the same year bought farms of their own. These families consist of 762 males, and 764 females.

The researches recently made in the Census Bureau, at Washington, show that notwithstanding the war, the population of the United States has largely increased. The State which enumerated their people in 1855, found an average gain of 13½ per cent. since 1850, and the Bureau estimates that the population has increased from 31,443,321, the number found by the census of 1850, to about 35,500,000.

**Boston.**—Mortality last week, 79—50 males and 29 females.

**New York.**—The number of deaths in New York last week was 487, of which 38 were caused by cholera. The previous week there were 560 deaths, 54 of which were by cholera.

**The Pacific Railroad.**—On the first inst. the Government engineers examined and accepted 35 miles of the Union Pacific Railroad. This makes 240 miles of the road completed.

**Louisiana.**—A New Orleans dispatch says, the crop prospects continue to improve except in the alluvial regions, and in places heretofore free from the army worm which are now invaded by it. The crop of sugar cane will be large, but all who can will keep the cane to sow themselves or sell for plant cane. The crop of sugar will consequently be small. The Louisiana rice crop will be large.

**The Markets, &c.**—The following were the quotations on the 1st inst. **New York.**—American gold 147. 1851, 1852, 1853, 11½; ditto, 1854, 11½; ditto, 1855, 10½; ditto, 5 per cents, 99½. **Superfine** State flour, \$8.10 a \$10.75. **Shipping** Oil, \$10.85 a \$11.25; extra \$14.25 a \$17. **Baltimore** flour, \$12.20 a \$13.60, for common to good, \$13.70 a \$16.50 for extra. **Amber** State wheat, \$3.95 a \$3.10; white Michigan, \$3.95 a \$4.10; white Maryland, \$3.95 a \$4.10; Jersey, \$7 a 58 cts. **Canadian** rye, \$1.30; western, \$1.18. **Western** yellow corn, 36 cts.; mixed, 99½ a 95. **Middling** uplands cotton, 42 a 43 cts. **Cuba** sugar, 11 cts.; **Porto Rico**, 11½ a 11½ cts.; **hard** refined, 16½ a 16½ cts. **Philadelphia.**—**Superfine** Flour, \$7.50 a \$8.75; extra, family and flour brands, from \$9 to \$16. **Hard** red, \$8 to 80 choice, \$3; white, \$3 a \$3.25. **D-lanare** rye, \$1.10. **Yellow** corn, \$1.05; western mixed, \$1.02. **Oats**, \$4 a 55 cts. **Flassed**, \$3.30. **Timothy**, \$3.50 a

\$4. **Cloverseed**, \$7 a \$8. **The arrivals** and sale of beef cattle numbered about 2700 head. The market was dull and prices rather lower. **Sales** of extra up to 16 a 17 cts., fair to good, 14 a 15 cts., and cut 12 a 13 cts. **Sheep** were fair demand at better; about 8000 sold at 6½ a 7 cts. per lb. gross. **Hogs** a \$15 the 100 lbs. wt. **Buffalo.**—No. 2 Chicago wheat, \$2.10 a \$2.12. **Yellow** corn, 80 cts. **Chicago** oats, 48 cts. **Illinois.**—No. 2 spring wheat, \$1.77. **Corn**, 61 a 62 cts. **Oats**, 34 cts. **Chico** No. 1 spring wheat, \$2.05 a \$2.07; No. 2, \$1.81 a \$1.90. **Corn**, 65 cts. **Oats**, 33½ cts. **Baltimore.**—**Red** wheat, \$3; white, \$3.25 a \$3.40. **Yellow** corn, 86 a 90 cts. **Oats**, 63 a 65 cts. **St. Louis.**—**Corn**, 75 a 80 cts.

#### RECEIPTS.

Received from J. A. Potter, Agt. N. Y., \$2.50 and for R. W. Wright, \$2 per vol. 39, and A. McKee Bowman, and G. Westcott, \$2 each, vol. 40; from S. L. Eston, N. Y., \$1, to No. 26, vol. 40; from S. W. Marriott, N. Y., \$2, vol. 40; from E. Hollingsworth, Agt., O., \$2, vol. 40, and for A. Dewesse, \$5, vol. 40 and W. Harmer, \$2, vol. 39.

#### NOTICE.

A Stated Meeting of the Women's Aid Association will be held at No. 112 North Seventh St., on Sunday the 6th inst., at 4 P. M.

SARAH LEWIS, *Secrete*

#### EVENING SCHOOLS FOR ADULT COLOURED PERSONS.

One or two additional Assistant Teachers are wanted in the Women's School. Application may be made to Isaac Morgan, Jr., 622 Noble street, J. Wistar Evans, 817 Arch street, Dr. E. H. Coates, W. Cor. Spruce and T. T. Wistar Brown, 111 Chestnut Street, Philada., 10th mo. 1st, 1866.

#### WANTED.

A young woman, a Friend, as Teacher for a School, in Benzet St., 11th below Arch. To a well qualified this is a desirable position. Apply to either of the committee, J. M. Whitall, 410 Race Street, Dr. E. H. Coates, W. Cor. Spruce and T. T. Wistar Brown, 111 Chestnut Street, Philada., 10th mo. 1st, 1866.

#### WESTTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the Boy's SECOND MATHEMATICAL SCHOOL, to enter on his duties on the 1st of the Winter Session. Apply to Samuel Hillis, Wilmington, Del. THOMAS EVANS, 817 Arch St., Phila. JOSEPH SCATTERGOOD, 413 Arch Street, " Charles J. Allen, 304 Chest St., "

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSUEA H. WORTHINGTON, M. D. Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, of the Board of Managers, No. 437 Market Street, Philadelphia, or to any other Member of the Board.

DIED, on the 8th of Seventh month, 1866, ELIZA daughter of Thomas S. and Priscilla Bacon, in the year of her age. She was for a number of years, a entirely confined to the house, and at times so much bodily suffering, as well as deep spiritual afflictions. She was concerned from an early period of life, that her day's work might keep pace with the aid that "through the washing of regeneration and renewing of the Holy Ghost," she might be prepared to receive the answer of "Well done." Near her close several times she spoke of the great peace and felicity favored her spirit, and of her own unworthiness of a favor. Her friends and relatives have the comfort, hope that through mercy and redeeming love that is his eternal gain.

—, on the 31st of Seventh month last, at her decease in Haddonfield, ANNA EVANS, relict of the Thomas Evans, in the 81st year of her age, an esteemed member of Haddonfield Monthly Meeting.

WM. H. PILE, PRINTER,

No. 214 Pearl street, between Cook and Third

For "The Friend,"

The Completion of the Atlantic Telegraph.

The operations of the Atlantic Telegraph Company, during the present year, have been attended with remarkable success. A new cable has been laid across the Atlantic, the cable lost in the previous expedition has been recovered from the bottom of the ocean, and continued to Newfoundland, and this island has been connected by short lengths of submarine cable with the telegraphic system of the main land. A double line of telegraph has thus been established between the two continents, and a new era been opened in the history of our foreign intercourse.

This remarkable achievement has shown that the turbulent ocean is no longer a barrier to the communication with each other of the nations which it separates, who, by the instantaneous passage of the electric fluid, can now transmit intelligence mutually with the facility of neighbors. It has also enabled us to witness with admiration the publication among us of occurrences which transpired but a few hours previously in the capitals of Europe, and to observe the pulsations of the day pulsating backwards and forwards upon the delicate nerves at the bottom of the sea, affecting simultaneously nearly all parts of the civilized world. The continuance of this mode of communication in the future, seems also almost insured by the experience of this year.

The comparative ease with which the new system was laid in good order, notwithstanding the prevalence of unsettled weather that was met with, is a reason to believe that the present lines will be promptly renewed, should it become necessary, while the fact that a twelve month's service to the action of the water produced but a very slight effect upon the cable of 1865, indicates that it may be some years before that will be the case. The American and Russian Telegraph Companies are meanwhile busily engaged in completing their lines in the west, and a company is now being organized in England, to connect Europe and America by telegraph through the Faroe Islands, Iceland, Greenland and Labrador.

It thus appears likely that the electric wire will perform an important part in our communication with other portions of the globe. In commercial transactions, the Atlantic telegraph is already superseded to some extent the mails, and it will probably become in time the chief mode in the transmission of this kind of intelligence.

as has been the case in the line between Great Britain and India. As the charges become more reduced, this line will also doubtless be freely used by the public at large in sending messages to absent friends, or in obtaining information, and it will prove a great convenience to governments in communicating with each other and their distant agents. To the governments of England and America especially, the Atlantic telegraph affords an excellent opportunity for the mutual speedy correction of misunderstandings, and the timely interchange of opinions, and in this view of its probable employment, may we not hope that as it has already been the herald of peace both upon its first establishment in 1858, and also in the present year, it will continue to be, not only the bearer of peaceful tidings, but an agent in diffusing the feelings of peace and good will among men.

The important results which this company have attained have not been without great labour and expense. In the twelve years of persevering effort and repeated failure, through which it has struggled, the remark has been well illustrated which was addressed to its Directors on the eve of the starting of their first expedition in 1857, "that the pathway to great achievements has frequently to be hewn out amidst risks and difficulties, and that preliminary failure is even the law and condition of ultimate success." The following is a brief account of some of the late operations preparatory to, and attending the successful termination of this enterprise; a number of the details of which have been gleaned from an interesting "History of the Atlantic Telegraph," written by Henry M. Field, a brother of the originator and chief supporter of the company, Cyrus W. Field, of New York.

During the seven years that elapsed between the abandonment of the old cable, in 1858, and the third attempt to submerge a cable in 1865, various discoveries and improvements in the science of submarine telegraphy were made, which greatly facilitated the execution of the project. In 1859—a time of general discouragement in relation to these enterprises in consequence of the failure of several long lines of telegraph—the British Government, then largely interested also in the success of a line to India, appointed a committee of some of the most eminent electricians and engineers of the country to investigate the difficult problems connected with these subjects, in the hope that their labours would throw light upon their obscure character. This committee continued its elaborate researches for nearly two years; and their detailed report filed, when published, a very large volume. The kind of metal best suited for the purpose of conducting electricity, and the most suitable material for an insulator, were among the subjects elucidated in these reports; and the method of applying the insulator to the conductor as well as the effect upon a submerged cable of a heavy pressure arising from the weight of a superincumbent column of water, were also discussed. These reports, by clearly demonstrating the possibility of transmitting intelligible signals rapidly through a long circuit of

properly protected submarine wire, aided greatly in restoring public confidence in the feasibility and ultimate success of the undertaking, and this feeling was strengthened by the completion, about that time, of two other lines of great length, one from Malta to Alexandria, 1535 miles long, and the other in the Persian Gulf of 1400 miles.

By the continued exertions of Cyrus W. Field, public interest was further enlisted on behalf of the plan of thus uniting the old world with the new, and the aid of vessels belonging to the two governments was asked for and obtained for a future attempt. The cloud of discouragement which had settled upon the affairs of the company finally lifted, the co-operation of some moneyed men was secured, and proposals were issued for the construction of a new cable. The enterprising firm of Glass, Elliott & Co., the manufacturers of a portion of the cable of 1858, having united themselves with the Gutta-Percha Company for the construction and laying of submarine cables, under the title of the Telegraph Construction and Maintenance Company, came forward with a very liberal offer to the Directors of the Company, proposing not only to construct but to submerge the new cable at their own risk, stipulating only for the reimbursement weekly of the expenses actually paid by them, and leaving the question of profit to be decided entirely by the result of the attempt, which if successful was to be twenty per cent. of the cost. They further agreed to aid the Company by subscribing over £100,000 to their capital stock. This offer was accepted, and the Great Eastern steamship was chartered by the Construction Company for the undertaking.

Before determining upon the kind of cable to be manufactured, the judgment of a scientific committee was taken upon the form best calculated to ensure success. The numerous patterns laid before the Company were subjected to a careful examination in order to ascertain the arrangement which would most fully combine the elements of strength, flexibility, lightness, imperviousness to water, and perfect insulation, with the permanence of continuity essential to a conductor in which the slightest flaw might impair or entirely prevent the passage of the subtle fluid. The form which was finally adopted was believed to combine these requisites in as perfect a manner as was possible, and the specifications agreed upon were framed to secure to the fullest extent the objects in view. The freedom of copper from contaminating metals having been found to be of great importance, it was resolved to reject all samples that showed, upon testing, a lower conducting power than eighty-five per cent. of that of pure copper, and it was further provided that the core—or the conductor covered by the insulating material—should be electrically perfect; and that it and the whole cable when finished, should be subjected to a careful testing under water, which in the latter case should be of the temperature of 75°. This condition considerably increased the severity of the test, as the insulating property of the gutta-percha is diminished by warmth; and it was believed that if the conduction of the cable proved satisfactory under such

circumstances, it would certainly not be defective when laid in the cooler depths of the ocean.

After some months of constant activity and vigilant supervision, the cable of 1865 was finished, satisfactorily tested, and stowed away in three large tanks on board the Great Eastern. The expedition to submerge it left the shores of Ireland in the Seventh month of last year, amid general expectancy and anticipation of a speedy triumph. But the discovery of several defective portions, early in the course of the voyage, and the necessary stopping and shifting of the vessel to recover and repair them, soon rendered the issue of the expedition a doubtful one. This attempt was finally brought to a close by the breaking of the cable in being hauled in by the cumbersome 'picking up' machinery, in the search for another 'fault,' after the Great Eastern had proceeded more than half way across the Atlantic, and nearly three-fourths of the cable had been paid out: and after an unsuccessful attempt to recover the cable by grappling for it in the deep water, the squadron returned. Notwithstanding the care which had been exercised in its construction, and coiling on board the ship, it was found that in at least one or two of the faulty portions, a small piece of iron wire, apparently a part of the external 'protection,' had been broken off and protruded through the gutta-percha coating, bringing the interior of the cable into direct communication with the water, and thus destroying the circuit. The fact that the cable might thus in some unknown way contain hid within itself the elements of its own destruction, threw a cloud over the prospects of the company, since it could not be known but that other similar faults might exist in the cable, which, though undiscovered at the moment of paying out, might one day suddenly reveal themselves in preventing the proper transmission of the current.

(To be continued.)

For "The Friend."

#### Thoughts for the Times.—No. 45.

It is impossible to read the lives of the men and women who have been spoken of in these columns, without perceiving that they themselves were firm believers in the reality of the Divine inspiration, and that they felt assured, from distinct consciousness, what the will of God concerning them was. If they erred in this, the error was not on the side of fanaticism; for the stronger this conviction, the more careful were they to live pure unblemished lives, to perform every required duty, at peace with all men, and walking humbly with their God. And the proof of it does not rest merely on their own assertion or their own belief. Not only have we known the implicit reliance upon this divine speaking Word, to guide hundreds and thousands safely, with a wisdom far above their own, through the perils and temptations of the world; but the whole course of the true ministry of the Gospel among us, has been lighted up with this light from Heaven. How often has the witness for God been reached in the hearts of hearers, their secret lives been laid bare by men to whom they were entire strangers, and the reality of the revelation and the divine authority of the ministry been sealed upon the conscience of individuals and attested by a change of heart and newness of life. How marvellously was this the case with John Churehman and Thomas Scattergood—taught when to speak and when to be silent—baptized into the state—so as to minister to the necessities of meetings and individuals—closely following their divine Master through all their probations—turning many to righteousness so as to inherit at last—we cannot doubt—

the promised reward, and "shine as the stars forever and ever."

While none will doubt the christian virtues of such men, or the godliness of their lives; there are many to whom the statements given by these exercised ministers, of their experience of the Divine teachings, is in an unknown tongue, who not being understood is thought to be a vain babbling and a delusive dream. To the man unacquainted with the alphabet, the ease with which the instructed read is an equal mystery: nor can the ignorant acquire the power till he has mastered his letters and learned to apply his knowledge. Even thus it is in spiritual things. The instructions of the divine monitor are first known in the heart—and they have been felt by all—as a reprover of evil, and a rewarder of well doing. The first duty in the christian life is to obey those admonitions, and it is only by learning one lesson after another in this—the real school of Christ, that the power is gained of understanding his higher teachings. None that in sincerity of heart, seeks at this door of entrance to become one of Christ's flock, will ever be turned away, but may go in and out and find pasture. Let none, then, presume to scorn our statements, until he has tried with his whole heart and strength, and failed to enter in.

It were a grievous error, if we who refuse the ministry of persons who think themselves qualified by theological studies and the ordination of men to preach the gospel at stated periods, were to run into the opposite extreme, and allow all and any, under the influence of a confidence in their own abilities, of excited feelings or a heated imagination, to preach and pray in our religious meetings at their will. This extreme would be worse than the other; for it would be sure to end in rantism and antinomianism—the precursors of all wild license. There is no surer touchstone of the worth or emptiness of such assumptions, than the spiritual discernment of experienced disciples—walking with all humility in the fear of the Lord. We have no ground to stand upon, if we forsake the Rock of Ages, that rock of immediate revelation upon which the church is built.

Those who witnessed the disorders that afflicted our Society during the early part of the present century, have told us of the excesses into which some of our members were betrayed, who forsook the path of humble obedience to the Divine Teacher, and walked in the light of their own reason and imagination. There appeared in meetings what seemed, to the superficial eye, to be an outpouring of the Spirit—abundance of preaching and praying, by persons who had not previously given evidence of being under the preparing hand, and whose communications were a burden to the reflecting and judicious. The opinions which such preachers may adopt, matters less than their presumption in undertaking to speak, without that divine sanction which alone can render any act of worship availing. Their minds not being sufficiently attentive to the monitor within,—the divine speaking Word—they are very apt, sooner or later, to mistake some mere opinion or imagination for the truth of the Gospel—to look upon it as an article of faith, enlarging and insisting upon it as such, so as to pave the way for disputations and dissensions in the Society. Such preaching and praying become a sign of the times, and wherever they prevail we may anticipate disorder and schism. In that revolutionary period persons were wont to claim great spirituality for declamations too evidently proceeding from an excited imagination—sometimes asserting that they had a testimony to bear against plainness of dress and language, and so appearing and preach-

ing in fashionable attire. Thus did they proceed from one extravagance to another, till the fires of a false enthusiasm had burned out.

We have heard of meetings in which preaching and praying were kept up almost without intermission; in which young persons wore little appearance of the restraining power of Truth, walked to the gallery and knelt in prayer while their adherents in the body of the meeting knelt likewise; and these communications were so continuous, that intervals of not more than four or six minutes of silence were all that were permitted. How different is all this from the coming solemnity of divine worship! What contrast to the meetings which witnessed awful waiting in silence and the powerful baptizing ministry of Thomas Scattergood!

And when the tried afflicted members of church could keep silence no longer, when their remonstrances, like the fabled touch of Ithuriel's spear, wake up and strip of its disguise the spirit they had disturbed. What angry feelings, what bitter animosities were excited, how little like the assemblies of a religious society did our meetings for discipline become!

One thing, in particular, was remarkable: those who had borne a fair reputation as peaceable orderly members, who had long been useful in the service of the Society; when they were drawn off into this spirit of party, seemed to change to very nature and become excited and passionate partisans. Thus did their very abandonment of them, confirm the truth of our principles, by showing what poor creatures they were when they forsook the *guide of life*, which had hitherto been safely along.

May the great Head of the Church keep up the hollow of his hand, from a recurrence of scenes.

From the "Cornhill Magazine"

#### The Loss of the Steamship "London."

(Continued from page 42.)

After many weary hours of anxious looking at last saw the sky in the east lighten up a little. We at first thought it to be daylight break but it proved to be the moon rising. It was about four o'clock. Daniels was now seated he relieved King for about three hours, when a sudden the lights of a distant ship were seen. We watched her intently for a short time, discovered she was nearing us. Presently was abreast of us, and only a short distance. We dare not row towards her, the sea would permit that. The order was then given for a sing out at once, and lustily we obeyed; it had sounded terrible to those on board of vessel—our voices above the roar of the sea wind. We soon had the gratification of knowing that they had heard us, and were putting vessel about to run for us. We could not utter a small vessel of two masts. She ran at our bow, a short distance ahead of us. We called her, but they could not see us. They evidently looking for us, and we bellowed as we could. We also tried to light matches as they had got wet. We could see the ship first to one side, then across to the other. A squall would come, and she would be hid view; when it passed we would see her perhaps in another direction; on which there another cheer and another cry. Presently could see they had lost the run of us, and tantalizing that was when we were within minutes' row of her, and dare not deviate from our course. Now we could only see her occasionally through the gloom when we rose to the top of a wave. At last she was out of sight; all

safety from her were now gone. It affected the spirits of all. We were beginning to suffer from cold, exposure, and thirst. The latter I felt most; when baling, could scarcely resist the temptation of putting the dipper to my mouth, when we could see the vessel no more, we desisted upon not going any faster than we could limp, hoping to see her when daylight came in; which did happen at last—in hail and rain. Then the sun shone out for a few minutes; we scanned the horizon, but could see nothing. By the sun judged we were making the course that Captain Martin had given us, and had a strong idea that we were within forty miles of the French coast. It was just as well we did not know our exact position. When picked up, an hour or two later, we were then 140 miles from land.

Again the cry was raised, "Slip in sight!" I could just see her off on the port quarter, apparently making towards us. Presently we sighted another, more in our track, on the starboard bow, but at a great distance. We could only see the tops of the masts, like three fingers above the sea. Hope revived again; we were in the nick of vessels, and rejoiced to find there were still floating.

When we went for half-an-hour, with occasional squalls, then a shower and squall, the sea still high, the same constant attention required almost. Those on the lookout reported that the vessel was not getting any nearer to us. Some proposed to King, who was now steering, to put us to run for her. He strongly objected: saying the boat would surely swamp in going and; and then we had a good distance to row, only to windward, before reaching the vessel. Some men by this time were getting impatient, willing to risk a good deal to bring this boat-trip to a termination. My only fear was that they would end it too abruptly in trying to reach the vessel. They were also getting irritable; there not that friendly feeling as existed at first—could answer each other sharply. Of course this owing to exposure and want: all were coming of thirst. There were a few raw vegetables that by chance had been left in the boat; now got eating them, and found them a great relief. By this time, say 9 A. M. (Friday, 12th), a dispute arose, and words were running pretty fast as to the advisability of putting round to for this vessel on the port quarter. One who was holding the signal of distress (a shirt on an) said to King, at the rudder, "If you don't hear about, I will put this in our trough the boat." I was beginning to feel frightened. My course every allowance must be made for a vessel under these trying circumstances. I myself could entertain any ill-feeling towards him what for his threat. Immediately somebody proposed that we should run for the vessel on the board bow, not so much with the hopes of finding her, as to prevent the boat being put round. I seconded the proposition by saying that as certainly the best plan; that if we should find her, we would still be making our course to land; that it was not more than forty miles off, and by keeping on we would sight it in the night; that it was early in the day, and we were likely we should see other vessels; that we were in the track of them, we having seen four days was proof. The proposition was then put carried in parliamentary style, though some of the language used might not be considered parliamentary. The oars were doubly manned, the course of the boat slightly altered. Soon everything was going pleasantly, and all seemed satisfied with the new arrangement; all they were to be going towards some vessel. The

sun at that time was shining, and our little craft sped along bravely. She quite astonished the most sanguine,—everybody expressing great affection for her. The man on the look-out, the only one allowed to stand up, and who was also supporting the oar with the signal of distress, reported that we were nearing the ship. Still great caution was required to manage the boat. The vessel not being directly in our track, we of course had to make good a few points to the wind; and this is where the difficulty was. Whenever an opportunity offered, we would steer to windward of the vessel, knowing we could make leeway at any time. Whenever a crested wave was coming, then would be heard, "Look out, King, here is one;" when round would come the boat. We would turn tail and run with it until it had passed, when up she would come again to windward of the vessel. In the course of half-an-hour we were getting pretty near her. Soon we could see her rejoiced, and when within half-a-mile of her, we were hurried to find that they had got sight of us, by their taking in some sails, and bearing away to run for us. We then intended to run up to windward, and come round under her lee. Just at that moment there was seen a terrific squall, with its high wall of white foam coming down fast upon us, as if to totally annihilate us just at the moment that success was at hand. In a few minutes we would be up abreast of the vessel. But on came the gale. Of course we had to turn and run with it. By the next two or three minutes we found ourselves right down to leeward, and being carried fast away from the ship. Our great fear now was that we would be shut out from sight of each other. Many then suggested to King to put about, and some not to. He said, "She will certainly fill, if I do; and I will not; and don't you see them running for us?" And so they were, and hallooing, and directing with their hands in the wildest state of excitement, which very much bothered us, and tended to increase our embarrassment. I suppose they were trying to make us understand to run on with the wind, and they would follow. After the first shock of the gale had passed, the boat was brought partly round, but in doing so we had a narrow escape from being swamped, as she shipped a heavy sea. In a few minutes we were running up to the stern of the vessel (a barque of about 400 tons), when a line was thrown to it with remarkable accuracy. It was caught; soon a rope followed; and we were at last by the side of the barque. She had come round to the wind, was rolling very much, and we were thumping against her side by the main chains. All order now was broken through—each one grasping hold of anything he could lay hands on, and scrambling up, some assisted by those in the vessel. I saw directly before me two iron bolts by which the main rigging was secured; they looked very tempting; I sprang and caught hold of them; at that moment the boat was taken from under me by the roll of the vessel, and I was left hanging by my hands. I could see others on each side of me, in a moment up rose the sea and boat again lifting us up, when I caught another hold, and was soon on to the rail. All were out of the boat but one,—he had hurt himself the day before, and was not able to get up; a rope was got over, and he was drawn up. How thankful I felt to be once more in safety, and with a prospect of having plenty to eat and drink! The ship was Italian. We were kindly welcomed by the captain, who was serving out Geneva when I got aft. He was a fine jolly and burly old fellow, with a most benevolent countenance, and with his crew were doing their best to assist for our comfort; only we

could not understand each other. It was now about 10 A. M., and we had been about twenty hours in the boat. In a short space of time we were all arrayed in warm dry clothing, and in possession of the captain's cabin; they soon got us warm tea and biscuit, and we saw preparations for something more substantial; some fowls were killed, which were served up in the evening in the shape of a stew. After the first meal was over, we then began to move about—to learn something of our preservers, and whereabouts we were. She was an Italian barque and crew of Genoa, bound from the Mediterranean laden with wheat, to call at Cork for orders; her name was *Marianopolis*, Captain Giovanni Batta Cavassa. Her position this day at noon, N. lat. 45° 54', W. long. 7° 13', Greenwich meridian. She had experienced pretty heavy weather, and had been obliged some time previous to throw overboard some of her cargo, but at this time was safe, dry, and snug. We now felt very comfortable, and quite at home. We could talk freely, and began to realize more fully the dreadful catastrophe we had witnessed. It appeared more terrible to us now than at the time, or during the night, as our own safety then was very doubtful. In the afternoon I laid down and had a sleep, and a troubled sleep it was. I passed through all the horrors of another shipwreck. And for many nights after, and I may say many weeks after, I had to go through the same ordeal. At night, I can't say we went to bed: most of us lay down on the wheat, which was loose in bulk, and covered ourselves with sails, and felt very comfortable: such a happy change from last night.

The next morning we found ourselves all very sore, particularly our hands. Having sat so long in one position, our knees and legs got stiff, and some could barely manage to crawl about. The weather was still boisterous. About noon we had quite an alarm. The rudder-head was carried away, and of course the vessel became unmanageable; the seas thumping against her sides most unmercifully. We had a carpenter in our party; and he and some of the others rendered the Italians great assistance. In the course of half-an-hour all was secure again. The day passed, and another night came. Next morning (Sunday) we found the weather still unpleasant—wind unfavourable—with no prospect of getting to land that day. We were now getting uneasy, longing to see land again. The captain gave us to understand that he could not land us at Brest; but would go on to Falmouth, which was just as agreeable to us as the former place.

So another, the third, night came, and we really hoped that we would get on to land tomorrow. When it came, which was now Monday, it was fine, with a fair wind. We were now in the English Channel. About 10 A. M., sighted land—the Scillys or Land's End. How rejoiced we were once more to behold it! We were now all alive and happy with the thoughts of being on shore at night. During the afternoon were anxiously looking out in hope a pilot would be got to take us in. Evening came and none was to be seen. The wind increased, and we were in doubt if we would get in before night after all. The two Lizard lights bore nearly ahead of us, and we running towards land. About 10 P. M., the vessel was put about to stand off for the night, and a twelve o'clock the wind had increased to nearly a gale, blowing dead on shore. The captain with his crew on deck all the time, apparently very anxious; we could not communicate our fears, or learn anything of our state. They were continually singing out and directing; and we not understanding them, rather tended to increase our fears.

But our little barque held her own. Between three and four in the morning, she was put about to run slowly to land. The day broke with a fog; soon it rose, and then was to be seen the land close by, and we running along, with Falmouth harbour fair before us. Three cheers for our captain! We ran in and dropped anchor. Shortly after, an agent or interpreter came on board. Our history was made known to him. When he returned to shore he took three of us with him, including the chief engineer, who then made his report, and the news was soon telegraphed to London. I could scarcely believe my good fortune when looking back to five or six days ago; then it appeared too much to expect—and now that I was commencing a new existence. On Wednesday night, on board the *London*, there seemed to be so little possibility of any ever being saved, much less me; and I so fully expected to meet death.

We had to remain on board a few hours until noon, when a steam-tug came alongside. The captain took us on shore, we said good-bye to our Italian preservers, and with many cheers from them we parted. I need not erry the history of the adventure any further; but am pleased to add that, when the facts were made known to the Board of Trade of London, a gold chronometer, with a suitable inscription, was awarded to Captain Cavassa for his noble and humane conduct towards us.

Selected for "The Friend."

Copy of a letter from John Fothergill to a Friend in the ministry.

MY FRIEND.—Some days ago, as I was riding along, thou wert suddenly brought to my remembrance, and divers considerations respecting thee ensued, in true care for thee, for thy safety and comfort, and for the good of the cause of Truth; which considerations have made such impression on my mind, as to prevail upon me to commit them to writing. I question not but the love and power of Truth hath had a good degree of prevalence in thy mind for regeneration, and hath begotten love to the Lord's work in the earth, and some engagement at times to be active therein. Now, a sure way to grow right, is to have a true and watchful care, to feel and know certainly the first work, regeneration, to be duly carried on, to be crucified with Christ; and so pure love to Truth itself will grow predominant, and other loves be buried. Then a thorough care to attend with patience for certain and intelligible requireing, and heavenly help, upon every occasion of acting for Truth, through which humble care, the divine hand fitheth vessels more and more with food, with light and assistance to act according to his pleasure, to his honour, and the edification of the people in their several stations, amongst whom we converse or labour.

The further counsel which arose, and is with me, not from any uneasiness on any particular account, but for thy right help is, labour innocently to be and to do what grace would make thee, and lead thee into; and be content with its wages; for it gives or makes way for as much regard and freedom from men, as is meet for us. Have a care of too much talking and conversation; so we may better remember, that no inconsistency be observed in it, and there may be less occasion or room for sinking into unprofitable drooping or reservedness. I know it is also rather profitable to be moderately concerned about some temporal affairs, with inward fear, till we become assured of a distinct requiring to leave it.

J. F.

### OMNIPRESENCE OF GOD.

O Thou by long experience tried,  
Near whom no grief can long abide;  
My Lord, how full of sweet content,  
I pass my days in banishment.

All scenes alike engaging prove,  
To souls impressed with sacred love!  
Where'er they dwell, they dwell in Thee,—  
In heaven, in earth, or on the sea.

To me remains no place nor time,  
My country is in every clime:  
I can be calm and free from care  
On any shore, since God is there.

While place we seek, or place we shun,  
The soul finds happiness in none;  
But with my God to guide my way,  
'Tis equal joy to go or stay.

Thou art he east where thou art not,  
That were indeed a dreadful thought:  
But regions none remove I call,  
Secure of finding God in all.

### LIFE'S MYSTERY.

Life's mystery—deep, restless as the ocean—  
Bath rugged and wailed for ages to and fro;  
Earth's generations watch its ceaseless motion  
As in and out its hollow moanings flow;  
Silvering and yearning by that unknown sea,  
Let my soul calm itself, O Christ, in thee.

Life's sorrows, with inexorable power,  
Sweep desolation o'er this mortal plain;  
And hush'n lives and hopes fly as the chaff  
Borne by the whirlwind from the ripened grain:  
Ah, when before that blest my hopes all flee,  
Let my soul calm itself, O Christ, in thee!

Between the mysteries of death and life  
Thou standest, loving, guiding—not explaining;  
We ask, and thou art silent—yet we gaze,  
And our charmed hearts forget their drear complain-  
ing!

No crushing fate—no stony destiny!  
Thou Lamb that hast been slain, we rest in thee!

The many waves of thought, the mighty tides,  
The ground-swell that rolls up from other lands,  
From far off worlds, from dim eternal shores  
Whose echo da-dahs on life's wave-worn strands,—  
This vague, dark tumult of the inner sea,  
Grows calm, grows bright, O risen Lord, in thee!

Thy pierc'd hand guides the mysterious wheels;  
Thy thorn-crowned brow now wears the crown of power;  
And when the dark enigma presseth sore,  
Thy patient voice saith, "Watch with me one hour."  
As sirs the moaning river in the sea  
In silver peace—so slinks my soul in Thee!

*The Worthing's End.*—There is something almost startling in that parable concerning the rich man suddenly called to die, while fluctuating himself on the extent of his possessions. You seem to see the lost soul, worn and wasted with evil getting and evil keeping, rush past the gate of heaven down to eternal beggary and shame. I never read the story but memory brings up one in whose case, living and dying, a parallel is found.

The wife of one of the wealthiest business men in our land, the mistress of an establishment where grandeur found its very incarnation, and towards which many enviously looked, a christian servant one day ventured to call the fashionable woman's attention to those better things which God hath prepared for such as love him. Glancing around her magnificent apartments, and the beautiful grounds without, she impatiently exclaimed, "That is all the heaven I care about, or want."

A few years passed, and amid the same scenes, haggard and worn, beauty all gone from the face,

Selected.

joy all faded from the eye, she lay winding a pier earthly days. Racked with pain of body pierced with deeper agony of mind, the dying woman lifted her hands and shrieked in a tenant's ear, "Oh! had I but the hope of heaven I would welcome death this very hour!"

Poor, wasted, wretched, hopeless soul, the tap lights of this world all gone out, and ahead t blackness of darkness for ever.—*Times and W*

ness.

From the "Silkure House."

### The Cultivation of the Silkworm.

(Continued from page 43.)

The silanthus moth is so called from the tree on which it usually feeds, the *Alanthus glutulosa*. This tree was once known as the "Vern du Japon," or varnish tree of Japan, a name given to it by its introducer into Europe in 1751, t Abbe Inceville. The silanthus tree is extremely hardy, and, according to Lady Dorothy Nevil "it will thrive on calcareous, ferruginous, sand clay, arid, and strong soils." Like the sun which it resembles, it throws out suckers from the roots: from these propagation is easy.

The silanthus-worm is indigenous to the temperate regions of China, and was, I believe, first introduced into this country by Lady Dorothy Neville. Its appearance in Europe is due to Piedmontese missionary, the Abbe Fantoni, who was residing in the province of Hang-Tung. It is seen, sent several living cocoons, in the year 1856, to some friends of his in Turin. These pup yielded moths in the middle of June in the following year; the eggs were subsequently hatched, and it was found the new silkworms feed greedily the leaves of the alanthus; and thus the mo soon multiplied, eggs were transmitted to France and the larvae of *B. Cynthia* are rapidly replacing the mulberry-worms.

To Lady Neville also belongs the credit of cultivating this silkworm, for the first time in England, in the open air, but protected by a net or a canvas covering. To Dr. Wallace, of Chester, is due the credit of a most successful attempt to cultivate the alanthus-worm on the alanthus-tree, without any protection whatever. I purposely, as I have before said, visited the doctor and his alanthus plantation, in order that I might witness what had been done towards cultivating this silk-worm on trees unprotected. By the side of the railway he has planted 30 alanthus-trees, which are cut down to a height of about two and a half to three feet. Here there are planted rows of Jerusalem artichoke for the purpose of intercepting the currents air, or breaking the force of a breeze of wind. A few alanthus-trees are also placed on the slop bank of the Great Eastern Railway. This plantation is the great feeding-ground for the silkworms after they are transferred from the nursery which is in the garden near the doctor's house, the larger plantation being quite two miles as. In this nursery last year Dr. Wallace distributed nearly 19,000 eggs, which were laid some in July. The way the eggs are collected is simple and effective. The moths are placed in cylinders made of perforated zinc, and the cylinders are jammed by the moths when laying into holes, from which they are easily brushed. Placed on bibulous paper under glass shades from twelve to fourteen days, according to temperature, the eggs hatch. The baby-worms are then placed on buds, with holes for the stem of either leaves or branches to pass through, water to keep them fresh. When large enough the little spinners are swung in paper hammo to the leaves of the trees in the nursery;

on the trees, they feed and grow rapidly. Their next change is from the nursery to the plantation. The young worms, carefully picked up off the trees in the garden, are carried by a basket, and distributed over the trees in the large plantation, or silanthy. From these trees, the cocoons informed me, he gathered over 5000 cocoons in September.

Two broods in ordinary summers can be reared on each year. Dr. Wallace states that his first brood, 5633 moths, made their appearance before the 22d of May and the 27th of July: of these, 230 fertile couples were obtained. The males laid their eggs between the 24th of May and the end of July, in number 37,000. From these eggs the first larvæ emerged on the 11th of August, and came out again as moths in August. The second brood laid their eggs in June, and the worms appeared near the end of September; these, of course, remain in the pupæ during the winter, and the moths should rear in July. Lady Neville says her second brood were all in cocoon in September.

A friend of Dr. Wallace's residing in Suffolk laid 470 cocoons out of doors (without adopting any precaution to protect the worms) from the 1st of August to the 15th of September.

The cocoons are not injured by the moths escaping from them, there is no necessity to murder the pupæ in order to save the silk; and a far greater number of eggs are obtained from the alanthus than from the common silkworm. This, in itself, is a great advantage to the farmer in point of profit. I saw the eggs, which are at least twice the size of those of the mulberry; they are oval and white, with a few specks black seen through the covering. About two laid eggs appears to be the average number laid in a healthy moth. The caterpillars hatch in about twelve days, if the temperature is moderate.

The caterpillars I did not see, but I am told are black on emerging from the egg, and their lives are divided into five stages: No. 1, interval between their birth and first change; No. 2, that between the first and second stage; No. 3, that from the third to the fourth; No. 4, that of the fourth stage to the formation of the cocoon, which is stage No. 5.

In the first stage No. 1 the worm is dark at first, yellow coloured; in No. 2 it is about five-sixths of an inch long; in No. 3, eight-tenths of an inch and the colour white. "At this stage," says Lady Neville, "the worm gets covered all over with a waxy secretion, like flour; an admirable protection against the effects of rain and dew." In the 4th stage it has grown to an inch in length, assumes an emerald green tint, and is covered with tubercles of the same colour: the head, and last segment of the body are of a golden yellow. In No. 5 stage the extremities of the cocoon become blue: when about three inches the worm begins its cocoon.

The cocoon is a most ingenious and beautiful contrivance, and one that struck me as being more ingenious than anything I saw. The larva is reared for the little workman's sole use, so it is not that three or four spin their cocoons on the same leaf. A natural instinct—for thus we may designate the Divine guidance in the progress of animated life—directs this tiny worm to provide against the fall of the leaf; so that, when the wintry blasts snap its hold, and sever the leaf for ever from its parent stem, instead of being house and all, to the ground, the silken strings suspended by a rope, expressly provided to meet the contingency. I may here refer to Dr. Wallace's valuable essay; "When

the groundwork, or outer envelope, has been commenced, and coarsely spun along the upper surface of the leaflet, the larva traverses the leaf-talk towards the bough, spinning round it a silken tube six inches or more in length. Should it arrive thus at the stem of the bough, it fastens to the groundwork, and then returns to the groundwork, spinning as it goes back. The leaf is now drawn together by fixing strong threads obliquely from side to side; as these dry they contract, and so curl the leaf. Then it lays another coat of a more substantial character on the envelope, and with a network of fibres fills in the intervening space.

"At this stage," Dr. Wallace states, "the silk is white, and the spinner can be easily watched at his work. Thirty-six hours of hard labour is needed to enable the worm to make his house safe from prying eyes. The silk now turns brown, and the cocoon hardens, forming a safe and secure protection to its tenant." It will be observed that the larva is covered with tubercles; these, Dr. Wallace tells us, serve several useful purposes: first, as a protection against enemies; secondly, for secreting a waxy powder that throws off wet like the hairs do on a cabbage-leaf, but their main use is in keeping the silken threads from off the body during the operation of spinning, thus allowing the worm perfect freedom of motion.

Now, if you have borne in mind what I said about the cocoon of the mulberry worm, the difference betwixt it and the alanthus will be at once apparent: at the end of every one of these cocoons is an opening, purposely left by the worm when spinning, for the exit of the moth. The cocoons are pale gray, very closely woven, about an inch and three-quarters long, and three-quarters of an inch broad.

The great drawback to utilizing this silk has hitherto arisen from the impossibility of winding off the filaments. As the cocoons were open at the ends, it was assumed that the thread could not be continuous; hence dealers would have nothing to do with them, except for the purpose of carding. But the French have surmounted this difficulty; and several patents are already in operation in France for reeling the alanthus silk from off the cocoons. Dr. Wallace kindly gave me some beautiful silk, spun from the produce of the alanthus silkworm, and also a piece woven into fabric. — Atkinson tells us that the yarn of this silkworm, woven into a coarse kind of cloth, is so durable that it lasts the lifetime of an individual, and that the garment descends from mother to daughter. The first operation, Dr. Wallace told me, is to soak the cocoon in an alkaline solution, in order to remove the superabundant gum; then, if the cocoon is kept wet, the silk winds readily; but, if immersed in water, it fills at the hole in the end, and its weight breaks the thread.

(To be continued.)

How striking, how heart affecting, and yet how consolatory it is, at the close of a long life, to look back upon the course of our Heavenly Father's dealings with us, and to recognize, in a manner, the end wrought out through the varied stages of our earthly pilgrimage; what each friendship, each trial, each pursuit, was intended to accomplish; what strength each refreshment of the way gave us, and how far it was used to His glory; what wisdom was imparted by each discipline, and whether His message of love and mercy had been kept in our minds, and powdered in our hearts, and what fruit it bore to life eternal. How encouraging, and yet how humiliating

is the review; humiliating that we needed such reiterated chastisements, so much discipline from Him who is love; and yet encouraging, since that very discipline shows that He will never leave us, nor forsake us—but that this God is our God—that He who has been, will be our guide even unto death, or rather through the passage of death to Life Eternal.

The fervour of the day has become the cool of late evening; the lengthening shadows fall long and wide across the closing landscape, the colouring, once so bright, sinks into one uniform mass of grey; the magic mirror of the mind itself is dull; yet, we still discover those eternal landmarks which, from childhood, even to hoary age—have stood immovable before us—the hope, the anchor, and the refuge of our souls.—M. A. Schimmelpenninck.

From "Blackwood's Magazine."

### The Great Woods in Winter.

On first changing from a civilized life to one in the wilds, a host of new sensations strike forcibly on the mind. The most artificial and elaborate cultivation of existence has been exchanged for the most simple; and the traveller is surprised to find how limited the actual necessities of life are, and how easily a man is able to be his own workman in everything in this primitive condition. The army of wants created by civilization, and the means of gratifying them, the results of combination and mutual dependence, appear very clearly in the comparison with this simpler mode of life. The complexity of our social system, and the effect of the division of labour in the former, contrast forcibly with the self-sufficiency, the complete independence of the individual, and his reliance on himself alone, in the latter. In life in the wilds, a man is compelled, not only to obtain daily food for himself in the most literal sense, but also to provide by his own labour every other necessary of life and every comfort. He must procure everything, and do every thing, by his own individual action. He is a competitor of all trades in his own person—his own builder, carpenter, and mason; his own butcher, baker, shoemaker, tailor. But one of the novelties which most forcibly and constantly impresses an Old-World traveller in a new unsettled country, such as the virgin forest and prairie of North America, is the absence of boundaries, the sense of the illimitable extent of country spreading out on every side without artificial obstruction to progress in any direction, and perfect freedom to wander anywhere and everywhere without restraint or fear of trespass. There are no walls or hedges, no rights of property to respect. And akin to this is the new feeling of the utter absence of law and conventionality. Every man is a law unto himself, and does, almost without dread of interference, or even comment, what seems right in his own eyes. He consults no one as to the propriety of his conduct, and his actions are regulated merely by his own inclination or sense of right or expediency. But more impressive even than this consciousness of absolute and perfect freedom and independence is the sense of solitude which necessarily accompanies it. There is a solitude which may be experienced even in the busiest haunts of men—a loneliness amongst multitudes—felt by the friendless outcasts in some great city, where the very presence of unknown, unsympathising crowds adds point and bitterness to the isolation, and causes the man who is "alone in the world" to feel more utterly desolate, more terribly solitary and companionless. But the solitude of the prairie and the woods is

different from this—less painful indeed, and less despairing, but perhaps more awesome. When amongst the buffalo which crowd the plains in summer, and the bands of hunters and swarms of wolves which ceaselessly and unrelentingly pursue them; when the thousand pools and lakes are thronged with myriads of wildfowl, and their shores with the still plover, the bittern, and the snipe; when the broods of prairie birds flutter out of the long rook grass, or burst with loud whirr from the copses; when the air is full of its summer tenants, the swallow and the butterfly to charm the eye, and the mosquito and the gadfly to vex the body; when the hawk dashes past in pursuit of his quarry, and the crow caws as it flaps lazily by overhead; when the crane stalks along in the distance, and the prairie dog and the ground squirrel play about on the greensward; when the dry earth is musical with the chirp of the grasshopper, and the swampy ground seems to vibrate with the croak of countless frogs;—then, even then, while the animal world keeps you company with a goodly and joyous throng, and the hum of active business in the inferior creation resounds around, the sense of solitude is never absent. When the sun goes down, and the wolves announce the close of day in howling chorus; when the owls hoot and fit round in company with bats in the dim twilight,—the feeling of loneliness increases. Later yet, when all is hushed and still, and the crackle of the logs on the camp-fire is the only sound which breaks the perfect quiet, the sense of isolation from mankind grows more and more intense. For although, when the whole expanse of copse and prairie is visible in broad daylight, the rarity of man is striking enough, it is in the solemn noiseless darkness that the want of society is most keenly felt. But this sense of solitude experienced by the summer traveller on the prairies of North America, influential as it is, seems weak and small compared with the loneliness of the great woods in winter. Then the wildfowl have fled away from the fierce cold, the waters are closed with a lid of ice, and the only sign of life there is the Christmas house of the provident musk-rat. The bear has retreated to his hole, and is wrapt in his six months' sleep, and the beaver stirs not abroad from his cozy hut on the river bank. The mosquito and the gadfly are dead, the leaves have fallen from the deciduous trees, the mosses and ferns are buried deep beneath the snow, and the evergreen firs and pines are mantled in white. The silence of the woods is broken only by the chirrup of the squirrel, tempted by the sun from his nest in the hole at the foot of a pine, or the explosion of a tree cracking with the intense frost.

This utter want of even animal society, this absence or dormancy of life, I felt in all its awesomeness on one trapping expedition into the forests of the North Saskatchewan, in the Hudson Bay Territory. My companion and myself had fixed our winter quarters on the borders of the great forest, at a lonely spot which had been named La Belle Prairie by the Canadian voyageurs, who had noticed the singular beauty of the place. Here, 80 miles from the nearest trading-post, we built a rough log-hut, and occupied ourselves in hunting and trapping with the Indians and half-breeds.

The winter was drawing to an end, but the cold was still unabated, and I determined to have a last campaign against the martens, the fishers, and the silver-foxes, which yield the most valuable furs. On my former expeditions I had carried all my traps, blankets, and provisions on my back, and had generally been compelled to return sooner than I wished, from the failure of my supply of

food. I resolved on the present occasion, therefore, to take a dog sleigh with me, to convey first a bag of pemmican, and thus hoped to be able to penetrate farther north than I had done before, where animals I sought would be more numerous. I accordingly harnessed "Tigre," a faithful, knowing old dog, to a little sleigh, and in company with a French half-breed named Bruneau, set out on my journey. Crossing the lake, about two miles in width, which bounded La Belle Prairie on the North, we entered the forest, which stretches far away towards the arctic circle. Although there was no path for us to follow, the trees were large, and did not grow very closely together, and we advanced rapidly through this and over a succession of lakes during the first day. But on the second our difficulties began in earnest. The timber in this part had been burnt by Indian fires, and had been succeeded by a close thicket of young aspens, while the ground was thickly strewn with great fallen trunks. Through this mass of vegetation we had to cut our road with axes foot by foot, to make a passage for Tigre and the sleigh. To add to our embarrassment, a dense fog enveloped us, so that we could see but a few yards ahead, and the snow, by which we steered our course, was invisible. After working away half the day, and making but a few mile's progress with great labour, Bruneau expressed his belief that we were steering to the east instead of north. I was confident that our course was correct, but on appealing to a little pocket-compass which I carried, it also declared that we were marching due east instead of north. So firmly persuaded was I that we were following the right line, that I concluded the compass must have lost its properties by constant proximity to the iron of a knife which I carried in the same pocket. But Bruneau persisted in doubting my opinion, and the only way to decide the question was patiently to await the reappearance of the sun. We therefore camped at once, hoping for clearer weather on the morrow. The next morning broke with a bright unclouded sky, and when the sun rose, it made its appearance, surely enough, straight in front of us. The Indian instinct of the half-breed had been true; and Bruneau, who had hardly left his home in the settlement before he joined our party, and was little more accustomed than myself to wander in trackless wilds, had shown that inexplicable sense of direction which is so remarkable in the red man and his half-brothers of the West. Forward again we started, changing our direction according to the new light we had obtained, crossing lake after lake, heaving down the aspens on the "portages," or portions of ground between them, lifting the sleigh over the fallen timber, and scanning with watchful eyes the surface of the snow for the tracks of game. Tigre dragged his load with difficulty, for the snow was deep, and so imperfectly beaten down by the snow shoes of the pioneer, that it was hardly firm enough to bear the dog's weight, and the recumbent trunks which crossed the path were serious obstacles for him to scramble over with his weighty appendage. On the third day, therefore, of this slow and toilsome march we lightened the cargo by leaving behind in *cache* a great part of the pemmican. But we had a thief to guard against. We knew that, however carefully we hid our store, the rapacious wolverine would infallibly discover it, and as surely devour it. Now the wolverine, or North American glutton, called *Kekwaharkees* or evil one by the Indians, is an animal of extraordinary strength and almost superhuman sagacity and ingenuity. During the winter he gets a living by making use of the labours of the trapper, whose track he dili-

gently hunts for; and when he has found it follows it with untiring perseverance. When comes to one of the wooden "deadfall" traps principally used for the fisher and marten proceeds to make a felonious entry at the bait and abstracts the bait with impunity. If animal has been already caught in the traps, it, or wantonly tears it to pieces, or hides in the bushes or at the top of some tall pine, carefully examines anything left behind in a sordid camp—nothing escapes his curious investigation; and if it be found edible or destructive it is demolished. In order to secure our pemmican, therefore, from his clutches, we pended it by a stout cord from the small end of a long pole, projected, after the manner of a long rod, over a stout branch of a tree. The end of the pole from which the pemmican was too slender and taper to afford firm footing for the animal if he scrambled along it, so that he could not rest there to gnaw the cord to twine, the prize was too high from the ground to permit of his jumping up to it; and even if he succeeded in climbing along the pole, and slid from the point of it on to the bag beneath, being flat and hard, and suspended to a horizontal position from the middle, would infallibly "up" and dislodge him, for his claws could get firm hold on the smooth case of parchment which enclosed the pemmican. Having thus secured our supplies for future use, we again pursued our northward journey, and by evening reached point considerably in advance of any we had attained in previous expeditions. Here the traps of martens were tolerably numerous, and we solved to fix our headquarters on the banks of a small lake close by, and commence trapping earnest. The snow was quickly shoveled with a snow-shoe for a small space, pine-boughs cut and strewed for our couch, a plentiful supply of dry wood cut and stacked up; and then, wrapped in our buffalo robes, we slept the sound sleep of the well tired voyager. The next two days were employed in making traps in separate lines several miles in length, radiating from the camp, the "walk" being extended at each junction. Being anxious, however, to obtain news of party left behind in the hut at La Belle Prairie I despatched Bruneau thither; and as the route was cleared, we expected that he would accomplish the journey there and back in three days. We set out at daybreak on the following day, and was left with Tigre as my only companion.

(To be concluded.)

Benjamin Bishop.

"28th of 7th month, 185

"My dear Friend.—A few lines revive, will sprang up in my heart when writing to my friend, John Dunstone :

"How sweet to meet a pilgrim in the way,  
With Jesus listening to all we say."

What can such poor weak creatures as we do? We may sometimes say, we cannot help wood the fire. This one thing we can do,—we can still at the fountain head, grace assisting, until it is unsealed, and then some of us carry water to the labourers that are faint and weary; and am not mistaken, there are within your Quarter Meeting, labourers that can handle the axe, will yet, at times, be ready to faint, and in need of the sympathy of their friends, for the harder work to grub up the corrupt tree, the cut off the branches, leaving the roots and standing. The Lord direct our hearts into

of God, and into the patient waiting for  
"ist."

To ———

"1851.

The minute of our last Yearly Meeting, 50) respecting gravestones, struck me, and I  
more many more, with awe, for fear of the  
the Lord that is coming upon us, and t  
has taken hold of me in the day of trouble.  
I not time to sound an alarm in the Lord's  
mountain, to gather His saints unto Him,  
that that have made a covenant with Him by  
fiance? It is not a lion that is come up against  
the night his roaring have made us afraid,  
it is a subtle, twisting, twining serpent, hid-  
himself in the grass. O my beloved friends,  
who have made a covenant with the Lord by  
fiance, 'lift up your voices like a trumpet, cry  
d, show the Lord's people their transgressions,  
the house of Israel their sins.' May every  
know the place where to wait, even to attend  
wisdom's gate, and see that their eye be single  
the glory of God, and in His holy fear and  
t, watch and wait until the cloudy pillar is  
n up, and the light shines upon the path  
er we must go. O how precious is it to  
icipate together in the life which is hid with  
ist in God, being quickened by His grace, and  
bled with His blood, thus travelling together  
spirit unto the rest and kingdom of God. I  
one of the least in our heavenly Father's  
re, and willing to be so, if I can but behold  
beauty of the Lord, in His attributes of mercy  
wonderful loving-kindness unto His erring  
care man, and enquire in His temple 'Lord,  
wouldst thou have me to do?' In Jesus  
st we are one, and all members one of an-  
; and as the blood flows from the heart  
high blood channels to every member of the  
s, so doth the love of God, from Christ the  
ain, flow to every member of His church;  
ch, if interrupted in its course, giveth pain  
in particular part, and the members are thereb  
or less disqualified for performing their  
ral offices. Wonderful is the descending  
of God to man in Christ Jesus our Lord, who  
our sakes humbled Himself unto the death of  
cross. And His ministers must put on the  
Jesus, even to the death of His cross; then  
they rise in the likeness of His resurrection,  
stering life to every quickened soul, giving  
to babes, and meat to them of riper age,  
p calling unto deep,' at the noise of the Lord's  
sponses. This is a mystery hidden from the  
trating of human wisdom, but revealed unto  
Lord's babes; and great and glorious it is in  
eyes of all those that have pleasure therein.  
le I could wish 'that my head were waters,  
mine eyes a fountain of tears, that I might  
day and night for the slain' of the Lord's  
le, my heart rejoiceth in believing that the  
dom of our Lord is advancing in the hearts  
e children of men, and many will be gathered  
Christ, and sit down 'under their own vine  
under their own fig tree, and none will be  
to make them afraid.' I do believe the  
of the Lord will arise in our Society; and  
e feet of His ministers are much turned unto  
highways and hedges, so there will be in the  
s time a gathering unto the power of the  
l, and the kingdom of our Lord Jesus Christ  
be exalted. O for those who have early en-  
nder the banner of the Captain of our  
ion! May the fathers and mothers of the  
of God, in this our day, be guided by the  
m of Truth in carrying such in their arms,  
they may grow up as plants of the Lord in  
youth, and as corner stones polished after

the similitude of a palace, and members of that  
glorious church that has neither spot, nor wrinkle,  
nor any such thing. Whilst I desire thus for your  
youth, I also desire for the aged, that our love  
may abound yet more and more in knowledge,  
and in all judgment. I write not as one who has  
already attained, but as labouring to attain, re-  
joicing in the hope of the glory of God; and with  
them that labour in the same hope. I am almost  
ready to say, my heart is continually bowed with  
thanksgiving and praise to the Author of all our  
mercies for the many blessings showered upon me  
by the members of His church militant. The  
language of my spirit often is, 'Why to me?  
Why to me?' I feel afraid of my own heart-  
less felicity should get mixed with these heavenly  
feelings of gratitude. ———

*The Little Brown Birdie.*—As I was retiring  
from the dinner-table of a friend in the country,  
one bright sunny day last autumn, as I cast my  
eye through the bow window, my attention was  
attracted by a little brown birdie, sitting on the  
ground near a mirror, which the coachman had  
brought from the city that morning; and left lean-  
ing against the wing of the house. A group of  
friends and children immediately gathered around  
to look at birdie; and with one voice we said it  
had received an injury and could not fly; but the  
next moment we found ourselves mistaken, for it  
took wing and was off. Very soon, however, it  
returned, taking its position before the mirror,  
and by its movements we soon discovered that it  
was watching its own reflection in the glass, mistak-  
ing that for a foe. It gazed a moment, moved  
its head towards one side, then towards the other,  
raised its feathers, stepped back a little, the re-  
flection of course making the same default move-  
ments, and then, with all its power, rushed for-  
ward to strike its foe. The force with which it  
struck the mirror, of course, sent it backward.  
Recovering its position, it would resume the same  
position, and go through the same belligerent  
movements till exhausted. Then it would fly  
away for two or three minutes. On returning, it  
would repeat the same till again exhausted, but  
with little variation. Sometimes before flying  
away to recruit, it would step behind the glass, as  
if looking for its foe there. The bird was left  
undisturbed by the family, though it was closely  
watched till sunset. I do not think it was absent  
five minutes at any one time.

The next morning when the family assembled  
in the dining-room, the first inquiry was for  
birdie. The mirror having been left in its posi-  
tion, we found birdie at its post, apparently with  
the motto in his mind, "Never give up." The  
same defiant spirit, the same belligerent evolu-  
tions were acted out, with but a few minutes' re-  
cess, till late in the afternoon, when the mirror  
was removed.

As I watched the little birdie's movements,  
and saw its persistent, unforfeiting spirit, I thought  
how much this is like the spirit and conduct of  
too many human beings, both of larger and  
smaller growth. How many, like birdie, are  
*fighting shadows or imaginary enemies*; how  
many think they have detected an enemy, when,  
if like birdie, they will look behind that which  
caused the shadow, they will find that there was  
no enemy to defeat! — *Examiner and Chronicle.*

How often the Holy Spirit speaks to us to give  
up some indulgence for Him, and says, as it were,  
give up these pebbles my little child, and I will  
give thee gold instead. Sorrow purifies the eyes  
and enables us to see there is no *abiding* hap-  
piness except in Jesus.

*The Locust Plague in Algeria and France.*—  
A private letter of the 17th July from Algiers  
gives a deplorable account of the destruction  
caused in that province by the locusts. Their  
invasion had lasted two months; they had nearly  
eaten up the crops, and in many places stripped  
every green leaf from the trees. In many places  
the devastating insects lie on the ground a foot  
deep. The local authorities at one time gave 5  
frances a quintal for the collection and destruction  
of the locusts, but had reduced the reward to 2  
frances. Some of the cultivators had abandoned  
their farms, shut up their houses, and removed  
into Algiers, in consequence of the loss of their  
crops. To prevent a repetition of the plague by  
the "langostines," or young of the locusts, just  
come out of the egg, and covering the earth in  
all directions, the troops are distributed in parties  
over the fields to assist the cultivators in destroy-  
ing the pest.

The plague of locusts has extended from Al-  
geria to France. One of the most extensive farm-  
ers of the vicinity of Roanne had a field of lucerne,  
extending over 100 acres, entirely destroyed last  
week by a flight of these destructive insects.  
There remains no sign of the crop above ground,  
the roots of the plants alone exist.

It is somewhat singular to find a Calcutta cor-  
respondent, writing on the 2nd July, making the  
following remarks:—"To add to our troubles  
fights of locusts have been attacking the fields  
all up by Central India to Cuttack, but at this  
time of the year they have found little but trees  
and indigo. They make excellent food.

*Submission.*—The essence of christianity is  
self-renunciation, and the discipline that brings  
us to feel our child-like dependence is the per-  
fecting of our piety. Grief after grief brings us  
to joy. Broken in spirit, we are made whole,  
humbled we are exalted. We gain the great  
victory through a succession of defeats. Pre-  
sently after Saul was stopped in the city to hear  
the word of God, we are told "he was led up into  
the hill of the Lord;" so we are struck down, that  
we may ascend into the mount; troubled, that we  
may have peace; worried into the rest of our  
Father's arms. We sin when we chafe against  
the providential conditions of our lot. Submis-  
sion is a brave achievement. There is no state  
where you may not win acceptance, because there  
is none where you may not give your affections,  
and rest in the Lord and wait patiently for Him.  
If we are obedient in all the gentleness of faith  
to the voice that says, "Be still and know that I  
am God," then will Christ do for us more than  
Saul for Saul, showing us His word, giving us  
another heart, and anointing and crowning the  
least of us, not princes and captains of armies  
here, but "kings and priests unto God," because  
servants of Himself. — *Thoughts for Weary  
Hours.*

*The Cost of War.*—Give me the money that  
has been paid in war, and I will purchase every  
foot of land upon the globe. I will clothe every  
man, woman, and child, in an attire that kings  
and queens would be proud of. I will build a  
school-house upon every hill-side, and in every  
valley over the whole habitable earth. I will  
build an academy in every town, and endow it;  
a college in every State, and fill it with able pro-  
fessors. I will crown every bill with a church,  
consecrated to the promulgation of the gospel of  
peace. I will support in the pulpit an able  
teacher of righteousness, so that on every Sabbath  
morning the chime on one hill should answer to  
the chime on another round the earth's broad

circumference, and the voice of prayer and the song of praise should ascend like a universal holocaust to heaven.—*Stebbing.*

Our meetings both silent, I thought that something was to be felt, exelling words; my own mind was lowered in sweet, inward stillness.—*M. Capper.*

## THE FRIEND.

TENTH MONTH 13, 1866.

### SUMMARY OF EVENTS.

**FORNIGN.**—By the treaty between Italy and Austria, the former acquires the territory of Venetia as it existed while under the dominion of Austria, and the debt of Venetia, amounting to thirty-five millions of florins, is assumed by the Italian government. A complete amnesty has been granted by Italy to all political prisoners. The treaty of peace has been finally signed. The Italian government does not assume more than the debt specially contracted for Venetia. Austria had insisted that a part of the general debts of the Austrian Empire should be transferred to Italy, but this demand was successfully resisted. It is said that the Italian army which reduced to peace footing, will consist of two hundred thousand men.

A patent, taking possession of the recent kingdom of Hanover, was promulgated by the Prussian government on the 6th inst. The loyalty of the people in all cases, is demanded.

The in-urgent movement amongst the Cretans, is said to be spreading rapidly. A battle had taken place in Candia, between the Cretans and the Turkish troops, in which the latter remained masters of the field. The king of Greece had made a speech expressing his sympathy with the Christian population of Turkey.

The British harvests are expected to be less discouraging than was supposed. The balloon in the Bank of England has increased. There was a slight shock of earthquake in England and France on the 14th ult.

The weekly returns of the Bank of France show a decrease in cash of 5,000,000 francs. The Paris money market was easy, but there was a general want of confidence in all specie and undertakings. The payment of the interest on Mexican obligations now due, is deferred for want of funds.

Late Mexican advances report some Imperial success. Maximilian made a speech at the national anniversary, denying that he thought of abdicating. It is said that he will head the army in person.

The accounts of the famine in Bengal, India, continue to be most distressing. Subscriptions were being raised for the relief of the sufferers. Great and disastrous floods had occurred in India. Accounts have been received in Paris of the martyrdom of nine French Catholic missionaries in the Cores, in Asia. One other escaped over the mountains to that country, and two more were still wandering in the mountains.

The Liverpool quotations of the 6th, for middling uplands cotton, was 14½. Sales of the day 10,000 bales. Consols, 89½. U. S. 5-20's, 71½.

**UNITED STATES.**—*The Public Debt.*—From the published statement of the United States Secretary of the Treasury, it appears that the total debt on the first inst. amounted to \$2,701,500,795. About \$460,000,000 of this sum bears no interest. The balance in the Treasury consisted of \$86,259,969 in coin, and \$1,953,858 in currency. Since 8th mo. 1st, 1865, the debt has been reduced \$84,916,340.

*Philadelphia.*—Mortality last week, 374. Of cholera, 163; cholera morbus, 17; cholera infantum, 15. The mean temperature of the Ninth month, according to the record kept at the Penna. Hospital, wa- 69.50 deg. The highest during the month being 82.25°, and the lowest 50 deg. The amount of rain was 8.76 inches. The average of the mean temperature of the Ninth month for the past seven years, is stated to be 66.13 deg., the highest mean during that entire period was 72.68 deg., in 1855, the lowest was 60 deg., in 1840.

*Baltimore.*—Mortality last week, 114; males, 65; females, 49.

*The Cholera.*—In Nashville, Memphis, and most other places in which the disease has appeared it has subsided, and is no longer epidemic. In Philadelphia there was some increase during the past week.

*The South and the Freedmen.*—General Scott, commanding in South Carolina, has issued an order which declares that during the season for picking cotton and

harvesting rice and corn, and until the crops shall have been prepared for market, and divided among those who have produced them on shares, persons will not be permitted to trade or barter in these products, without a written license. The design of the order is to prevent the freedmen from being cheated out of their wages. Gen. Sickles has issued an order restoring civil law and disincorporating the military provost courts, excepting at Hilton Head and certain Sea Islands. The Superintendent of the Freedmen's Bureau for northern Alabama, reports favorably. He says a people of that section are anxious for a permanent settlement of national difficulties, and accept the present condition of things in good faith. Their treatment of the freedmen is humane and just, and they entertain no malice toward northern men who are not offensive.

In Georgia there is a strong feeling in favor of reparation to the freedmen for an effort to be made at the next meeting of the Legislature to relieve the people from the payment of certain debts contracted prior to and during the late war. The plea urged for reparation is the loss of slaves and the failure of the crops. The amount of property returned by the assessors for the State in 1865, was \$2,020,777. The freedmen continue to leave this State for the Mississippi Valley, induced by offers of higher wages. A considerable emigration of the white residents is progressing in North Carolina—they go to the West.

The Assistant Commissioner for Florida reports that the freedmen are in a promising condition, and the freed people well paid and kindly treated. The cholera has appeared in many parts of Florida, principally among the negroes.

The reports from Mississippi represent the cotton crop as only fair, the early and the late rains, and the owner thought having done much damage. The corn crop is a failure. The feeling of hostility towards the friends of the freedmen, is said to be very general throughout the State. In some localities, however, the civil authorities have shown a commendable desire to co-operate with the agents of the Freedmen's Bureau in their work.

In Texas the schools are mostly supplied with teachers of southern birth, and hitherto have been supported entirely by the freedmen. The superintendent says, that three hundred more schools are needed in that State, and invites the help of the charitable societies of the North.

*The New Orleans Riot.*—The report of the Military Commission to investigate the riots in New Orleans, is signed by Generals Mower, Quincy, Gregg, and Balley. It gives a full synopsis of the evidence, confirming the dispatches of General Sheridan. The commission gives the opinion that there was a preconcerted plan among the rebel associations for the purpose of attacking the Convention of the Freedmen, and that the riot was due to the declaration of martial law and the presence of United States troops, fire and bloodshed would have raged in all the negro quarters of the city, and the lives and property of Unionist and northern men would have been at the mercy of the mob, which was composed chiefly of rebel soldiers.

*Miscellaneous.*—The cable across the Straits of Northumberland, connecting New Brunswick with Prince Edward's Island was successfully laid last week.

A. T. Stewart, of New York, has offered to give \$1,000,000 for the erection of tenement houses for the deserving poor of that city on condition that the land required should be provided by others.

The *Memphis Commercial* says the four tobacco growing States, Missouri, Kentucky, Virginia and Tennessee, pay an internal revenue tax of nineteen millions of dollars that on that article.

The report of the State Auditor of Iowa, shows that there are 200,000 head of cattle, 212,923 horses, 13,751 mules, 1,353,316 sheep, and 361,214 swine in that State. The United States, it appears, have been negotiating with the Turks for the cession of an island in the Gulf of Eginia. This has induced the Emperor Napoleon to address energetic remonstrances to the Ottoman Porte, in which he was supported by the British Government. From First mo. 1st to Tenth mo. 3d, 1866, 18,642 immigrants have landed in New York, as compared with 140,228 during the same period of 1865.

A Texas paper states that a little girl was lately devoured by an alligator near Galveston, in full view of her father, who was unable to do anything to save her. Since breaking out of the cholera in Cincinnati, 1406 persons have died of the disease. It has now almost disappeared.

*The United States Circuit Courts.*—The adjourned term of the Circuit Court, which was to be held this month at Richmond, was not held because it was found that

the acts of Congress did not warrant the adjournment from Norfolk. At the last session the number of circuits was reduced to nine, and all of them, except first and second, materially changed. It is the fact that the old allotment of the Chief Justice and the clerks to the circuits, as formerly constructed, does give them jurisdiction in the new. It is understood that Chief Justice Chase has submitted this point to other Justices, and that the question whether the circuit Courts will be held this fall in the altered circuit by the Chief and Associate Justices and District Judges by the District Judges alone, will be determined conformly with the views of the majority.

*The Markets, &c.*—The following were the quotations on the 8th inst. *New York*—American gold 149½, S. sixes, 1881, 112½; ditto, 5-20, 1862, 113; ditto, 1 1/10; ditto, 5 per cents, 10-40, 99½. *Superfine S. flour*, \$8.20; do, \$10.40; do, \$11.40; do, \$11.40; Baltimore flour, common to extra, \$12.26; do, extra and family, \$13.70 to \$16.50. *New amber S. wheat*, \$3.34; do, Western rye, \$1.12; *State S. S. 1/2*, \$2.32. *State barley*, \$1.40. *Yellow corn*, 95 mixed western, 93¢ ct. *Middling uplands cotton*, 58¢ ct. *Philadelphia Superfine flour*, \$8.89; do, extra family and fancy brands, from \$9.25 to \$16. *wheat*, \$2.85 to \$3.10; white, \$3.10 to \$3.25. *Rye*, \$2. Yellow corn, \$1.07 to \$1.08. *Oats*, 56 to 58¢ ct. *Feed*, \$3.25. *Timothy*, \$3.50 to \$3.75. *Cloverseed* is \$7.75. The sales of beef cattle reached 2400 head. Sales of extra fat 16 W. 178, fair and good, 14.15 commencing at 12.50. *Wool*, 100 lbs. *Wool*, 100 lbs. sold at \$13.45 to \$14.50 the 100 lbs. net. Of sheep, sold at 63¢ ct. per lb. gross for common, and 65¢ ct. for extra fat sheep.

### RECEIPTS.

Received from Mary A. Baldwin, Pa., per J. G. San \$2, vol. 40; from Jeremiah Foster, R. 1, \$2, vol. 40.

An experienced Teacher wishes a situation in a school, for the winter season. Apply at the Office "The Friend."

### WESTTOWN BOARDING SCHOOL.

Wanted, a Friend qualified to perform the duties Book-keeper and Librarian at the above institution begin on the opening of the Winter Session, or as thereafter as practicable.

Application may be made to Robert Thomas, Burlington, N. J. Aaron Sharpless, West Chester, Pa. Joseph Scattergood, 415 Spruce Street, Phila. Charles J. Allen, 204 Arch Street, Phila.

### FRIENDS' BENEFIT ASSOCIATION.

A meeting of the contributors and of Friends is held in the welfare of the Freedmen, will be held Arch street meeting-house, Philadelphia, on Fifth evening, 25th inst., at 7½ o'clock. A full attendance particularly requested.

### WANTED.

A young woman, a Friend, as Teacher for a C. School, in Benezet St., 11th below Arch. To a person well qualified this is a desirable position.

Apply to either of the committee,

D. B. H. Coates N. W. cor. Spruce and 7th T. Westar Brown, 11th Chestnut Street. Philada., 10th mo. 1st, 1866.

### WESTTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the Boy's SECOND MATHEMATICAL SCHOOL, to enter on his duties on the opening of the Winter Session. Apply to

Samuel Hillis, Wilmington, Del. Thomas Evans, 817 Arch St., Phila. Joseph Scattergood, 413 Spruce St., Phil Charles J. Allen, 204 Arch St.

### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, WILMINGTON.) Physician and Superintendent, —JOSHUA H. WILBERTSON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

WM. H. PILE, PRINTER,

No. 214 Park street, between Dock and Third.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XL.

SEVENTH-DAY, TENTH MONTH 20, 1866.

NO. 8.

PUBLISHED WEEKLY.

Two Dollars per annum, payable in advance.

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

For "The Friend,"

The Completion of the Atlantic Telegraph.

(Continued from page 83.)

Great, however, as was the disappointment which resulted from this failure, those who had closely watched the progress of the enterprise and in it much to reassure them of ultimate success. Several important questions connected with submarine telegraphs had been satisfactorily settled during the few weeks that the experiment lasted, and those especially who were on the Great Eastern, and had witnessed the ease and regularity with which the cable was transmitted from the tanks through the paying out machinery,—the piece of apparatus requiring the most delicate adjustments, and which had caused the greatest anxiety on the former expeditions,—and had observed the distinctness and rapidity with which signalling was performed after submergence, were confident that all the obstacles encountered could be finally overcome; and that entire success awaited a cable that was "faultless" in itself. If success of the telegraph becomes assured, the moment the occurrence of faults can be obviated, or their detection can be followed by immediate repairation," was the deliberate judgment of the electricians and engineers who had participated in the attempt; and who expressed their conviction that if a steam engine were attached to the paying out machinery, so as to admit the hauling in of the cable the moment a fault was discovered, instead of the apparatus at the bow of the vessel; and a slight modification made in the form of the external sheath or outer "protection" of the cable, all the remaining difficulties within the power of man would be removed.

This conviction was also felt by the directors, several of whom were interested in the project, and by the contractors. The latter again went forward with a liberal proposition, in which they offered to manufacture and lay a new line of cable, for half a million pounds sterling,—which its estimated cost—and allowing as before all their compensation to depend on the result. If successful, the additional amount to be paid them twenty per cent. of this sum, or one hundred thousand pounds in the shares of the company; they further engaged to search for the broken cable at their own expense, and with sufficient funds of new cable to complete it if possible to Newfoundland.

To furnish the capital for the construction of a new cable another company was organized—The Anglo-American Telegraph Company—with

which the old company contracted to assume the whole burden of the enterprise, and to operate the line if completed, until the First month, 1869. Most of the large stockholders of the Atlantic Telegraph Company became also interested in this, and large sums were subscribed by a few individuals. The Telegraph Construction and Maintenance Company took shares to the amount of £100,000, and such substantial manifestations of confidence in the company were shown, that within fourteen days after their books were opened all of the stock was disposed of.

The manufacture of the new cable, owing to some legal difficulties which had retarded the formation of the new company, was not begun until the Third month of the present year. As, however, its general form was the same as that of last year, but little time was lost in arranging the machinery, and the work was promptly commenced. The cable, as before, consisted of a strand of seven wires, six laid spirally around the seventh, which with its successive layers of insulating material, formed the "core;" around which a covering of iron wires laid spirally as the "protection" gave strength and weight. The careful manner in which the conductor was surrounded by the insulating material so as to prevent the slightest escape of the current, has been thus described as witnessed in 1865.

"The centre wire of the copper strand was first covered with a coating of gutta-percha, reduced to a viscid state with Stockholm tar, this being the preparation known as 'Chatterton's Compound.' This coating must be so thick that, when the other six wires forming the strand were laid spirally and tightly round it, every interstice was completely filled up, and all air excluded. The object of this process was two-fold: first, to prevent any space for air between the conductor and insulator, and thus exclude the increase of inductive action attendant upon the absence of a perfect union of those two agents; and, second, to secure mechanical solidity to the entire core; the conductors of some earlier cables having been found to be to some extent loose within the gutta-percha tub surrounding them. \* \* \* The whole conductor next received a coating of Chatterton's Compound outside of it; this, when the core was completed, quickly solidified, and became almost as hard as the remainder of the subsequent insulation. It was then surrounded by a first coating of the purest gutta-percha, which being pressed around it while in a plastic state by means of a very accurate die, formed a first continuous tube along the whole conductor. Over this tube was laid, by the same process, a thin covering of Chatterton's Compound, for the purpose of effectually closing up any possible pores or minute flaws that might have escaped detection in the first gutta-percha tube. To this covering of Chatterton's Compound succeeded a second tube of pure gutta-percha, then another coating of the compound, and so on alternately until the conductor had received in all four coatings of compound and four of gutta-percha. The core having been received from the gutta-percha works, and carefully tested to note its electrical condition, was first taken to

receive its padding of jute yarn, whereby the gutta-percha would be protected against any pressure from the external iron sheath, which latter succeeded the jute." Upon this coating of jute, the protective iron wires were wound, each having first been covered, in the cable of 1865, with a tight wrapping of tarred manilla yarn. This wrapping, however, was dispensed with in the new cable, and the wires were simply "galvanized," by which it was believed the attacks of rust would be effectually prevented, and greater ductility be secured at the same time, so that the cable would stretch longer in case of a heavy strain without breaking. The exterior surface, also, in the latter, was bright and clean, and not tarry and adhesive as in the former. Thus completed the new cable weighed about thirty two hundred weight per mile, and its strength was sufficient to sustain about twelve miles of its length in water, or more than four times the amount necessary to reach to the bottom in the deepest water to be met with; and was somewhat lighter and stronger than the old.

In the mean time some new arrangements were devised on board the ship, by which the difficulties attending the occurrence of "faults" could be, it was hoped, entirely remedied. Preparations were made for an uninterrupted series of tests to be performed every minute during the voyage, by which the continuity and insulation of the cable would be constantly known, and it would become impossible for a defective portion to escape notice for twenty or thirty minutes, as had been the case the year previous, in which time the "fault" might have drifted two or three miles away from the ship. The "picking up" apparatus was also adjusted to the paying out machinery at the stern of the vessel, so to be in readiness to recover a "fault" at the shortest notice. With these improvements, and with a strong set of grappling apparatus for the recovery of the old cable, the Great Eastern left the Medway, where she had received the largest part of her cargo, on the 30th of the Sixth month.

This great vessel which in this enterprise found an employment worthy of her noble proportions, was of itself a constant theme of admiration to all in the progress of the preparations, and in the course of the voyage. Her gigantic size, and her faultless model, her powerful machinery, and the number and extent of her various passages, staircases, freight apartments, and saloons, produced feelings of astonishment on the mind, which are only heightened by closer examination and comparison with other vessels. Her sea-going qualities had previously been thoroughly tested; and although at times in heavy seas she is obliged to yield to the force of the waves, yet in general her steadiness is such, even in rough weather, as almost to make her passengers forget that they are voyaging upon the unstable element. In the expedition of 1865, she was the constant theme of admiration to all who were engaged in the attempt. In the passage around from the Medway to the Irish coast, with her enormous burden of several thousand tons, she encountered a head wind and a rough sea, "but neither wind

nor sea made the slightest difference on the Great Eastern's steadiness," writes one of the passengers, "and it was scarcely possible, even by means of a pendulum, to detect that she was moving at all, far less that she was steaming against a strong gale and a high cross sea." As she proceeded down the English channel, however, and the storm increased, the great ship labored rather heavily in the seas. The cable had been stored in three enormous water-tight tanks, which had been constructed in her capacious hold,—one in the fore, one in the middle, and one in the after part of the ship; the largest of which weighed with its contents, 2500 tons. In the rolling and pitching of the ship, during the gale, it was feared that the fastenings of this tank might have been loosened; but a careful examination revealed the staunch manner in which the work had been done, as not an alteration of any kind was found necessary to strengthen the supports; the tanks, however, being filled with water, and the pitching of the ship occasionally spilling it over the edges, it was thought better to reduce the quantity, and the valves were accordingly opened and a mass of the water allowed to run into the sea.

On account of the great weight of her cargo and stores, it had not been deemed advisable to put in the whole of her coal before leaving the Medway, and she accordingly stopped at Berehaven, on the Irish coast, for the remainder of her supply. When fully loaded the Great Eastern had on board eight thousand five hundred tons of coal; five hundred tons of stores belonging to the expedition; and twenty-four hundred miles of the cable, weighing with the tanks and water in which it was coiled, five thousand tons more, making in all fourteen thousand tons, while the engines, rigging, &c., of the vessel added nearly as much more. Thus heavily laden and equipped for her voyage, the Great Eastern waited at Berehaven until her companion, the William Cory, upon which was stored thirty miles of "shore" cable, accomplished her task of making the necessary communication with the land, and of depositing this ponderous line, the strongest wire cable ever made, in the comparatively shallow water that surrounds this portion of the coast. The harbor of Valentia is located on a small island, about six miles long, and two broad, belonging to the county of Kerry, in Ireland, and is the most westerly port of Europe. That portion of it selected for the terminus of the cable is called Foilhummer Bay, and is thus described by Wm. H. Russell:

(To be continued.)

Benjamin Bishop.

(Continued from page 55.)

"To ———"

"9th of 9th month, 1851.

"My dear Friend,—I feel as though I need not hesitate in replying to thy consoling letter. What shall I render to the Lord for all His beneficent towards me? Praise ye Him, with me, in the heights, praise Him in the depths, and let all the seed of Jacob glorify Him, with my soul, with yours; yea, blessed be the Lord God, the God of Israel, who only doeth wondrous things, and blessed be His glorious name, for ever and ever, and let the whole earth be filled with His glory. Amen and Amen! Now leaving unto Christ our unworthiness and weakness, and all the iniquities of the flesh, we will get onto our watch, and stand upon the tower, and there we will watch to see what the Lord our God shall say unto us; and as for His reproofs, we love them; for we are sure, if we open to His knocks, let Him in, and hearken

to His voice, He will give us 'beauty for ashes, the oil of joy for mourning, and the garment of praise for the spirit of heaviness.' As the secret of the Lord is with the righteous, the Lord requires it of them, that they should keep His secrets; dwelling in their tents, when the cloud is resting on the tabernacle, and when it is taken up, following it whithersoever it goes. Though I am unworthy of the least of all the Lord's mercies, yet Jesus hath begotten in me a travail of soul, not for our Society only, but for all the inhabitants of the earth, that they might be saved. How the Lord will bring about His act, His strange act, I know not, neither desire to know; one thing I desire of God, that will I seek after—that I may have fellowship with Him, and with His Son Jesus Christ our Lord, through sanctification of the Spirit, and redemption which is in Him. Though I am indeed small, and it may be of many, despised, yet my soul doth magnify the Lord, and my spirit rejoiceth in God my Saviour: for He hath not only brought me up from the depths of the earth, but He hath also delivered me from the lowest hell. He found me in a waste howling wilderness, where there was no way. He led me about; He instructed me; He taught me to go, holding me by my arms; and now by the streams of water He is guiding me! The lines are fallen to me in pleasant places, in Him I have a goodly heritage. And now, can I do otherwise than mourn in secret for those that are out of the way, whose minds the god of this world hath blinded, lest the light of the glorious gospel should shine unto them; and in my watchings, by the eye of faith, I see a precious remnant of such mourners, weeping in secret for the abomination which maketh desolate."

"To ———"

"10th of 9th month, 1851.

"Dear ———, whom I love in the Truth, and to the beloved of the Lord, being blessed with peace on every side, through faith in the mercy of God, which is in Christ Jesus our Lord, I feel drawn in Gospel love to communicate with thee, on that which I most of all desire, viz.—that the light of life, which is now shining in darkness, may shine out of darkness throughout Zion, the perfection of beauty, that the Gentiles may come to her light, and all kings to the brightness of her rising; and who is he that will say, the time for the Lord's house to be built, is not come? The mighty God, even the Lord, is calling the earth by His Son, Christ, from the rising of the sun, to the going down thereof, and in a special manner to His saints, who have made a covenant with Him by sacrifice, to gather unto the Lamb standing on Mount Zion, that they may follow Him whithersoever He goeth. These two things are certain, they that have heard the voice of Christ and believe not, are not His sheep, and whosoever taketh not up his cross and followeth Him not, cannot be His disciple. In the outward court, 'the Light shineth in darkness, and the darkness comprehendeth it not.' 'They have eyes, but they see not; ears have they, but they hear not, neither do they understand with their heart.' And such have we been; but they that dwell in the inner courts of the Lord's house, walk in the Light, as Christ is in the Light, and have fellowship with the Father, and with the Son, and one with another in Him; and such may we be, through the washing of regeneration, and renewing of the Holy Ghost. It is an awful consideration that the publicans and harlots go into the Kingdom of heaven before them that hear and believe not, and the hypocritical professors are the greatest stumbling blocks in the way."

"To ———"

"10th of 11th month, 1851

"A beloved disciple of our blessed Lord writ 'by this do we know that we have passed first death unto life, because we love the brethren and my heart's desire and prayer to God is, if we consider the Apostle and High Priest of our profession Christ Jesus, that we may always be about in our bodies, His dying, that so His) may be made manifest by us before the eyes of the nations. O my dear friend, how precious is to feel a dying daily to self, that Christ u reign over all; to those who experience it, Lord will be a spirit of judgment, when they in judgment, and strength to turn the battle the gate. Be thou strong in the Lord, and in power of His might, for the Lord will mak separation between the precious and the vile; will have a people to His praise, and He will judgment to the line, and righteousness to t plummet, when He ariseth to shake terribly t earth.

"To ———"

"5th month, 1852

"I remember the Friend that ——— mentio and am thankful she is sitting by the springs water. I should like her to know so much in of me, with my dear love. O how precious is t love of God shed abroad in our hearts by the H Ghost; and blessed are they that dig down u the spring thereof, the streams of which ma glad the whole city of God. I am shut up, t I see the day approaching when the Bridego will come forth out of his chamber, and the br out of her closet, and many shall be callu in the marriage supper of the Lamb; and the L shall be exalted in judgment, and God th holy shall be sanctified in righteousness. I kn of none so small as myself among the Lord's li ones, and if I may but hew wood, and draw wa for such, it is enough, with the peace which feel in my poverty.

"Farewell my dearly beloved friends, in H who doeth all things well."

For "The Friend.

#### PROCESSES FOR PRESERVING MEAT.

The high cost of wholesome meat in many c ilized countries has of late years shown the i portance of finding other sources from which cheaper supply of this necessary article of fo may in the future be supplied. While in Engla and on the continent such a scarcity of anim food exists, that the poorer classes are but sdd able to enjoy it, there are abundant herds of w cattle and sheep in South America and Austral which have hardly any value beyond that of h hides and wool. It has consequently been desi ble to find a method by which the meat of th animals could be preserved for an indefinite p riod in a state suitable for food, and in a fo convenient for transportation to distant places.

One of the processes suggested for this purp consists in placing the fresh meat in air-tig canisters, from which the air is then entir exhausted, and a small amount of sulphurous a and a larger quantity of nitrogen gas afterwa introduced; when the cans are carefully seal In the late London Exhibition several speci of fresh meat and fish preserved in this way shown, which retained their fresh appeara during the whole of the exhibition.

Another plan which seems to have met w favor in England, provides for the exclusio air by giving to the articles to be preserv this coating of paraffin. This body is a wh solid, very wax-like in its character, obtained

low cost in the distillation of coal and petroleum, in order to secure the entire expulsion of the air retained in the substances to be thus treated, they are first immersed in the melted paraffin, not at a temperature of about 240°, for a short time, and are then covered with a coating of the servative. In this process a portion of the paraffin contained in the substances is driven off, if they are thus diminished in bulk, and at the same time become cooked, so as to be ready for use upon the removal of the paraffin, which is easily accomplished by means of boiling water, which the paraffin is melted, and rises to the surface. Among the advantages claimed for this method, are its simplicity, the consequent facility with which it can be performed by unskilled workmen, and its cheapness. The latter is perhaps its chief recommendation, and as canisters are necessarily required, and the paraffin can also be used over again when separated from the substance, its cost is comparatively small. Specimens of a variety of substances, such as bacon, butter, mutton, butter, eggs, cheese, &c., preserved this way, have been tested with very satisfactory results, and a company has been formed in London under the title of "Redwood's Patented Company, Limited" to bring articles preserved this method into general notice. It has also secured patent rights in South America, from which country it was hoped choice beef and mutton would soon be exported in a form and at a price which would prove a boon to the community. Still another process, differing essentially from the foregoing has recently been recommended in France by Prof. Liebig, and has been employed in several countries on that continent with satisfactory results. It is in fact but an improved process of making "beef tea," which is then reduced to a solid consistence. An extract of the kind is thus made which represents its nutritive value in a very condensed form, the concentration being carried to such an extent that ten pounds of beef makes but about six ounces of extract, and the essence of an entire ox may thus be contained in a very few pounds. Several articles of this description are now to be met with in the English market, one of which is imported from South America and another from Australia. That from South America is the product of the manufactory of German named Giebert, a civil engineer residing in Uruguay, who, after consulting with Prof. Liebig, and receiving instruction in a practical laboratory in Munich, undertook the establishment of works on a considerable scale. It is recognized as a good article, though not yet quite in point of flavour to that which is produced in Munich. In the latter city, as well as in many other places in Europe, it is now largely prepared in the use of the sick.

From our own country an extract of beef has long been produced, having been made as early as 1819 by Carl Borden, who in 1851 obtained a patent for his "meat bisquit," at the International Exhibition in London. The establishment for the manufacture of this article has lately been founded in the prairie country of Illinois, where it can be obtained of the best quality and at a lower rate than in the Eastern States. It has been observed in this manufactory, that a larger quantity of extract can be obtained from the same weight of beef than is the case where cattle have been driven long distances to a market, the juices of the meat not having been subjected in the former instance to the depletion attendant upon a long and fatiguing journey. The juices here are evaporated in a vacuum, without the addition of any preservative substance, and the extract made represents many times its weight of prime beef. As pre-

pared in this manner, or by the process of Prof. Liebig, this preparation has a light colour, a rather soft consistence, and an inviting odor. It is quite soluble in water, and needs only the addition of the usual condiments to render it palatable. It is rich in the essential constituents of nourishing animal food, and its use has been followed by very striking results in cases of sickness, the period of convalescence having been reduced very considerably in some cases in which its employment was observed by Prof. Liebig and Pettenkofer, in a hospital at Munich. As a restorative after accidents, it has also been found of value. In the best articles of this kind there is little or no gelatin extracted from the meat, and the preparation has consequently none of the glue-like odor which, in course of time, would render its taste disagreeable.

#### Thomas Scattergood to Sarah Cresson.

Eighth mo. 1st, 1796.

At Robt's Marriages, near Chelmsford in Essex.

DEAR COUSIN.—Having left most of my letters in my trunk in London, and thine amongst them I have not with me, but thinking so much of thee this morning, and which I tell thee I have done at other times with near and tender affection, concluded to take up my pen and tell thee so. Many and various are the trials such poor beings as I am in a separation from near and dear connections have to pass through, and they have a tendency to dip the mind into a feeling of sympathy with and for those, who have set out in the same blessed work. And the desire of my soul is, that thou, with all the called of our heavenly Father to labour in His vineyard, may keep steadily to the work, for blessed are they who keep their hands to the plough, looking forward and pressing forward, under the direction of their holy Head and high Priest—these will meet with sufficient encouragement by the way. Remember then, dear child, the way to profit is to give thyself wholly to the work, so will thy profiting appear unto all. Study to show thyself approved unto the Lord thy God, a workman in His house and family, that need not be ashamed, rightly dividing the word of Truth, (unto which thou art beyond any doubt in my mind called.) Let not thy little acts of faith and love in the gospel of Him, who hath called thee and sanctified thee for the work, pass by undone, for a cheerful surrender of thy will and faculties in little acts, will make way for more, so will thou know thy day's work keeping pace with the day, and then thou mayest look forward to the end which crowns all, even finishing thy work and thy course with joy, and witness that crown laid up in store for all such as love the Lord Jesus Christ, and do His will. Love retirement and reading the Holy Scriptures. Treasure up such parts of them as forcibly strike the mind, and then at seasons thou wilt witness the key of David handed to thee, which will unlock thy little treasury and open the mysteries with more enlargement, for the help and benefit of others who are ignorant and unlearned; here is the use and end of a gospel ministry, which is not received of men, but of God, and that which is received in secret, quiet retirement, revives in meetings and families, and commendment given to proclaim abroad. Therefore, as a beloved younger sister in the work, I charge and counsel thee, to give thyself to reading, meditation and prayer, and may thy God and mine give thee wisdom in all things to go in and out before the people. Let no one despise thy youth, neither do thou take in discouragement from this quarter, but in humility and reverence, seek for a quali-

Solicted.

fication to say, "Here am I Lord, first prepare, and then send me." I have now whilst writing the agreeable company of my valuable friend and mother, Elizabeth Gibson. She and her husband have been with me near a week. He has gone to monthly meeting, and if they do not move on with me to-morrow, I expect dear George will, and, for all I see, go with me through this country: he is indeed, (however in my opinion,) a choice spirited friend, and a comfortable couple they appear to be, much beloved by their friends; they have two nieces of his living with them, who have been as affectionate to me whilst at their house as I could look for from my own children, and very comfortable I felt under their uncle's roof. I thought this account would be pleasing to thy dear mother, to whom present my continued love and sympathy, and tell her it was good house-keeping formerly when the prophet kept the widow's house, and my desire is that the Great Prophet of prophets may yet have room in her house and heart. My dear love to thy brother Ebenezer; tell him though I have not felt qualified to answer his affectionate letter, yet he may be assured he has considerable place in the mind of his absent relation, who was rejoiced on hearing that he was dear John Wigham's armour-bearer. Oh, that he and my dear son may be companion in the way that leads to the everlasting kingdom. My love to all the rest of the lesser tender plants in the family; oh, that they may grow up as plants in their youth, and know a being dignified in their day. May thou and thy dear mother be encouraged to continue labour towards them, to lend the tender twigs and form the mind. Ah, how my bowels roll towards my own likewise, for whom my prayers are put up, that they may be the Lord's children.

In near and tender love I salute thee once more, who am thy affectionate friend and relation,

THOMAS SCATTERGOOD.

P. S.—Tell E. Foulke that she is frequently, and with comfort the companion of my mind, tell her to be strong and courageous in the work whereunto she is called.

Cost of War.—Between 1815 and 1864, 2,782,000 men were killed in battle. Of these, 2,148,000 were Europeans, 164,000 inhabitants of the other continents. Thus, during 49 years, the average annual number who thus perished amounts to 42,800 men, not including the victims of disease engendered by the consequences of war. The Crimean War (1853-56) was naturally the most destructive, 511,000 men having perished during its course; 176,000 of them died on the field of battle, 334,000 from disease in hospital—256,000 being Russians, 98,000 Turks, 107,000 French, 45,000 English, 2,000 Italians, and 2,500 Greeks.

The war in the Caucasus (1850-60) cost the lives of 330,000; Anglo-Indian war, (1857-59) 196,000; the Russian and Turkish war (1828-29) 136,000; the Polish insurrection of 1831, 150,000; the civil war of Spain which raged from 1833 to 1840, to 172,000; the war of Greek independence, (1824-29) to which Lord Byron fell a victim, 148,000; the various French campaigns in Algeria, from 1830 to 1840, 146,000; the Hungarian revolution, 142,000; the Italian war of 1859-60, 129,874; which last number may be thus analyzed: 96,874 fell on the field of battle, and 33,000 died of disease; of which 49,664 were Austrians, 39,220 French, 26,300 Italians, 13,101 Neapolitans, and 2,370 Romans. A curious result may be deduced from the above—namely, that a greater number perish by the dis-

esses incident to a camp life that are actually killed by shot and shell or any other engine of destruction.

As to the sums of money swallowed up by these wars, it is impossible to arrive at anything approaching a correct calculation. The Crimean war cost Russia 2628 millions of francs, (one million francs, £10,000.) England 1320 millions, Turkey, 1669 millions. Austria, for more demonstrations, 470 millions. Thus in two years and a half, 6,526 million francs were spent. The Italian war of 1859 cost France 345 millions, Austria 739 millions, Italy 410 millions. Thus, in two months, 1458 millions were swallowed up.—*Latte Paper.*

## AT SEA.

The night was made for cooing shade,  
For silence, and for sleep;  
And when I was a child, I laid  
My hands upon my breast, and prayed,  
And went to sleep with thee,  
Childlike, as then, I lie to-night,  
And watch my lonely cabin-light.

Each movement of the swaying lamp  
Shows how the vessel reels,  
And o'er her deck the billows tramp,  
And all her timbers steele and croup  
With every shock she feels;  
It starts and shudders, while it burns,  
And in its binged socket turns.

Now swinging low, and slanting low,  
It almost level lies,  
And yet I know, while to and fro  
I watch the seeming pendule go,  
With restless fall and rise,  
The steady shaft is still upright,  
Poising its little globe of light.

O hand of God! O lamp of peace!  
O promise of my soul!  
Though weak and tossed, and ill at ease  
Amid the roar of smiting seas—  
The ship's convulsive roll—  
I own, with love and tender awe,  
Your perfect type of faith and law.

A heavenly trust my spirit calms—  
My soul is filled with light;  
The ocean sings his solemn psalms;  
The wild winds chant; I cross my palms;  
Happy as if to-night,  
Under the cottage roof again,  
I heard the soothing summer rain.

Trowbridge.

Selected.

## SOCIAL INTERCOURSE.

O God! who on the tablets of the heart  
Gazest with thine all-searching eye, and there  
Do'st read the record of each secret wish,  
Guard with thy grace the inlets to my soul,  
And chase away the traitor-thoughts within,  
Thy will temptations forgetting stand, and faint  
Would lead in sin and folly, strike me dead,  
That in the gay and care-forgiving crowd  
Thou art as near me as in solitude;  
Keep thou the portals of my lips, lest words  
Of levity, or censure undesired,  
Abuse the freedom of my mortal hours.  
Thine my each word and action, with a hue  
Of heart-born courtesy and holy love,  
That in the use of every social gift  
The happiness of others may be mine;  
And every effort which I make to please  
May be unmarred by envy or by pride.  
And as the glow-worm, that, lit up unseen,  
Glades with the lustre of its tiny lamp,  
Its little neighborhood of blue and flower,  
So grant, O Lord, my love of thee may shine,  
Not in the loud profession of my faith,  
But in the peace-lit shed around my path,  
Still growing brightest in the darkest hour.

Shall I be presumptuous if I record, with feelings of great seriousness, that my prevailing exercise in this my latter day, is secret wrestling

prayer; oft on the bended knees in my quiet secluded chamber, my spirit craves for more evident marks of godly simplicity among the Quakers, so called. I am one of those who mark the base ed "march of intellect," with a jealous fear. The refinements of our day seem, in my view, to draw the mind from under the cross of Christ. According to my observation, we are not the plain, unfastidious people, that, if faithful, we should be; we are too generally intermingled with the manners and maxims of the times. Everlasting mercy can yet turn and overturn, and settle a faithful people.—*Mary Capper.*

From the "Leisure Hour."

## The Cultivation of the Silkworm.

(Continued from page 59.)

Several specimens of silkworms seem to have been confounded together, or have generally been described as distinct species when really only climatic varieties. I can best explain this by quoting from Dr. Wallace, than whom I presume there is no better authority. He says, in a reply to a letter of Dr. Eries.

"There are three types, *Attacus cyathia*, *A. ricini*, and *A. guerini*. The true *cyathia* was originally figured by the younger Daubenton in 1760, was possessed by Drury in 1773, and has been cultivated for centuries in North China; hence, owing to Dr. Roxburgh's mistake, the *Erio*, or *Arriody arria*, as it is called in Hindustan (viz., *A. ricini*), has gone by the name of *Saturnia cyathia*. Hence the two types have been confounded under one name; and, as, whenever *A. cyathia* was demanded from India, *A. ricini* was invariably supplied, it was concluded that *A. cyathia* did not frequent India. However, in 1844, Captain Hutton discovered wild specimens of *A. cyathia* at Mussoorie; and, thanks to him and M. Menneville, we are now thoroughly familiar with the difference between the two types, and with the intermediate hybrids. Before enumerating these differences, let me state that undoubted wild specimens of *A. cyathia* have been obtained from Shan-Tung, a province in North China, situated to the south of Peking; from Mussoorie, in the sub-Himalayan regions, 6000 feet above the level of the sea; from Assam, Cachor (where also the type *A. ricini* is domesticated), Java (remarkably fine), Nepal, Darjeeling, and Thibet. Many of these specimens are very fine, and vary much in coloration and intensity of markings. At Mussoorie, according to Captain Hutton, it feeds on *Cariaria Nepalensis*, and on the *Tej-Bul* (*Arctanthoxylon hastile*). It will likewise eat the leaves of *Ricinus communis*, but does not take kindly to them. In China it feeds on the leaves of the *Ailanthus glandulosa*. In Europe it has been reared on turneps (*Pteris sanguisorba*) on salsify and scorzonera, on sunnamb, on laturnum, on teale, on plum, and on *Ricinus communis*; hence it is polyphagous. It may have in Europe more than one generation annually. Thus, in England, in 1855, two broods were perfected by Lady Dorothy Neville; at Paris, by M. Menneville, four generations were fulfilled. This was the result of an unusually high temperature. It has been figured by Cramer. Specimens are in the British Museum.

"*A. ricini* inhabits Assam, Cachor, Bengal, and Ceylon, feeding by preference on the *Ricinus communis*, is domesticated, and is the commonly cultivated *erio* or *Arriody* worm, which in Bengal yields from four to seven crops annually. Figured by Drury. Specimens in the British Museum.

"*Attacus guerini*, from Beagal, is similar to the former, but smaller, and may be distinguished by the tolose lunule on the fore-wing. Figured

by F. Moore, in his 'Synopsis of Asiatic Sil-producing Moths.' Specimens in the Brit Museum.

"Let us now quote from M. Menneville the difference between *A. cyathia* and *A. ricini*. The egg of the true *cyathia* is white, but its shell covered with little brown or black particles, which give it a spotted look; that of the *erio* is entire white, is smaller, and less heavy. The caterpillar of *cyathia* has on each segment four black spots and when full grown is of a beautiful emerald green, with its head, its claspers, and the segment beautifully marked with yellow; that the *erio* has no spots, and is uniformly a pale green."

Humboldt mentions a magnificent moth (*Bombyx modroon*) found in Meehacan, a province Mexico, at an altitude of 10,500 feet above the sea-level, and the inhabitants of Oaxaca make garments from the silk of its cocoons.

Many parts of South-western Asia, as Mingrel Georgia, Dagestao, and others, now in the possession of the Russians, and known as Transcaucas together with the Crimea, were once great stor holds for silkworm culture. — Cast-hills had one time immense establishments in Tiflis, Kac, and elsewhere, for the cultivation of silk. He employed 27,000 hands, and produced in a year 1,200,000 pounds of silk, which realized 4,800,000 dollars.

Near the Black Sea shore, prior to the Crime war, the Armenians were large growers of mulberry trees and rearers of silkworms. The tree were, to a great extent, destroyed during the war and I am not aware that the cultivation of the silkworm has revived since that time of devastation.

A few words in conclusion as to the probability of silkworm culture paying as a mercantile speculation. My own impression is, that it ultimately will. Two serious objections had present themselves to me prior to visiting Colchester first, the impracticability of winding off the sil and, secondly, as it seemed, the impossibility keeping the worm from their enemies in the open unprotected. Dr. Wallace's experiment, however, in a great degree removed these difficulties. Out door enemies do little or no harm, a winding the silk has also been accomplished. Birds—sparrows in particular—were observed picking aphides from off the cabbages close to the bushes on which the worms were feeding, but attempt was made to touch them. Ants, wasps and parasitic diptera are the most to be dreaded still last summer they did no material harm.

What the French have done, surely English can do; the only question is as to the cost producing silk so as to afford a remunerative price to the grower and manufacturer when sold at a price the silk fabric will fetch. Dr. Wall calculates that a thousand cocoons will produce one pound of raw silk, worth £1, and that one tree, the trees being planted a square yard apart would yield fifty cocoons. After deducting the cost of reeling and other requisite expenses, estimates that £12 an acre may be taken as an average return for railway banks and other waste lands. Another great advantage is found in the rapid growth of alianth-trees; if planted one two years old, they will produce a crop of leaf fit for feeding the next year; whereas the mulberry requires twenty-five years before it is fit to supply material for a crop of worms. Alianth silk lacks gloss, but who can say what skill may yet accomplish in the process of manufacture?

I have been tempted to exceed my usual space from the immense interest and importance of silkworm culture, more especially as bright broods

through the clouds of the future. We may see silk-worm plantations clothing all the way banks, and the tall alantans rearing its cryn high above its neighbours. Its very leaves means tall, or, as the Germans have it, *otterbaum*," the tree of the gods.

For "The Friend,"  
No. 46.

Thoughts for the Times.—No. 46.  
The disorders in our meetings for discipline, have been alluded to in the last number of this paper, as having occurred in the early part of the present century, arose from discontent with the position to certain doctrines which had captivated the minds of many of our members, and their desire to slacken the discipline and to procure more liberty of opinion. The new views regarded by our more experienced and judicious friends, as irreconcilable with the essentials of Christianity, and as striking at the very vitals of religion; and were opposed, therefore, in an uncompromising firmness. In the course of the contest which ensued, many side issues were raised; and the Friends who were foremost in resisting innovations, were accused of bigotry and persecution—accusations which avail much when on is at fault, and which were believed by numbers who knew little what were the issues really in question. After years of painful litigation the contest ended in the separation of 1847.

Perhaps there were few of the prominent actors whose scenes, that long survived the stormy motions of the time, who did not recur to excisions used in the warmth of debate, for which they felt regret and sorrow, and who did not in calm hour of retrospection, acknowledge that could have been better to trust less in argument, and more in a weighty, patient, watchful exercise of mind—in the arm of power, of the great God of the church.

A meeting for discipline is not an arena for tentative discussion, but an assembly for operating, in a religious frame of mind, on the terms of the Society; and it should be held as a religious meeting, in the fear of the Lord—in a humble, patient, waiting frame of mind, seeking to be guided by Divine Wisdom. This lesson has been confirmed to us, by the confusions attendant at eventual time. Such a meeting is in no way a democratic assembly, the questions between, are to be decided by a majority of votes. Thus to act would be to subvert the structure of our institutions. The spirit which these meetings should be conducted is succinctly described by Stephen Crisp. "Also, Friends, it is worth your consideration to heed, how by His invisible power, many faithful men are raised up upon the walls of Zion, that in most of your meetings there be men and women upon whom God hath laid a care, to be taking care for the good of the church, and to take the oversight upon them, to do all things kept in good and decent order; and to make due provision for comforting and relieving the necessities of the needy and distressed, nothing being lacking to make your way comely. These have not been, or are brought forth by any act of yours; but God raised up pastors and teachers, elders and deacons of his own election and choice, and bowed spirits to take upon them the work and service to which they are appointed for the Lord's and the body's sake, which is the church; and you may be truly said, 'take ye heed of the work of God, over which the Holy Ghost hath you overseers, &c.' And such ought to be attended to in the discharge of their trust, as

those that must give an account to him that called them, and gifted them for their several works and services in the church.

"By these means hath the Lord established among you a heavenly government, and built, as it were, a hedge about you, that ye may be preserved from generation to generation; a people fitted for the glory that is, and shall daily more and more be revealed among and upon the faithful, who delight in that power that called them to be saints, and to bear a profession for the holy name of God, against the many names and ways that men in their changeable minds have set up, that the name of the Lord alone may be exalted.

"And all you, dear Friends, upon whom the Lord hath laid a care for his honour, and for the prosperity of the Truth, and gathered you into the good order of the Gospel, to meet together to manage the affairs thereof; take heed that ye have a single eye to the Lord; to do the Lord's business in the leadings of his spirit, which is but one, and brings all that are given up to be governed, to be of one mind and heart, and act, in the general service and purpose of those meetings. Although through the diversity of exercises, and the several degrees of growth among the brethren, every one may not see or understand alike in every matter, at the first propounding of it; yet this makes no breach of the unity, nor hinders brotherly kindness, but puts you often upon an exercise, and an inward travelling to feel the pure, peaceable wisdom that is from above among you, and every one's ear is open to it, in whosoever it speaks; and thereby a sense of life is given in the meeting, to which all that are of a simple and tender mind, join and agree. But if any among you should be contrary minded in the management of some outward affair, relating to the Truth, this doth not break the unity that ye have in Christ, nor should it weaken brotherly love. So long as he keeps waiting for an understanding from God, to be gathered into the same sense with you, and walks with you according to the law of charity; such an one ought to be borne with and cherished, and the supplications of your souls will go up to God for him, that God may reveal it to him, if it be his will, that so no difference may be in understanding, so far as is necessary for the good of the church, no more than there is in matters of faith and obedience to God.

"For, my friends, it is not of absolute necessity that every member of the church should have the same measure of understanding in all things; for then where were the duty of the strong bearing with the weak? Where were the brothers of low degree? Where would be any submitting to them that are set over others in the Lord? which all tend to preserving unity in the church, notwithstanding the different measures and different gifts of the members thereof. For, as the spirits of the prophets are subject to the prophets, so are the spirits of all that are kept in a true subjection to the spirit of life in themselves, kept in the same subjection to the sense of life given by the same spirit in the church. By this means we come to know one Master, even Christ, and have no room for other masters, in the matter of our obedience to God. \* \* \* Let all beware of their own spirits and natural tempers, and keep in a gracious temper; then are ye at for the service of the house of God, whose ye are, and as ye keep upon the foundation that God hath laid, and he will build you up, and teach you how to build one another up in him. As every member must feel life in himself, and all from one head, this life will not hurt itself in any, but be tender of the life in all; for by this one life of

the Word, ye were begotten, and by it ye are nourished, and made to grow up in your several services in the church of God. It is no man's learning or artificial acquirements; it is no man's riches or greatness in this world; it is no man's eloquence and natural wisdom, that makes him fit for government in the church of Christ; all his endowments must be seasoned with the heavenly salt, and his spirit subjected, and his gifts pass through the fire of God's altar, a sacrifice to his praise and honour, that so self may be crucified and baptized into death, and the gifts made use of in the power of the resurrection of the life of Jesus in him. When this great work is wrought in a man, then all his gifts and qualifications are sanctified and made use of for the good of the body which is the church, and are as ornaments and jewels, which serve for the joy and comfort of all who are partakers of the same divine fellowship of life, in Christ Jesus our Lord. Thus many come to be fitted and furnished to good works, which are brought forth in their due seasons, for edification and building up the weak, and for repairing the decayed places, and also for defence of them that are feeble, that hurtful things may not come near them."

Were all meetings for discipline held in this spirit, there would be no disposition in them for wordy argument, and no contention for victory; for this disposition decreases as the members deepen in religious experience, and as they rely more and more upon the guidance of the Holy Spirit. Our most eminent and judicious members have ever been remarkable for their patient waiting in these meetings. Where a talkative and superficial spirit showed itself, they would generally remain quiet, till it was somewhat spent, and then at the fitting time, in a few wise words, reconcile or silence the opposing voices. This habit of wordy discussion may creep into meetings where no unsound doctrine exists; it may take place chiefly in regard to the outward concerns of society—which are always best referred to a committee for examination—but wherever it prevails it lowers the tone of the meeting and lessens the dependence of the members upon the efficacy of silent watchfulness.

These meetings are to be held in the authority of Truth; and the inferior being in strict subordination to the superior meeting of which it is a constituent branch, and bound to submit to its judgment and decision. Without such subordination there could be no peace or settled government in the church; and the rule holds good of the relations of each member to his particular meeting. The right of private judgment does not confer the right to compel others to submit to it, but is bound to respect and comply with the decisions of the body—unless indeed such decisions should strike at the Truth itself.

"Travelling up and down of late, I have had renewed evidences, that to be faithful to the Lord and contented with his will concerning me, is a most necessary and useful lesson for me to be learning; looking less at the effects of my labour, than at the pure motion and reality of the concert as it arises from heavenly love. In the Lord Jehovah is everlasting strength; and as the mind, by humble resignation, is united to him, and we utter words from an inward knowledge that they arise from the heavenly spring, though our way may be difficult, and require close attention to keep in it; and though the manner in which we may be led may tend to our own abasement, yet, if we continue in patience and weakness, heavenly peace is the reward of our labours."—*John Woodman*.

From "Blackwood's Magazine."  
The Great Woods in Winter.

(Concluded from page 54.)

I immediately started on my "walk," and kept merrily at work all day, making fire traps and penetrating still farther into the forest, retracing my steps to the camp at night. Tigre greeted my arrival with a cordial wagging of his tail, to which I responded by giving him an ample supper, then replenishing the smouldering fire, raised a cheerful blaze, and cooked my own very frugal meal of fried pemmican. After emptying my dish of food—the frying-pan—I lit my pipe, and squatted on my bed of pine-logs before the fire. As I sat and thought, while Tigre crouched by my side and thrust his nose against me and looked up into my face, seeking a caress, the sense of loneliness first began to oppress me. Darkness had set in; the moon, already past the full, had not yet appeared, and the lofty pines of the forest around me, their dark-green boughs decked with glistening snow-wreaths, towered up fairy-like in the bright starlight. The huge fire, sinking down in the snow on which the logs first rested, sent out from its trough of ice vast clouds of steam, which rose in a great column through the clear frosty air towards heaven, and almost hid the flames from sight. Not a breath of air rustled the dead leaves still lingering on the young aspens, or shook the snow from the flat, hard, wide-spreading branches of the firs. Not a sound broke the calm quiet of the night. The bay of the wolf, the sharp bark of the fox, the sad cry of the whip-poor-will, or even the mournful cry of the loon would have been a relief. But the wolf enters not the thick forest, the wood-fox was dumb, and the whip-poor-will and the loon had not returned from their winter's visit to the south. All was silent, motionless, and still. I heaped a pile of great dry trunks upon the fire, wrapped myself in my buffalo robe, covering my head from the biting frost, closed my eyes and composed my well-tired limbs for sleep. Weary as I was, however, and sternly resolved to compel the service of the fickle god of sleep, there was something which as persistently repelled him. It was not fear, for there was no possible danger to apprehend; it was not thought for the morrow, for my material wants were amply though rudely provided for; but I was oppressed by loneliness—I craved for the human presence, I longed with a painful, unspoken yearning for conversation and society. Tigre, thinking I was asleep, crept quietly up, and lay across my feet close to the fire; and I turned off the robe from my face and talked to the dog, who, as if he appreciated my feelings, and was sensible of the same want as myself, stepped up beside me and uttered a sympathetic whine. Again I lay down, but with uncovered head, braving the keen air, although there was sixty degrees of frost; and my eyes wandered from the blazing fire at my feet along the snowy carpet around me into the shadowy recesses of the forest, and then upward from the snow-decked feathery branches of the tall pines to their taper summits, and thence to the pale stars which glittered so coldly bright in the clear sky. As I gazed, wakefully, wearily, watching the slow march of Orion to the west, my thoughts strayed homewards—

"Towards its fountain upward ran  
The current of my days."

Visions of dear faces and happy golden hours gone by came before me; and old associations, and the companionship of far-distant friends carried me away for a time from the solitude of the actual reality. A faint rustling, audible enough in the pure silence, caught my ear, and brought

my mind back to the present, and my eyes to earth again. A mouse, tempted by the warmth of the fire, had ventured out from his winter's nest, and was nibbling with great zest the remains of the pemmican left in the frying-pan. I welcomed him as an old friend, and turned my head in order to watch him more comfortably; but this slight movement scared him, and he scampered hastily back to his hole. I covered my head once more, for my nose and cheeks ached painfully with the cold, and dozed away fitfully for a long time. Before long—not very long—a consciousness of increased light gradually broke upon my dulled senses. It was not sunrise, for, as I peeped out of my robe, my eyes naturally turned to my night-clock Orion, and I saw that he had not advanced very far on his journey. But the heavens were glowing with a brilliancy such as I had never seen equalled before. It was the aurora in all its glory. An arch of bright yet pale yellow light spanned the northern sky from east to west, and from the bow, rays of roseate hue of every shade, mingled with pure white beams, streamed up the zenith, ever changeable and varied; where at one moment a red ray flared up, a yellow or white streak flashed in place of it fitfully and uncertainly, yet increasing in lustre and brightness. Soon, however, the fires began to pale, and then died out, and the starlight alone lighted the scene. A third time I buried myself in my coverlet, and slept until the squirrels announced daybreak by their merry chirrup. I jumped up, blew with numb quivering lips the smouldering embers into a blaze; and when I had warmed myself through, had a hearty breakfast in company with Tigre and two little blue-and-white nappies, which, according to their invariable custom, attached themselves to the camp, and now lopped boldly about, picking up crumbs, and even ventured to make a thieving raid upon the lump of pemmican. Then I tied Tigre to a tree, stuck the axe in my belt, shouldered my gun, and marched off to look at my traps. I could not, however, shake off the feeling of loneliness which had taken hold of me; I had never felt it depressing before on my daily journeys alone, but it disquieted me now. The trees creaked and bent with the strong north wind, the leaf leaves rustled on the aspens, and the snow-wreaths started down from the firs. Not a living creature did I meet in my long day's tramp. I found the tracks of the wary mouse freshly printed, but he fled far away at the sound of my approach. Even the rabbits and the partridges evaded me; for it is a marked feature of the American forest, that although the tracks of animals may be plentiful, they themselves are rarely seen. If the snow did not betray their recent presence, their existence would not be suspected; and the reason of this is plain enough—they are so invariably pursued if seen, so constantly hunted by man and four-footed enemies, that they become cautious and timid in the extreme. Any one accustomed to see the game of the old world playing about in the presence of man, wonders at this invisibility. But the so-called wild animals of civilized countries are called to see mankind, who are not bent on their destruction; they have a seven months' rest from persecution too. But in the wilds of north-west America the approach of man indicates certain pursuit. He is associated only with terror and death, for the hunter spares not—he needs all he can catch, and neglects no opportunity for slaughter. Thus the faintest sound scares the denizens of the woods, which instantly hide themselves.

Returning from my long walk at sunset with a most satisfactory load of furs, I felt a dreary an-

icipation of the coming evening; and think even a change of camp would be a relief. I decided to move it farther north, where more tracks were numerous. I harnessed Tigre accordingly, to the little sleigh, and proceeded to point where there was an ample supply of dead trees. I had but just completed the task of chopping the firewood, when I heard the soft tread of snow-shoes behind me, and Bruce appeared striding through the trees, followed by seven dogs. He had come a day sooner than I expected, having hastened back with the news that caribou and geese had already been seen passing northwards—a sure sign that the thaw was close hand; and it was therefore necessary to return the hut as quickly as possible, for when the sun begins to melt, travelling is almost impossible and we might be detained in the woods for half-starved. One more look at our traps that day, then after skinning our victims we went on to rest, intending to commence our homeward journey about midnight. But we both—Bruce tired out with his forced marches, and I from wakefulness the previous night—overslept of ourselves, and the grey light of dawn had begun to appear before we left the camp. As the regained power the snow began rapidly to soften. We were too late—the thaw had commenced. The hut was more than thirty miles distant, and the difficulty of travelling increased every moment. The melting snow adhered in great cakes to the snow-shoes, and accumulated in masses on the network instead of sitting through the meshes it does when frozen and dry, so that we waded with great labour and embarrassments, each being clogged with a heavy weight. The parment strips with which the shoes are laced cracked, stretched and snapped with the wet.

The dogs could hardly move along, sinking to their bellies at every step, as the frozen or on the track gave way beneath their feet. At last, after an hour or two's toil, our snow-shoes broke down hopelessly, and we were compelled stop and camp, hoping to resume our journey under more favourable circumstances in the evening, when the night frost had hardened the surface sufficiently for it to bear our weight with the aid of snow-shoes, for these were now utterly useless.

The sun shone out warmly, and we stretched ourselves on our backs on the elastic couch branches, and basked in the genial heat in part half-sleep, so still and motionless that a rion crow, taking us for a couple of crows swooped down with a loud hoarse croak, and came close, in his eagerness to dig out our eyes, his wings flapped against our faces; and I rudely awakened, we started up with a shriek which caused the frightened intruder to see mistake and sail hurriedly away over the tops. When the moon arose, two or three hours after sundown, we again harnessed the dogs, continued our harassing march. We were barely not more than twenty miles from the hut but surely never was an equal distance travelled with greater trouble and fatigue. We had away our broken "raquettes," and the erous surface of the snow, weakened by the heat was only strong enough to bear our weight, I unshod feet, in certain places which had sheltered from the full force of the sun. I stepped easily along for a few yards, and the platform would give way, we crashed thro to the ground, a yard beneath, with a jar shock, and plunged up to the thighs in "slush." Through this we ploughed for a few hundred yards, slowly and painfully, panting heavily, the exertion, the dogs toiling after with the sle-

came another firmer portion, and we stalked it for a few strides, to be shaken to the snow again by another break through, or had him back to help our four-footed fellow-sufferers, every now and then lay down, unable to ease their load through the adhesive snow-paste. An hour after hour, we struggled on, stagger-faint, and weary. The night wore on, and we trudged away, until the early dawn found us on the shores of the lake, on the other side of it, some two miles distant, the hut was reached. But by this time we were so completely out and exhausted that we were unable to take another step, although so near the end of our journey, and were fain to light a fire and lie in to rest. We slept heavily until the sun fully up, and then, somewhat revived by the resumed our laborious task, and at last yoked stepped on to the firm, well-beaten pathway led to the hut. Glad smiling faces greeted at the door with an eager welcome, for our passions feared that we might be detained in the forest by the sudden arrival of the thaw, and, in inaction, were anxious to leave winter quarters as soon as possible, since provisions were short, and the time for setting out on our journey across the Rocky Mountains had come on.

talk over our adventures, with breakfast and thing smoke, and then Bruneau and myself, nodding heads and blinking eyes, in the noonday, thankfully retired to bed, and on and on, with hardly a break, until the morning.

### Business and Memories.

#### PROVIDENTIAL PRESERVATION OF LIFE.

There are many instances occurring of the interposition of Divine Providence, for the preservation of the lives of his human creatures. It is interesting and instructive to take note of them, and preserve a record for the benefit of posterity. True that the foolishness, the inconsistency, the wickedness of man are daily occasioning and suffering. Yet how marvelously the sometimes interferes to prevent the destruction of life, brought into imminent peril by the sinfulness or wickedness of man, and the decisive force of the elements, has been manifested in many instances. Two occurrences of modern times I wish to record in this essay.

A few years since, as a Friend was entering the hall of the meeting house at Arch and Fourth streets, he saw two strangers coming in one of which shaking, one of the strangers asked if our doors were open to others than our own members. He was told that we were glad to have company with us. When the meeting closed the friend spoke to them again: when they bowed to him where they could obtain books for their own principles. He told them if they could meet him at that place at half-past that afternoon, he would furnish them with

The Friend could not that day lay his hands on Barclay's Apology, having loaned his but he brought some other books, and sent the rest a copy of the Moral Almanac, contained the account of the preservation of a pious man, who, on a dark night, in passing a point of rock exposed to the sea, suddenly found himself and horse immersed in waters, and being washed away from the shore. Two fishermen were brought there that day by Divine Providence, who had through

the ministry of dreams so aroused them, that they left their warm beds to go to that desolate and dangerous spot to save a faithful servant of the Lord Jesus Christ. They saved the poor drowning man, and the effect of their obedience was also seen in this, that having been enemies before, they were now reconciled. This narrative was read to the strangers, on which one of them said, I believe in this, [the doctrine of Divine Providence interfering for the preservation of man.] He added as a reason for his belief the following remarkable incident in his own experience. He was conductor of the night train from Cleveland to Ashtabula, in the State of Ohio, and as he was necessarily engaged at night, he took his sleep by day. On one occasion when taking his usual repose, he dreamed that the night train at a certain place in the road met with a dreadful accident, and that himself and the engineer were both killed. He seemed to see plainly the bodies of these two rolling down a steep bank, which he knew was at the place where he dreamed the accident occurred. He awoke in terror, and was deeply impressed. The dream was reiterated, and when he arose to go to the station, he took leave of his family, never expecting to see them again. It was so also in parting with those at the station. His mind was fully aroused, and nothing on the way could banish the dream from his mind, or relieve him from the awful feeling which oppressed it. When the train drew near the place at which in his dream the accident occurred, he at first had the rate of its speed reduced from 20 miles an hour to six. Passing on further he stopped it altogether. Getting out and walking on a short distance, he discovered not two hundred yards from the spot at which the train stopped, an engine on the track which, having broken down, had been left there without a light or any other signal to warn approaching trains of their danger.

It was no wonder that this man whose life, and the lives of all the passengers and employees in the train had been without doubt saved by his dreams, should be a believer in the merciful superintendence and providential interposition of our gracious Father in Heaven. A circumstance which occurred also in Ohio within two or three weeks past, and is now going the round of the newspapers, we will add, as setting forth the same mercy and the same providence.

A farmer, said to be a Pennsylvanian, but residing near Mansfield, Ohio, dreamed one night during the recent great freshet, that a fill arose a chasm near by, some hundred feet deep, had given way. So impressed was he in his sleep by the dream that he sprung from his bed and was hastening to save the trains which might be approaching, when his wife caught him and he awoke. After telling her his dream, he returned to his bed, but his mind was too much agitated to allow him to sleep much more that night. In the morning he found the road to all appearance in a sound condition, although much water was surging and raging through the large culvert below. The agitation of the farmer's mind was not set at rest, and after retiring to bed, so great did his concern become, that he arose and went to the spot again. This was on Thursday night. When he reached it he found the huge fill was all washed out, and there was nothing but unsupported ties and the rail above. At this time he heard the night train approaching; clambering over the ruins he ran with his hatchet to meet it, signalling the train to stop. With many cars heavily laden with passengers from a great Union meeting which had been held at Mansfield, it was very difficult to bring the train to rest. When it was effected,

it was but a few feet from the terrible chasm. Had that farmer failed to pay attention to the feelings which impressed him—had neglected to take heed to the providential warning in sleep, and the equally providential uneasiness when awake, hundreds of lives would probably have been lost, for nothing earthly could have saved them, had they taken that tremendous leap.

*Value of Old Rope.*—Among the numerous wrought and often considered worthless materials, which the ingenuity of man has discovered means of re-manufacturing, and rendering of equal value with the original substance, are old tarred ropes, which have long been in use at the coal pits. Our readers will be surprised when we inform them that out of this dirty and apparently unbleachable substance is produced a tissue paper of the most beautiful fabric, even of surface and delicacy of colour, a ream of which with wrappers and strings, weighs two and a half pounds. It is principally used in the potteries for transferring the various patterns to the earthenware, and is found superior to any substance yet known for that purpose. It is so tenacious, that a sheet of it twisted by the hand in the form of a rope, will support upwards of one hundred weight. Truly we live in an age of invention.—*Liverpool Standard.*

*A Gentlemanly Elephant.*—The Paris correspondent of the *Telegraph* quotes this anecdote:—"The elephant is known to be endowed with an exquisite sense of smell. The interior of his trunk is lined with an immense olfactory nerve, by which the animal is able to detect the faintest odours at a distance. The large elephant at the Jardin des Plantes was, as usual, occupied yesterday morning in taking up the pieces of bread and cakes offered to him by the public, when all of a sudden he drew in his trunk and continued to follow along the railings of his enclosure, with evident pleasure, a lady who was carrying in her hand a bouquet of orange flowers. The lady, having remarked the movements of the elephant, held the bouquet within its reach, and the animal immediately seized the flowers, and after having inspired with great avidity the perfume for a few moments, again put forth his trunk and restored the bouquet to the lady. To the elephant the orange flower is the most delicious of all odors, and travellers state that in Japan these animals may frequently be seen burying their trunks in the foliage of these trees to enjoy the perfume."—*Late Paper.*

## THE FRIEND.

TENTH MONTH 13, 1866.

### SUMMARY OF EVENTS.

**FOREIGN.**—At the latest dates the weather in England was not favorable for the crops, and the breadstuffs market was firmer for wheat and corn. It was supposed that about a tenth part of the whole wheat crop had been destroyed by the recent rains.

Woolwich arsenal had been leveled to the ground by an explosion of gun cotton. No lives were lost.

The dechlorinating movements in various parts of England are reported as long toward the possibility of a dissolution of Parliament next spring.

On the 13th, middling uplands cotton were quoted in Liverpool at 15d. Sales of the week 96,000 bales. Consols, 85½. U. S. 5-20's, 70½.

The Directors of the Atlantic Telegraph Company have been authorized by the shareholders to apply to Parliament for power to increase the nominal capital to £5,000,000, including the existing capital. In fifty-five days, ending 9th mo. 21st, the cable earned £46,048.

The London Times suggests that Lord Stanley should now take in hand the claims of the United States for

speaking the deprivations of the Althman, and believes they can be set at rest if the necessary temper and judgment be brought to bear upon them. The *Times* further suggests that England should offer to submit her neutrality laws, together with those of the United States, to a mixed commission; also that the time has come when a concession in the Althman case is no longer a question of reconstruction, and would be accepted by the United States as a spontaneous act of good will.

A Paris correspondent asserts that notwithstanding the pacific countenance assumed, there is in high places as strong, if not stronger irritation against Prussia than at any previous period. The indignation in France is no longer confined to misconstruction, and would be accepted by the United States as a spontaneous act of good will.

Official intelligence from Canada states that another battle had taken place, in which 7,000 Cretons and 17,000 Egyptian troops were engaged. The former commenced the attack and drove back the Egyptians to the shore, where they were received on board the vessels of the Turkish squadron.

The cholera prevails in Hungary to a fearful extent. Its presence is felt in many parts of Europe. It is stated that the past summer has been the worst in Europe since 1766.

As the new year Vera Cruz, to 9th mo. 30th, say that Maximilian takes a strong stand, and is reassured by promises of French money, said to be on the way to the capital. It is rumored that arrangements have been perfected for the continuance of the bulk of the French troops, who will enter the service of Maximilian.

Not having succeeded in their projected prosecution of the treaty upon Paraguay had been determined upon by the allies. At a conference between the allied commanders, it was resolved that the Paraguayans should be attacked simultaneously by the whole of the allied forces, land as well as naval.

A Liverpool dispatch of the 13th, reports the cotton market very active, and sales that day of 30,000 bales, prices had advanced 1/4.

**UNITED STATES—The Trial of Jefferson Davis.**—A correspondence between the President and the Attorney General, relative to the trial of the rebel leader, has taken place. The President speaks of the delays in the carrying out of the trial, and in Virginia, and inquires what further steps should be taken by the Executive with a view to a speedy and impartial trial according to the Constitution. The Attorney General refers to the change in the circuits of the court, made by Congress, and says that he is unable to see that any further delay can be made on the part of the Executive to bring the prisoner to trial. He suggests, however, the issue of an order to the commandant at Fortress Monroe, to surrender Davis to civil custody whenever demanded by the United States, upon process from the Federal courts.

**The Elections.**—On the 9th inst., elections for members of Congress and other officers, were held in the States of Pennsylvania, Ohio, Indiana and Iowa. In Pennsylvania 18 Republicans and 6 Democrats were chosen; in Ohio 16 Republicans and 3 Democrats; in Indiana 8 Republicans and 3 Democrats; in Iowa the entire delegation of 6 members are Republicans. In Pennsylvania 99,879 votes were cast for the Republican Congressmen. In Ohio they have lost one; in the other two States the delegations are unchanged.

**Philadelphia.**—Mortality last week, 471, including 127 of cholera. There were also 18 deaths of cholera morbus. At the election on the 9th inst., a much heavier vote was polled than at any former election. George, the Republican candidate for Governor, received 54,205 votes, and Clymer, the Democratic candidate, 48,817—total vote of the city, 103,022.

**Miscellaneous.**—About one thousand new buildings have been erected in Nebraska City, this summer.

The residue of a large lot of grapes, grown in garden to Joseph E. Davis, the mother of Jefferson Davis, Gen. Howard has ordered that possession of his property be given him, at the expiration of the present lease thereof, and that such portions of the rent of the property as accrued after the date of the pardon, shall be paid to him, amounting to not less than \$20,000. It is estimated that the crop of dried apples, blackberries and other fruit, which will be shipped from North Carolina the present season, will amount to more than 1,000,000 pounds, worth at the north over \$300,000. At High Point Depot, alone, \$75,000 worth of dried blackberries have been already shipped.

The United States Commissioners have examined and reported favorably upon the seventh section of thirty-five miles of the Union Pacific Railroad. The Commissioners represent the road as well built, and furnished with all the appurtenances of a first class road. This great work has made good progress the present year.

Damage was done to the upper portion of a very extensive district of country. In the neighbourhood of Baltimore the floods caused a wide spread destruction of property, many bridges, mills, factories and other buildings being swept away. A number of persons were drowned, including two entire families. Much damage was done to the crops.

A most disastrous fire occurred in Quebec on the night of the 14th inst., by which from 2000 to 2500 houses were consumed, and about 18,000 persons rendered homeless. The destruction of property is estimated at from two-and-a-half to three millions of dollars. The loss to the city of Quebec by property thus lost is \$91,000,000, an increase of \$27,000,000 last year. During 48 hours, ending on the 15th inst., there were 87 cases of cholera reported.

**Boston.**—Mortality last week, 97—55 males and 42 females.

**New York.**—Mortality last week, 429.

**Marine Disaster.**—The mail steamer *Evening Star*, sailed from New York for New Orleans on the 29th ult. She encountered a violent hurricane on the 2d and 3d inst., being then about 180 miles east of Tyber Islands. After weathering the storm for fourteen hours, she foundered on the morning of the 3d with two hundred and seventy-five persons on board, only twenty-four of whom were saved.

**The Freedmen.**—The American Freedmen's Union Commission was recently in session in Baltimore. The report of the general Secretary showed that the Commission has sustained during the past year 760 teachers, and seventy-five schools, and expended over \$1,000,000 dollars in supplies. Its organization extended into nearly every State. Chief Justice Chase is President of the Commission. General Kidoo has issued a circular to the sub-assistant commissioners in Texas, in which he directs them to endeavor to harmonize the freedmen and their employers by appealing to their good sense and feelings of both parties. At Brecken, Capt. Smith has virtually proclaimed martial law. He states that outrages on the freedmen are increasing, and that he is resolved to aid the officers of the Bureau in bringing the guilty to justice. A State Convention of the colored men of North Carolina has been called at Raleigh, especially to promote the cause of the freedmen, and to look after the suffering poor. The State League, by which the Convention was called, say, "While we feel a deep sense of gratitude to those benevolent societies which have done so much for the freedmen, still we are conscious of the fact that we must learn to rely upon ourselves, and the world is looking to us for a demonstration of our capacity to perform the part of useful, intelligent citizens."

**The Markets.**—The following were the quotations on the 15th inst. **New York.**—American gold ranged from 150 to 153, closing at about the former figure. U. S. notes, 64 1/2 cts.; Erie, 4 1/8 cts. \$1.20. White corn, 110 1/2; ditto, 10-41/2; 5 p. cents, 9 3/4. Middling upland cotton, 42 cts. **Philadelphia.**—Superfine flour, \$7.75 a \$8.75; white, \$9 a \$2; family and fancy brands, \$14 a \$16.50. Red wheat, \$2 5/8 a \$1.05; white, \$3 10 a \$3.25. Rye, \$1.30. Yellow corn, \$1.05; 115 a 57 cts. **Cincinnati.** \$7 a \$8. Timothy, \$3.50 a \$3.62. Flaxseed, 40 cts. The market was quiet on the 16th and 17th inst. The arrivals of sheep reached about 12,000 head, extra fat sheep sold at 6 1/2 cts., and common to good at 6 1/4 cts. per lb. gross. Hugs sold at \$13 a \$14.25 the 100 lbs. net. **Cincinnati.**—No. 1 wheat, \$2.10 a \$2.13; No. 2, \$1.70 a \$1.89. No. 1 corn, 64 a 65 cts. No. 2 oats, 34 and 35 cents. **Milwaukee.**—No. 1 white, \$2.11; No. 2, \$1.74. No. 1 corn, 63 cts. No. 1 oats, 38 cts. **Buffalo.**—White wheat, \$3 a \$3.05; spring wheat, \$1.32 a \$2. Western corn, 85 cts. Oats, \$1 a \$1.20. **Chicago.**—Spring wheat, \$2.20 a \$2.40; winter red, \$2.60 a \$2.70. Corn, 75 a 82 cts. Oats, 47 a 50 cts.

A young woman Friend wishes a situation as Teacher of the English Branches. Apply at the Office of "The Friend."

## RECEIPTS.

Received from J. Cope, Pa., \$2, vol. 40; from Bandy, Ala., \$2, vol. 40; from N. Hall, \$3; to 14, vol. 42; J. Elgerton, \$2, vol. 39; J. Thomson, 14, vol. 40; Mary Baily, \$2, to No. 47, vol. 40. J. Hill \$2, to No. 16, vol. 39; J. Bandy, \$2, vol. 40; J. B. \$2, vol. 40, and G. Tatam, \$2, vol. 39; from J. Foster, R. I., \$2, vol. 40; from C. Dawson, Io, per Warrington, \$2, vol. 39; from M. Atwater, Act. N. for L. H. Atwater, H. Fuller, W. Brecken, A. Deuel, Hoigt, J. K. Fuller and E. Fuller, Mich., and Rut Forest, N. Y., \$2 each, vol. 40, for W. Brownell, \$2, 33, for A. Boon, C. W. S., \$2, to No. 27, vol. 41, and D. Hight, \$2, to No. 8, vol. 41; from J. Fawcett, Ag. for E. Page, \$4, vols. 39 and 40, for E. Bonaldi, M. P. Starbuck, and Mattila J. Watson, \$2 each, vol. 40; and for Elizabeth Fawcett, W. Darlington, Pa., and Holloway, O., \$2 each, vol. 40.

Received from Jos. Cone, West Chester, Pa., \$5, a from Jan. W. Fuster, Hopkinton, R. I., \$2, for the Relief of the Freedmen.

An experienced Teacher wishes a situation in a fam school for the winter season. Apply at the Office of "The Friend."

## WESTOWN BOARDING SCHOOL.

Wanted, a Friend qualified to perform the duties Book-keeper and Librarian at the above Institution, begin on the opening of the Winter Session, or as hereafter as practicable.

Application may be made to Robert Thomas, Burlington, N. J. Aaron Sharples, West Chester, Pa. Joseph Scattergood, 413 Spruce Street, Philadelphia. Charles J. Allen, 304 Arch Street, Phila.

## FRIENDS' FREEDMEN'S ASSOCIATION.

A meeting of the contributors and of Friends interested in the welfare of the Freedmen, will be held Arch Street meeting-house, Philadelphia, on Fifth-evening 23th inst., at 7 1/2 o'clock. A full attendance particularly requested.

## WANTED.

A young woman, a Friend, as Teacher for a Girl School, in Benzer St., 11th below Arch. To a person well qualified this is a desirable position.

Apply to either of the committee, J. H. Whittall, 410 Race Street, W. B. Coates, N. W. cor. Spruce and 7th St. T. Wistar Brown, 111 Chestnut Street. Philada., 10th mo. 1st, 1866.

## WESTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the Boy's SECOND MATHEMATICAL SCHOOL, to enter on his duties on the opening of the Winter Session. Apply to Samuel Hillis, Wilmington, Del.

Thomas Evans, 817 Arch St., Phila. Joseph Scattergood, 413 Spruce St., Phila. Charles J. Allen, 304 Arch St., "

MARRIED, on the 10th of Tenth month, 1866, Friends' meeting-house, on Twelfth street, Philadelphia, JOSEPH TROTTER NEWBOLD, of Springfield, Burlington Co., N. J., to RACHEL G. BAKER, of this city, daughter of the late George W. Baker, formerly of New Bedford Massachusetts.

DIED, at the residence of his father, near Columb Burlington Co., N. J., on the 27th of Fourth month 1866, GEORGE W. BAKER, of George L. and Margaret Kasher, in the fourteenth year of his age. This child was of a mild and amiable disposition; from infancy he was remarkable for his love of truth, having never been known to utter a falsehood. His illness was short but attended with much suffering, which he bore with cheerful and expressing gratitude those who visited on him. On one occasion a relative inquired if he was willing to die? he kindly answered "Yes, if my Heavenly Father will be pleased to take me." Though the loss of so promising a child is deeply felt by his relatives and friends, they have the consolation which he is at rest in his Heavenly Father's kingdom.

WM. H. PILE, PRINTER,

## The Completion of the Atlantic Telegraph.

For "The Friend."

(Continued from page 58.)

"The little bay, which is not much above a mile in length, contracts from a breadth of half a mile to a narrow channel, terminated by steep banks of shale, earth, and high cliff furrowed by water-courses; and on the southernmost side is locked in by the projecting ledges of rock forming the northern entrance to the Port Magee channel. It is so guarded from wind and sea, that on one side only it is open to their united action, but as the entrance looks nearly west, the full roll of the Atlantic may break in upon it, when the wind is from that point; and indeed there is not wanting evidence that the wild ocean must tumble in there with frightful violence. Jagged fragments of masts and spars are wedged to the rock immovably by the waves, and the cliffs are gnawed out by the restless teeth of the angry water, into deep caves. But then a seam of that point would run parallel with the line of the cable, and would sweep along with and not thwart its course, so that the strands would not be driven to and fro, and ground out against the bottom. Except for a couple of hundred feet near the shore at the top of this cove, indeed, the bottom is sandy, and the rocks inside the sand were calculated to form a protection to the cable, once deposited, as the greatest part of its use lay through a channel which had been cleared of the boulders with the intention of rolling them back again, at low water, to cover the shore end." The telegraphic cable emerging on the water at the head of this cove, is connected with the wire carried on posts in the ordinary way to the station at Valentia, whence messages are conveyed to Killarney, and placed in telegraphic communication with the world at large.

The operation of landing the end of the shore cable was performed with the help of numerous fishermen's boats, collected from along the shore, which, formed into a kind of pontoon bridge, supported the portion of the heavy cable reaching to the deep water where the William Corry was to the shore. This occasion was one of deep interest; large numbers of the simple minded peasantry of the country were among the assembly that had gathered on the rocky sides of the bay, eagerly watching the movements of the strong fish boats as they passed the cable, almost as if in short lengths as a bar of iron, from boat to boat, until it was landed, and had been drawn

into the trench leading up to the telegraph office, in which it was to be laid. In a few hours the end of the cable was brought up to the telegraph station, tested and the signalling found perfect. The William Corry then slowly proceeded out of the harbor, depositing the cable as she went, until she had cast out the whole of the thirty miles, and buoyed the free end in water 100 fathoms deep. This was immediately telegraphed to the shore, from which information was forwarded to the Great Eastern, who with her attendants then moved round towards Valentia to take their places in the line of march across the sea. The government vessel, the Terrible, and the Albany and the Medway—steam-ships chartered by the company—accompanied the Great Eastern, the latter having on board also several hundred miles of last year's cable, and the new cable to be laid across the mouth of the Gulf of St. Lawrence.

The expedition started finally on the 12th of the Seventh month, and proceeded first to search for the buoy that marked the end of the shore cable. This was discovered by the Medway in the course of a few hours, and the cable was soon hauled up and made fast to the Great Eastern, and the fact announced through it to the earnest watchers in the telegraph station at Valentia. Its end was soon stripped of its many coverings, the wire was exposed and entwined with the wire of the more delicate one on board the great ship, the place of union again carefully surrounded with the successive coats of the insulating material, and wound around with iron wires and bands. Signals were now sent through the whole twenty-four hundred miles of cable on the Great Eastern, and through the shore cable to Valentia, and the signalling being found perfect, the expedition started for sea. From this time its progress was almost uninterrupted; though the weather was somewhat unsettled, and fogs, rain, and squalls were met with: there was, however, no heavy gale encountered, and the Great Eastern kept her steady course, running nearly the same distance from day to day. Almost the only serious difficulty occurred on the night of the 18th, when the cable in one of the tanks became tangled together by several coils rising at once from their right position, involving together about five hundred feet. The night was dark and rainy, and the wind blowing hard, and as the paying out was necessarily stopped during the effort to disentangle it, the danger was great that in a sudden lurch of the ship the cable would part, or become hopelessly caught in the machinery at the stern of the vessel. By careful management, however, these dangers were safely avoided, and after a detention of about two hours the paying out was again resumed without any discoverable injury having been done to the cable.

During the expedition, constant communication was maintained with the station at Valentia, and the English public were thus kept apprised of its daily progress. Intelligence from Europe was likewise transmitted through the cable, which was posted up every day outside of the telegraph office for the information of all on board the ship. The average speed of the vessel was nearly five

miles an hour, and the amount of cable paid out was about five and a half miles in the same time.

On the 23d of Seventh month, the vessels passed over the deepest water in their course—it being here over two and a half miles deep, and were at this point rather more than half way across the ocean. They had also passed, a few hours previously, the neighbourhood in which lay the broken end of the cable of 1865, their route having been parallel to that of last year, but at a distance of about thirty miles to the southward. A little before twelve o'clock on this day, Cyrus W. Field sent a message to Valentia requesting that the latest news from China and India should be forwarded, so that on their arrival at Newfoundland he might be able to transmit it at once to the principal cities of the United States. In just eight minutes after the reply arrived "Your message received and in London by this."

On approaching the coast of Newfoundland, the squadron was obliged to proceed with caution on account of the fog, which at times was so dense as to prevent the officers from seeing much further ahead than the ship's length. The different vessels, however, were able to communicate with each other by means of steam whistles, and blue lights, and thus to keep their proper positions in regard to each other, and to advance in company. At 6 o'clock on the morning of the 27th of 7th month, they were about ten miles from Heart's Content Bay, which was then invisible; as they steamed slowly onwards, however, the fog lifted, and at 8 o'clock disclosed the entrance of the bay, and the line of buoys which had been previously arranged to mark the course towards the point where the cable was to be landed. The little village having learned of the approach of the ships, was also seen to be all astir to give them a hearty welcome. At 9 o'clock, just as the cable had been out in order to make the splice with the shore end on board the Medway, the following message was received from England, containing the concluding words of an editorial in that morning's issue of the *London Times*, "It is a great work of glory to our age and nation, and the men who have achieved it deserve to be honored among the benefactors of their race. Treaty of peace signed between Prussia and Austria." The splice was now made with the shore cable on board the Medway, and in a few hours the task was ended, 1835 miles of cable having been laid in perfect order between the two continents.

From the station house at Trinity Bay, the wires traverse the whole length of the island, 400 miles to Cape Ray, on the south-western side, whence they are carried by a submarine cable across the mouth of the Gulf of St. Lawrence to Cape Breton Island, at Aspy's Bay. Upon this island a land line has also been constructed for a distance of 160 miles, connecting Aspy's Bay with Port Hood on the western side, from which another short length of submarine cable extends to the main land. The construction of some portions of this line, particularly that across the rocky wilderness that constitutes the interior of Newfoundland, was a work of great labour and hardship.

N. B.—It is seen that a millistere and a liter are equal. We would really prefer that *stera*, &c., should rhyme with *player* rather than with *fare*.—*Boston Recorder*.

Selected for "The Friend."

#### Anecdote of Lord Hailes.

The following anecdote was related to John Campbell, of Kingsland, by Dr. Walter Buchanan, minister of the Canongate parish, Edinburgh:—"I was dining," said Buchanan, "some time ago with a literary party at old Abercrombie's, of Tallbodie, the father of Sir Ralph Abercrombie, who fell in Egypt. A gentleman present put a question which puzzled the whole company. It was this: 'Supposing all the New Testaments in the world had been destroyed at the end of the third century, could their contents have been discovered from the writings of the three first centuries?' The question was novel to all, and no one even hazarded an answer to the inquiry. "About two months after this meeting Lord Hailes sent for one of the party, and asked him if he recollected the curious question about the possibility of recovering the contents of the New Testament from the writings of the first three centuries. His friend said he remembered it well, and had often thought of it, without being able to form any opinion or conjecture on the subject.

"'Well,' said Lord Hailes, 'that question quitted accorded with the turn or taste of my antiquarian mind. On returning home, as I knew I had all the writers of those centuries I began immediately to collect them, that I might set to work on the arduous labour as soon as possible.' Pointing to a table covered with papers, he said, 'There have I been busy for these two months, searching for chapters, half chapters, and sentences of the New Testament, and have marked down what I have found, and where I have found it; so that any person may examine, and see to themselves. I have actually discovered the whole New Testament from these writings, except seven or eleven verses (I forget which,) which satisfies me that I could discover them also. Now,' said he, 'here was a way in which God concealed or hid the treasure of [the bible.] that Julian, and other enemies of Christ, who wished to extirpate the gospel from the world, never would have thought of; and though they had, they never could have effected its destruction.' The labour in effecting this feat must have been immense; for the gospels and epistles would not be divided into chapters and verses as they are now."

We are surprised that this labour of Lord Hailes is not more generally known. In the "Handbook of the Bible," by Dr. Angus, who rarely misses a point in literary and theological argument, reference is thus made to the quotations of the New Testament in the Fathers: "In not less than one hundred and eighty ecclesiastical writers (whose works are still extant) are quotations from the New Testament introduced; and so numerous are they, that from the works of those who flourished before the seventh century the whole text of the New Testament, it has been justly said, might have been recovered, even if the originals had since perished. The experiment was tried by Dr. Beutley, and he confirms the statement."

Another feature of this evidence is referred to by Dr. Angus: "The references of classic authors one to another, though sufficient to establish the antiquity of the works quoted from, form a very inadequate provision for correcting the text of each. They are generally in the way of allusion only to some fact or passage. Even when the

references are more pointed, they are generally so loosely made as to be of little critical value. In quotations from the Scriptures the case is entirely different: they are generally made with the utmost care, the very words of the sacred writers being introduced, and forming the subject of lengthened discussion, or of important practical teaching." ("Bible Handbook," ch. 1, § 15.)

Among the methods employed by the Emperor Julian and other persecutors to uphold decaying paganism and crush the Christian religion, one was to compel the Christians to give up their sacred books to be burned. Those who were weak enough to obey these edicts were called by the ignominious denomination of *Traditores*, or traitors, from *tradere* to deliver up. The insertion of the whole text of the Christian canon in the writings of the early ecclesiastical authors was a providential safeguard against external accidents, and affords a remarkable confirmation of the genuineness and authenticity of the New Testament.—*Leisure Hour*.

For "The Friend."

#### EVENING SORROW.

I am mourning to-night for a day that is gone,  
That no future time can recall,  
A prize beyond value, so lately my own,  
But alas, I have squandered it all!

'Tis not that I've idled my time all away,  
I've tried to be diligent still;  
At the work that was needful I've labored to-day  
With a cheerful and earnest good will.

I've been faithful to all that could claim me below,  
But O! to our Father above,  
Cooked up with the weeds, very heavy and slow,  
Has been the sweet current of Love.

When I rose with the lark in the rosy hued morn,  
I forgot the Creator of light;  
When I saw the dew glistening the grass and the corn,  
I forgot who had given me sight.

And all through the day, I've accepted the gifts,  
That round me so plentiful fall,  
But not with a heart that in gratitude lists  
All praise to the Giver of all.

And in my own heart I've not hearkened to hear,  
The voice that would warn me of ill;  
Neglecting the Saviour so graciously near,  
And now, will He bear with me still?

Forgive me, dear Saviour, in sorrow I pray,  
And strengthen my heart with Thy love,  
To love Thee, look to Thee, and walk in the way  
That leads to Thy Presence above!

Selected.

Tell me where thy flock is feeding  
Saviour! Shepherd of my soul!  
I saw wounded, faint, and bleeding,  
Thou alone couldst make me whole.  
Lead me by the living waters,  
Where thy flocks at noon repose;  
On the mountain I am straying  
Helpless in the midst of foes!

Bind me as a seal that's chosen,  
On thine arm and near thy heart;  
When the floods of waters deepen,  
Let thy kindness not depart.  
Whom have I? in earth or heaven,  
There is none compared with thee!  
Flesh and heart and strength are failing,  
Let me find my all in thee!

*The Telegraph and the Fisheries*.—On the north and west coasts of Norway the telegraph lines have of late been greatly extended through very thinly settled regions, and one of the inducements for this extension was the great service which a coast telegraph can render to the fisheries. As the employment of the telegraph for this service seems to be peculiar to Norway, Director Nilsson's account of this branch of the Norwegian

telegraph service is not without general interest. The Norwegian fisheries are carried on along 1,200 geographical miles of coast line, and it is estimated that 40,000 men are employed in the herring fishery and as many in the cod fishery. The herring come upon the coast at regularly recurring seasons; they are taken in large quantities from the middle of January or first of February till the middle of March. The signs of the coming of the herring, the so-called "herring shine" or "herring-glimmer," are visible a short time before the actual arrival of the fish. Vast shoals of herring approach the coast, followed by cetaceae and accompanied by clouds of sea birds. Traveling inspectors of the fisheries send to all fishing ports and stations daily telegraphic reports of the arrival of the fish, their numbers, and of the exact localities where they most abound. Telegraphic stations are temporarily established at any point of the lines at which the desired information is to be had directly and promptly. This advises the fishermen are enabled to hasten from all sides without loss of time straight to the most teeming waters. With the fishermen come also the dealers who buy of them. During the whole herring season the official inspectors announce by daily bulletins at the telegraph stations the amount of the catch, the price of the fish, the changes in the positions of the shoals, and even the colour of the water. A milky colour of the water is so indicative that the spawning is ended; it forbids the departure of the shoals of herring.

It is very obvious that an intelligent use of the telegraph can greatly increase the productivity of the fisheries on sparsely populated coasts, which fish resort at somewhat irregular intervals, or scattered points at which they touch, now at one locality, now at another. The greater part of the Norwegian coast is thinly settled, and when great multitudes of fish invade some particular bay or harbour, the inhabitants of the region are unable to secure the riches which the sea brings to their doors. The telegraph brings vessels at men and casks and salt from far and wide, season to season the booty.

There are several kinds of fish which, like the herring on the Norwegian coasts, appear with good degree of regularity on the coasts of the United States. The alwives and the shad, formerly the salmon, have regular seasons of coming into our rivers from the sea. Would not be a benefit to the fishing communities as whole if all the particulars about the arrival of these fish in their favourite waters, about the quantity, size, and condition, and the prices demanded, were daily announced by telegraph just as all the particulars of the cattle markets are given? Would it not be for the advantage of every fishing village in New England if, during the mackerel season, the whereabouts of the mart fleet, the success of the fishing, the size a temper of the fish and their changes of place should be daily announced by telegraph from stations which could follow the fish and keep constant watch upon their movements? The productivity of the fisheries could undoubtedly be much increased by a well organized system which should give fishermen accurate daily reports, from all the principal fishing grounds near the coast.—*The Nation*.

At meeting my mind rather insensible to go but kept alive in the secret hope and belief, that none ever sought the Lord in vain, though He pleased at times to hide the light of His countenance from His waiting, dependent children. Simplicity, humility and faith is our safety.  
*M. Capper*.

For "The Friend."

## Thoughts for the Times.—No. 47.

In that epistle of tender love and brotherly advice to the churches, dated in 1690, a portion of which was quoted in the last number of this series—Stephen Crisp uses these remarkable words, as full of warning and instruction to us now, as they were to the Friends whom he addressed. "And whereas it may often fall out, that among a great many, some may have a different apprehension of a matter from the rest of their brethren, especially in outward or temporal things, there ought to be a christian liberty maintained for such to express their sense, with freedom of mind, or else they will go away burdened. If they speak their minds freely, and a friendly and christian conference be admitted thereupon, they may be eased, and oftentimes the different apprehension of such an one comes to be wholly removed, and his understanding opened, to see as the rest see. For the danger in society doth not lie so much in this, that some few may have a differing apprehension in some things from the general sense; as it doth in this, namely, when such that so differ, suffer themselves to be led out of the bond of charity, and labour to impose their private sense upon the rest of their brethren, and are offended and angry if it be not received; this is the seed of sedition and strife that hath grown up in too many to their own hurt.

"And, therefore, my dear friends, beware of it, and seek not to drive a matter on in fierceness or anger, nor to take offence into your minds at any time, because what seems clear to you, is not presently received; but let all things in the church be propounded with an awful reverence of Him that is the head and life in it; who hath said, where two or three are met in my name, I will be in the midst of them; and so he is, and may be felt by all who keep in his spirit. *But he that follows his own spirit, sees nothing as he ought to see it.*"

This authority of superior over subordinate meetings, and over the members, which is the corner stone of church order and discipline, is to be maintained in all brotherly love and concordance. For our religious Society is founded upon the pure doctrine of Christ, and built up upon the pattern of the primitive apostolic church. While its members adhere to the original faith, and the discipline is administered in the spirit of love, there neither is nor can be any encroachment on individual rights, nor any valid separation from the brethren. For those differences of opinion respecting the affairs of the Society which often arise, are all comprehended in the wise admonition of Stephen Crisp: "Take heed that ye have a single eye to the Lord; to do the Lord's business in the ledings of his spirit, which is but one, and brings all that are given up to be governed by it, to be of one mind and exit, at least in the general purpose and service of those meetings. Although through the diversity of exercises, and the several degrees of growth among the brethren, every one may not see and understand alike in every matter, at the first propounding of it; yet this makes no breach of the unity nor hinders brotherly kindness, but puts us often upon an exercise, and an inward travelling, to feel the pure peaceable wisdom that is from love among you, and every one's ear is open to it, in whomsoever it speaks; and thereby a sense of it is given to the meeting, in which all that are of a simple and tender mind join and agree."

\* \* \* For my friends, it is not of absolute necessity, for every member of the church should have the same measure of understanding in all things; for then, where were the duty of the

strong bearing with the weak? where were the brothers of low degree? which all tend to preserving unity in the church, notwithstanding the different measures, and different growths of the members thereof. For as the spirits of the prophets are subject to the prophets, so are the spirits of all that are kept in a true subjection to the spirit of life in themselves, kept in the same subjection to the sense of life given by the same spirit in the church. By this means we come to know our Master, even Christ, and have no room for other masters in the matter of our obedience to God."

And if, through unwatchfulness on the part of the members, there should be erroneous judgment in the proceedings of any meetings among such a people, what is the duty of those who discern the error? Clearly, this should make no breach of the unity, nor hinder brotherly kindness. And it should put the Friend who sees more clearly than his fellow members "upon an exercise and an inward travelling, to feel the pure peaceable wisdom that is from above." We may be sure that the earnest prayer and desire of such will have, in the Lord's time, the answer of peace, and that patient and faithful watchfulness will be rewarded.

Against one thing especially should all seek to guard, the influence, namely, of a frame of mind which seeks victory in argument, which prevents us from seeing ourselves in that light which lays bare our real condition and unmask us to ourselves.

Separation and division are no remedies for such differences of opinion. *They begot their kind.* The attempt to form a religious society on the principle of secession, where the fundamentals of christianity are not at stake in the contest, will end in gradual disintegration, until all is reduced to "the dust and powder of individuality."

These truths become still clearer, when we reflect that the proceedings of our meetings for discipline relate either to individuals who have violated the discipline, or to questions of doctrine and order and our relations with other portions of the Society; and that it is in regard to these last, that the differences alluded to, almost always occur. And as these questions regard what may be called the *conscience* of the body, that is, its religious belief and duties, it is clear that individuals must hold themselves subject in these respects to the decisions of the recognized authorities. There is presupposed in all questions of the kind, an agreement among the members in the fundamental principles of the Society—of which these cases are but instances of the manner in which the body sees right to apply them. All this must be understood as applying to societies under the influence of the Holy Spirit; for it is as true of bodies of men as of individuals, that he that follows his own spirit, sees nothing as he ought to see it.

*Irrigation in Australia.*—The project of collecting and storing water upon the large seas, so that it may be had in abundance at all seasons for domestic and agricultural purposes, has long been under discussion in Australia. Lately it has acquired political importance, and the idea now bids fair to be put in practice. Victoria, the wealthiest and most enterprising of the Australian States, has recently determined to spend a million of pounds sterling towards carrying out the project. The rain-fall of Australia, on an average of years, is ample to supply the wants of all the inhabitants, but the contumacious of the country affords little natural storage. If the experiment now in progress proves successful, it may alter the

character of the cultivation throughout the entire country. In Queensland, in the districts below the Darling Downs range, it is thought that artesian wells may be found useful, and it is proposed to sink such wells at once, as an experiment. The supporters of this scheme find encouragement in the experience of the French, who have derived great advantage from wells bored in the desert upon the outskirts of Algeria.—*Nation.*

For "The Friend."

## Photographs.

Since the appearance of the short articles in "The Friend" on the subject of photographs, I have many times felt that a few remarks made in simplicity and defence, and in a spirit very far from argumentative, might be of some use in placing the subject in a fairer light. I have no doubt that the concern experienced by the Friends was truly sincere; but while there is in this, as in many other things, an *undue* liberty, is there not a liberty that is allowable and innocent? And do we not constantly see that the restraint that is in some particular laid upon one, is not felt by another, whom we cannot but admit is as faithfully endeavouring to walk unblameably before God? While so many excellent and exemplary Friends have not felt it wrong for them to have their likenesses taken, is it not well to be cautious and guarded in a too general and indiscriminating condemnation?—remembering the words of Paul—"Let not him that eateth despise him that eateth not, and let not him which eateth not judge him that eateth; for God hath received him." Romans xiv. 3.

Some Friends there doubtless are, perhaps many, who feel it wrong for them, even at the desire of those whom they dearly love, and would wish to gratify, to sit for a photograph. When this is the result of true conviction, they will no doubt receive the reward of peace, and the taint thus laid upon them, may or may not at some future time be lifted. Yet may it not sometimes result from a fixed habit of thought, that prevents a generous appreciation of the views and feelings of others? I think every feeling that is right is attended by humility and charity toward others, not characterized by *setness*. Then again, the feeling of objection to photographs may sometimes be the result of a known objection on the part of dear and valued friends, and a laudable desire not to wound them. This sometimes leads to renouncing them altogether, but I think oftener, to a desire that when taken, those not particularly interested should not see or hear of them. Not but this limitation has sufficient ground of its own, but no doubt it is very often caused by respect for the views of others.

When we think of the infinite variety of characters to which the human countenance is the index, we may well be "lost in wonder, love and awe;" and when we realize how much the countenance of a beloved father, mother, brother, sister, or friend, is to us the representative of the character,—that to which we have looked as the intelligent channel of thought or feeling, which speech sometimes failed to convey,—we may thankfully exclaim with Cowper,

"Blest be the art that can immortalize  
The art that baffles Time's tyrannic chain,  
To quench it."

Many indeed have felt a pure and beneficent influence from the simply traced and faithful likeness of the "loved and lost."

"Thyself removed, thy power to soothe me left."  
And the power not only to soothe, but the deeper and more solemn influence of a pious parent,

Henry M. Field gives the following description of this island, which has suddenly acquired a fresh interest as the American terminus of the Atlantic telegraph.

"The island of Newfoundland holds the same relation to America that Ireland does to Europe. Stretching far out into the Atlantic, it is the vanguard of the western continent, or rather the signal tower from which the New World may speak to the Old.

"Nor is it without other claims to importance, which ought to be recognised. In extent it is equal to England. Is it not surprising that an island large enough for a kingdom, lying off our own coast should be so little known? And yet its reason is obvious. It lies out of the track of European commerce. Our ships, though they skirt the Banks of Newfoundland, pass a few leagues to the south, and get only a distant glimpse of its rocky shores. Even what is seen gives the country rather an ill reputation. It has a rock bound coast, around which hang perpetual fogs and mists, through which great icebergs, broken from the Northern seas, drift slowly down like huge phantoms of the deep, gliding away to be dissolved by the warm breath of the Gulf Stream. \* \* The rocky shores are indented with numerous bays, reaching far up into the land, like the fjords along the coast of Norway; while the large herds of caribou deer, that are seen feeding on the hills, might easily be mistaken for the flocks of reindeer that browse on the pastures, and drink of the mountain torrents of ancient Scandinavia. \* \* The interior of the island is little known. It is uninhabited and almost unexplored. It is a boundless waste of rock and moor, where vast forests stretch out their unbroken solitudes, and the wild bird utters its lonely cry. Bears and wolves roam on the mountains. \* \* As yet almost the whole wealth of the island is drawn from the sea. Its chief trade is its fisheries, and the only places of importance are a few small towns, chiefly on the eastern side, which have grown up around the trading posts. Besides these, the only settlements are the fisherman's huts scattered along the coast. Hence the bishop of the island, when he would make his annual visit to his scattered flock, is obliged to sail around his diocese in his private yacht, since even on horse-back it would not be possible to make his way through the dense forests to the remote parts of the island. Indeed, it was this circumstance that first suggested the idea of cutting across the island a nearer way, not only for the people themselves, but for communication between Europe and America."

(To be continued.)

Selected for "The Friend."

I entered into solemn covenant with God Almighty, that I would answer his requirements, if it were to the laying down of my natural life; but when it was shown me, that I ought to take up the cross in a little thing, I had like to have been disobedient in the way of small things, for although I had gone through so much inward exercise, yet I was afraid of displeasing my superiors; being then a servant to great persons. It was shown me that I should not give flattering titles to man; and I was threatened inwardly that if I would not be obedient to the Lord's requirements, He would take away his good spirit from me again. I was in a strait; afraid of displeasing God, and afraid of displeasing man; till at last, I was charged by the Spirit with honouring man more than God, for in my address to God I used the plain language, but when I spoke to man or woman, I must speak otherwise, or else they would be of-

fended. Some would argue that God Almighty being the Only One, the singular language was proper to Him alone; and man being made up of compound matter, the plural was more proper to him.

Oh! the subtle twistings of proud Lucifer that I have seen, would be too many to insert. Although God Almighty is that only One, yet He is the Being of all beings; for in him we live, and move, and have our being. Let the cover be what it would, I had Scripture on my side, which they called their rule; and I know proud man disinclined to receive that language from an inferior which he gave to the Almighty. So it became a great cross to me, but it was certainly a little thing in the way of the progress of my soul, until I gave up to the Lord's requirements in this little thing.—Elizabeth Webb.

From the "North American and U. S. Gazette."

#### Review of the Weather.

NINTH MONTH, (SEPTEMBER.)

	1865.	1866.
Rain during some portion of the twenty-four hours, . . . . .	12 days.	11 days.

Lowest mean of do. during that entire period, 1840, 60 deg.

#### COMPARISON OF RAIN.

	1865.	1866.
First month (January), . . . . .	3.61 inch.	3.14 inch.
Second month (February), . . . . .	5.83 "	6.61 "
Third month (March), . . . . .	4.71 "	2.15 "
Fourth month (April), . . . . .	2.83 "	2.93 "
Fifth month (May), . . . . .	7.24 "	4.68 "
Sixth month (June), . . . . .	4.75 "	2.96 "
Totals for the first six months of each year, . . . . .	29.84 "	22.47 "
Seventh month (July), . . . . .	3.97 "	2.52 "
Eighth month (August), . . . . .	3.75 "	2.18 "
Ninth month (September), . . . . .	7.96 "	8.70 "
Totals, . . . . .	43.62 "	35.87 "

It may be remembered that for the corresponding month of last year we had an unprecedented record to present, and although the excess of heat this year is about three degrees less, we find it almost three and a half degrees above the average for the past seventy seven years.

It will be seen that the number of deaths continue on the increase, showing an excess for the month (counting five weeks each year), of 1866 over 1855, of four hundred and seventy-nine, (479).

In reference to climate, &c., the following facts are worthy of preservation. They are gleaned from a paper read some time since before one of the sections of the Association for the Advancement of Science and Art, Cooper Institute, New York, by J. Disturion, on the influence of climate. In the course of his remarks he gave the

results of meteorological observations, as far as they could be collected, for the past three hundred years. The oldest record was obtained from the learned men connected with the Bishop's Palace, Quebec. Here records have been preserved of the change of weather, temperature, &c., from the time of Jacques Cartier (1535-36) to the present period.

From these long continued observations, although at times irregular, the following conclusions were arrived at in regard to the temperature of the vicinity of Quebec, 46 degrees 50 minutes north latitude. On carefully comparing the meteorological observations made in the sixteenth and seventeenth centuries with those of the middle of the nineteenth century, it is easily to be understood that the climate of Canada—at least the neighbourhood of Quebec—is about the same as it was three hundred years ago. Then, three or four feet of snow; now, at least as much; the first snow falling the first fortnight of November; navigation on the St. Lawrence, between Quebec and Montreal, interrupted by ice in the last week of November, and opening toward the end of April—five months closed on an average. The apple, cherry and plum trees blossoming the last half of May and beginning of June: this is what we find at both epochs. In this respect nothing appears changed, and the clearings and improvements made until now have had very little influence in the present temperature of Canada.

On comparing the observations relating to Philadelphia, for the past sixty years, it seems that the seasons, embracing the whole year, are somewhat warmer than they were at the time of the early settlement of the country, or since trustworthy records have been kept.

The mean annual temperature of Philadelphia for the last sixty years, at periods of ten years are as follows:

From 1800 to 1809, average	51 deg. 80 min. Fab.
" 1810 to 1819, "	50 deg. 70 min. "
" 1820 to 1829, "	52 deg. 70 min. "
" 1830 to 1839, "	52 deg. 00 min. "
" 1840 to 1849, "	52 deg. 70 min. "
" 1850 to 1859, "	53 deg. 00 min. "

The coldest year was 1816, being a mean of 49 degrees Fahrenheit, and the warmest 1858, being 54 degrees; making a variation of 5 degrees Fahrenheit. Thus the mean annual temperature of Philadelphia may be said to have increased during a period of 66 years about 1 1/2 degrees Fahrenheit. J. M. ELLIS.

Phila., Tenth mo. 3d, 1866.

Benjamin Bishop.

(Continued from page 58.)

"To

"In the love of the gospel and hope of eternal life through Jesus Christ our Lord, do my heart salute thee, greatly desiring to be thy companion according to my measure, in bonds and imprisonments, even unto the death of the cross, that the life of Jesus may be manifest in our mortal flesh. As thou wrote in thine, there wants something more than a will, to visit the churches of Christ to the edifying of the body in love, through the help of the Great Head thereof; yet when our door is open before us we may enter in to see our friends face, 'and take their pledge.' O preciousness of that faith, which worketh by love and comes by Christ! By it the church militant overcomes the world, the flesh, and the devil and blessed is every one that hath an eye to see and an ear to hear, the things that belong to our peace. Blessed are these, whether in tent, or in the field, and blessed shall be the basket and their store: blessed shall they be who

ey come in, and blessed shall they be when they  
out. The Lord, which made heaven and earth,  
bless His little dependent ones everywhere,  
increase them more and more in His love,  
and their children. The Lord has arisen,  
and will arise more and more, by the might of  
His own power; and He will make them that  
to Him face before Him. He will bind up the  
broken hearted, and set the captives free, saying  
to Jerusalem thou shalt be built, and to the  
temple, thy foundation shall be laid; the zeal of  
the Lord will perform this.

"To ———"  
"19th of 3d month, 1853.

"As for myself, I desire to be pressing towards  
the mark for the prize of the high calling of God  
Christ Jesus. I am often ready to faint by the  
y, the hindering things are so many, and my  
enemies so lively, and strong, and un-  
varied, and often exulting, that when I am  
telling on the one hand, they break in on the  
ner; so that not only my earth troubles for fear  
of the Lord, but my heavens shake also. But  
S I do, when I present my spirit before the  
rd, I bring my offences and commissions be-  
fore Him, for I love His judgments, and patiently  
wait all the days of my appointed time when I  
am sinned against Him.

BENJAMIN BISHOP."

"To ———"  
"26th of 4th month, 1853.

"It passes a long time since any communica-  
tion seemed between us; but for every purpose  
of heaven there is a time and season, and as  
a branch cannot put forth a bud until the sap  
eth from the root, no more can we be a saviour  
life into each other's life without the renewed  
cleaving of the Spirit of life in us; yet we love  
each of each other's welfare, and to sympathize  
with each other, as the dispensations of an All-  
wise Providence pass over us. I rejoice and  
sympathize with you according to my measure, in  
your afflictions and consolations, as ye also do  
with me. And you will believe me in saying, it  
is the travail of my soul day and night, for the  
perfect sifting of the day, when the wise  
simple, the rich and the poor, will be each  
other's joy and rejoicing in the Lord.

"The few lines expressive of your unity with  
in the faith, are precious to my soul. Praise  
thanksgiving often arise to the Author of all  
mercy, that there is yet preserved among a  
fellowship in the Spirit."

"To ———"  
"5th month, 1854.

"I unite with you in prayer, that the presence  
be holy Head of the church may go with them  
go, and stay with those that stay; and I wish  
a doubtless will, as we continue in watchful-  
ness unto prayer, keeping our habitations in the  
h as it is in Jesus; for want of which, many  
ones are weak in the faith, and the eyes of  
our understanding becomes darkened, so that  
they cannot see the things that belong to their  
pe; of which, in a letter just read to me, I  
e a painful instance. I have, however, had a  
et-ment just this morning, in which I briefly  
ed to the 'path which no fowl knoweth,' and  
re the glorious Lord will be unto us a place  
ard rivers and streams; where no lion or  
ous beast can ever come; and this is my  
h, that the just Lord is among us as a people,  
He will bring forth His judgments to the  
t, and overturn, overturn, until there is room  
Him to reign, whose right it is. Thy report  
y dear father and mother is very pleasing.

"Your sweet is the Scripture which speaketh to

this import, 'The Lord shall come down upon  
them that fear Him, as the clear shining after-  
rain.' So let us wait upon the Lord, and be of  
good courage, for He strengtheneth the hearts of  
all those that trust in Him. I conclude with  
thanksgiving and praise unto Him, who is able to  
do far more abundantly for us above all we can  
ask or think; in whose love and fear, farewell.

"Your sincere friend,

BENJAMIN BISHOP."

"I find it is the hardest thing when I am in  
God to abide in Him. When I sensibly feel His  
presence, then I can say to my soul, 'O satisfied  
with favour, and full of the blessings of the Lord!'  
But when He goeth on one of His journeys, and  
commandeth me to watch and keep the house,  
then the enemy takes advantage of my weakness.  
I think G. D. said, 'Many who have begun well  
suffer loss; through mistaking desertion for death,  
immediately we begin to doubt of that which we  
formerly have tasted and handled of the precious  
Word of Life, and are almost ready to cast away  
our confidence.'"

"From ———, alluding to a visit to Benjamin  
Bishop, during his illness.

"23d of 11th month, 1854.

"I am quite unequal to convey, in this way,  
an idea of the precious opportunity, of which I  
have been mercifully favoured to partake this  
morning, at the bedside of our dear invalid and  
truly happy friend, Benjamin Bishop. When  
E. P. told him I was there, he said, 'I am very  
glad; now my dear friends, let us sit in solemn  
silence.' He said, after a sweet pause, 'I feel as  
if I could not depart in peace without telling you  
of the precious love I feel for all my friends,  
those in our religious Society, and those out of it,  
who are looking to Christ. O the love of God is  
inconceivable. May you give up body, soul, and  
spirit, into His hands. While the fleshly lusts  
remain, there will be trouble, but in the meekness  
and gentleness of the Lamb, there is peace. Our  
Society has been more favoured than any other in  
the world, far more; therefore more will be re-  
quired of it. I never before so fully realized the  
sweetness of such a state. I can say, No pain of  
body.' To which I added, 'and I think, none of  
mind.' 'I can say so too, but I have nothing to  
spare, not a moment to spare.' After another  
pause, he took off his cap, and seemed engaged  
in solemn prayer and praises. I could not dis-  
tinguish all he said, but I clearly heard, 'Thou  
hast taught me to pray, that Thy holy will may  
be done by me, in me, and through me.' Soon  
after, 'Expressive silence, muse His praise.' I  
have not words to do it.' On my bidding him  
farewell, he said with earnestness, 'My dear friend  
I am tiring well; go, and may the Lord go with  
thee.' 'I thank thee, O Lord, that thou dost  
not take me, until that which was to be done in  
me is perfected.'"

#### Our New Weights and Measures.

The laws of the United States have given us a  
new set of measures which are now used in com-  
mon with France, all the rest of America except  
Canada, and more than half the nations of Europe.  
It is as yet optional with us, but the intention is  
within a few years to make it obligatory. Roughly  
stated, the measures are simply a long yard, the  
meter, with its thousandths; a quart larger than  
the wine quart, the liter; a heavy double-pound,  
the kilogram; a large square yard, the deciare;  
and a large cubic yard, the stère. All t. e. are  
subdivided and multiplied, just as our dollar is  
from eagles down to mills, but not half the sub-

divisions will be used. The machinist will work  
by millimeters, thousandths of a meter; the  
traveler will estimate his progress by kilometers,  
large half miles. Coal will be sold, as lumber  
now is, by the thousand—a little less than the  
"long ton". The chemist and assayer have long  
weight by the milligram, of which sixty seven  
make one grain. Fields will be estimated by the  
hectare, a scant half acre. Liquid medicines will  
be dosed out by the centiliter, one of which,  
nearly three a teaspoonful, we recommend for an  
ordinary dose of brandy. Things now measured  
by the bushel will be weighed. Measures of time,  
angles, and temperature, will be left as they are.  
Now for more exact statements. The new unit,  
the meter, is, as near as could be ascertained in  
the last century, a ten millionth part of the dis-  
tance from the equator to the pole. The liter is  
a cube of the tenth part of a meter. The kil-gram  
is the weight of a liter of pure water at its great-  
est density, 39 degs. The divisions above unity  
are expressed by Greek numerals: deca, ten; hec-  
to, hundred; kilo, thousand; myri, ten thou-  
sand. The subdivisions of unity are expressed  
by Latin numerals: deci, tenth; centi, hundredth;  
milli, thousandth. Here is the whole system.  
Below we give the full set of names, putting in  
small capitals those that are likely to be used; as,  
"eagle, DOLLAR, dime, CENT, mill;" would show  
that we reckon by dollars and cents only. As  
even the United States foot differs slightly from  
the English, we copy the most careful estimate  
we know of the American values of the new mea-  
sures from Holton's New Granada. They were  
calculated expressly for that work with the utmost  
exactitude under the direction of Prof. Guyot.

Myriameter, 6,214 miles.

KILOMETER, 0,621 miles.

Hectometer, 19,872 rods.

Decimeter, 10,936 feet.

METER, 3,28099 feet.

Decimeter, 2,937 inches.

Centimeter, 0,394 inches.

MILLIMETER, 0,039 inches.

MYRIARE, 3,861 of square mile.

Kilare, 24,711 acres.

HECTARE, 2,47 acres.

Decare, 39,538 square rods.

Are, 11,96027 square yards.

DECIARE, 10,7642406 square feet.

Centiare, 1,076 square feet.

Milliare, 1,5498 square inches.

Myriastere, 39,241 cubic yards.

Kilastere, 3924.1 cubic yards.

Hectostere, 392.41 cubic yards.

Decastere, 2,76 c-rds.

STERE, 35,317 cubic feet.

Decistere, 3,532 cubic feet.

Centistere, 610,278 cubic inches.

Millistere, 61,028 cubic inches.

Myrialiter, 2641.78 wine gallons.

Kiloliter, 264.178 "

Hectoliter, 26.418 "

Decoliter, 2.642 "

LITER, 61,028 inches, 1,05672 quarts.

Deciliter, 0,85464 gills.

Centiliter, 0,855 gills.

Milliliter, 0,085 gills.

Myriogram, 22,617 lbs. av.

Kilogram, 2,305 lbs.

Hecogram, 3,528 oz. av.

Decigram, 154,332 grains.

Gram, 15,43316 grains.

Decigram, 1,543 grains.

Centigram, 1543 grains.

MILLIGRAM, 0,154 grains.

spared till the maturing years of the child could in some degree measure it, comes back with renewed freshness, while contemplating what seems a little tangible hold on the blest treasures of affection and memory.

There is indeed no privilege that may not by perversion, become a snare. The closest external guarding cannot bar out pride and vanity from the heart. Mournful indeed is it that they lurk so near the holiest places; strange would it be if they did not by their approaches this wonderful combination of discovery and invention. But let every one see to him self that he "use this liberty as not abusing it." It is in the abuse of good gifts, given as "richly to enjoy," that the snare lies. And should any one find anything in his heart at all approaching to idolatry, let him at once "flee this thing," for to him it is sin. Or if from any reason, or indeed without any reason, he finds a check upon his spirit respecting it, how important it is that this should be heeded and not stifled. "Let every one be fully persuaded in his own mind." We cannot judge one for another, and surely we have the highest command that we must not. "See thou copy no man," said William Penn, "save in the matter of faithfulness."

That there is occasion for wise and tender care respecting photographs, especially among young people, may be very true. But there is danger of a good influence being lost through a want of wisdom and tenderness, and I may add, of tact. Should not motives and principles be the object of care, and a benevolent sympathy win the way for a word in season? Young persons quickly detect the difference between a concern that has an intelligible ground in pure principle, and that which merely asserts the wrong of anything. The garden needs culture and enriching, as well as fencing and pruning. And with regard to this, as an external, which, like eating and drinking, may be evil or may not, let us remember that "the kingdom of God is not meat and drink; but righteousness, and peace, and joy in the Holy Ghost. For he that in these things serveth Christ, is acceptable to God, and approved of men."

For "The Friend."

### Musings and Memorials.

#### THE SAVIOUR TAKES CARE OF HIS LAMBS.

The love and tender mercy of our Lord and Saviour Jesus Christ, is often marvellously displayed towards the workmanship of his holy hands, and more particularly so toward those young in life who have learned to love and serve him. Some years ago I read an anecdote of a little girl, who had been well instructed in the school of Christ, and felt willing to part with her earthly friends, and to go to the Saviour, which was far better. When the time of her departure seemed drawing near, she expressed a willingness to die, but added, "I fear to go down into the dark valley all alone." To some words of consolation offered her she replied, "I am a poor, weak, timid creature, and I dread the last struggle with the king of terrors." One present told her to trust in the Saviour. This seemed to reach her state, and with a renewed feeling of loving confidence she with a sweet smile exclaimed, "I will trust Him." The dear Saviour was very merciful to her, for in a few minutes after saying those words, she appeared to sink into a sweet sleep, and without a bodily struggle, which could be perceived, was quietly gathered to glory.

I was acquainted, many years ago, with a boy of a feeble mind and infirm body, who in his mental and physical weakness clung with tena-

cious affection to his mother for support and comfort. He was the son of pious parents, who had, as the Lord opened the way for it, instructed him in the knowledge of the Truth, and the dear Saviour had condescended to his weak intellect, so that the words of wisdom fell not into barren ground. He was a great sufferer, and through strengthening grace, was enabled to bear his physical anguish with exemplary patience. Yet in the weakness of his mental constitution, he was fearful to be left alone. Disease wore away his strength, and the boy who could not bear to be parted from his mother, came to his dying day. But the merciful condescension of his dear Saviour was manifested towards him, in that he knew not that he was about leaving her. He felt no additional pain, only the things around his bed seemed strangely to change. But his mother was near, and so in quiet he gently breathed his last, and was gathered by the Blessed Saviour without a pang or struggle. There was an additional weakness, a sinking of the pulse, until its motion ceased, and then all pain and fear was over, and the feeble-minded one found the Saviour's arms of strength around him, and needed no earthly one to guide and guard. In a sweet assurance of the extension of the gathering arm of mercy towards this weak child, his christian parents rejoiced even in tribulation. In respect to him the following lines were written:

"He had a weak and tender one,  
Unfitted for the storms of life;  
With him the work of death begun,  
And he was safely housed from strife.  
A timid child, and wont to cling,  
For safety to his mother's side,—  
He needed her protecting wing,—  
He needed her to cheer and guide.  
Of feeble mind,—yet firm to bear  
In patient grief,—as day by day,  
Strong against 'twas his to abate,  
'Till all life's vigor wore away.  
He could suppress each pain-stirred groan  
Yet feared he to be left alone  
He would have viewed with thought of dread  
Haven's open gates before him spread,—  
Since in that holy baptism place,  
Maternal care he bore to miss,  
And not a dear familiar face,  
Would welcome to its bowers of bliss.  
But heavenly love was roused his bed  
To soothe all fears that might annoy,  
And Death laid off all night of dread,  
Ere he was toucht the timid boy.  
He knew not 'twas his time to die,  
Without a groan, without a sigh,—  
He felt his crippled form, to spring,  
A babe of grace on cherub wing;  
To feel adoring praises move,  
And amid the white raiment named host,—  
And in the flow of heavenly love,  
To find all fears and weakness lost."

To some of his dear children the Blessed Saviour gives such a sweet confiding faith, as to enable them to meet death without terror. Of one little boy of eight years of age the following interesting incident is narrated. He was taken suddenly very ill, and after a few days the physician told his parents that he could not survive the attack. His affectionate father thought it right that his little boy should be aware of his situation, and therefore told him what his doctor thought. After doing so, he asked the little sufferer if he was afraid to die. The child received the intelligence with much calmness, but instead of replying to the query, he requested his father to read to him out of the Bible what the dear Saviour had said about little children. The father read to him the passage "suffer little children to come unto me, and forbid them not." When the father had finished, the grace-supported child looked up at him and said, "No! I am not afraid

to die. When I die, Jesus will take care of me. No! I am not afraid to die."

*American and British Incomes.*—The *London Spectator*, in an article upon the American Income returns, states that A. T. Stewart's return of over four millions of dollars, is probably the largest annual business income in the world. It also states that if the Rothschilds be excepted whose wealth is more that of a family than of individuals, no unowned person has an income approaching Stewart's.

Referring to British incomes, the *Spectator* prints some statistics which show that either the wealth of England has been greatly exaggerated or the wealthy classes do not make correct returns. The publication of the names of income tax payers in England is not permitted. Thus in the English returns, 332,431 persons pay income tax and the average income of each is only \$1595 00. There are but 107 persons who return over \$250,000 a year; 1283 between \$25,000 and \$250,000; 627 between \$20,000 and \$25,000; 1438 between \$15,000 and \$20,000; 2204 between \$10,000 and \$15,000, and 7354 between \$5,000 and \$10,000.

For "The Friend."

### "Fells of Swarthmore Hall."

One of the magistrates of Appley, who has united with some of the clergy to procure the conviction of James Naylor and Francis Howgill in the year 1652, when afterwards reflecting on what those men had said in their defence, could not divest his mind of the apprehension that he had assisted in prosecuting two servants of the Lord, who were made to suffer for their christian faithfulness. Again and again through the year this thought haunted his conscience and disturbed his peace. In this state of mind he visited Judge Fell's family. What he saw there among those who had adopted the principles held by the condemned, only tended to deepen the conviction that they were right and he wrong. His religious views had heretofore been of that Calvinistic phase which dwells on justification by faith, dis severed from the Gospel doctrine, which also requires a continual progress in sanctification of heart and life, through the aid of the Holy Spirit. He held that doctrine of salvation by faith—a many hold it in the present day—in naked isolation.

Before that anxious inquirer had left Swarthmore Hall, George Fox had an interview with him, which is thus noticed in his journal.

"Much about this time it was that Anthony Pearson was convinced, who had been an opposer of Friends. He came over to Swarthmore, and I being at Colonel West's, they sent for me. Colonel West said, 'Go, George, for it may be of great service to the man.' So I went, and the Lord's power reached him."

Yet it was a difficult work that was before him after his spiritual eyes had been opened, to see his mind divested of the evils that had resulted from so long relying on a faith that had no purified his heart and life—a faith that had no proved its vitality. He was a lawyer, and accustomed professionally to judge right or wrong by legal definitions, rather than by the higher and holier injunctions of the Gospel.

Anthony Pearson about a year afterwards writing of Judge Fell's family, (consisting of his wife Margaret and eight children, viz: Margaret Jun., aged about 20, Henry the only son, about 16, and his companion William Coton, 17, and daughters Bridget, Isabel, Sarah, Mary, Susanna and Rachel, then a babe,) to his friend, says: "I

have long professed to serve and worship the true God, and, as I thought, above many attained to a high pitch in religion; but now, alas! I find my work will not abide the fire. My notions were swelling vanities, without power or life. What it was to love enemies, to bless them that curse, to render good for evil, to use the world as using it not, to lay down life for the brethren, I never understood; what purity and perfection meant, I never tasted. All my religion was but from the hearing of the ear, the believing and talking of a God and Christ in heaven, or in a place at a distance I knew not where. Oh! how gracious was the Lord to me in carrying me to Judge Fell's—a family walking in the fear of the Lord, conversing daily with him, crucified to the world, and living only to God. I was so confounded (on contemplating it), that all my knowledge and wisdom became as folly; my mouth was stopped, my conscience convinced, the secrets of my heart were made manifest, and the Lord was discovered to be near, whom I ignorantly worshipped. I could have talked of Christ, of the saints, and the hope of glory, but it was all (experimentally) a riddle to me.

"Truly, dear friend, I must tell thee, I have now lost all my religion, and am in such distress I have no hope nor foundation left. My justification and assurance have forsaken me, and I am even like a poor shattered vessel, tossed to and fro, without a pilot or rudder—as blind, dead and helpless as thou canst imagine. I never felt corruption so strong, and temptation so prevailing as now. I have a proud, hard, flinty heart, that cannot be sensible of my misery. When I deeply consider how much time I have wasted, and how unprofitably I have lived, my spirit feels a sudden 'ere; then I am still flying to my old refuge, and here my thoughts are diverted. What it means to wait upon God I cannot apprehend. The confusion in my own spirit, together with the continual temptations from without, are so great, I cannot understand or perceive the small, still voice of the Lord.

"What thou told me of George Fox I found true. When thou seest him or James Nayler, they both know my condition better than myself. Love them, (if neither of them be drawn this way,) to help me with their counsel by letter, they are full of pity and compassion, and though they are my enemy, they are my friends; and so Francis Howgill, from whom I received a letter full of tenderness and wholesome advice. Oh! how welcome would the faces of any of them be to me! Truly I think I could scorn the world, to be fellowship with them. But I find my heart full of deceit, and I exceedingly fear to be deceived, (as I have been,) and to be seduced into a form without power; into a profession before I possess the Truth; which would but multiply my misery, and deprive me both of God and the world. Dear friend, it will much refresh me to receive any lines from thee. Be it thou faithful. Thou may perceive from my Ashdod language what countryman I am—even of the lowland that lives in darkness.

"I am afraid lest the orders we made at Appleby use some to suffer, who speak from the mouth of the Lord; I heartily wish they were suppressed recalled.

"I have been at Judge Fell's, and have been formed from that precious soul, his consort, in measure what these things mean, which I counted the overflowings of giddy brains, a heart, pity and pray for me; and let all obligations of former friendship be discharged in all wishes to the soul of thy old family friend,

that he may partake with them, of your heavenly possessions.

A. PEARSON."

Rainshaw, near West Auckland,  
May 9th, 1853.

*An Incident related by Thomas Shillitoe, 1828.*  
—Four men were called to be witnesses in a trial before the court, and were required to take the oath; all were dressed alike fashionably. On being directed to put their hands upon the book, all were sworn but one, and they departed leaving the one standing; which the judge observing, he addressed the individual in the nearly following language. "Do you affirm?" He answered "yes." "Are you a Quaker?" He answered "yes." "Do you belong to that church or Society?" He said "yes." "After a little pause the judge replied, "The time had been, when the members of that Society were known by their peculiar dress and appearance; but it is not so now; you could not be known by your dress, you are like a ship of the sea, or privateer sailing under false colours, that it may not be known."

Al! how many are sailing under false colours in the present day, ashamed to be known as the cross-bearing followers of the meek and lowly Jesus. 1854.

## THE FRIEND.

TENTH MONTH 27, 1856.

### OHIO YEARLY MEETING.

This meeting convened at Mount Pleasant on the 8th instant; the meeting for Ministers and Elders having met on the 6th. There were two ministers and their companions present with minutes from meetings within Philadelphia Yearly Meeting.

Although the number of members who have removed into Iowa is estimated at five hundred—counting men, women and children—who, living at the distance of nearly a thousand miles, could send but few to meet with their brethren and sisters, yet the meeting was thought to be quite as large as any one held by them since the separation in 1854. There was a considerable number of young people of both sexes in attendance, who, by consistent appearance and serious deportment, gave evidence of their heartfelt interest in the good cause, for the promotion of which they are thus annually called together.

Cut off as this Yearly Meeting of Friends is, from all official intercourse with other co-ordinate bodies, except Philadelphia, the business claiming its attention principally relates to its own members. This was conducted with much harmony, and a good degree of that weight and solemnity which become a meeting transacting the affairs of the Church, and seeking the preservation and edification of its members.

A proposition came up from Pennsville Quarterly Meeting to accede to the request of the three Monthly Meetings which have been established for some time in Iowa, to constitute a Quarterly Meeting; but as two of those meetings are constituents of Stillwater Quarterly Meeting, which had not felt prepared to bring the proposal to the Yearly Meeting, the consideration of the subject was dismissed for the present.

The meeting got through with its business on Fifth-day the 11th instant, and separated, we believe under a thankful sense of the renewed extension of Divine regard, and the prevalence of Christian love among the members.

When received, we will republish extracts from the printed minutes.

We have another article on "Photographs" in our columns of to day. The subject is one that admits of much being said on both sides, but, at last, we believe it must be left to be decided by the convictions of Truth on the minds of individuals.

There is one thing, however, connected with it, in which we should suppose every true Friend could unite; which is the inpropriety of photograph albums and pictures being kept on the tables in Friends' parlours, or for general exhibition. This, together with the time, money and attention often lavished on the creations of this art, must, we think, give pain to those who are desirous to see the members of our religious Society more thoroughly redeemed from conformity with the world.

### SUMMARY OF EVENTS.

FOREIGN.—A London dispatch of the 20th says, there is no news of general importance to-day worth telegraphing. Consols, 89½. U. S. 5½. Middling uplands cotton, 15½d. The reform agitation is progressing in England. The demonstration at Leeds was most imposing in numbers and organization. It was attended by 120,000 persons, speeches were made by John Bright and others, and resolutions passed. The cholera continued in London and some other parts of England, but did not prevail extensively. The number of deaths in London from that disease during a period of seven weeks, was 3091, the number for the week ending 9th mo. 15th, was 182. The ratified treaty between Italy and Austria has been sent to Vienna with 35,000,000 of florins in treasury bonds, in payment of the indemnity. The Austrian forces were evacuating the fortresses held by them in Venetia, and the Italians were taking possession. An affray took place at Verona between some Austrian troops and the inhabitants, but order was soon restored. The Austrian Emperor will renounce the title of king of Lombardy and Venetia.

The law of incorporation of Frankfurt with Prussia, has been promulgated. The Prussian flag was raised, and large numbers of men assembled. The inhabitants remained quiet. Similar royal orders, relating to possession of Nassau and Hesse-Cassel were solemnly promulgated at Cassel and Wiesbaden. The patent extending Hanover to Prussia was promulgated in Hanover on the 6th inst. The ceremony was accompanied by salutes of artillery and bell ringing. The patent declares the annexation to be the result of the "righteous war" in which Prussia was engaged to vindicate its rights and Prussian authority, and promises perpetual obedience to the monarchs. The annexation is declared to be necessary for the reorganization of Germany. The ex-king of Hanover having protested against the annexation, his former subjects from their allegiance. The citizens of Frankfurt also protest against the annexation.

The weather in England was still unfavourable for the crops. Flour had advanced 1s. per barrel, and wheat 3d. per 100 lbs.

Advices by the overland Bombay mail give sad accounts of the famine. The deaths from starvation in various provinces were numerous. The Board of Revenue had ceased to publish the number of reported deaths. The famine had approached very near to Calcutta. It is said that it will be impossible to relieve more than a very small part of the suffering around the city for the next two months. Nine hundred dead bodies were picked up in the streets of Bal-me in one morning.

A terrible hurricane commenced in the Bahamas on the 30th ult. and lasted two days. Almost half the town of Nassau was destroyed. The storm, many vessels were sunk or driven ashore. The hurricane is said to be the most violent which has been experienced in that quarter since 1813.

Advices from the seat of war in Paraguay, report severe fighting, before a Paraguayan fortress, on the 1st of 9th month, and the following day. The allied forces, after a battle in which they lost 1200 men, took some of the Paraguayan intrenchments.

It is stated that the revolution in Candia is losing its serious character, and that the leaders of the insurgents had offered to enter into negotiations for submission on the place that the conferences on the subject should be held. The presence of the representatives of France, England and Prussia, which condition had been accepted.

Dispatches of the 22d say, that the election in Venetia had resulted in nearly an unanimous vote for union with Italy.

The Prusso-Saxon treaty of peace was finally signed on the 24th.

The Liverpool markets were recently unchanged. The Spanish government has announced its intention to give to the territorial governor of the Pope after the French forces leave Rome.

**UNITED STATES—Pennsylvania.**—The total vote in this State, at the late election for Governor, numbered 596,063. The majority for Geary, the Republican candidate, was 17,853.

**Philadelphia.**—Mortality last week, 377. Of cholera, 67.

**The South.**—The Agricultural Bureau at Washington estimates the cotton crop of the South, this year, at 1,500,000 bales. The sugar crop of Louisiana is estimated at 60,000 lbsds. The Wilmington (N. C.) market is, however, not so hopeful of the manufacturing interests of the south. It is stated that there is at this time in process of erection in the State of Georgia, seventy-two mills for the manufacture of cotton and woollen goods, some of them for calicoes. The belief is expressed that cotton and woolen mills will be multiplied from year to year until the south will finally be able to work up her entire crop of cotton.

**The Freedmen.**—The United States Secretary of State recently issued a circular to the Governors of the Southern States, advising them of a fraudulent scheme on foot to induce freedmen and their families to emigrate to Peru. Entitled "The Freedmen of Peru," this communication stating that a resident of Lima had been dep. red for the United States with the object of contracting for 2000 colored families, who, under the delusive promises of higher wages, it was expected would be induced to leave their native land. The means to prevent the negroes from being imposed upon, thereby being reasons to believe their treatment in Peru would be no better than that of the Chinese Coolies.

A freedman in Mobile, Alabama, last week deposited in the Freedmen's Bank \$540, in gold, which he had been accumulating for fifteen years. Another freedman of the same name had deposited the sum of \$7000. There are at present in Tennessee, 81 schools for freedmen, with an average attendance of 8260 pupils. The hospital for freed people, at Memphis, is now conducted by the civil authorities at a cost to the city of over \$4000 per month. Gen. Sheridan gives but a discouraging account of the situation of the freedmen in Louisiana. He says that many of them who engaged to work for a share of the crop, will be left not only destitute of the means of support during the coming winter, but will be in debt to the owners of the lands for supplies advanced to them in the summer. Complaints are frequent that the freedmen are being deceived in the date of their contracts, the commencement of the year until the crop was ready to harvest, are being discharged and driven away, ostensibly on the ground of having been insolvent. There are frequent reports of cruelty to the freedmen, especially in the north-western part of the State.

**Mississippi.**—The returns of the all but three counties in Ohio, and estimates of those counties, give a Republican majority of 43,311. Guilford, Hendricks county, Indiana, gave its entire vote (621) for the Republican ticket at the late election. The number of schools in New York city is 260, with an average attendance of 92,700 pupils. The number of teachers is 4222 males and 2146 females. Professor A. Wood and others lately ascended Mount Hood, in Oregon. His report establishes the fact that Mount Hood is a volcano, and that it is the highest mountain in the United States, being 17,600 feet. An official report shows that the French crops this year fall fully one-third below the normal average. It is stated that the United States insurance companies escaped heavy losses by the Quebec fire on account of the financial policy of the Canadians, who required each foreign insurance company to deposit \$50,000 in Canadian securities. Most of the American companies refused to do this, and hence their losses were small.

The number of deaths in New York City last week was 475. In Boston there were 78 deaths during the week. The vote of Ohio has nearly doubled since 1840. It was then 275,000, and now upwards of 500,000.

**Baltimore.**—Party spirit runs high in this city, and the Governor has just issued a circular to the Governor of the State to investigate certain charges made against the Police Commissioners. They deny the right of the Governor to do so, but he has insisted upon it, and on the 22d commenced taking testimony in the case at Annapolis. These movements are understood to have direct reference to the election of the Governor, to which the Governor, it is asserted, aims at the success of the administration or Democratic party.

**The Markets, &c.**—The following were the quotations on the 22d inst. New York—American gold 146. U. S. six per cents, 1881, 113½; do, 5-20, 106½; 1½4%; do, 1865, 119½; ditto, 10-40, 5 per cents, 99½. Super-fine State flour, \$9.15 a \$11. Shipping Oil, \$11.70 a \$12.85. Baltimore flour, common to fair extra, \$12.25 a \$13.90; trade and family do. \$14 a \$16.50. Amber State wheat, \$3.03. Barley, \$1.20 a \$1.35. Western mixed corn, \$1.07 a \$1.08; white, \$1.10. Cuba sugar, 11 a 13 cts.; Porto Rico, 13 cts.; band refined, 16 cts. Middling upland cotton, 29 a 40 cts. The balance in the New York Sub-treasury on the 22d inst. was \$100,487,505. Philadelphia—Uplands cotton, 40 a 42 cts. Extra family flour, \$12.50 a \$13.50; higher brands from \$14.75 to \$16. Red wheat, fair to choice, \$3 a \$3.15; white, \$3.20. Rye, \$2.30 a \$2.37. Yellow corn, \$1.15; mixed western, \$1.12. New southern oats, 60 cts. Cloverseed, \$7 a \$8. Timothy, \$3.50 a \$3.62. Flaxseed, \$3.20 a \$3.25. The arrivals and sales of beef cattle reached about 1800 head. Prices nearly unchanged, extra sold at 18 a 16½ cts., a few choice at 17 cts.; but to good, 14 a 15½ cts., and common, 11 a 13 cts. per lb. Sheep were dull, 20,000 arrived and partly sold at 6 a 6½ cts. per lb. gross. Hogs were lower, sales at \$12 a \$13.50 the 100 lbs. net, and a few extra at \$14.50. Baltimore—Red wheat, \$3.10 a \$3.15. White corn, \$1.25; yellow, \$1.10. St. Louis—Prime fall wheat, \$2.45 a \$2.75; choice, do. \$2.80. Chicago—No. 1 spring wheat, \$2.17 a \$2.19; No. 2, do. \$1.85 a \$1.95. No. 1 corn, 74 cts.

#### WESTTOWN BOARDING SCHOOL.

Wanted, a Friend qualified to perform the duties of Book-keeper and Librarian at the above Institution, to begin on the opening of the Winter Session, or as early thereafter as practicable.

Application may be made to  
J. Langens, Burlington, N. J.  
Aaron Sharples, West Chester, Pa.  
Joseph Scatt-rgood, 413 Spruce Street, Phila.  
Charles J. Allen, 304 Arcu Street, Phila.

A young woman Friend wishes a situation as Teacher of the English Branches. Apply at the Office of "The Friend."

#### WESTTOWN BOARDING SCHOOL.

The Winter Session of the School will commence on Second-day the 5th of Eleventh month.

Pupils who have been regularly entered and who go by the cars from Philadelphia, can obtain tickets at the depot of the West Chester and Philadelphia Railroad, corner of Thirty-first and Market streets, by giving their names to the Ticket agent there, who is furnished with a list of the pupils for that purpose. In such case the passage, including the stage fare from the Railroad Station to the boarding school, to be paid for by the other incidental charges at the close of the term. Conveyances will be at the FERRY ROAD STATION on Second and Third-days, the 5th and 6th of Eleventh month, to meet the trains that leave Philadelphia at 7.50 and 11 A. M., and 2.30 P. M.

Baggage may be left either at Thirty-first and Market streets, or at Eleventh and Market. If left at the latter place, it must be put under the care of Hibbard Alexander, who will convey it thence to Thirty-first and Market at a charge of 10 cents per trunk, to be paid to him. Those who prefer can have their baggage sent for to any place in the out-lying part of the City, by sending word on the day previous (through the post-office or otherwise) to H. Alexander, No. 5 North Eleventh St. His charge in such case for taking baggage to Thirty-first and Market streets, will be 25 cents per trunk. Baggage put under his care, if properly marked, will not require any attention from his owners, either at the West Philadelphia depot, or at the Street Road Station, but will be forwarded direct to the School. It may not always go on the same train as the owner, but it will go on the same day, provided the notice to H. Alexander reaches him in time.

During the Session, passengers for the School will be met at the Street Road Station, on the arrival of the first train from the City, every day except First-days; and small packages for the pupils, if left at Friends' Book Store, No. 304 Arch street, will be forwarded every Sixth-day at 12 o'clock, except on the last two Sixth-days of the Term. Freight, and the expense charged in their bills.

Teeth Mo. 24th, 1866.

#### RECEIPTS.

Received from Sarah B. Upton, N. Y., per H. C. W. \$2, 50 do, and for Phebe Griffin, \$2 to 27, of W. C. Wm. Griffin, \$2 to 37, of do, 40, Mary Upton, \$2 40, of do, 30, Burton, Pa., \$2 to No. 13, vol. 41, from P. B. Bedell, Act. 10, \$2, vol. 39, and for J. Bate A. Crew, and J. Bailey, \$2 each, 40, J. Embree, \$2 to No. 14, vol. 40, T. D. Langstaff, \$2 to No. 46, v. 40, S. W. Stanley, P. Askew, and Mary Patten, \$2 each, 29, R. Mott, \$2, vol. 38, and W. Pierpont, \$3, vol. 38, J. B. Burton, Pa., \$2 to No. 13, vol. 41, from N. S. 41, and for J. Pollard, \$2, vol. 40; for Sarah Greese, R. I., \$2, vol. 40.

#### WESTTOWN BOARDING SCHOOL.

WANTED, a TEACHER for the Boy's SECOND MATHEMATICAL SCHOOL, to enter on his duties on the opening of the Winter Session, on the 5th of Eleventh month, at Samuel Hill, Wilmington, Del.

THOMAS EVANS 317 Arch St., Phila.  
Joseph Scattergood, 413 Spruce St., Phila.  
Charles J. Allen, 304 Arch St., " "

An experienced Teacher wishes a situation in a family school, for the winter season. Apply at the Office "The Friend."

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA.) Physician and Superintendent, — JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 627 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, at the Friends' meeting house, Chester, Pa. on the 3d inst., Geo. S. GARRETT, of Upper Darby Delaware Co., Pa., to MARY W., daughter of the late Jesse J. Maris, of the former place.

—, on the 17th of Tenth month, 1866, at Friends' meeting-house, Downingtown, Pa., AMBROSUS SMITH of Philadelphia, to MARY, daughter of the late Char Downing.

—, on the 10th inst., at Birmingham, Ches Co., Pa., GEORGE L. SMEDLEY, of the city of Chester, a JANE H., daughter of David Garrett, of the former place.

DIED, at his residence near Harrisville, Harris county, Ohio, on the 16th of Fifth month, 1866, Rebecca wife of Parker Hall, and daughter of Joseph and Elizabeth Hall, in the 78th year of her age, an esteemed member of Shortneck Monthly Meeting. From earliest she was of a sober and religious turn of mind, and concerned to lead a life consistent with her profession. And as she grew in years, by taking heed to the life within, she grew in grace. After her marriage she pursued habitually the duties devolving upon her, as affectionate wife and mother; and the care and consideration she evinced for the comfort and happiness those about her, her unassuming deportment and an amiable disposition, won her the affection and esteem those with whom she mingled. Though diligent in her domestic duties, she was not less diligent in her careful not to let temporal concerns interfere with religious duties, being diligent in the attendance meeting, and in reading the Holy Scriptures and all religious books. Often seeking opportunities for retirement in spirit before the Lord, that she might with her strength renewed, and know the work of sanctification to go on in her heart. She was strongly attached to the doctrines and testimonies of our religious Society as held and maintained by our worthy predecessors, few years before her death she came forth in public testimony, speaking a few words at times in the way to ministry, to the satisfaction of her friends. She was patient and resignation; during which she uttered many weighty expressions, evincing that her mind was stayed on things above, saying, near her close, that she did not feel any thing in her way, but she believed that her work was done. And on taking leave of this life and time, she earnestly entreated them so fully, that when time to them should be no more, it might be prepared to meet her in Heaven. Thus affording an evidence that through redeeming mercy she was prepared for the change; and we doubt not has changed the fleeing enjoyments of this world, for crowns of glory that fadeeth not away."

WM. H. PILE, PRINTER,  
No. 214 Park street, between Dock and Third.

VOL. XL.

SEVENTH-DAY, ELEVENTH MONTH 3, 1866.

NO. 10.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,  
PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

## The Completion of the Atlantic Telegraph.

(Continued from page 6.)

The appearance of the immediate neighbourhood of the terminus of the cable on the narrow neck of land separating Trinity and Placentia Bays, is thus described: "Those who have visited Trinity Bay, Newfoundland, with one consent allow it to be one of the most beautiful sheets of water they ever set eyes upon. Its extreme length is about eighty miles, its breadth about thirty miles, opening boldly into the Atlantic on the northern side of the island. At its southwestern end it branches into the bay of Bull's Arm, which is a quiet, safe and beautiful harbor, about two miles in breadth, and nine or ten in length, running in a direction north-west. The depth of water is sufficient for the largest vessels. The sea rises some seven or eight feet, and the bay abounds in a beautiful sandbeach. The shore is clothed with dark green fir-trees, which, mixed with birch and mountain ash, present a pleasing contrast. The land gradually rises from the water level around, so as to afford one of the most agreeable town sites on the island. You ascend only about a quarter of a mile from the water, and here are no longer trees, but wild grass like an open prairie. \* \* \* Numerous little lakes may be seen in the open elevated grounds from which snow rivulets affording abundance of fine trout. After ascending for about a mile and a half you have then probably three or four hundred feet above the tide, and nothing can exceed the beauty of the scene when at one view you behold the acid waters of both Trinity and Placentia Bays, the latter sprinkled with clusters of verdant islands."

The fact of the arrival of the telegraph fleet at Earl's Content, and that the Atlantic Telegraph had been laid in perfect order, was soon transmitted over the length and breadth of the land, producing a feeling in the public mind,—from remembrance of former attempts, not sanguine in success—of agreeable surprise. Numerous messages of congratulation were at once addressed to Cyrus W. Field, at Newfoundland, and others of similar character quickly passed between many of the friends of the enterprise on opposite sides of the Atlantic. The Queen of England and the President of the United States, also exchanged messages of friendly greeting through the new medium of communication which had thus united their respective territories. One of the most interesting despatches received on the occasion, was

from the President of the Suez Canal Company, which dated at Alexandria, in Egypt, at half past one o'clock on the 30th of the Seventh month, was received at Newfoundland at half past ten o'clock on the morning of the same day: the time actually occupied in its transmission over nearly one-fourth of the earth's circumference being only about two hours and a half. The almost instant communication between this land of ancient history, and the almost unexplored shores of the new world, is particularly striking, and the greeting in this way of the representatives of two of the greatest enterprises of modern times, the one of which looking forward to the speedy union of the oceans of the eastern and western hemispheres, and the other just returning from connecting their continents, forms a spectacle not often to be witnessed.

On the 28th of Seventh month, the line was opened for business, and in the first twelve hours four thousand words were transmitted between the two continents.

One object of the expedition had now been successfully accomplished, but another remained. A slender cord, scarcely an inch in diameter, lying upon the bottom of the trackless ocean, was to be hunted for, raised if possible through two miles of water, spliced, and continued to Newfoundland; and preparations were immediately made for the task.

The experience of last year had demonstrated the possibility of hooking the cable by grapnels—five-armed anchors with sharply curved and pointed flukes—and raising it a considerable distance above its bed. It remained to be seen whether ropes and apparatus sufficiently strong could be employed to grapple it again, and lift it fully to the surface. For this purpose the vessels had been furnished with improved appliances previous to their departure from England, and the Albany had been fitted out with the same picking-up apparatus which had been used by the Great Eastern in the previous attempt. The Albany and Medway had been provided with grappling apparatus in order to enable them to raise the cable in different places, part way up, when by buoying it the strain would be diminished upon the intermediate portion which, it was hoped, the Great Eastern might then succeed in recovering.

From observations made at the moment of the parting of the old cable, the position and course of the Great Eastern at that time had been known, and with these few data the squadron sailed for its rendezvous in mid ocean, 600 miles distant, on the 9th of the Eighth month.

On the 12th inst. the Great Eastern arrived at the designated spot, and found the Albany already there, and that she had been engaged in grappling for the cable, and had succeeded in raising it nearly to the surface. On the 17th the Great Eastern was more successful, and actually lifted it out of the water upon the flukes of the grapnel, but immediately lost it again while all on board were rejoicing in their success. In the brief interval, however, in which it was visible, those who saw it, says J. C. Deane, in his diary of the expedition, were struck with the fact, "that one

half was covered with ooze staining it a muddy white, while the other half was just in its state as it left the tank last year, with its tarred surface and strands unchanged, which proved it simply lay in the ooze half imbedded. The strain on the cable gave it a twist, and it looked like a pole painted spirally black and white."

The attempt at grappling was again recommenced, and on the 20th the cable was broken by the Medway, and on the 27th the broken piece, about two miles long, was hauled on board the Great Eastern. An examination of this portion by the electricians was highly encouraging. It appeared "it was almost as fresh as when it was put down a twelve-month ago—bump and wire perfect. Above all the gutta-percha was as new in appearance as when it left the manufactory in the City Road, a fact so important, that notwithstanding the disappointment we all felt," says J. C. Deane, "we know now that as an insulator it is practically superior to any, and that a cable once laid across the Atlantic without a fault, may be looked upon as practically secure." After several days had been spent in unsuccessful efforts to raise the unbroken end of the cable, it was concluded to give up the attempt in this neighbourhood and proceed to a spot one hundred miles further east, where it was known that the water was shallower.

The diary of 8th month 31st states, "At noon to-day we were 6½ miles north of the line of the cable, lat. 51° 58.45' N., long. 36° 7' W. Nothing could be more favorable for commencing operations, sea smooth, clear day, and no wind. Under these favorable circumstances orders were given to lower the grapnel at 10 a. m." That afternoon the cable was hooked in 1900 fathoms water, and the hauling up was continued all night. In the morning 800 fathoms remained to be drawn in, when it was concluded to buoy the grapnel with the cable thus hanging from it in mid ocean, and again grapple for it a few miles to the westward, where in consequence of the adjoining part of the cable being thus raised from the bed of the ocean, and buoyed, the resistance would not be so great.

The next day the Medway and the Great Eastern both grappled for the cable to the east of the buoy, the latter being between the Medway and the buoy. The result of this attempt, which ended in complete success, is thus narrated in the diary: "After dinner we received a signal from the Medway that having hooked the cable she had hauled it up about 500 fathoms. We told her to heave up as rapidly as possible, and in fact to break the cable so that we might have the strain taken off our part of it, and so increase our chance of raising it to the surface. To the eastward the effect would be produced by the bight we lifted yesterday and buoyed. The picking up went on with its usual certainty and precision, and by 12 o'clock (midnight) the bows of the boat were crowded not only by those actually on the watch, but by nearly all the hands, who turned out to see the result of this attempt to recover the cable. By this time the boats of the Albany and Medway rowed up under our bows, not so much with a view to assist in putting stoppers on

the cable, as to be there in case any of the men who were lowered on bow lines over the bow should fall into the water during their perilous work. Precisely at 12.50 this morning the cable made its appearance, and save when the voice of Capt. Anderson or Mr. Canning was heard giving an order, one could almost hear a pin drop, such was the perfect silence which prevailed. No excitement, no cheering, "as all was calm and quiet, the men hardly spoke above their breath." The cable hands having had the bow lines slipped over them, were lowered over the bows, and placed huge hempen stoppers on the cable, which was speedily attached to five-inch ropes, one being placed to protect the eastward side of the bight, and one the westward. This took the best part of three quarters of an hour. It was then found that the bight was so firmly caught on the springs of the grapple that one of the hands who had put on the stoppers was sent lower down to the grapple, and with hammer and marlingspike and other implements, the rope was ultimately freed from the tenuous grip of the flukes. The signal being given to haul up, the western end of the bight was cut with a saw and the cable then rose over the bows of the Great Eastern, slowly passing round the sheave at the bow, and then over the wheels on the fore part of the deck. The greatest possible care was taken by Mr. Canning and his assistants to secure the cable by putting stoppers on between the V. wheel and the pick up machinery, and to watch the progress of the grapple rope shackles round the drum, before it received the cable itself. This occupied a considerable time, and now it became evident that before long the end would be passed down as far as the electrician's room. There awaiting its arrival were Mr. Gooch, Cyrus Field, Capt. Hamilton, Mr. Canning, Mr. Clifford, Prof. Thomson, Mr. Deane and others. At last Mr. Willoughby Smith, the chief electrician, made his appearance at the door with the end of the cable in his hand, and the connections having been made, he sat down opposite the instrument. A breathless silence prevailed. Not a word was spoken, all eyes being directed upon the operator, whose expression of countenance indicated the deep anxiety he felt in making the test. At the expiration of about ten minutes he relieved our suspense by stating that so far as he had then gone he believed the tests to be perfect, but another minute had scarcely elapsed when he took off his hat and gave a cheer which, as can easily be imagined, was lustily taken up in the room, and having been heard outside, it was echoed from stern to stern of the ship, with a heartiness which every one can appreciate.

Mr. Canning at once sent a message to Mr. Glass, the Managing Director of the Telegraph Construction and Maintenance Company, expressing the pleasure he felt in speaking to him through the cable of 1865, and the operator at Valentia, telegraphed back his congratulations."

The fact of its recovery, and that it was still in working order, was immediately reported through the new cable to Newfoundland, and from thence over the country, causing almost as much gratification and interest as the news of the successful accomplishment of the former undertaking. On board the ship the paying out of the cable soon commenced, and was continued with regularity until on the 8th of the month the fleet again cast anchor at Newfoundland, and the second line of communication was laid between the two continents.

*The Way to the Crown.*—We must taste the gall, if we are to taste the glory. If justified by faith, we must suffer tribulations. When God

saves a soul, he tries it. Some believers are much surprised when they are called to suffer. They thought they would do some great thing for God; but all he permits them to do is to suffer for his sake. Go round to every one in glory; each has a different story to tell, yet every one a tale of suffering. But mark, all were brought out of this. It was a dark cloud, but it passed away. The water was deep, but they reached the other side. Not one there blames God for the way he led them thither. "Salvation" is their only cry. Child of God, murmur not at your lot. You must have a plain as well as a white robe. Learn to glory in tribulations also.

Benjamin Bishop.

(Concluded from page 67.)

*"A Letter from John Dunstone to Benjamin Bishop."*

"The following beautiful letter from a dear blind friend in affliction, to Benjamin Bishop, was dictated to, and transcribed by the late John Budge, who thus adds in the P.S.: "It is really animating and edifying to witness the power and grace of Christ in thus cementing and binding up together as in the bundle of life, those who, in reference to everything else under the sun, are wholly unknown, and strangers to each other. "I in them, and thou in me, that they may be one in us," was the language of our blessed Saviour, and to be witnesses of this sublime and precious unity, is indeed, a favour transcending the conception of men."

"Cambridge, 6th of 7th month, 1841.

"My dear friend and brother in the Truth, and in tribulation, and in bonds as prisoners of hope, which hope maketh not ashamed, having from time to time experienced the love of God shed abroad in our hearts by the Holy Ghost, which is given unto us. My dear friend, I do most tenderly salute thee in the love of the everlasting gospel of Christ, which is the power of God unto salvation to every true believer in Him; and every one that shall receive the gospel, believe in it, and become faithful to it, shall thereby be enabled to live by it, and shall grow up in it as sweet springing flowers in a well-watered garden; and whoever these may be, or wherever found scattered among the nations, they shall be so many living stones in the spiritual building. These are in a spiritual sense the salt of the earth, the lights of the world, and cities set on a hill that cannot be hid: these let their light so shine before men, that others seeing their good works glorify their Father who is in heaven: these spread a good savour wherever they go, and whether they eat or drink, or whatsoever they do, they endeavour to do all with a single eye to the glory of God, having no confidence in the flesh.

"My dear friend, I feel glad in my heart in having this favourable opportunity to inform thee that I both received and heard read, with a degree of thankfulness, thy welcome and cheering letter, which came to me under thy own hand, and as I believe from thy very heart, as it reached the pure Witness not only in my heart, but in the hearts of some others also. It was and is to me as cheering and refreshing as a morsel of bread and a cup of spring water are to a weary traveller, when he is both hungry and thirsty. And besides this, my dear friend, I can assure thee that it afforded me no small comfort to see thee, touching my experience, being an entire stranger to me, hit the work so nicely, and to hear thee read my heart page by page, as though thou hadst seen in the light of the glorious gospel, in a good degree, the whole travail of my spirit: with this I was struck with admiration, to see such a wonder-

ful display of the infinite wisdom of Almighty God, and I am constrained to think that 'and blood have not revealed these things'—these, but my Father who is in heaven.' Now my dear friend, have I not some good ground to believe that for many years that are I though unknown to each other as to the outward we have in spirit been travelling on hand in hand together, in that new and living way which opened by Christ in the gospel, and cast up the Saviour and friend of sinners? This is diverse from every other way. Men in the dominion of this world have sought out many inventions, and have been, and still are, pursuing unwise ways, contrary to the way of Truth. Have not seen, my dear friend, in the light of blessed gospel, which has shined in our hearts that the Lord our God is one Lord, and the of Truth one way only? Christ speaking of way saith, 'I am the Way, the Truth, and Life: no man cometh unto the Father, but by me;' and the prophet when moved by the Holy Ghost to speak of this way says, 'And a high shall be there, and a way, and it shall be called the way of holiness; the unclean shall not over it, but it shall be for those; the wayfaring men, though fools, shall not err therein: no shall be there.' No, no, my dear friend, no like professors shall be found there: they are lambs redeemed by the precious blood of Lamb of God. 'Nor any ravenous beast shall up thereon; it shall not be found there, but redeemed shall walk there; and the ransom of the Lord shall return, and come to Zion—songs and everlasting joy upon their heads; shall obtain joy and gladness, and sorrow sighing shall flee away.' My dear friend, what an unspeakable favour and matter of thankful is this, to be found walking in the way among the redeemed ones, and to be numbered among the little flock of God, whose good pleasure to give them the kingdom; and to be brought from.—'Lo! here is Christ! and Lo! He there,' and to be gathered home to the fold of Christ, and to sit at the feet of the Saviour to the Good Shepherd's voice, and to learn the sweet and precious lessons of His grace. But, my friend, I need not enlarge here; I feel fully assured that thou knowest much more of things than I; therefore I do earnestly desire thee, when it may be well with thee, to think me, and show kindness I pray thee, and mention of me in thy prayers, not to Pharaoh, to the King of glory, for He our God is the King of glory, the King of saints, and of angels. And now, my dear friend, let us hold out in patience, and struggle on a little longer, we shall soon come to that blessed city of which it is said, 'There shall be no night there,' they need no candle, neither light of the sun the Lord God giveth them light, and they shall reign for ever and ever. 'Thou shall thy reign shine forth as the sun in the kingdom of their Father.' 'He that hath an ear to hear him hear.'

"As touching my bodily health at the present and for some weeks past, I have been much pressed, and generally confined within doors seldom getting any sleep in the night season, cough being troublesome; my breath much affected, and my whole frame being disordered, I by night than by day. I get most of my strength from the former part or middle of the day, but feel thankful, the Holy Spirit of God assists me, to be enabled to say with Job, 'All the of my appointed time will I wait till my comforts.' My dear wife, who has been a faithful sharer with me in all my afflictions, unites

in sending her dear love both to thee and mine, and if thou hast opportunity to do so, give my united love to our mutual friend, R. B., and any other friend or friends thou mayst think proper. So, for the present, farewell.

From thy brother in the Truth,  
JOHN DUNSTONE."

"Extract of a Letter from —"

"16th of 4th month, 1855.  
"Last Seventh-day evening I had a sweet interview with Benjamin Bishop. He said 'I wish my friends to know I am in possession of peace and love. I am almost afraid to say so, so unorthodoxly I feel, but it is the truth. I can say with Sarah Taylor, I am carried on from day to day, not knowing how the present dispensation will terminate, nor even desiring to know. I have been comparing myself to the man who fell upon thieves, I have been so scared for, and sometimes the Master calls upon me.' In allusion to the present state of our Society, Benjamin Bishop said, 'It is awful, but the Lord is very merciful!'

"Benjamin Bishop died on the 30th of the 5th month, 1855, aged 75 years."

**Colorado Copper and Lead Mines.**—Commissioner Wilson, of the General Land Office, has received a communication from the Surveyor General of Colorado, in which he says he has just returned from the newly discovered copper and lead mines, but had found the veins not sufficiently developed to enable him to judge accurately of their value. The copper occurs in the shape of boulders, embedded in fine flint-sparse boulders are pure carbonate of copper of a quality. In some veins the copper is hedged with a soft, decomposed gneiss, differing from the rest of the vein, and easily worked with the pick. The crops on the plains had been safely vested, and were fully equal to an estimate contained in a previous report of the Surveyor General as to the immense productiveness of the country. At least four million acres can be cultivated, and thus far the production has fully the wants of the people.—*N. American.*

Selected for "The Friend."

**Brief Account Concerning Silent Meetings; the Nature, Use, Intent, and Benefit of them.**

This is a great mystery, hid from the eye of man, who is run from the inward life into outward observations. He cannot see either that is required by the Lord of his people, or any caution therein, or benefit thereby; but to the Lord that is drawn inward the thing is plain; the building up hereby in the life of God, fellowship one with another therein, is sweetly and precious refreshment from the presence of the Lord received by them, who singly herein upon him according to the leadings and reproofs of his Holy Spirit. Now to open the mystery a little to the upright hearted, if the Lord will. After the mind is in some measure turned to the Lord, his quickenings felt, his seed begins to arise and spring up in the heart, then the soul is to be silent before him, and the soul to be upon him (and for his further appearances) at measure of life which is already revealed, and this is a great thing to know flesh silenced, and the reasoning thoughts and discourses of the fleshly mind stilled, and the wisdom, light, and guidance of God's Spirit waited for. For to come into the poverty of self, into the dress, into the nothingness, into the silence of spirit before the Lord; into the putting off of all his knowledge, wisdom, understanding, ideas, all that he is, hath done, or can do, out

of this measure of life, into which he is to travel, that he may be clothed and filled with the nature, spirit, and power of the Lord.

Now in this measure of life which is of Christ (and in which Christ is, and appears to the soul) there is the power of life and death; power to kill to the flesh, and power to quicken to God; power to cause the soul to cease from its own workings, and power to work in and for the soul what God requires, and what is acceptable in his sight. And in this God is to be waited upon and worshipped continually (both in private and public) according as his Spirit draws and teaches. For the Lord requireth of his people not only to worship him apart, but to meet together to worship him, in the seasons, and according to the drawings of his Spirit; and they that are taught of him, dare not forsake the assembling of themselves together, as the manner of some is; but watch against the temptations and snares, which the enemy lays to deceive them therefrom, and to disturb their sense by, that they might not feel the drawings of the Father thereunto. And this is the manner of their worship. They are to wait upon the Lord, to meet in the silence of flesh, and to watch for the stirrings of his life, and the breakings forth of his power amongst them. And in the breakings forth of that power, they may pray, speak, exhort, rebuke, rejoice, or mourn, &c., according as the Spirit teaches, requires, and gives utterance. But if the Spirit do not require to speak, and give to utter, then every one is to sit still in his place (in his heavenly place I mean) feeling his own measure, feeding thereupon, receiving therefrom (into his spirit) what the Lord giveth. Now in this is edifying, pure edifying, precious edifying; his soul who thus waits, is hereby particularly edified by the spirit of the Lord at every meeting. And then also there is the life of the whole felt in every vessel that is turned to its measure; inasmuch as the warmth of life in each vessel doth not only warm the particular, but they are like an heap of fresh and living coals, warming one another, inasmuch as a great strength, freshness, and vigour of life flows into all. And if any be burthened, tempted, buffeted by Satan, bowed down, overborne, languishing, afflicted, distressed, &c., the estate of such is felt in spirit, and secret cries, or (as the Lord pleaseth) aloud up to the Lord for them, and they many times find ease and relief, in a few words spoken, or without words, if it be the season of their help and relief with the Lord. For absolutely silent meetings (wherein there is a resolution not to speak) we know not; but we wait on the Lord, either to feel in words, or in silence of spirit without words, as he pleaseth. And that which we aim at, and are instructed to by the Spirit of the Lord as to silent meetings, is that the flesh in every one be kept silent, and that there be no building up, but in the spirit and power of the Lord. Now there are several states of people; some feel little of the Lord's presence; but feel temptations and thoughts, with many wanderings and roivings of mind. These are not yet acquainted with the power, or at least know not its dominion, but rather feel dominion of the evil over the good in them. And this is a sore travelling and mournful state, and meetings to such as these (many times) may seem to themselves rather for the worse than for the better. Yet even these, tiring, as much as may be, from such things, and cleaving (or at least in truth of heart desiring to cleave) to that which disliketh or witnesseth against them, have acceptance with the Lord herein; and continuing to wait in this trouble and distress (keeping close to meetings, in fear and subjection to the Lord who requireth

it, though with little appearing benefit,) do reap an hidden benefit at present, and shall reap a more clear and manifest benefit afterwards, as the Lord washeth and wreatheth out that in them, wherein the darkness hath its strength. Now to evidence that the Lord doth require these silent meetings, or meetings after this manner silent, it may thus appear. God is to be worshipped in spirit, in his own power and life, and this is at his own dispose. His church is a gathering in the Spirit. If any man speak there, he must speak as the oracle of God, as the vessel out of which God speaks; as the trumpet out of which he gives the sound. Therefore there is to be a waiting in silence, till the Spirit of the Lord move to speak, and also give words to speak. For a man is not to speak his own words, or in his own wisdom or time; but the Spirit's words, in the Spirit's wisdom and time, which is when he moves and gives to speak. And seeing the Spirit inwardly nourisheth, when he giveth not to speak words, the inward sense and nourishment is to be waited for, and received as it was given when there are no words. Yea, the ministry of the Spirit and life is more close and immediate when without words, than when with words, as has been often felt, and is faithfully testified by many witnesses. Eye hath not seen nor ear heard, neither hath entered into the heart of man, how and what things God reveals to his children by his Spirit, when they wait upon him in his pure fear, and worship and converse with him in spirit; for then the fountain of the great deep is unsealed, and the everlasting springs surely give up the pure and living water.

ISAAC PENNINGTON.

**Tin.**—One of the strange facts observed by geologists is that the very useful metal, tin, should only be found in large quantities in comparatively few places. The mines of Cornwall have been worked since pre-historic times, and it is found in Bohemia, Saxony, France and Sweden. In Southern Asia it has been very extensively worked in the island of Banca since the discovery of the mines in 1710. In 1751 there were produced in Banca 370 tons; in 1852, 5,235 tons, and in 1853, 3,745 tons. The mines of Tenasserim, in the Malay peninsula, in 1853, yielded nearly 1,000 tons. In 1857, 816 tons of tin ore were taken to England from Australia. It is found in Brazil, Peru, Chili and Mexico. Bolivia is said, on doubtful authority, to have produced 3,000 tons annually. The money of the ancient Mexicans was made of tin, their coins being in the shape of a letter T. In California alone in the United States it has been found in such quantities as to make it worth while to work the mines.

Within two years past the tin mines of the Dutch East Indies having been more scientifically worked, have become so productive as to materially interfere with those of Cornwall. It is stated by the English press that the latter, in fact, can no longer be worked at a profit. Machinery which cost originally ten thousand pounds, has been sold by auction for nine hundred pounds, and seventy-eight mines have been recently wound up compulsively in the Stannaries Court, a part of the municipal system which has been instituted in Cornwall, especially with reference to the tin interests. It is said that by the end of the current year, not twenty thousand miners will find employment. A year ago, at Christmas, two hundred thousand were dependent on the mines.

Let me not, I pray you, accept any man's person; neither let me give flattering titles unto man. For I know not to give flattering titles; in so doing my Maker would soon take me away.

*Cotton and Live Stock at the South.*—The report of the Commissioner of Agriculture for September, gives some interesting statistics concerning cotton and live stock at the south. "The derangement of labour," says the report, "and the seeding of lands to weeds and noxious grasses during the past years of war and waste, have necessarily increased the ordinary hindrances to successful cotton culture. But the inducements were worthy of the most daring and persistent attempt.

It is too early yet to predict the result of the year's efforts with certainty. Insect enemies may yet affect the result. Our corps of observers is not sufficiently complete to warrant a reliable estimate of the amount of cotton to be expected; but we give the result of their estimates (each for his own county,) fairly compiled and computed, as a basis of estimates for the several States, to be modified, of course, as more complete information is obtained in the progress of the cotton harvest. The estimates are in tenths, not of an average crop, but of the excessive and never-falling crop which the census reports:

	Tenths.	Bales.
Alabama,	3	296,986
Arkansas,	4	146,957
Florida,	34	21,717
Georgia,	23	175,400
Louisiana,	33	281,651
Mississippi,	23	300,626
North Carolina,	5	72,757
South Carolina,	2	70,282
Tennessee,	20	296,044
Texas,	4	172,585
Total,		1,835,485

The Commissioner says an especial effort was made to secure an estimate of the farm stock of the south, about which all have been so much in the dark. Returns on this point have been sufficiently full to warrant averaging for per centages in each State of the last census returns. From these the numbers in each State have been calculated, with the following results:

TABLE SHOWING THE ESTIMATED NUMBER OF LIVE STOCK IN 1866.

States.	Horses.	Mules.	Cattle.	Sheep.	Hogs.
Alabama,	82,991	67,812	409,934	307,222	999,127
Arkansas,	79,913	38,459	232,797	93,266	316,340
Florida,	7,539	6,873	256,110	6,861	106,616
Georgia,	71,724	68,641	583,411	384,463	1,425,251
Louisiana,	33,842	54,139	227,959	96,626	272,845
Mississippi,	67,915	63,112	401,449	282,195	812,367
N. Carolina,	69,436	33,916	496,476	399,126	1,261,753
S. Carolina,	48,675	25,367	319,291	279,889	482,809
Tennessee,	260,887	62,489	832,365	519,839	1,079,707
Texas,	293,128	60,687	3,111,475	904,035	1,193,233
Virginia,	172,547	28,710	943,122	761,886	959,951
Total,	1,853,488	678,676	6,959,408	4,069,736	8,822,249

This exhibit, as compared with the census returns of 1860, makes the per centages as follows:—Horses, 68 per cent.; mules, 70 per cent.; cattle, 65 per cent.; sheep, 80 per cent.; hogs, 60 per cent.—*N. American.*

*An Implication of a Wrong State of Mind.*—From the most important points of moral action in women, the Apostle Paul descends to the very minutiae of their apparel. This indicates how well aware he was, that every appearance of impropriety in personal adornment, is an implication of a wrong state of mind. If this seemingly inferior concern was not judged to be beneath the notice of an inspired apostle, surely it ought not to be unworthy the regard of my fair countrywomen.—*Hannah More.*

### ABIDE WITH ME.

"They constrained him, saying, Abide with us, for it is toward evening and the day is far spent."  
Abide with me. Fast falls the eventide;  
The darkness thickens: Lord! with me abide;  
When other helpers fail, and comforts flee,  
Help of the helpless, O abide with me!

Swift to its close ebbs out life's little day;  
Earth's joys grow dim, its glories pass away;  
Change and decay in all around I see;  
O Thou who changeest not, abide with me.

Not a brief glance I beg, a passing word,  
But as thou dwellest with thy disciples, Lord—  
Familiar, condescending, patient free,  
Come not to sojourn, but abide with me.  
Come not in terrors, as the King of kings,  
But kind and good, with healing in thy wings;  
Tears for all woes, a heart for every plea;  
Come, Friend of sinners, thus abide with me!

Thou on my head in early youth didst smite,  
And hast rebellions and perverse meanwhile,  
Thou hast not left me, oft as I left thee;  
On to the close, O Lord! abide with me.

I need thy presence every passing hour—  
What but thy grace can foil the tempter's power?  
Who like thyself my guide and stay can be?  
Through cloud and sunshine, O abide with me!

I fear no foe, with Thee at hand to bless:  
Ills have no weight, and tears no bitterness.  
Where is death's sting? where, grave, thy victory?  
I triumph still, if Thou abide with me!

Hold thou thy cross before my closing eyes,  
Shine through the gloom, and point me to the skies;  
Heaven's morning breaks, and earth's vain shadows flee;  
In life, in death, O Lord! abide with me.

Selected.

is situated on the extreme southern part of Nevada, between the 115th and 116th degrees of west longitude. Lawrence says these pieces are not sent as fair specimens, but in his next trip to that region he will undertake to procure a block of a foot square, of such transparency that a newspaper can be read through it.—*N. American.*

For "The Friend."

### Are they Small Matters?

"It is with sorrow we observe that many under our name, in this day of ease and prosperity, wherein the means of indulging pride and ambition are easily obtained, have swerved from that christian simplicity and plainness of habit, speech and deportment, and in the furniture of their houses and manner of living, which the gospel enjoins, and which become men and women professing godliness." "Some, to excuse or palliate their departures in these respects, speak of them as 'little things' and of small moment; thereby endeavoring to lower the standard of moderation and self-denial, which is set before us in the Holy Scriptures, and which the Witness of Truth raised in the hearts of our forefathers, and still calls all to uphold. We believe that nothing can be called little which forms a part of our duty to God, and that the disposition to lessen these testimonies, as well as the unwillingness to conform to them, arises from the unsubdued will and un-mortified pride of the human heart, which shuns the offence of the cross."

To show the unanimity of exercise and feeling that has ever prevailed in the minds of pious Friends, I purpose making some extracts from their published records, proving that when truly "awakened" or when brought to a death bed, that "honest hour" which "crieth men's souls," they give a united assent in favor of our testimony to "plainness of speech, deportment and apparel." These and kindred subjects, attending meetings, reading the Holy Scriptures, &c., are not then regarded as "trivial" or "non essential," but deficiencies therein are often real burdens. Our late friend, Jos. Edgerton, advised those about him "To be plain in your houses, be plain in your diet, be plain in your dress; and I believe you will experience that "plainness in dress and address, is in some respects like a hedge about us; which though it does not make the ground it encloses rich and fruitful, yet it frequently prevents those intrusions, by which the labour of the husbandman is injured or destroyed. And does not a departure in these respects often "attract a description of company which is not congenial to a growth in a religious life and conversation and open a door for leading young people into many hurtful things, which prove of lasting injury to their susceptible minds. We mourn over the effects which are already apparent in some places and families, and believe it highly necessary that a living concern should be raised among us, to make a firm stand against the inroads of a worldly spirit in these respects.

*Susanna Gratton.*—This worthy woman was a pattern of great plainness, and was often grieved to see and hear of the superfluity that abounded among some of the professors of Truth, and that undue liberty they took, saying 'It was not so in the beginning, for then there was nothing to wear and dear to part with for Truth's sake.' She was likewise much troubled to hear the needless vain talking, foolish jesting, and see the light airy carriage among such, that were unbecoming our holy profession, saying, 'Time ought not to be so spent, for an account must be given unto God for all these things.' It pleased the Lord to preserve her out of such things to the end of her

### THE ANGEL OF PATIENCE.

"Ye have need of patience,"—Heb. x. 36.  
A gentle Angel walketh throughout a world of woe,  
With messages of mercy to moaning hearts below;  
His peaceful smiles invites them to love and to confide,  
Oh! follow in his footsteps, keep closely by his side.

So gently will He lead thee through all the cloudy day  
And whisper of glad-tidings to cheer the pilgrim-way;  
His courage never failing, when time is almost gone,  
He takes thy heavy burden, and helps to bear it on.

To soft and tearful sadness He changes dumb despair,  
And soothes to deep submission the storm of grief and care;  
Where midnight shades are brooding, He pours the light  
of noon,  
And every grievous wound He heals, most surely, if not soon.

He will not blame thy sorrows, while He brings the  
healing balm;  
He does not chide thy longings, while He soothes them  
into calm;  
And when thy heart is murmuring, and wildly asking  
why?  
He smiling beckons forward, points upwards to the sky.

He will not always answer thy questions and thy fear,  
His watchword is "Be patient, thy journey's end is near."  
And ever through the toilsome way, He tells of joys to come,  
And points the pilgrim to his rest, the wanderer to his home.

Spitta.

*Rock Salt from Nevada.*—Postmaster General Randall has received from special Post-office Agent Lawrence a box containing specimens of mountain salt, from the Pah Raguegat mining regions. They are fine, pure and almost transparent. One of the pieces shows the face of the mountain from which all were taken; the other pieces were taken back from the surface. This salt comes from a mountain of pure salt, several layers in extent and several thousand feet in height. The whole mountain is pure salt, and

ays, and it is not doubted but the Lord hath given her a portion among his redeemed ones." *Elizabeth Reeve*.—"Being naturally of a lively disposition, she was an agreeable and interesting companion to her associates, but though fond of indulgence in dress, and the enjoyments usually attractive to the youthful mind, she was very early in life favored with serious impressions which checked her in the pursuit of gratifications incompatible with the cross of Christ. When nearly twenty-two years of age, she was brought under renewed convictions, at the time of the death of two of her sisters, which occurred within about a week. Two years afterwards, her mother being taken extremely ill, she conversed with her Heavenly Father, that she would freely submit to his Divine requisitions whatever they might be; and was soon brought to evince her fidelity, by making a change in her dress, greatly to the cross of her natural inclination. From this period she continued steadfast in her allegiance to her Lord and Master, and through submission to the baptism of his Holy Spirit, she experienced the old man with his deeds to be put off, and the new man, which after God is created in righteousness and true holiness, to be put on;" and near the close of life could say, "I believe I have not allowed cunningly devised fables, and have faith to believe I shall be received into the everlasting rans."

*Mary Post* "was of a tender spirit, sober behavior, religiously inclined, and a lover of plainness in habit and speech, and kept to it; but a dislike of pride and finery in apparel. When at about eight years of age, she was at a neighbor's house who desired her company, being old and grave, and the said neighbour having a daughter, about fifteen years of age, who loved the child well. Mary said to her, 'Anna, what signifies these fine things thou hast on? they will not carry thee to heaven.' To which Anna answered, 'Pride is not in the things, it is in the ear.' To which the child replied, 'But if your minds (i. e. those that were them) were not proud, on would not wear them.' She also signified to her mother that she wondered at the great pride she observed in some young ones who professed 'truth,' saying, 'I hope I shall never be like them.' Her mother thereupon said to her, 'I hope thou wilt never be like them; but be an orderly child, that thou mayest be in favor with God.' At which she wept, and said, 'If I should love fine things, must alter much: what signify fine things when ye come to die?' A little before her end, she mented folks taking pleasure, and not considering the love of God; and the last words she was heard to speak were, 'Dear Lord God Almighty, open the door.'

*Ruth Paltley* "was a woman who truly feared the Lord, and loved his truth and people, very sincere and upright in her conversation among all, very affectionate and loving to her husband, kind and loving to his children he had by a former wife, dutiful and tender to her aged parents, tender and loving to her brothers and sisters and other relations, compassionate to those under affliction, and ready to sympathize with them, charitable to the poor, and in an especial manner to those of the household of faith. She was in her conversation so adorned with a meek and quiet spirit, as made her lovely, and therein was very exemplary; as also in plainness of apparel, becoming her profession, and in using the plain language to all, and in calling the days according to scripture, which although by some it may be looked over but too lightly, yet is what many have witnessed the Spirit of Truth, which leads us to all truth, to lead them into. She also hated

deceit, and was more in substance than in show." A little before her end she said, "Her Maker laid nothing to her charge, and that she was sensible He had regard to her." To a niece of whom she had a tender and motherly care, she advised and desired that she would take up the cross while young; saying, it would be harder if deferred; and that she had been well rewarded since she took it up."

*Stephen Manning* "was educated in the way of Truth, and was, from a child, of an innocent and upright life, zealous and constant in attending religious meetings, and went several miles to them on foot. He was a diligent waiter upon the Lord therein, and received much benefit thereby, in having his understanding enlarged, his strength renewed, and his heart filled with the love of God, who was pleased to put him into the ministry, and caused him to declare his everlasting truth, and to exhort the Lord's people in faithfulness to persevere in the way of the Lord, and to be diligent to wait on God, that they might live in and enjoy what they were convinced of. He was also zealously concerned to caution against pride and covetousness, and superfluity in apparel, and to beware of those sins, and the various workings of the enemy. He was a meek, steady man, and lived in what he preached, being exemplary in his conversation, as became his holy profession. Several tender people, not called Quakers, came to see him during his sickness, to whom he said, 'It is well with me, and the Lord will carry me through to my desired place. It is a brave thing to have a conscience void of offence toward God and men: there is heaven upon earth; and he desired that all might labour to have a possession in the Truth, saying, 'A profession thereof will not do.'"

(To be continued.)

*A Phenomenon in Vermont*.—E. B. Osgood, our City Auditor, a few days since returned from Brandon, Vermont, where he examined the famous ice well, so called, about which there has been so much discussion among the savans. The well is of the ordinary size, and forty feet in depth. At the depth of thirty-nine feet ice is formed on the sides of the well, and from that down. The water is of the usual temperature of ice water, and no matter how the thermometer stands on the surface of the earth, even if it indicates one hundred in the shade, this never varies, and the ice is always there. In the winter the coating is thicker. No other well in the vicinity has this feature, and the cause is not easily explained.—*Lawrence American*.

Selected for "The Friend."

Extract from the Journal of Richard Jordan.

On Seventh-day, the thirtieth, we had a very large public meeting in Friends' meeting-house for those not professing with us, who at their gathering sat in a solid becoming manner; but one stood up very soon in testimony in a way that unsettled the meeting for a time; but at length it seemed to become more settled, and I expected soon to stand up, but that same person rose again with a repetition of many words without life, at which the people were so disturbed that they began to leave the meeting; and although my concern for them was great, yet I durst not offer any thing until the coming of the heavenly Prophet, lest I should be a means of scattering instead of gathering them. And in the remembrance of the passage respecting Saul's conduct and the effect of it, in a case analogous to this, I was settled down in the quiet and passed the meeting in silence, and left it rejoicing in my own preservation.—*Friends' Lib.*

For "The Friend."

At a Special meeting of the Association of Friends of Philadelphia and its vicinity, for the relief of Colored Freedmen, held Tenth month 25th, 1866.

The chairman of the Executive Board, informed the meeting that it had been called on account of the pressing wants of the coloured freedmen under its charge, and the want of pecuniary means to relieve them.

After hearing the statements of several Friends familiar with the facts, showing the need there is for help being promptly extended, not only to prevent closing the schools for coloured people now under our care, but also to provide food and clothing for many aged and infirm, who, unless relieved, appear likely to suffer severely during the approaching winter, it was concluded to appoint the following named Friends as a committee authorized to issue an address to Friends generally, urging the continuance of liberal contributions for carrying out the objects of the Association, to be signed by at least six Friends whom the committee may select: viz., Charles J. Allen, Charles Evans, Geo. J. Scattergood, John B. Garrett, Charles Rhoads, Thomas Conard and Thomas Evans.

The committee appointed in the Eleventh month last, to aid the Executive Board in obtaining subscriptions, is requested to continue its services, in order that the necessary care for collecting funds in the different Monthly Meetings throughout this Yearly Meeting, may be promptly taken. This committee is authorized to fill any vacancies that may have occurred in it.

SAMUEL HILLES, Pres.  
CHARLES EVANS, Sec.

For "The Friend."

#### Church Membership.

It seems evident from an attentive perusal of the Holy Scriptures, that one great object in the coming of our Lord and Saviour Jesus Christ, was to found a Church in which, and by which, the government of his Spirit should be manifest to the world. In other words, this church is a Spiritual House or Temple, composed of living stones. He himself being the Foundation, and all true christians being built thereon; which church was prefigured by that of the Jews. To become a member of this spiritual house or church, it is declared necessary to be "born again," "of the Spirit," and to continue therein, "to live in the Spirit;" and however obsolete these terms may appear to many, there is very much implied therein. The carnal, selfish, earthly nature, must be crucified, or a death unto the carnal delights and covetousness of earthly treasures, known; and the aspirations of the new birth, continually arising and seeking after the revelation of the mind of Christ, to know his will, and also for strength and ability to perform that will when made known. In the natural body there are many members, and each has its proper action and office in the body, so that one member cannot suffer without all partaking of the suffering: for the body is so tempered together that all the members are but one body, and each member has its fellow feeling with the others. So it is in the mystical body of Christ, and much more sensibly, for it is the Life of Christ, the Head of the body, that pervades it and suffers when any particular member suffers; and the living virtue being obstructed, the whole body is given to feel, and mourn over the loss sustained. And so much so was this experienced in the gathered church at the commencement of the christian era, that it is declared when a part was under sufferings and privations for the Truth's

sake, the rest, according to their ability, contributed to their assistance; nay, so far was this common feeling shared by each member of the body, "That no man considered that aught he possessed was his own, but parted to every man according to his need;" and Paul says that when the churches in Judea, to whom his face was unknown, had heard only that he who persecuted them in times past now preached the faith which before he had sought to destroy, (such was their mutual rejoicing) that they glorified God in him."

How useful is it, then, dear Friends, that we seek for this unity of church-fellowship. Not from natural relationship, or for earthly favors, but for a relationship such as existed at the first, being born again of the Spirit, and made fellow heirs of the grace of God. How should we strive for that sweet heavenly union and communion which is to be found when the Master is pleased to manifest Himself in the assemblies of his saints, and knit their hearts together as the heart of one man, enabling each member to feel His sacred presence, and to say as did the disciples formerly, "Master, it is good to be here." As each one is brought thus to feel, and to wait at the footstool of Christ; beseeching Him to arise for his own name's sake, a similar feeling and prayer are called forth to that which prompted the Psalmist to declare, "I will not give sleep to my eyes nor slumber to my eyelids until I find out a place for the Lord, an habitation for the mighty God of Jacob." Oh Friends, awake! awake! put on strength in the name of the Lord to wrestle as Jacob did, who he would not let the angel go without a blessing: for though Esau was prepared to meet him with an armed band, yet under Jacob's fervor of soul the Lord melted Esau's hard heart, so that he wept and kissed his brother. Esau's nature is as strong now, and his power as great as then; but "Jacob's God, the God of Bethel, our Fathers God, will make himself known, as in the ancient days, if we only rightly invoke his aid, cry mightily, and in the fervor of spirit wrestle until we become as Israel, and prevail. It is as we become members of Christ, waiting together upon him, that he will replenish his church again with the gift of his Holy Spirit. Not only in meetings for worship but also in those for discipline, to keep near the Lord, to judge righteous judgments. Thus many may become as stakes in Zion, if they are only faithful to judge and cast out all evil. It is not those that are without, that the saints are to judge, for the apostle emphatically says, concerning all such as are without the spiritual body, that these "God will judge." But they must judge in the church, and not allow impurities to contaminate the whole body by allowing the testimonies of the gospel to fall to the ground, and giving way to breaches in the discipline; as is apparent in many places; but stand in the gap and stop the breach, lest God judge us with the world. For He will spare his saints, those who not only mourn, but cry for strength, and use the strength imparted for God's glory, and the honour and good of his church. This is Christ's way to regenerate and reform the world by building and establishing his church, to be a habitation for Him through his Spirit, and there is no other way to do the work effectually. The enemy has been and is busy setting those to work outside this spiritual building, whilst the house of God lies waste. The apostle says concerning his labour, that he preached Christ, "warning every man and teaching every man;" and in another place, speaking of some of his converts, he says, this they did, "they first gave their ourselves to the Lord and unto

us by the will of God," and his labour was "to present every man perfect in Christ Jesus;" and elders were ordained in every city to watch over them in the Lord. And oh! how my spirit craves for the time to arrive when there may be amongst Friends the same zeal to gather to Christ, and to bring the faithful every where to feel their oneness in the body; instead of the many confederacies of men to effect a reformation in the world without Christ or the aid of his Holy Spirit. Well do I remember the late Sarah Lynes Grubb, when addressing a meeting in England and alluding to the many philanthropic societies among them, saying, "Ah! you have been mightily busy at work, but your work is only like the spider's web," and that there were those then present who might be said to be hatching cockatrice eggs; warning the young people not to eat of their eggs, "for such dieth."

Having penned this to ease my mind from a load that has long lain upon it, I desire in conclusion to call on all concerned Friends to ponder their paths, and let each one labour as "over against his own house," with desires that the ancient glory may crown their labour.

New York, 10th mo. 1866.

### The Lower Jordan.

Between the lake of Galilee and the Dead Sea lies a long deep valley, varying from five to ten miles in breadth, and shut in by the parallel mountain ranges of Samaria and Gilead. Down the centre of this valley, in the bed of a deep ravine, winds the river Jordan. It has two distinct lines of banks. The first, or lower banks, confine the stream, are comparatively low, generally alluvial, and thickly fringed with foliage. The second, or upper banks, are at some distance from the channel—occasionally nearly half a mile apart, and in places they rise to a height of one hundred and fifty feet. The appearance of the river itself is exceedingly varied. Now it sweeps gracefully round a green meadow, softly kissing with its rippling waves the blushing flowers of the oleander as they bend over it,—now it clasps a wooded islet in its shining arms,—now fretted by projecting cliffs, and opposed by rocky ledges, it dashes madly forward in sheets of foam.

One bridge alone spans the river, on the road which joins the ancient cities of Bethelchem and Gadara. But the ruins of many others are visible, and the fords are numerous. Of the latter, one of the most remarkable is Succoth, where Jacob crossed with his flocks and herds, and where the fleeing hosts of Zohab and Zalmunna had suffered so terribly from the Israelites. The plain around Succoth is abundantly watered by fountains and streamlets from the mountains. The soil is exceedingly rich. Dr. Robinson says of it, "The grass intermingled with tall daisies and wild oats, reached to our horses' backs, while thistles sometimes overtopped the riders' heads. Jacob showed his usual worldly wisdom when he encamped at this favoured spot, and made booths (succoth) for his cattle."

But the most interesting place on the Jordan is unquestionably that now called the "Pilgrims' Bathing Place," opposite Jericho. Here the channel is deep, the current rapid, and yet, on three different occasions, the river was stayed by a miracle, and the channel left dry to let God's people pass over. And an interest still higher and holier elings to it. It is the scene of Christ's baptism. Sitting here one day on the river's bank, beneath the shade of a great willow tree, I read in succession the Bible narratives of the passage of the Israelites under Joshua, of the

translation of Elijah, and of the baptism of Jesus; and then looking up on those grey bluffs that bound the narrow ravine, I involuntarily exclaimed, Oh, that my eyes had seen those glorious events of which you were the witnesses! Oh, that the eye of sense had witnessed what the eye of faith now contemplates! The marshalled hosts of Israel, the ark on which rested the Shekinah's glory; then the fiery chariot bearing God's prophet to heaven, and last of all, "the Dove," the heavenly dove, coming down and abiding upon the Saviour.

It was in the month of April I visited this "holy place" on the Jordan. It was already the time of harvest, for the people of Jericho were reaping their little fields up on the plain. And we are told that "Jordan overfloweth all his banks all the time of harvest." The fact is still true, though Palestine is changed. The heavy rains of early spring falling on the northern mountains, and the winter snow melting on the sides of Hermon, send a thousand tributaries to the sacred river. It rises to the top of the lower banks, and when I was there, the muddy, swollen waters had flowed over and covered portions of the verdant meadows on each side. Mounting my horse, I followed the tortuous river to its mouth, and saw it empty its waters into that sea of death. One would almost think they flow reluctantly, for the current becomes slower and slower, and the channel wider and wider, till at length water touches water, and the Jordan is lost. Such is the sacred river, without a parallel, historical or physical, in the whole world. A complete river beneath the level of the ocean, disappearing in a lake which has no outlet, and which could have none. In whatever way we regard it, the Jordan stands alone.

### THE DEAD SEA.

The Dead Sea fills up the southern end of the Jordan valley. It is about fifty miles in length from north to south, by ten in breadth. The mountain chains which shut in the valley become here steeper, wilder and bleaker. In some places they rise in lofty precipices of naked rock from the bosom of the waters: in others they retire, forming wild nooks and yawning ravines, fitting homes for the wild goats which still inhabit them. The scenery of the lake is bare and desolate, but grand. The water is clear and sparkling, deep and beautiful azure when the sky is cloudless, but reflecting vividly every changing hue of the firmament. In summer, when the heat is intense, a thin, whitish, quivering vapour hangs over the surface of the water, and gives a strange, dreamy indistinctness to the mountains. At the northern and southern ends, the flat plains are parched and barren, in part covered with fine sand, and in part with white nitrous coating like hoar frost. Braekish and sulphur springs occur at intervals around the whole borders of the lake. Some of them are warm, and send up clouds of steam. At one or two places along the western shore, and also at the southern end of the lake are slimy pools and marshes, whose exhalations of sulphuretted-hydrogen taint the atmosphere for miles. Strewn along the northern shore, especially near the mouth of the Jordan, lie large quantities of drift wood, brought down by the swollen river, and it is everywhere encrusted with salt crystals. The great depression, the fierce rays of an unclouded sun, the white mountain chains on each side, and the white soil below, reflecting the sun's rays, give the whole basin of the Dead Sea a temperature like that of a furnace. Never did I suffer so much from intense suffocating heat as during the days I spent on the shores of the lake.

S. C.

Selected.

Yet, still it cannot be called a "sea of death," in that sense in which travellers in former ages were wont to represent it. It has been stated that no vegetation could exist along its shores, and that no bird could fly over it, that, in fact, its poisonous exhalations are fatal alike to animal and vegetable life. This is altogether untrue. At every little fountain along the shores, the vegetation has a tropical luxuriance. I have seen the oleander dipping its gorgeous flowers into the lake, and I have seen the willow and the tamarisk, and numerous other shrubs flourishing where their stems were at certain seasons immersed in the waters. The cane-brakes on the shore abound with wild fowl; and occasionally flocks of ducks may be seen swimming far out upon the sea. The water, however, is intolerably salt and bitter, and no fish could live in it. Yet it is not altogether destitute of living creatures, a few inferior organizations having been found in it by recent naturalists. Its specific gravity is so great that the human body will not sink in it. I have tried it myself, and can, therefore, testify to the truth of the fact. This is easily accounted for. The weight of water increases in proportion to the quantity of salt it contains in solution. Ordinary sea water has about four per cent. of salt, whilst that of the Dead Sea contains more than twenty-six per cent.

The Dead Sea is thus a physical wonder, and strange to say, it is also a historical wonder. It would appear that in ancient times, it was much smaller than it is at present, leaving room for a large and fertile plain, on which the cities of Sodom, Gomorrah, Admah and Zoboim once stood. These cities were burned by fire from heaven, and the whole plain, or, as it was called, "the vale of Siddim," was covered with water. Recent explorations of the sea, and of the surrounding region tend, I believe, to throw some light on one of the most remarkable events of physical geography and of Biblical history. The northern section of the lake, from the mouth of the Jordan to the promontory of Lisau, is immensely deep, varying from forty to two hundred and eighty fathoms. But the whole southern section is shallow, only a few feet of water covering an extensive flat, in which bitumen pits, and bituminous limestone abound. The latter appears to have been the plain of Sodom, for we learn from Gen. xiv. 27, 28, that the plain was visible from a hill-top near Hebron, which would not be true of any part of the Jordan valley north of Sogedi. The Bible further informs us that "the vale of Siddim was full of slime pits," that is, pits or wells of bitumen. Now we know that bitumen burns like oil, and bituminous limestone is also inflammable. May not the houses and the other edifices have been built of the latter, and like the tower of Babel, cemented with the former? And if so, when once ignited by fire from heaven, they would burn rapidly and fiercely,—may, the whole plain filled with its bitumen pits, and trenched with inflammable stones, would burn like a coal field. How strikingly does this seem to illustrate the words of Scripture, "And Abraham got up early in the morning (from his tent at Mamre,) to the place where he stood before the Lord, and he looked toward Sodom and Gomorrah, and toward all the land of the plain, and behold, and lo, the smoke of the country went up as the smoke of a furnace."

J. L. VATLER.

*Double-minded Farmers.*—One great principle of success in business is learning a trade well and then sticking to it. It requires a long time to know every thing connected with successful busi-

ness. An acquaintance, a seed dealer, stated that for the first five years he could not ascertain that he made any thing. But he was learning. Before ten years he was clearing five thousand dollars per year. Another was doing well in manufacturing ropes. But he was unstable in mind, and although his friends advised him to "hang to the ropes," he was not getting rich fast enough; but he meddled with business he had not learned sufficiently, bought a mill, bought grain, and then broke a bank by his large failure. Some farmers come to the conclusion that cows are the most profitable; purchase animals, erect buildings, and begin well. But being a new business, they do not succeed as they expected; they might if they would stick to it. The next year they sell their dairy and buy sheep. The price of wool is low that year; and they hear that much money has been made by raising tobacco. Thus they go on, changing from one thing to another, and never succeeding in any. Stick to your business.—*Late Paper.*

For "The Friend."

#### Reflections on the Uncertainty of Life.

The falling leaf and drooping flower are, to the unscientific, but the signal for depression, reminding them of the approaching autumn of life, when they must be consigned to the silent grave; but the christian, if his earthly comforts die, feels that his hopes are fixed beyond the confines of time, where his treasures lie; and dear as the ties of life are, when he feels the silver cords loosening around him, and hears the golden bowl, or the pitcher breaking at the fountain, he does not conclude all his happiness is removing from him, for the everlasting Arms are underneath for his support, and he is enabled to drifk the cup resignedly, believing his Heavenly Father doeth all things well, afflicting not willingly, or grieving the children of men.

Since the blossoms dropped, have we not seen the smiling infant, the lisping child, blooming youth, vigorous middle life, and the aged, like a shock of ripe corn, all gathered we trust into the garner of rest? and what is the lesson it should teach us, but to have our treasures where moth and rust do not corrupt, and where thieves do not break through and steal," as well as the necessity of having oil in our vessels, when our lamps ready for the midnight cry, "Behold the Bridegroom cometh, go ye out to meet Him." When this is the case, they can look forward with a degree of faith and hope, to being admitted with the Bridegroom of souls into the kingdom of rest and peace; but let us remember that none but those who have been willing to confess Him before men can expect to hear the welcome language, "Come ye blessed of my Father, inherit the kingdom prepared for you, from the foundation of the world."

Well, then, dear young friends, if these are the unalterable terms, bow to early impressions, "a flower that's offered in the bud, is no vain sacrifice," submit to the restraining yoke of the cross of Christ, while it is laid upon you in mercy, cast all your crowns at His feet, and let the impressive language of your conduct and appearance be, I the clay, Thou the potter, fashion and form me as seemeth good in Thy Holy eye sight, only let me live to honor Thee, and magnify Thy ever adorable name, by dedication and devotedness of spirit to all of thy requirements. For if we do not bow in mercy when the still small voice is inviting, and wooing us to go in at the strait gate, and to keep in the narrow way, we shall have to in judgment, when the flaming sword is between us and the tree of life which stands in the midst of the Paradise of God. For as it is disobedience that

separates us therefrom, so it is by submission and faithfulness to manifested duty that we can ever expect to inherit eternal life, and be an inhabitant of one of those blessed mansions promised by Him who went before to prepare a place for those who love and serve Him here on earth.

*Re-capture of Honey by Bees.*—A few days ago M. Dyer, of Charninster, having directed the withdrawal of a drawer of honey, weighing apparently about forty-five pounds, from a hive, to which a super had been applied, the drawer, as usual, was deposited for the night underneath a shrub in the grounds, in order to allow the bees who still clung to it to go away. On the servant being sent, however, to fetch in the honey the next morning, it was found to be black with bees, being a detachment from the swarm from whose hive the honey had been taken; and the little girl having been twice stung in attempting to fulfil her mission, it was thought best to leave the honey where it was till nightfall, in the hope of finding it then abandoned by the bees. And so indeed it was, for in the course of the day they had contrived to clear out the combs as cleanly as if they had been made of paper, thus retaking every particle of their honey.—*Dorset Express.*

When I am assisted to look beyond this transitory scene of uncertainty, I am welcome tribulations and rejoice in such adversities as have the least tendency to draw my mind nearer unto God; which I well know must be by being weaned and redeemed from the earth and earthly satisfactions.—*D. Wheeler.*

## THE FRIEND.

ELEVENTH MONTH 3, 1866.

The high prices at which breadstuffs of all kinds are now held, has given rise to fears lest there was a real scarcity of these essentials to life in the country, and that the poorer classes must necessarily suffer severely, as the consumption at home and the demand abroad appreciated their value. We are, however, inclined to think that speculation and our inflated currency, have much to do with the present high prices, and that as measures are matured for bringing the national notes to par value with gold, which probably will be done by Congress this winter, breadstuffs, in common with other articles, will recede from the prices they now command.

But the exigencies of the approaching winter will require that the hand of charity shall be widely opened, to bestow the help which many among the indigent will probably stand in need of.

The report of the Agricultural Department at Washington, for the Tenth month, just ready for publication, is said to be more favourable than was anticipated. The crop of Indian corn, notwithstanding the losses sustained by floods, is said to be unprecedented, amounting to more than a thousand millions of bushels.

A correspondent of one of our daily papers alluding to the out-coming Agricultural Report, says—"The estimate for wheat for the present year, now nearly complete, will not vary much from one hundred and forty-three millions of bushels, showing a small percentage of decrease, which is fully compensated by the comparatively superior quality of the grain. This is ten millions of bushels more than the crop of 1859, and is within five millions of a product in proportion to the increased population. It is evident that

the entire wheat crop will exceed by several millions that of 1859, when the yield was reported at 173,104,924 bushels. Then there were five and a half bushels to each inhabitant. The yield of oats is extraordinary, and the quality excellent."

#### SUMMARY OF EVENTS.

**FRONZES.**—The rates of charge for the transmission of messages through the Atlantic Cable, have been reduced one-half. It has been decided at Manchester to work the cotton mills only on short time.

A treaty between Prussia and Saxony, has been fully ratified. Saxony is required to pay ten millions of florins. The army of Saxony has already been dissolved. Baden rejects the proposed alliance with Prussia.

Rumors are current of changes in the French cabinet being imminent. The threatened rupture is caused by the Emperor insisting on the negotiation of a large loan. It is now said that the French troops will leave Rome towards the close of this year. So far from its being true that the French government has intimated an extension of time for the withdrawal of the French troops from Mexico, the accounts received in Washington indicate that they will be withdrawn in a shorter period of time than that heretofore mentioned by the French government. Advice from Vera Cruz to 10th mo, 12th, state that General Castellan had arrived there with instructions to send to France, in two detachments, all the troops from that place. This measure will probably necessitate the absence of the Emperor Maximilian, and these steps may be hastened by recent military reverses.

For some time past the Liberals have been steadily gaining ground in Mexico. In an engagement near Puebla, the Belgian legion was totally defeated by the Mexicans, with a loss of their artillery and train. The Emperor Maximilian and the officers had already re-embarked for Belgium. The Empress Carlotta, who went to Europe to seek aid for Maximilian in his difficulties, has, it is stated, become hopelessly insane. A Paris dispatch of the 26th, says, the Emperor Maximilian will probably return in an Austrian tripartite which was recently dispatched from Trieste by the Austrian Emperor.

Reports have been received from Candia, stating that the insurgents had determined upon a vigorous prosecution of the war. In one battle the Turks lost 1200 men killed and 800 wounded. Later dispatches say, that after four days heavy fighting the insurgents had repulsed the Turks in three places.

The London *Globe*, in an editorial, alludes to the design entertained by the courts of Prussia and Sweden, to absorb the kingdom of Denmark.

It is said that the relations between Austria and Russia are assuming a menacing character. The London *Times* says the Russian government is intriguing for the further disintegration of Austria.

A project has been submitted by France and England to the Spanish government, for the settlement of the Chilian difficulty, and has been approved by the Queen of Spain and her ministers.

The London *Standard* of the 28th says, the British government are about to call of Parliament a large increase in the amounts heretofore voted for the army and navy. Advice from Japan report that the Tycoon's army had suffered a heavy defeat at the hands of the insurgents, and that the Tycoon in consequence had abdicated.

The weather in England was unfavorable, and the market firmer for all kinds of breadstuffs. Middling uplands cotton, 15s. Consols, 89½. U. S. 5-20's, 68½.

**UNITED STATES.—Internal Revenue.**—The receipts from this source, from 7th mo. 1st to 10th mo. 27th, amounted to \$121,975,410.

**Bonds.**—The total circulation issued up to this time, amounts to \$294,836,689. For the redemption of this paper the government holds securities to the amount of \$336,883,550.

**Philadelphia.**—Mortality last week, 306, including 43 of cholera.

**Chicago.**—The present population of this city is 204,000. In 1837 it had but 4170 inhabitants.

**The Fenians.**—Some of these deluded men, who were captured in Canada a few months ago, having been tried and condemned to death, President Johnson has interposed on their behalf. By his direction the Secretary of State has addressed a communication to the British minister, requesting to be furnished with copies of the records of trial and conviction in the several cases. Secretary Seward suggests that as the offences involved in these trials are in their nature political, it is the opinion of the United States government that sound

policy coincides with the best impulses of a benevolent nature in recommending tenderness, amnesty and forgiveness in such cases.

**The South.**—The tobacco crop in Kentucky is better this season than ever before. Accounts from north and central Alabama report great destitution from the failure of the crops of cotton and corn. Many planters have sold their lands for small sums, and the crops failing, the lands are sold at ruinous rates. Meetings are being held urging the Legislature to pass laws preventing the sacrifice of property. The rice crop of South Carolina is estimated at 25,000 tierces—about one-fifth of the crop of 1860.

The public lands in Florida are being rapidly disposed of in small tracts for actual settlement. Returns from the Land Office at Tallahassee show that in the 8th and 9th months last, 11,569 acres were disposed of at that office, in 80 and 40 acre tracts, under the homestead law of 6th mo. 21st, 1856, which law applies exclusively to the disposal of public lands in the Southern States.

Extensive iron works are in process of erection at Trenton, Dade county, Ga. There are three hundred and twenty brick stores in course of construction at Atlanta, Ga. The excitement over the continued discovery of iron in Georgia is increasing. Sales of mines are made at high prices. Much favorable attention is now being given in the State to the raising of tea. Black tea, said to be of excellent quality, has been produced on the coast, where it seems to flourish remarkably well.

**Miscellaneous.**—The State of Oregon, one of the youngest in the Union, has 443 public schools, which is the original thirteen States. The Shenandoah, the famous rebel cruiser recently sold by the United States consul at Liverpool, is said to have been since purchased by the sultan of Zanzibar. The United States realized \$108,632 from the sale of the Shenandoah. Owing to the late high prices for sugar, considerable attention is now being given in Georgia to the raising of tea. Black tea, said to be of excellent quality, has been produced on the coast, where it seems to flourish remarkably well.

The people of Victoria, Vancouver's Island, have petitioned Queen Victoria to allow the colony to withdraw from the British and become annexed to the United States.

There are four colored persons on different juries of the Superior Court now in session at Boston.

Since the fire at Portland on the 4th of Seventh month last, there have been between six and seven hundred buildings erected, including many blocks of brick and granite stores. The contributions received by the mayor for the relief of indigent sufferers, amounted to about \$500,000.

**Vermont.**—The Legislature has elected United States Senators as follows: To fill the vacancy occasioned by the death of Senator Collamer, L. F. Poland; to fill the unexpired term of Senator Root, George B. Burdette; and to serve for six years from the 4th of Third month next, Justin S. Morrill.

**West Virginia.**—A full vote was polled at the late election, and the Republican candidates were chosen by increased majorities.

**The Markets.**—The following were the quotations on the 29th inst. New York—American gold 146½. U. S. sixes, 118½; ditto, 5-20, 186½, 114½; ditto, 186½, 111; U. S. 5 per cents, 10-40, 99½. Superfine State flour, \$9.75 a \$11.56. Shipping Ohio, \$12.45 a \$13.45. Baltimore flour, fair to good, \$12.60 a \$14.50; trade and family \$14.75 a \$17. No. 2 Chicago spring wheat, \$1.25 a \$1.40. White amber, \$1.25 a \$1.40. Barley \$1.25 a \$1.40. State oats, 73 a 74 cts; western, 69 a 71. Rye, \$1.25 a \$1.45. Western mixed corn, \$1.21 a \$1.25; yellow, \$1.25; white, \$1.25 a \$1.27. Middling uplands cotton, 39 a 41 cts. **Philadelphia.**—Cotton, 39 a 40 cts. Superfine flour, \$7.75 a \$9; higher brands, 10 a \$11.75. Wheat, \$3 a \$3.25; white, \$3.35 a \$3.40. Rye, \$1.40 a \$1.43. Yellow corn, \$1.25 a 64 a 65 cts. Cloverseed, \$8 a \$9. Timothy, \$3.50 a \$3.62. Flaxseed, \$3.25. The arrivals and sales of beef cattle reached 2700 head. The market was moderately active at former rates. Sales of extra at 16 a 16½ cts, a few choice at 15½, fair to good, 14 a 14½ cts, and common at 13 cts. Sheep, 20 a 20½ dull owing to the large receipts at 17 a 20, 16 a 16½; extra sold at 5½ a 6 cts, and common to good at 5 a 5½ cts, per lb. gross. Hogs were also dull and lower, sales at 212 a 213 the 100 lbs. net.

#### RECEIPTS.

Received from S. M. Brinton, Pa., \$2. 40; from G. L. Sinsley, Pa., \$1. 31; \$3. 40; from Owen, N. Y., \$2. 40; 40; from S. Chodroner, N. Y., \$2. 30; 39; from Jane C. Whitlock, Va., to No. 47, vol. 40; from I. Buffinton, Mass., \$2. 40; 40; from J. Collins and Dan'l Peckhann, N. Y., per H. Knowles, Agt, \$2 each, vol. 40.

A Stated Meeting of the Female Society of Philadelphia for the Relief and Employment of the Poor, will be held at the House of Industry, No. 112 North 7th St., on Seventh-day, 11th month 31st, at 3½ o'clock.

JULIANA RANDOLPH,

Tenth month 26th, 1866.

Clerk.

#### WESTTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the Boy's SECOND MATHEMATICAL SCHOOL, to enter on his duties on the opening of the Winter Session. Apply to

Samuel Hillis, Wilmington, Del.  
Thomas Evans, 817 Arch St., Phila.  
Joseph Scattergood, 413 Spruce St., Phila.  
Charles J. Allen, 304 Arch St., " "

#### WESTTOWN BOARDING SCHOOL.

The Winter Session of the School will commence on Second-day the 5th of Eleventh month.

Pupils who have been regularly entered and who go by the cars from Philadelphia, can obtain tickets at the depot of the West Chester and Philadelphia Railroad corner of Thirty-first and Market streets, by giving them names to the Ticket-agent, or, where he is furnished with a list of the pupils for that purpose. In such case the passage, including the stage fare from the Railroad Station, will be charged at the School, to be paid for with the other incidental charges at the close of the term. Conveyances will be at the STREET ROAD Station on Market at a charge of 25 cents per trunk, for the first month, to meet the train at leave Philadelphia at 7.50 and 11 A. M., and 2.30 P. M.

Baggage may be left either at Thirty-first and Market streets or at Eighteenth and Market. If left at the latter place, it must be put under the care of Hibbert Alexander, who will convey it thence to Thirty-first and Market at a charge of 25 cents per trunk, to be paid in full. Those who prefer can have their baggage sent for to any place in the built-up part of the City, by sending word on the day previous (through the post-office or otherwise) to H. Alexander, No. 5 North Eighteenth St. His charge in such case for taking baggage to Thirty-first and Market streets, will be 25 cents per trunk. Baggage put under his care, if properly marked will not require any attention from the owners, either at the West Philadelphia depot, or at the Street Road Station, but will be forwarded direct to the School. It may not always go on the same train as the owner, but it will go on the same day, provided the notice to H. Alexander reaches him in time.

**DURING THE SESSION,** passengers for the School will be met on the Street Road Station, on the arrival of the first train from the City, every day except First-days and small packages for the pupils, if left at Friends' Book Store, No. 304 Arch street, will be forwarded every Sixth-day at 12 o'clock, except on the last two Sixth-days in the Two-fifth month, and the expense charged in paid bills.

Tenth mo. 24th, 1866.

#### WESTTOWN BOARDING SCHOOL.

Wanted, a Friend qualified to perform the duties of Book-keeper and Librarian at the above Institution, to begin on the opening of the Winter Session, or as early thereafter as may be practicable.

Application may be made to  
Robert Thomas, Burlington, N. J.  
Aaron Sharpless, West Chester, Pa.  
Joseph Scattergood, 413 Spruce Street, Phila.  
Charles J. Allen, 304 Arch Street, Phila.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSUAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 357 Market Street, Philadelphia, or to any other Member of the Board.

DIED, on the 21st of Tenth month, 1866, at his residence in Germantown, Philadelphia, JEREMIAH HACKNEY in the 68th year of his age.

From "The British Friend."

"If the Lord Will."

A short time since a very powerful sensation was produced in the city in which the writer resides, by the announcement of the sudden death of a gentleman who held several important public offices in connection with both the city and the county. He was somewhat advanced in life, being about sixty years of age; but there was every reason to hope that he would be spared for many years to come. He had gone up to London business, and whilst there he was seized in his hotel by a fit from which he never recovered his consciousness, and he was found by the waiter in his bedroom dead. Nothing had ever passed between him and his dearest friends to lead them to suppose that he had any idea of his liability to such a visitation; and the state in which his worldly concerns were left made it quite plain that he calculated most confidently on long-continued life.

A near neighbour of his, resident in the same street, within fifty yards of his dwelling, and who had known him from his boyhood, would most likely be one of the first to hear of the startling event. That he would feel it deeply is all but certain. When death came down those whom a man has been passing his door every day, and whom he has known all his life—especially when they are cut down suddenly—he must be careless and hardened indeed who is unmoved. How he is affected—whether or not it prompted the reflection, "I may so die—I must make my peace with God;" whether or not it called forth the prayer, "So teach me to number my days, that I may apply my heart unto wisdom;" perhaps not in those who best loved him ever heard; but the writer was told by one of his nearest relatives, that they had no reason to believe that he had the least suspicion that he laboured under disease which might terminate suddenly. One evening, however, within a few days of the event, he had narrated, he set out accompanied by one of his sons, to visit another son who resided about fifteen miles distant. At a certain point of the road he stepped out of the vehicle in which they were riding, and turned to look at a beautiful prospect which could be commanded from the spot where they had halted. He slipped, fell, and in an instant, without a single groan, or a single word or look of farewell, he was gone.

That two such sudden deaths should occur to persons so well known to each other, such near neighbours, and within so short a space of time, was

felt to be exceedingly startling and impressive. But another event occurred whilst the impression made by these two deaths was still fresh. Within five minutes' walk of the residence of these gentlemen lived another, a professional man, whose pursuits most frequently have brought him into contact with the one first named. He was in the prime of life; he had a large family dependent on his exertions; he was in the receipt of an excellent income from a situation which he held under government, and he had every prospect of increasing prosperity. In the midst of all he was struck down by illness. No fears were entertained at first, and it was thought that he would very speedily be restored to health. But other diseases supervened upon the disease by which he was first attacked; for the most part he was in a state of great prostration, both bodily and mental; his strength gradually succumbed, and in the course of a short time his wife was left a widow, and his children fatherless.

About the same time there occurred an event of European—we might say of world-wide—interest. The Czarowitz of Russia, a young man of one-and-twenty, on whom life was opening with prospects as splendid as could well be conceived—the heir of the vast empire of all the Russias—and who was just about to be united to the sister of our own beloved Princess of Wales, was on a visit to a distant European city, when he was seized with a fatal disease, which defied all the appliances of the best medical skill. His bright visions of empire all melted away; and instead of a territory which, in continuous stretch, is the largest in the world—extending into three quarters of the globe—including somewhere about half of Europe, and a portion of Asia larger still—all that remains to him is the narrow space which his corpse occupies in the mausoleum of his ancestors.

Here, then, is a group of instances of the uncertainty of human life, taken from different positions in society, and from different stages of life, from the verge of old age, from the prime of manhood, and from vigorous and hopeful youth. Do they not combine to teach us most solemnly how uncertain is everything earthly? and do they not enforce most powerfully on our consciences the warning, "Boast not thyself of to-morrow, for thou knowest not what a day may bring forth?"

Everybody calculates on the future. The disposition to do so dates from the dawn of consciousness. The child is never occupied exclusively with the present. He may enter with all his heart into his play, and he may attend diligently to the studies by which he is to be fitted for the duties of life; but he has another world—a world of his own creation—filled with just such trifles as delight his childish mind—a world which he often reveals—the world of the future; and with more or less of definiteness and confidence he anticipates the time when things will be as he has painted them.

So it is in youth. Galled by present restrictions, and debarred from many enjoyments for which he longs, the young man looks forward to a time when every bond will be relaxed, and when,

his own master, he will be at liberty to form what connections and enjoy what pleasures he likes.

The disposition is not one whit less strong in mature life. The apostle James describes some active, eager men of business, who looked forward to the future without the slightest misgiving, and said, "We will go into such a city and continue there a year, and buy and sell and get gain." These men were only types of numbers with whom we meet every day. Many a one, who is now in a comparatively humble position in life, is saying to himself, "I will continue where I am for a time. The opportunity of change will doubtless occur, and I will embrace it. That will lead to something else, and then I shall be on the high road to wealth." The man of business says, "I will clear off this encumbrance; I will make such and such additions to my business; I will purchase that property; I will attain that social position, and then I will retire to enjoy in peace the substance I shall have acquired."

At every period of life men "boast themselves of to-morrow."

It may be freely admitted that we cannot help anticipating the future. It is impossible that we should be restricted to this little narrow present. Nearly all the work we do contemplates a future more or less remote. We work to-day that we may win to-morrow's bread. We reap in autumn the fruit of seed sown in the spring, or it may be in the bygone year. Many a gallant vessel is at this very time spreading its sails to the breeze, bound on enterprises which contemplate the traffic and the success of years to come. We are even commanded to make a wise provision for the future: "Go to the ant, thou sluggard; consider her ways, and be wise: which, having no guide, overseer, or ruler, provideth her meat in the summer, and gathereth her food in the harvest. How long wilt thou sleep, O sluggard? when wilt thou arise out of thy sleep? Yet a little sleep, a little slumber, a little folding of the hands to sleep: so shall thy poverty come as one that travelleth, and thy wealth as an armed man." Then, too, what a blessed thing is hope! How it quickens the diligence of the student as he trims his lamp and prosecutes his toil! How it revives the energies of the man who is well-nigh fainting beneath the burden and heat of the day! How it cheers the poor sufferer on his bed of pain! So we are not forbidden to look forward to the morrow, and to form our plans for it; but we are forbidden to boast of it. We are forbidden to say presumptuously, "To-morrow shall be as this day, and much more abundant." We are forbidden to presume, with any certainty, that we will see the morrow; and even though we should see it, we are forbidden to calculate on the fulfilment of our plans, as though nothing could interpose to prevent their accomplishment.

Then how are we to anticipate the morrow? We find an answer to the inquiry in the words of the apostle James: "For that ye ought to say, If the Lord will, we shall live, and do this or that." It is not meant that we are to use those very words whenever we speak of the future, for

that would needlessly cumber our speech, and it might become a mere form after all. But it were better for us to use it too frequently than never to use it, or any words of similar import, and to lose sight of the recognition which it involves of the subordination of everything to the will of God. These words, however, express the spirit in which we should form our plans. We must ever hold it as a settled practical conviction, "that only if the Lord will shall we live;" and that only "if the Lord will" can we expect to "do this or that."

(To be conclud-  
ed.)

### Earnings of Workmen in Great Britain.

Professor Leone Levi, an eminent statistician in England, has prepared a careful estimate of the earnings of the working classes in Great Britain. By comparisons between census returns, Parliamentary reports on wages, Board of Trade statistics, and other official documents, he has been able to arrive at conclusions which he regards as accurate. The result of his calculations is that the total annual earnings are about £418,000,000, or \$2,000,000,000. The distribution of this sum, according to industries, is found to be as follows:

	England.	Scotland.	Ireland.	Aggregate.
Agriculture,	£44,000,000	£9,000,000	£23,000,000	£76,000,000
Textile fabrics,	38,000,000	6,000,000	8,000,000	52,000,000
Metal manufactures,	27,000,000	2,000,000	1,500,000	30,500,000
Building trades,	25,000,000	1,000,000	1,200,000	27,200,000
Shipping, railway, &c.,	25,000,000	1,500,000	7,000,000	33,500,000
Wholesale trade,	21,000,000	5,000,000	2,000,000	28,000,000
Retail trade,	13,000,000	2,000,000	8,000,000	23,000,000
Domestic service, &c.,	47,000,000	5,000,000	7,000,000	69,000,000
Labourers, industrial,	17,000,000	2,000,000	2,000,000	21,000,000
Others,	49,500,000	6,200,000	4,500,000	60,200,000
Total,	£311,500,000	£52,700,000	£54,100,000	£418,300,000

The wages, details of which are given in connection with each branch of industry, amount to the following general averages:

	England.	Scotland.	Ireland.	Average.
Males, 20 to 60,	22s. 6d.	29s. 6d.	14s. 4d.	16s. 2d.
Males, under 20,	6s. 6d.	7s. 6d.	6s. 3d.	6s. 6d.
Females, 20 to 60,	12s. 6d.	18s. 6d.	7s. 6d.	10s. 6d.
Females under 20,	6s. 6d.	8s. 2d.	7s. 6d.	7s. 6d.
Average,	16s. 2d.	14s. 10d.	11s. 9d.	14s. 10d.

### Professor Levi says:

"From these estimates it appears that the average income of a working man is in England 22s. 6d., in Scotland 20s. 6d., and in Ireland 14s. 4d. Frequently, however, there are more workers than one in a family. In a family of five, generally, two or even three persons are earning something. Assuming, then, that there are two earners in each family, and taking the average wages of men, women and children as a basis, the average income per family may be estimated at 32s. 4d. in England, 29s. 6d. in Scotland, and 23s. 6d. in Ireland."

Assuming the correctness of these estimates, the average amount for the support of every work-

ingman's family in England, allowing two earners of wages for each family, is equal only to eight dollars per week; in Ireland it is only seven dollars and fifty cents, a fact which partly explains the rapid emigration to the United States.—*N. American.*

### Thoughts for the Times.—No. 48.

When Thomas Lower, who was afterwards the son-in-law of Margaret Fell, and was at this time an entire stranger to George Fox, visited him in prison at Lancaster, George Fox spoke particularly to him. He afterwards said that the words were as a flash of lightning through him; that he never met with such men in his life as the Friends, that they knew the thoughts of his heart, and were as the wise master builders of the assemblies, that fastened their words like nails.

William Penn, in his admirable preface to the life of George Fox, thus addresses his brethren in Christ that are in the exercise of the ministry: "Let life be your commission, your well spring and treasury in all such occasions; else you will know there can be no begetting to God, since nothing can quicken or make people alive to God, but the life of God; and it must be a ministry in and from life that enlivens any people to God. We have seen the fruit of all other ministries, by the few that are turned from the evil of their ways. A dry doctrinal ministry, however sound in words, can reach but the ear; and is but a dream at the best; there is another soundness, that is the soundest of all, viz: Christ the power of God. This is the key of David that opens and none shuts; and shuts and none can open; as the oil to the lamp and the soul to the body, so is that to the best of words. Which made Christ to say, 'My words, they are spirit and they are life,' that is, they are from life, and therefore they make you alive that receive them. If the disciples, that had lived with Jesus, were to stay at Jerusalem till they received it; so must we wait to receive before we minister, if we will turn people from darkness to light and from Satan's power to God."

The quickening virtue of the ministry being thus felt by the hearers, and taking effect in hearts prepared by the Holy Spirit to receive it—the Gospel ministers among us are likewise guided by the same Divine influence to the hearts thus prepared. And therefore it is, that so much of the preaching in our meetings is directed, even in large assemblies, to particular cases and conditions which have impressed the spirit of the minister; and that such preaching, uninteresting as it may be to the careless superficial hearer, finds an answer in the hearts to which it is addressed, and is most effectual in convincing and converting and turning men from the evil of their ways. It is a consequence too of this divine guidance of the speaker, and preparation of heart in the hearer, that our ministers are so often called upon to preach the gospel to a gathered few in private, and to pay religious visits to the families belonging to a meeting. As there are few severer tests of the divine guidance of a minister, than such visits, so there are few occasions in which the authority and efficacy of a true ministry are more signally owned. For the preacher has to speak under circumstances which can leave little or no doubt as to the individual addressed—whose conscience must own and be stricken by that which is divinely commissioned, to the truth of which the hearers also can often bear witness. Every religiously concerned Friend must have experienced the truth of these remarks.

These religious sittings in families—which

have grown out of the nature of our gospel ministry—are important, nay almost essential in maintaining the warmth of religious feeling and the love of the brethren among our members. They have always been most frequent, when our ministers have been most deeply exercised and most highly favoured in their holy calling. They constitute a feature peculiar to our Society, and its incidents connected with them are among the most cherished recollections of us all.

Although most of our eminent ministers, who engaged in religious service abroad, have been called upon to pay such visits, no one appears to have been so much and almost exclusively engaged in this duty as Sarah Stephenson. She was a native of Whitehaven, in Cumberland, and was first called, in 1771, to this service in which she was, during the remainder of her life, so much engaged. "A very close exercise," she writes "now came to my mind in a line in which I had not been engaged. He who is pleased in condescending love, to open to the understandings his children, his blessed will, through the spirit of his dear Son Jesus Christ, our Mediator and Advocate, was pleased to lay a concern upon me to visit the families of Friends at Melksham; line of service then so new, and particularly so this county, that I apprehend few, if any, could remember a visit of this kind having been paid in it. From a view of being such a poor, weak and contemptible instrument, I frequently adopted the language of Gideon, 'I am the least in my father's house'; and from an apprehension of great unfitness, was very desirous of being excused, endeavouring to persuade myself that the Lord would remove the concern from me; till, in compassionate regard, he was pleased to administer sickness, and to suffer distress of mind to attend in this time I was brought very low, and, in my own apprehension, had every symptom of a decline, except a cough; so that I looked for the messenger of death, with a desire to pay the debt due to my friends, by a sacrifice of life. But, when I looked up with desire of beholding the gates of mercy open by my reception, it seemed clear to me, that if I did not obey the discover that had been made, it would remain as I then saw it, a total obstruction to my soul's entrance into the blessed kingdom of eternal rest. This awful distressing prospect reduced all within me to resignation to his blessed will; and then a smile of his favour arose upon my spirit, a strengthened me to move under the influence of his love. So I laid my concern before Friend and way was opened for my moving in this weighty work; which the Lord graciously owned by his blessed Spirit from family to family; and I thankfully acknowledge that the minds of Friends were generally open to receive what I had communicated, so that I had cause to bless and praise the holy name of Him who lives for ever."

"This was the beginning of a work in which my good Master has since been pleased often to employ me; which has been very arduous, through deaths often and deep baptisms; I think scarce any service so much so; but he ledeth down the bottom of Jordan, in order to qualify to fit the different states of individuals in families, as in this abased state to speak as the Spirit giveth utterance."

The remainder of her life was given to ministerial labours, of which this service in families formed the principal part. In the year 1778 she visited Ireland, and has preserved notes her journey in that island. "We attended week-day meeting at Grange, on the 9th, at close of which our concern was mentioned; way was made for our accomplishing the vi-

egan the arduous service on the 10th, and was favoured with an evidence of being in the way of my duty. O, holy Father, keep my soul steady on these, and permit nothing to draw my attention from thee, but be pleased to enable me to obey every manifestation of duty. And O, my soul, mayst thou be instructed, and whilst endeavouring to dress the vineyards of others, not leave thy own undressed. \* \* \* To-day have I several seasons of close labour and deep exercise; under which my spirit mourns for the whole, safe state of some, and the insensibility of others, desiring all self-righteousness may be stripped off, and their minds brought into that state of self-abasement, with which the Most High well pleased; that so sweet life in Him may be perceived."

"We sat a considerable time in silence, the 10th, at Kilkennore, and in great poverty. At it seemed my place to stand up, though in much weakness that I thought I had hardly strength sufficient to do so; but I obeyed the secret motion of Truth; and when upon my feet had spoken on the advantage of knowing Jerusalem be a quiet habitation, a place of succour in the day of storm, when we should be searched as with needles: and though things opened pretty close, it was under the power of Truth and love, so that, if I felt aught, Truth arose into a good degree of dominion, and great tenderness there was the meeting. O, my soul, thou hadst indeed cause to believe in the sufficiency of that power, that is the resurrection and the life! I was so wont to see five children that were orphans, they were so tendered in the opportunity we had with them, that they could not forbear weeping aloud. The dear children were recommended to read the scriptures, and the blessing attendant on obedience to the Lord's will was set forth to them. I may the visitors and visited remember, and be comforted by such condescending goodness, such vouch from adorable mercy!"

"We have now gone through great part of the millies (at Clonmel) and have cause to say, thereto, the Lord hath helped us. Indeed He is enabled me to deal plainly, and honestly to scorch away my duty; and I hope we have left an open door to such as may come after us. \* \* \* Some of the opportunities were memorable seasons, the comfort of both visited and visitors. Tendering invitations were extended to some of the youth, but close matter handed to others; and, oh, may the slothful be awakened to diligence before the awful midnight cry be heard, that so, their language may not be, 'Give us of your oil or our lamps are gone out.' \* \* \*

"We finished our laborious service at Waterford, through the renewed help of gracious Goodness, whose condescension was great in opening doors, and giving ability to speak to them in his love, so that I hope many were led to view their sad condition without a Saviour. May it prove lastingly profitable to their poor never dying souls!"

"We have had forty-six sittings (at Cork) very close labour, and many deep baptisms; but may thankfully acknowledge our heavenly Father has been mercifully near, opening the states of many, and renewing a gracious invitation to divers. Come, I hope, will close in with it. Oh may his fiers of love be as broad cast on the waters; that may be found after many days. At Cork, Youngall, and Bandon together, we had about two hundred sittings; but what swelled the number was, that I was not easy without visiting those who might be termed the outcasts; for when reduced very low, I received this language or command, *Gather the scattered*, in a manner that

deeply contrited my spirit; and we may with reverence acknowledge that the gathering arm of power was wonderfully manifested, to the tendering of many of their minds, so that great contrition appeared."

It was in labours and exercises like these that Sarah Stephenson spent the strength of her days. She was almost constantly engaged in visiting meetings through the families of the members, an engagement which she felt, to the last, to be almost awful and arduous, requiring more than almost any other service, the clear and open vision in the light of Truth. In the year 1794, she visited the northern counties of England, and writes thus from Manchester: "We attended the Monthly Meeting on a Third-day, and on Fourth-day entered on the weighty service, for weighty it is, as there is at seasons occasion to bring matters home, like Nathan to David. But the Ancient of Days was near, and was pleased to renew a gracious invitation to many, and in particular to the strayed sheep of the house of Israel, that they might return to the Father's house in deep humiliation, contrition and abasement, and then they would have bread enough and to spare. In many of these opportunities, great brokenness was witnessed. We found in this place, a precious exercised remnant, unto which we were nearly united; and at the close of the visit parted under the sweet covering of that love which is the badge of discipleship. We had one hundred and twelve sittings besides the first and week-day meetings, in twenty-eight days."

She again visited Ireland, during the troubles of the rebellion in 1799, and laid down her life in Philadelphia, in 1802, while on a religious visit to America. "She was peculiarly qualified," say her friends of New York, "to move with propriety in that great work of going from house to house: a meek and quiet deportment, a mind clothed with a spirit of love and affectionate solicitude, that all might be gathered within the divine enclosure, being conspicuous traits in her character and conduct of our beloved friend."

That constant indwelling of spirit, which so qualifies for this ministering to the states of individuals, was very remarkable in Samuel Eulens, of Philadelphia. He was a man of feeble frame and infirm health, learned in the learning of the schools, cheerful and social in temper, and whose thoughts dwelt constantly on the things belonging to salvation. In his native city and in Dublin where he spent some time on religious service, he will long be remembered for his remarkable traits of character. Near sighted almost to blindness, as he groped his way along the street, he would stop at the door of a house, enter it, deliver a short message of warning or consolation, most pertinent to the individual he found there; and after a few more words would retire and pursue his walk, to be interrupted in all probability in the same way. He seemed to dwell constantly in the presence, and to be ever ready to do the bidding of the Master.

Thomas Sattergood was another remarkable instance of a servant, whose loins were always girded, and whose staff was ever in his hand. At sitting down to meals or before rising from them—in the midst of a social gathering of his friends, he would feel the Holy Presence, and maintain an awful silence, or deliver with equal awfulness the message he had received. Social intercourse with his friends, was in him completely held in check by the religious covering of his spirit. Cheerful and innocent as was his conversation, and affectionate as was his disposition, they were regulated by his prevailing feeling of religious duty, by his sense of his high and holy calling.

*The Pacific Railroad.*—A Boston paper says: "Though there is a heavier force of men and pacimens at work on the California end of the Pacific railroad than on this, the progress in distance is far slower; for, while here the path lies along an absolute plain, there it is up and over the grand Sierra Nevada chain of mountains. About 12,000 Chinamen are at work on the road-bed in California, and an additional 10,000 have been contracted for, to be put upon the line next spring, when the contractors will be grading on this slope of the Sierras, and beginning to stretch their labour out on to the plains and into the valleys of Nevada. Now the track is completed to within sixteen miles of the summit of the mountains, and the following table of statistics, distances and altitudes, from Sacramento to the summit, shows how the iron pathway is mounting the great hills of the Pacific slopes of the continent. At Cisco, which the completed road has now reached, the locomotive screams on a spot as high as Mount Washington, the highest of our New England mountains:

	Distance. (miles.)	Elevation. (feet.)
Sacramento, . . . . .	—	54
Arcade, . . . . .	7½	76
Autelope, . . . . .	15	180
Junction, . . . . .	18	189
Rocklin, . . . . .	22	269
Pino, . . . . .	25	420
Newcastle, . . . . .	31	950
Auburn, . . . . .	36	1385
Clipper Gap, . . . . .	42	1785
Colfax, . . . . .	62	2443
Gold Run, . . . . .	64½	3245
Dutch Flat, . . . . .	67	3425
Alta, . . . . .	69	3625
Cisco, . . . . .	93	5911
Summit, . . . . .	105½	7042

"Some of the structures of the work on the last section of the road are grandly massive. A California journal says one culvert, at the crossing of Canon creek, is a noble piece of solid masonry, twenty-eight feet high and fifty-four feet in breadth. The forests of towering pines—the towering mountain peaks and yawning rifts and chasms, traversed by the railroad between Alta and Cisco, present a sublime panorama, which is destined to be a favorite study for the art-loving tourist, not only during our day, but one which will be contemplated with no less delight by unborn generations."

*The Noble Negro Boy.*—The following incident, in the fatal collision of the Niagara with the Post-boy on the Mississippi, was related to me by an eye-witness:

The two steamers struck, and the Niagara immediately careened and began to sink. The wildest consternation was at once universal. Ladies rushed to and fro with piercing screams, imploring the men to help them. But no means seemed at hand, and each sought his individual rescue.

At this fearful moment, a negro boy—one of the crew—was seen quietly lashing a long and stout rope round his body, at the other end tying a stick of wood in its centre.

Instantly, with this apparatus, he threw himself into the river. Turning upon his back, the stick drifted to the rope's end; and calling upon two ladies, who stood on the edge of the boat,—one with a child in her arms, he urged them to spring, and catch either end of the stick. Horror-stricken, they hesitated. The negro lay calmly on the waves, and, in tones of confidence, told them it was there only hope, insisting that

he would carry them safely to the shore. For an instant they hesitated; but, gathering courage from his self-possession, and realizing that it was their last moment, they took the leap, and both succeeded in grasping the stick. Turning quickly to prevent their seizing him, the heroic fellow struck out, with strong muscles, for the land. The rapid current was well-nigh restlessness, but he wrestled manfully with his burden. The energy of despair kept them to their hold, at length their feet touched bottom. Both ladies, with the clinging little one, were saved. Many witnessed this feat. It exhibited not only a cool, unparalleled bravery, but was wholly disinterested, as both ladies were strangers. It should be added that the boy left his own trunk, with his best clothing, and three hundred dollars in money, to sink with the wreck.—*J. W. Alford.*

*Presbyterian.*

Selected.

#### THE CHRISTIAN'S DEATH.

Lift not then the wailing voice,  
Weep not, 'tis a christian's death,—  
Up, where blessed saints rejoice,  
Ransomed now, the spirit fieth;  
High, in heaven's new light, she dwelleth,  
Full the song of triumph swelleth;  
 Freed from earth, and earthly failing,  
 Lift for her no voice of wailing!

Pour not thou the bitter tear;  
Heaven its hook of comfort opeth:  
Bids thee sorrow nat, nor fear,  
But as one who always hopeth,  
 Humbly here in faith relying,  
 Peacefully in Jesus dying,  
 Heavenly joy her eye is flushing,—  
 They should thine with tears be gushing!

Who they die in Christ are blest,—  
Ours be, then, no thought of grieving!  
 Sweetly with their God they rest,  
 All their toils and troubles leaving;  
 So be our's the faith that saveth,  
 Hope that every trial leaveth,  
 Love that to the end endureth,  
 And through Christ, the crown secureth!

Selected.

#### TO WHOM SHALL WE GO.

"Lord, to whom shall we go? Thou hast the words of eternal life."  
When our parent delights are nipt in the blossom,  
When those we love best are laid low?  
When grief plants in secret her thorn in the bosom,  
Deserted,—"to whom shall we go?"

When, with error bewildered, our path becomes dreary,  
And tears of despondency flow,  
When the whole head is sick, and the whole heart is weary,  
Despairing,—"to whom shall we go?"

When the sad thirty soul flutters away from the springs  
Of pleasure that this world can show,  
And sighs for another, and turns its wings,  
Impatient,—"to whom shall we go?"

O blest be that light which has parted the clouds,  
And a path to the pillow can show,  
That pierces the veil which the future enshrouds,  
And tells us to whom we shall go!

For "The Friend."

#### Are they Small Matters?

(Continued from page 77.)

*Mary Turner*, "In her tender years, by the grace of God, through the care of her religious parents, was instructed in and seasoned with the principles of the holy Truth, as professed by the people called Quakers; in which she continued faithful, and was an example of piety and virtue through the course of her life. When a little child, our much esteemed friend Wm. Penn, coming in at her father's, where he was very conversant, and affected by her pretty innocent deportment broke forth, extempore, thus:

"Sweet soul! what makes thee stray  
From the angelic way?  
Was it to teach us how to love  
The happy regions above?  
If so, O! let thy wand'ring prove our gain,  
And take us with thee back again."

She was naturally of a lively cheerful temper, which remained when she came to years of discretion, yet took pleasure in frequent retirement and divine meditation, in meetings for worship, and religious conversation, and received worthy public Friends with comfort and satisfaction. When at home alone, she entertained herself chiefly in reading the Holy Scriptures, Friends' writings and the three first books of Thomas à Kempis, on the Imitation of Christ; at other times with her pen and needle; for it was rare to find her unemployed in something useful or necessary, when her health permitted. In her dress and apparel she was very neat and plain. The tenderness of her love and affection, to her husband, mothers, brother and sisters, was more than common, and very remarkable, and likewise so generally extended to her acquaintance, especially where truth had a prevalency, that it may be said, love predominated in her."

To a friend she wrote, "The enjoyments of this life appear very changeable, and we are apt to seek them more than is good for us, which hinders our inward comfort; so we have something to war against every day. I desire thou mayst be directed by that Divine Hand which orders all things for our good every way, as we have an eye to it."

"On her bed of sickness she said to her brother, she admired people should so much place their affections on the things of this world, which are but as dross, and like travelling in misery; and earnestly desired their family might, with Jacob, obtain the blessing, and as they had such worthy parents, who had educated them in the ways of Truth, and enjoyed so many favors beyond many others, there ought to be a double thankfulness to the Giver. Speaking to her sisters, she said, 'We should be good examples in the plainness of our habits, as we make profession of the principles of Truth, and should take up the cross daily, for we were not born to serve ourselves, but to honor the Lord. That pain and weakness were hard to bear; and when we are going out of the world, we need to have nothing then to do; that she waited for the presence of the Lord, in which was more pleasure than in all the joys of this world.'"

*Joseph Baynes*.—"In his young years he was desirous to attain to the true knowledge of God; which desire God graciously answered to his seeking soul, in convincing him of his blessed Truth, by that faithful labourer and servant of Christ, George Fox, at his first coming into these parts, being in the year 1652; by whose ministry he was turned to the light of Christ Jesus, by which he came to see the emptiness of those outward forms and ceremonies in which he had been educated. He was a man who truly loved and feared the Lord, making it his daily care to keep his conscience void of offence towards God and man. A little before he was seized with bodily weakness, a concern fell upon him to advise young men and women to wait for the power of God, which would work a change in their hearts, and make them new creatures; otherwise, said he, they will have but the form of godliness, without the power; and such live in an unregenerate state, who produce the fruits of nature but not of grace. Mark, said he, grace teaches to deny ungodliness, and the world's lusts; to live soberly, &c. But alas! too many of our youth, for want of taking the grace for their teacher, go into a false and

undue liberty in their words and apparel, making that of no conscience to them, that the power of Truth made conscience to us. For by that power we were made willing to put off all superfluity in eating, drinking, and wearing of apparel. Our words were few and savory, for the Lord's dress was before our eyes, and our peace with him was precious to us, which we, through obedience to the grace of God in our hearts, enjoyed. This with much wholesome counsel, he imparted to the youth."

*Isabell Gill*.—"She was a loving and faithful wife, a true helpmeet both in temporal and spiritual concerns; a tender mother to her children; a good example to her servants in plainness a woman of an excellent temper and good understanding, mostly cheerful and loving in her family having attained to a good degree of growth in the Truth; more in substance than in show; a fervent lover of honest Friends, and openhearted to them." In the time of her illness, "when some young women came to visit her, she charged them not to be high-minded, nor give way to pride and nicety, by reason of the riches their parents might have to give them, which would be of no value without the blessing of the Lord, which she advised them to seek after above all things. At another time, when some young married women visited her, she advised and warned them not to be nice or high-minded, neither to deck or adorn their children too nicely, dressing them up like pictures, and then admiring them; for if they did so, the Lord might take them away from them; but to keep them clean and sweet, out of nicety, and the Lord would bless them."

*Johanna Noyes*.—"She had a true sense of the blessed truth, which seasoned her heart, and she was very solid and truly religious, and loved to go to meetings on week-days as well as First-days, and was well fitted for her charge. She often signified how good the Lord was to her; and desired her husband to bring up her children in the way of Truth, and keep them to Friends' school that they might be kept to the plain language. Also she desired of the Lord that he would be pleased to make them his servants. She advised her sisters to keep to their exercises in meetings, telling them they had no assurance of time here and that it would not do barely to go to meeting but they should be diligent to wait upon God in meetings. She felt so much of the power of the Lord that it made her cup to overflow."

*William and Blessing Fennel*.—"They were not only educated in the profession of Truth, but in their minority, were sober and religiously inclined, and dutiful to their parents, and as they grew in years, by and through the Lord's grace and good spirit, grew in sobriety: their lives and conversation adorned their profession. They took each other in marriage in the year 1688, and settled in Youghall, where they became serviceable in divers respects, through the Lord's goodness and preserving power. They lived in great love and unity together, and trained up their children not only in plainness of speech and apparel, but also in the nurture and admonition of the Lord and walked as good examples before them and others in godliness and honesty, being just in their dealings, and careful and punctual to keep their word and promises, keeping in moderation and temperance, loving and kind to Friends and neighbours, and affectionate to parents and charitable to the poor, doing good to all, but especially, to the household of faith, according to their ability."

*Mary Bentley*, aged fifteen, grand-daughter of the above mentioned Friends, "loved and kept

plainness in speech and apparel, and rather disliked than affected finery and vain fashions. She was often thoughtful of her latter end, and under those concerns of mind, with prayers to the Lord to prepare her for it, and soon became resigned to the will of God. She said to her sister Hannah, when about twelve years of age, "My dear sister, honor thy father and mother, and do not give way to little foolish things, for by small things the enemy draws away the minds of poor children. Ily dear, mind thy dear sister's dying words and do not put things off to a dying day, and think it is time enough."

*Mary Doeden* "had a liberal education, and when young was much taken with the gay fopperies of the times, and although she was not given to gross enormities, the Lord was pleased to reach to her and bring her through judgment, in order to redeem her from the evils of the world. During the time she was under the work and operation of the divine power and Spirit of God in her own heart, she had many outward trials and troubles to pass through, in particular when she was convinced of the blessed Truth. Her husband showed a very great aversion thereof, and would often express himself in very harsh terms on that occasion, though otherwise a very good husband, which made it more difficult for her to make open profession, but yet she was preserved in the Truth, and lived to the end of her days an ornament to her christian profession. At one time she said, "Oh! how the people called Quakers run out in dress, and are altered from what they were in days past. Oh! this world, I am weary of it," and advised all to keep low in their minds, and not to let in a worldly exalted spirit."

*Rebecca Toosey*, "aged about nine years, was a dutiful and pious child, a great reader and lover of the Holy Scriptures, and Friends' books; of an innocent and wise behavior and carriage, and her conversation was pleasing and acceptable. Though she was but a young plant, it pleased the Lord to endue her with an understanding in things both natural and divine. She was comely in her person, virtuous in her practices, quick of apprehension, just and equal in all she undertook, and never known to tell a lie or speak an ill word. She loved to go to meetings and said it was sweet to her. Some weeks before her sickness she had been at a meeting, wherein she was very attentive to a Friend who earnestly exhorted the children of Friends to make choice of the blessed truth for their portion, whilst they were in the enjoyment of health, that they might be prepared for a dying hour. Whereupon this child was much reached and melted into tears, and after meeting she got apart to read, which she was her usual practice. After she was taken ill she was in great pain; but her heart was filled with the incomes of the Lord's love and mercy, which caused her to utter many sweet and heavenly expressions."

(To be continued.)

*Longevity—Curious Facts.*—Some curious statistics have just been published with respect to the population in France. It appears that the females numbered 18,741,037, and the males 18,645,276, forming altogether, 9,654,930 families. There exist 5,900,120 boys under age, and 6,106,321 girls. Of 8,579,046 unmarried persons, there are 4,479,859 females. There are 931,023 widowers, and 1,790,126 widows. Of the widowers 81 are twenty years of age, and there are 820 widows of the same age. France possesses at this moment 1,529,154 girls of from 15 to 20 years of age, and 1,308,306 boys of the

same age. The greatest examples of longevity are supplied by females. We find three females out of four unmarried persons who have reached the age of 105, and two widows who have passed that age. 17,371 French men, and only 13,469 French women have lost their sight; 12,447 French men, and only 9,579 French women are deaf and dumb; 22,319 French women have become insane, and only 2,372 French men. There are 23,407 male idiots, and only 18,118 female idiots. The female sex prevails in France, while it has constantly decreased in the city of Vienna, since the year 1830, in the proportion of three hundredths every six years.—*Lotz Paper.*

#### A Memoir Concerning Lucretia Briggs.

*A Short Account of the Last Illness, and some Expressions of Lucretia, Daughter of Henry and Betsy Briggs, of Guernsey, Ohio.*

She was of an obliging disposition, loved retirement, preferring to spend first day afternoons in profitable reading, rather than in visiting. She was exemplary in conduct and conversation, except that a short time before her illness she had in some respects, deviated from that simplicity which the Truth requires, which brought her much suffering, when brought upon a bed of languishing.

She left the Boarding School about the middle of the Eleventh month, on account of the illness of her mother, which terminated in death, about a week afterwards; at which time, Lucretia felt that something of a solemn nature awaited her, saying "I have been too light." On the fourteenth of Twelfth month, she was taken ill with the same disease, typhoid fever. The symptoms were not alarming till the third day, when a physician was called, for which she felt thankful, believing he relieved her at that time; but expressed a conviction she should not recover. The conflict of her spirit was very great; at different times alluding to the great burden that rested thereon. She was soon brought to see the vanity of all earthly things, compared with a preparation for an entrance into the realms of bliss, which appeared to be her whole concern, saying, she had no wish to get well, if she could only obtain peace; earnestly craving that she might be kept in her right mind.

She bore a decided testimony to plainness of dress, by giving directions to have her hoops broken to pieces, the edging and ruffles taken from some articles of clothing, and her braid collars destroyed. She also felt it required of her to refuse those to wait upon her, who were attired in fashionable apparel, believing it required of her to let them know the cause; at one time expressing great peace for faithfulness herein. She also remarked, "It is hard to refuse their kindness, but the Lord must have the ordering, let the people say what they will."

She frequently requested to be left alone; and was opposed to any conversation on worldly subjects, or of a light character, being admitted in her room. To a young person who came to see her, she said, "I have never known what it was to be sick before, but if I should be raised from this bed, I think I shall never forget it." On being asked if she would like another physician called, she replied, "No, they can do me no good, but there is a greater Physician than man who can raise me up if it is His will, and I am willing to do His will, let it be what it may, if I can only obtain peace of mind." It is believed she spent whole nights without closing her eyes for sleep, in earnest intercession, that her sins and transgressions might be blotted out.

On enquiring of her father, if he had any

hopes of her recovery, he replied, but very little, and queried, whether she was willing to go? She answered, "Yes! if I can only obtain peace of mind; it is all I ask." A Friend remarking to her, that he did not want her to take up with a rest, short of the true rest, but he believed that little stood in the way between her and her Saviour, she quickly replied, "I must wrestle on." The remark being made that she had not been one of the most vain and foolish, she replied, "The best have enough to do at such a time as this." To her sisters she said; "Do not put off preparing for death, till brought to a sick bed." She at one time remarked, "I shall not be raised from this bed, to run the race of life."

During the last few days of her life it was evident to those around her that a comfortable change had taken place in her deeply exercised mind, and she at different times expressed, that she had a hope of an entrance into the kingdom, and at one time that she felt the Master round her. When queried with relative to sleep—she answered, "The Lord lets me sleep and keeps me awake, when he pleases." Her desire to be preserved in her right mind, was granted, even to the last. She passed away very quietly, the 3d day of the First month, 1866, in the nineteenth year of her age.

In the removal of this dear Friend in the vigor of youth, and of more than ordinary physical powers, a warning and a call impressively handed forth, for the awakening of survivors, that none may be resting at ease, and unprepared for the solemn change that awaits us all.

The foregoing Memorial was approved by the Meeting for Sufferings and directed to be forwarded to the Yearly Meeting.

ASA BRANSON, Clerk.

*Expected Meteoric Shower.*—According to the calculations of Prof. Newton, of Yale College, a remarkable display of meteors may be expected on the morning of the 13th or 14th of the present month. Thirteen of these so-called showers are recorded as occurring between the years 903 and 1833. In the latter year, the phenomenon took place on the morning of the 13th of the Eleventh month, and at this time it was computed that 240,000 meteors were visible above the horizon of Boston. From the great interest which attaches in these astonishing spectacles, the display will no doubt be carefully observed.

*In Everything give Thanks.*—When the hour of anxiety and trial comes, by the desire of your heart before the Lord, and wait to see what He will do for you! Do not pine and grieve over an uncertain portion, when the best is secured to you—*I mean God's grace!* Be like a little child that lies on the grass and looks up at the sky. That is enough for it; and when it is hungry and cries, its mother comes and nourishes it. \* \*

I have often tormented myself with anxious cares during my whole life, and it never helped me forward; on the contrary, the very things I was most afraid of, have generally proved my best helpers when they occurred. All God's dealings with us are messengers appointed to tell us His will, if we could but understand it. We are told in the Bible that when the angel came to the shepherds, bringing them the best news earth ever heard, "they were sore afraid." And is it not often the same with us? But if we listen rightly, the Lord's messengers ever reply in the same words: "Fear not."

Every affliction looks quite different before and behind. We must remember that all things come

to us back-foremost, so that we can never see them right in the face, so as to understand what they are really like, until they are gone by.—*Thoughts for Weary Hours.*

**Discovery of Native Sulphur.**—A valuable discovery has lately been announced of a bed of nearly pure sulphur on Sabo Island, one of the Dutch West Indies, lying about 150 miles southeast of Porto Rico. W. C. Roberts, who has lately visited it, reports a stratum of sulphur at least forty feet thick, extending at intervals over several square miles, a portion of which contained by analysis eighty-eight per cent. of sulphur. The deposit is favourably situated for excavation and shipment, and it is thought that with proper facilities, it can be readily loaded and brought to the ports of this country at a far less cost than is at present the case with the Sicilian article, which on account of the increasing demand of latter years, is becoming more and more difficult to obtain.

Selected for "The Friend."

### The Capabilities of the Negro.

To the Editor of the "Spectator."

SIR:—On behalf of my negro fellow-countrymen in Jamaica, I beg you to accept our grateful thanks for your able and unflinching exposure of the prevalent errors with reference to our race. Will you permit me to state very briefly a few facts bearing upon the assertion of Sir S. Baker, (the late successful explorer of the Nile,) "that the negro has little in common with the white man beyond the simple instincts of human nature?" I think I ought to know something about the question, for I am a negro myself, and up to my twenty third year was a slave in Jamaica. I have all my life lived among the race whom Sir S. Baker considers as scarcely possessing human reason, and, I say unhesitatingly, that I can prove his assertion to be incorrect. Why sir, there is not a single trade or profession in Jamaica which has not among its operatives a negro. There are, as you well know, negro members of the House of Representatives, who may be supposed to possess at least a sufficient glimmering of reason to enable them to discern the meaning of the laws which they enact; there are negro lawyers, negro doctors, negro ministers, negro merchants, negro managers of estates, negro sea captains, and negro schoolmasters. The head master of the Wilmore Free School at Kingston, one of the largest educational establishments on the island, is a negro, as are also the engine drivers on the only railway in Jamaica. In fact, sir, in that island both the lives and the property of vast numbers of the inhabitants are entrusted to members of that race, which Sir S. Baker regards as "possessing only the simple instinct of human nature." How wonderful, truly, must be "the simple instinct" which enables our negro engineers to manage the extensive sugar-refining machinery on our plantations. A "simple instinct" has induced the negroes to erect, at their own expense, a large school for the education of their children, in the new Road district, between the parishes of St. Elizabeth and Westmoreland. This school is taught by negro masters, is supported by negro contributors, and is managed by a committee of negroes. In the very same district a bank has been established by negroes, which is conducted by the "simple instinct" of a negro manager, and receives the small savings of the negro inhabitants of the district. Though established only three years, this bank has at the present time deposits to the amount of about 500*l*. I need hardly tell you, sir, that throughout the

whole island the soil is tilled, the crops are cultivated, and the markets supplied by negroes. An association has been lately formed by the "simple instincts" of the negro freeholders for the transmission direct to England of their produce, and the first fruits of this society have just been brought to this country in the shape of a cargo of produce worth about 700*l*.

I am sir, &c.,

SAMUEL W. HOLT.

To CROSBY GARRETT, Westmoreland, Sept. 25th, 1866.

**Accepting the Cross.**—Learn the will of the Lord, meekly accept the cross He sends. You must be detached from every earthly object in the least degree separates from God; and yet you are not to turn away from these objects altogether, because they are His gifts. He suites your pleasant things and leaves you lonely in a desert land, in order that you may better hear His voice, and desire His love, and feel that He is indeed your God.—*Thoughts for Weary Hours.*

**South American Beef in England.**—On the 27th ult. a public entertainment was given at the London Tavern, at which the courses were composed of beef from Buenos Ayres, served up in soups, steaks, roasts, boiled, stewed in pies and puddings, and pronounced by gastronomic critics and regular "diners-out," to be unexceptionable. The chairman of the meeting stated that there were annually exported from that district of South America, 2,500,000 hides, the carcases being left to rot or used as manure. He said, also, that the meat could be put up, shipped to England, and retailed over the counter by the pound, at less than five pence—eight cents.—*Scientific American.*

I explained the nature of *true worship*, and that there was at seasons a Power to be felt which was before words were, and which will remain when words have ceased.—*D. Wheeler.*

**Copper.**—The total production of fine copper in the world is stated to be 90,000 tons per annum, of which more than 45,000 tons have heretofore been obtained from Chili. The war between Chili and Spain of course interferes both with the production and the exportation of copper.

## THE FRIEND.

ELEVENTH MONTH 10, 1866.

Having received a printed copy of the minutes of the late Ohio Yearly Meeting, we take from them the following extracts:

### OHIO YEARLY MEETING.

*At Ohio Yearly Meeting, held at Mt. Pleasant, by adjournments, from the 8th of the Tenth Month to the 11th of the same inclusive, 1866.*

Reports were received from the Quarterly Meetings. The representatives are from

\* \* \* \* \*

Who were all present except three. Satisfactory reasons were given for the absence of two; J. E. will be expected to render a reason at another time.

The Clerk of the Yearly Meeting for Ministers and Elders, produced a minute for our beloved friend Clarkson Sheppard, a minister from Greenwich Monthly Meeting, New Jersey, setting him at liberty to attend this meeting; also, to appoint as way may open, a few meetings in the vicinity; dated Eighth month 30th, 1866. Also, one for our beloved friend Hannah Warrington, a minis-

ter from Chester Monthly Meeting, New Jersey, setting her at liberty to attend this meeting and some meetings on the way going and returning, dated Ninth month 11th, 1866.

A minute was also read for our beloved friend Charles Evans, companion for Clarkson Sheppard from the Monthly Meeting of Friends of Philadelphia, dated Ninth month 27th, 1866. Also, one for our beloved friend Amos Roberts, companion for Hannah Warrington, from the Monthly Meeting of Chester, New Jersey, dated Ninth month 11th, 1866. All of whom are acceptable in attendance.

The united request, forwarded by Pensylvania Quarter, of the three Monthly Meetings of Iowa, for a Quarterly Meeting to be established there, was read; but as no reference has been received from the other Quarter concerned, it is dismissed for the present.

The following Friends are appointed to examine the Treasurer's account, report the state thereof to a future sitting, what sum, if any may be necessary to raise the ensuing year; also, the name of a Friend for Treasurer, viz: \* \* \*

An account of the last illness and some expressions of Lucretia Briggs of Quernsey, Ohio, was read at this time to the humbling of many minds; the meeting directs that eight hundred copies be printed for distribution among our members.

The representatives are desired to confer together and propose to next sitting the name of a Friend for Clerk the present year and one to assist him; also, the names of two Friends to serve as Messengers to the Women's Meeting.

Then adjourned to 11 o'clock to-morrow.

*Third day of the week and 9th of the month, the meeting assembled near the time to which it was adjourned.*

Lewis B. Walker, on behalf of the representatives reported, that they were united in offering the name of Asa Branson for Clerk and Edward Stratton for Assistant, which was satisfactory to the meeting, and they were appointed to the service. He also, reported that they were united in offering the names of Joseph Wilson and Jacob Branson for Messengers to the Women's meeting, which was also satisfactory to the meeting.

The Queries were all read and the answers thereto from the Quarterly Meetings, the following being a summary thereof.

### SUMMARY OF ANSWERS.

*First.*—All our meetings for worship and discipline have been attended, and generally by the most of our members, though there is a remissness with some in this important duty, especially in the middle of the week: unbecoming behaviour therein mostly avoided, except some instances of sleeping; the hour of meeting pretty well observed.

One report states eight meetings not attended on account of sickness with some and neglect in others.

*Second.*—Most Friends maintain love towards each other, in a good degree, becoming our christian profession, tale-bearing and detraction mostly discouraged, and when differences arise endeavours are used to end them.

*Third.*—Many Friends endeavour by example and precept to educate their children and those under their care in plainness of speech, deportment and apparel; to guard them against reading pernicious books and from the corrupt conversation of the world, and they are encouraged to read the Holy Scriptures.

*Fourth.*—As far as appears Friends are clear of importing, vending or distilling, and nearly clear of the unnecessary use of spirituous liquors,

of frequenting taverns and attending places of diversion; moderation and temperance in a good degree observed.

*Fifth.*—The necessities of the poor and the circumstances of those who appear likely to require aid have been inspected and some relief afforded. They are advised and assisted in such employments as they are capable of, and some care is taken to promote the school education of their children.

*Sixth.*—As far as appears, Friends bear a faithful testimony against a hiring ministry, oaths, military services, clandestine trade, prize goods and lotteries; except that some of our members sometimes attend meetings where a hiring ministry is supported, and a few exceptions to the faithful maintenance of our testimony against military services; yet one report states that most Friends maintain a testimony against a hiring ministry, oaths, military services, clandestine trade, prize goods and lotteries; and another that Friends generally bear a testimony.

*Seventh.*—Friends are generally careful to live within the bounds of their circumstances, and to avoid involving themselves in business beyond their ability to manage; generally just in their dealings and mostly punctual in complying with their engagements; and when any have given reasonable grounds for fear in these respects care has been extended to them.

*Eighth.*—Friends are careful to bear a testimony against slavery; none of the description queried after under our direction.

*Ninth.*—A good degree of care is taken to deal with offenders seasonably and impartially, and to endeavour to convince to those who will not be reclaimed, the spirit of meekness and love before judgment is placed upon them.

SUMMARY TO THE ANNUAL QUERIES.

A Monthly Meeting set up at Sewickly Monthly Meeting by the name of Sewickly Monthly Meeting and another at Springville in Linn County, Iowa, and known by the name of Springville Monthly Meeting and held alternately at Springville and Hopewell.

A good degree of encouragement is given to schools for the education of our youth under the tuition of teachers in membership with us.

The queries addressed to the Quarterly, Monthly and Preparative meetings are read and answered nearly as directed.

Elizabeth Dean, an elder and member of Sandy Spring Monthly, and Particular Meeting, departed this life the 7th of Sixth month, 1866, in the 66th year of her age.

Mary Crow, an elder and member of Plymouth Monthly and Particular Meeting, departed this life the 16th of Eighth month, 1866, in the 57th year of her age.

Joseph Edgerton, a minister and member of Coal Creek Monthly and Particular Meeting, departed this life on the 30th of Tenth month, 1865, in the 69th year of his age.

A proposition to change the time of holding this meeting being brought before it, the following Friends are appointed, in conjunction with a like committee of women Friends, to take the subject into consideration, and report thereon to a future sitting, viz: \* \* \* \* \*

Redstone Quarter informs that Sewickly Monthly Meeting is without a correspondent; the representatives from that Quarter are desired to propose to a future sitting a Friend for that service.

Israel Heald requests to be released from being correspondent for Middleton Monthly Meeting; the representatives from Salem Quarter are re-

quested to offer the name of a Friend to be appointed in his place.

The meeting was informed that Springville and Hickory Grove Monthly Meetings are without correspondents; the representatives from Stillwater are requested to propose to a future sitting the names of Friends for the service.

Adjusted to two o'clock to-morrow afternoon.

*Fourth day afternoon and 10th of the month, the meeting again assembled.*

The reports from the Quarters on Primary Schools, were read, the following is a summary thereof: The guarded education of the youth is felt to be of very great moment, and it is desired that parents would let the subject have that place in their minds which its importance demands, and that Quarterly Meetings send up accounts next year as heretofore.

The Quarterly Meetings report 944 children of a suitable age to go to school, 17 schools have been taught the past year under the care of meetings, from three to eight months, and two family schools for two months.

359 children have attended Friends' schools exclusively.

406 children have attended District schools exclusively.

101 have attended Friends', District and subscription schools.

78 have not been going to school the past year, most of whom have been receiving instruction at home.

The committee having charge of our Boarding School made the following report, which was satisfactory to the meeting and the propositions therein contained were adopted; and the General Committee is desired to circulate subscriptions in their respective neighbourhoods in order for keeping up repairs, &c., about the institution.

REPORT.

"From the Minutes of the Acting Committee, it appears that the amount charged for board and tuition for session ending Third month 15th, 1866, for an average of about 63 pupils, \$3150 00  
Other receipts, . . . . . 1327 00

Making . . . . . \$4477 00  
Expenditures, . . . . . 4747 39

Leaving a deficiency for session of . \$270 39  
Amount charged for board and tuition for session ending Ninth month 6th, 1866, for an average of 94 pupils, . 251 50  
Other receipts, . . . . . 1394 08

Making, . . . . . \$1745 68  
Expenditures, . . . . . 1619 92

Showing an amount in favour of school for session, of . . . . . \$125 06  
And a deficiency for the year, of . . . . . 144 73

From a settlement with the Treasurer, it appears there is due of interest on the Benevolent Fund, to

Redstone Quarter, . . . . . \$11 59  
Short Creek, . . . . . 11 96  
Salem, . . . . . 36 37  
Stillwater, . . . . . 44 71  
Springfield, . . . . . 12 99  
Pensville, . . . . . 43 26

The committee appointed to examine into the financial condition of the school, report they find claims in favour of the Institution, supposed collectable, to the amount of . . . . . \$660 96  
Live stock and provisions on hand, . . . . . 834 00  
Estimated produce of farm, . . . . . 462 00

Making . . . . . \$1956 96

Debts owing by the Institution, . . . . . 1252 55

Balance, . . . . . \$704 41  
And by retaining the live stock, provisions on hand and produce of farm, . . . . . 1296 00

Leaving an indebtedness of . . . . . \$591 59

Voluntary contributions from our members to the amount of three hundred and forty-eight dollars, including a donation of fifty dollars from our women Friends, have been received and applied to the purposes designed.

Owing to the continued high prices of most of the articles of consumption, the committee propose that in future the sum of sixty dollars be charged for the Winter and fifty dollars for the Summer session.

And in order to guard more effectually against loss in the payment of accounts, the committee believe it would be best to adhere to the existing rules of the school, by requiring one half to be paid in advance, and the balance at the middle of the session; and it proposes that a satisfactory obligation be given for the latter when the pupils enter school, subject to the former conclusion of the Yearly Meeting, which provides, that deductions shall be made only on account of sickness, and other causes which the Superintendent shall consider a sufficient reason for scholars leaving school before the conclusion of the session.

Signed on behalf of the committee,  
ASA GARRETSON,  
Clerk for the day.

Tenth month 10th, 1866.

The representatives from Redstone offered the name of Edward Y. Cope, for correspondent for Sewickly Monthly Meeting, which was satisfactory and he appointed to the service; address Yonghoeheny, Westmoreland county, Pa.

The representatives from Salem Quarter propose that Millin Cadwallader be appointed correspondent for Middleton Monthly Meeting, which was united with and he accordingly appointed; address East Fairfield, Columbiana county, Ohio.

The representatives from Stillwater Quarter propose that John Thomas be appointed correspondent for Hickory Grove Monthly Meeting; address West Branch, Cedar county, Iowa, and Samuel W. Stanley, for Springville, address, Springville, Linn county, Iowa, which was also satisfactory to the meeting, and they appointed to the service.

The Committee to settle the Treasurer's account, &c., made the following report, which was approved and the Friend therein named continued Treasurer.

\* \* \* \* \*

The joint Committee to whom was referred the consideration of changing the time of holding this meeting, offered the following report, which was united with and the change is to take place accordingly; and the Meeting for Sufferings is directed to assemble at 8 o'clock on Seventh day preceding.

The committee to consider the propriety of changing the time of holding the Yearly Meeting, after deliberately considering the subject, propose, that in future it be held one week earlier, viz: on the last First-day in the Ninth month. The hours of meeting, both for worship and discipline, to be the same as at present. The meeting for Ministers and Elders to be held the Seventh-day preceding.

Signed on behalf of the Committee,  
JOSEPH HOBSON,  
DEBORAH HALL.  
Adjourned to nine o'clock to-morrow.

*Fifth-day morning, and 11th of the month, the meeting met pursuant to adjournment.*

The minutes of the Meeting for Sufferings since last year were read and its proceedings approved.

A memorial concerning Rebecca Hall, forwarded by the Meeting for Sufferings was read at this time to our comfort and edification; it is referred back to that meeting for further care therein.

John Fawcett and William Fisher are appointed to have five hundred copies of the minutes of this meeting and the memorial directed at a former sitting printed, divide them among the Quarters, and call on the treasurer for the amount of expense.

Having been enabled to transact the business in a good degree of harmony and brotherly condescension, and with feelings of thankfulness for this and other favors vouchsafed; the meeting solemnly concludes to meet at the time agreed upon next year if the Lord permit.

ASA BRANSON, Clerk.

It is no marvel that in this day of laxity in both principle and practice as regards dress, some among Friends who may have indulged in departures from simplicity of attire, should be brought under great distress of mind therefor, in the prospect of the near approach of that hour in which they must give account and receive the reward of the deeds done in the body. It should be regarded as among the mercies of our long-suffering Creator and Judge, when solemn warnings reach our ears, coming from the dying lips of those whose mental eye has been opened, by the numbing Spirit of Christ, to see things in their true light, and the soul feels the weight of sin, even though it be departures from the straight and narrow way in what the world esteems as little or laudable things. We commend the account of Lucretia Briggs, to be found in this number, to the serious consideration of our readers, especially the younger class among them. Would that they all would effectually seek for strength from Him who is the Helper of his people, to resist the temptations of Satan and the sophistries of deceivers; so as to maintain the testimony of the gospel to plainness of speech, behaviour and apparel, as well as all other of its testimonies, consistently with the noble profession of Friends.

SUMMARY OF EVENTS.

**Francois**—Liverpool dispatches of the 5th inst., report the cotton market firm at 15 1/2 for middling uplands. Breadstuffs unchanged. Consols, 89 1/2. U. S. 5-20's, 68 1/2.

A Madrid despatch of the 5th says, the Queen of Spain has made an offer to the Pope of Rome of a residence at Granada, and Spanish vessels of war have been placed at his disposal in case of emergency.

The French have declared war against Russia. The war has been renewed in Bokhara. The Russian forces have besieged and taken the city of Urtubo. The military forces of Russia are to be raised to their full strength.

According to the Paris Press, an alliance has been formed between Prussia and Russia.

A large fund has been collected in London for the relief of the sufferers by the great fire at Quebec.

The Pope has delivered an allocution condemning the conduct of Italy, and declaring that he is ready to die in the defence of the right, and that in case of need he will seek the free exercise of his ministry in another land.

The Turks claim great victories in Candia. In a hard fought battle near Ugressa, the Cretons lost 700 men, while the Turkish loss was very heavy. Three thousand Cretons had been drowned in a cave where they sought a hiding place and refuge, the tide rising and submerging them. Many of the Cretons were submitting to the Turkish authority. The cotton crop of Egypt is said to be very large. The cattle plague has almost died out in England. The famine in India has swept off vast numbers of the inhabitants, but it was hoped it would

soon be at an end. A plentiful harvest bids fair to restore the country to its usual condition.

An attempt has been made to assassinate the Emperor of Austria. As he was about leaving the theatre in the evening, a pistol was aimed at him, but before the ball was fired the culprit was seized and placed under arrest. The London Times urges the reference of the claims of the United States upon the government of Great Britain, for the property destroyed by the Alabama to a joint commission. The Times thinks this would be an act of policy, if not of justice.

It is stated that the Mexican Emperor Maximilian is about to return to Europe. A letter received at Washington by the Mexican minister, dated at Vera Cruz on the 26th ult., says: "Maximilian left the City of Mexico on the 23d inst., resigning verbally in favor of General Bazaine, (the French commander.) Gen. Bazaine endeavored to persuade him to delay his departure until general Castelnau's arrival, two days later, but he declined, and departed by 500 Austrian troops, proceeded to Orizaba, by cross roads, in order to avoid meeting with Gen. Castelnau. He reached Orizaba yesterday, and is expected here to-morrow. The captain of the Austrian frigate Dandolo, states that as soon as Maximilian arrives he will at once leave for Europe." Gen. Castelnau relieved the City of Mexico of 500 Austrian militia, and took possession of the palace and assumed the reins of government." The city of Oaxaca has been taken by the Liberals.

Buenos Ayres advices state that another despatch had taken place between the allies and Paraguay, the details are given, but a victory is claimed for the allies.

**UNITED STATES.—Philadelphia.**—Mortality last week, 300, including 41 deaths from cholera. The mean temperature of the Tenth month, according to the record kept at the Penna. Hospital, was 58.36 deg. The highest during the month was 73.50, and the lowest 49°. The amount of rain during the month was 4.15 inches. The highest mean temperature of the Tenth month during the past seventy-seven years, is stated to have been in 1793, 64°. The lowest was in 1827, 46°.

**Georgia.**—The Governor's message, delivered on the first inst., strongly opposes the adoption of the constitutional amendment. It says the amendment is equally novel and unjust. The funded debt of the State is computed at \$5,849,000. The Governor says the plauting interest of Georgia can never be what it once was. He deprecates the oppression of the debtor class by creditors. The Speaker of the House opened the session with a speech opposing the constitutional amendment, which was warmly received.

**Indiana.**—The Supreme Court of this State, by a unanimous vote, has decided that the 13th article of the State constitution, called the "black article," which forbids negroes from coming into the State, to be in conflict with the Constitution of the United States, and therefore to be null and void.

**Vermont.**—The Vermont House of Representatives has ratified the constitutional amendment by a vote of 159 to 11.

**Miscellaneous.**—The wine growers of California have adopted memorials asking Congress to reduce the tax on California grapes, and to raise the duty on foreign wine, and to raise the import duty on foreign wines.

The reports of the Ohio vintage are unfavorable, the wine being generally of poor quality, and the yield light. The official declaration of the vote of Pennsylvania for Governor, at the last election, gives 597,370 ballots, and a majority of 11,178 for General Geary.

The gold and silver production of the United States for the year 1856, is estimated at about \$106,000,000, viz: California \$25,000,000, Montana \$18,000,000, Nevada \$16,000,000, Idaho \$17,000,000, Oregon \$8,000,000, Colorado \$17,000,000, and various other sources \$5,000,000.

Between our 409,355 vessels cleared and entered the ports of Great Britain; about one per cent. of the whole were wrecked.

The population of the City of Washington is 102,612, that of the entire District of Columbia is only 122,867. Over 8000 new buildings have been erected in Chicago during the past year, at a cost of nearly seven millions of dollars.

The debt of the State of Pennsylvania was reduced \$1,158,009 during the year ending 9th month 30th last. The last monthly report of the Commissioners of Immigration, shows that in the year 1856, to 10th month 31st, the number of immigrants landed at New York was 202,470, and at other ports 170,000.

A severe snow storm is reported between Denver, in Colorado, and Salt Lake. The snow was two feet deep. Trains for the Overland Express Company had 76 miles frozen to death.

**The South and the Freedmen.**—A freedmen's school-house at Brentwood, Tenn., has been burned by incendiaries—the second time this outrage has been committed at that place. The condition of freedmen's affairs in the State of Mississippi, has undergone no material change. It is stated that most of the assaults upon white employers upon their labourers, doubtless for the purpose of obtaining the payment of their wages, are made to all liberal-minded citizens of the State to co-operate with the benevolent societies of the North to this desirable end. The crops of grain and cotton are generally deficient. The freedmen of Kentucky, it is stated, have been very industrious, and they would be quite well repaid for their labour on securing were it not for the trouble they experience in securing a fair and equitable division of the crops from their employers. Another source of loss to them is their being driven off by bands of guerrillas and thus deprived of the fruits of the summer's work.

The cotton crop generally gathered. More has been saved than was expected, but the cotton is still short. Many of the freedmen have expressed their determination to decline making early contracts for the coming year. The Superintendent of the Freedmen's Bureau is about making a tour through the State to examine into the condition of the freedmen. He believes that it will be best to refer their moral and physical welfare to decline making contracts for their labor.

The population of many parts of the South has diminished within the past six years. A recent enumeration of the inhabitants of Lauderdale, Lorandos, Madison and Jackson counties, Alabama, showed a total of 85,635. In 1850 there were 93,903 inhabitants in those counties.

**The Markets, &c.**—The following were the quotations on the 5th inst. *New York.*—American gold 148. U. S. sixes, 108 1/2, 114 1/2; ditto, 5-20, 1865, 109 3/4. Superfine State fair, \$9.40 a \$11.15. Shipping Ohio, \$12.10 a \$13.10. Superfine fair, common to fair extra, \$13 a \$14.75; trade and family \$15 a \$18. Amber State wheat, \$3.20 a \$3.25; No. 2 spring wheat, \$2.35 a \$2.40. Barley, \$1.18 a \$1.30. Western mixed corn, \$1.26 a \$1.30; yellow western, \$1.30. Middlings cotton, 39 cts. *Philadelphia.*—Superfine flour, \$8 a \$9; extras, \$9.25 a \$12; fancy 54 family brands, \$14.25 a \$15.25. Flour, \$12.50 a \$15. Yellow corn, \$1.25. Oats, 65 cts. Cloverseed, \$8 a \$9. The arrivals and sales of beef cattle reached about 2300 head. Prices nearly unchanged, extra selling at from 16 1/2 cts., a few choice at 17 cts., fair to good, 14 a 15 1/2 cts., and common 12 a 13 cts. Sheep were falling owing to the large receipts which reached 25,000 head; good to extra sold at from 6 to 6 1/2 cts., per lb. gross; fair, 5 1/2 a 5 3/4 cts., and common 5 to 5 1/2 cts. Hogs were lower, about 3000 sold at from \$11 to \$12.50 the 100 lbs. net.

WESTTOWN BOARDING SCHOOL.

WATSON, a TEACHER for the BOY'S SECOND MATHEMATICS CLASS, to enter on 1st dates on the opening of the Winter Session. Apply to  
Samuel Hiles, Wilmington, Del.  
Thomas Evans, 187 Arch St., Phila.  
Joseph Scattergood, 413 Spruce St., Phila.  
Charles J. Allen, 304 Arch St., "

WESTTOWN BOARDING SCHOOL.

Wanted, a Friend qualified to perform the duties of Book-keeper and Librarian at the above Institution, to begin on the opening of the Winter Session, or as early thereafter as practicable.

Application may be made to  
Robert Thorne, Burlington, N. J.  
Aaron Sharpless, West Chester, Pa.  
Joseph Scattergood, 413 Spruce Street, Phila.  
Charles J. Allen, 304 Arch St., Phila.

FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSHUA H. WOLSTONCROFT, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

WM. H. PILE, PRINTER, No. 214 Pear street, between Dock and Third.

PHILADELPHIA.

Postage, when paid quarterly in advance, five cents.

## Tea.

"While the bubbling urn  
Throws up a steaming column, and the cups  
That cheer but not inebriate, wait on each;  
So let us welcome peaceful evening in."

In deference to custom we begin our remarks on Tea, for the edification of our teetotal readers, with the lines which have made the tea-cup classic, and which have given a place among the "urns" of antiquity to the modern and more useful article of the name whose pleasant fizzing is praised in our poet's text. We have to thank Professor J. W. Johnston for the substance of the following remarks:

The artificial drinks of men are to be divided to the two classes of the *infused* and the *fermented*. We have nothing to say for the latter class of beverages, knowing that their few useful qualities are, in the judgment of reasonable men, no at all to the subject, counterbalanced by their many deleterious and poisonous properties.

The infused beverages are, for the most part, brewed of while hot, and they are thus distinguished by the mode of their use from most fermented liquors. The law of warm drinks prevails most universally. In frozen Labrador and snowy Russia, the climate might account for this prediction, but the meaning is really deeper-seated. The practice prevails alike in tropical and in polar regions. Tea is as much a Chinese as a British favorite. Each European race has chosen one special beverage of this class: Spain and Italy delight in chocolate; France and Germany, Sweden and Turkey, in coffee; while Russia, Holland and England drink tea.

Most persons have some notion of the process by which tea is grown and made ready for the market. The plants, which are raised from seed, are not used till four or five years after their sowing, and are dug up and renewed after about ten or twelve years. The season for getting the leaves is May and June. The work is done chiefly by women, and the young leaves are laid separately, providing the best tea. The freshly plucked leaves possess few of the qualities for which we prize it; these are mostly developed in the process of drying. Either green or black tea may be prepared from the same leaves, gathered at the same time. The process of drying develops the variety of quality; the principal difference in the mode of treatment being that the green tea is the result of a more rapid and hurried process. The black tea is left alone for some time after being gathered, and is roasted slowly over charcoal fire.

It was about the year 600 that the use of tea became frequent in China, and 200 years later in Japan. It was not brought to Europe till the 17th century. Dried sage-leaves used to be infused for tea previous to that time in England. To the year 1664 the East India Company considered it a rare gift to present to the Queen of England two pounds of tea! The growth and consumption of tea are now enormous. Ingham Travers computes the total produce of the dried leaf in China at 1,000,000 tons, or 2,240,000,000 lbs. To this is to be added the tea of Japan, Corea, Assam and Java. The consumption of tea in Great Britain and Ireland in 1853, amounted to 25,000 tons. This is at the rate of 2 lbs. per head of the population; and with reduced duties the consumption is increasing vastly. Great Britain consumed in 1852, 55,000,000 pounds of tea; whilst France in 1851 consumed but 500,000 lbs; the proportion of coffee in the two countries being, at the same time as 42,000 to 35,000,000. In China, sugar is seldom or never used with tea.

The effects of tea as obtained among us, are too well known to need description. It exhilarates without intoxicating—"cheers but not inebriates." It excites the brain to increased activity without producing depression, as narcotics do. It soothes and stills the vascular system, and hence its use in inflammatory diseases, and as a cure for headache. Green tea, when taken strong, may produce paralysis. Its exciting action on the nerves makes it useful as an antidote to the narcotic effects of opium, and even of intoxicants.

In manufactured tea the following chemical substances are found, by the conjoint influence of which these effects are produced:

I. *Volatile Oil*.—This may be distilled from tea by the usual process of distilling; this oil possesses the aroma of tea in a high degree, and is present in proportion of about one ounce to 100 lbs. of tea. This volatile oil is not found in the natural leaf, but is induced by drying. It is of a deleterious character, and if it existed in very large quantities in tea would produce paralysis—a disease to which tea-tasters, and those constantly employed in packing tea, are liable. This volatile oil decreases in quantity when the leaf is long kept.

II. *Theine*.—This is a crystalline substance which may be obtained from tea leaves, either by heating them in a watch-glass under a cone of paper, or by evaporating a concentrated infusion of tea. These crystals are known as *theine* or *caffine*. Tea (of commerce) contains about two per cent. of this. In some green teas the proportion is much larger, reaching sometimes six per cent. Theine has no smell, and a slightly bitter taste. It has, therefore, little to do with the flavoring of tea. It is remarkable—

1st. By containing a large amount of nitrogen, an element which forms an important part of the fleshy or muscular part of the body, as opposed to the fat, from which it is nearly altogether absent. Nearly three-tenths of the weight of theine is nitrogen, a proportion which is found in scarcely any other substance.

2d. This substance is found not only in tea, but in coffee, in Paraguay tea, and in guarana—a substance prepared and used in Brazil. Each nation has selected a plant for infusion, which, though apparently unlike, is like in containing this peculiar crystalline substance. This is somewhat remarkable, and would tend to show us that theine has some peculiar and salutary, or, at least, gratifying effect on the appetite and digestion, which causes the substances containing it to be chosen as national favorites.

3d. The observed effects of this substance, when taken into the system, justify the above conclusion. It is known that the human body suffers decay and renovation all the while it lives. The labours of life decay it, food renovates it. Now, a very small amount, three or four grains of theine, per diem, taken into the constitution, is found to have a sensible effect in impeding this process of waste, the phosphatic matter which is given off in an excrementitious form is diminished by its presence; and therefore the amount of phosphoric acid removed from the bones, blood and muscle in one who does not use tea, is greater than that given off by one who does, and in that proportion waste is diminished. And if the waste be lessened, the necessity for food to repair that waste will be lessened too. Hence a hard-working person, a labourer, or a household servant, by taking tea, will be able to do with a smaller amount of food. Tea, therefore, to a certain extent, saves food: while at the same time, it soothes the body and enlivens the mind, and this without that undue stimulus (to be followed by reaction) which is the effect of intoxicating liquors.

Moreover, when the powers of the body begin to fail, tea acts as a sort of medicine to arrest waste, and enables the enfeebled powers of digestion to still supply enough to repair the wear and tear of the solid tissues. No wonder, therefore, that instinct should drive the aged and the poor to drink a considerable amount of tea.

An ounce of good tea contains about ten grains of theine. Hence, if somewhat less than half an ounce of tea daily be taken, the requisite or desirable amount of theine will be introduced into the system; but, if more than this quantity be used, the pulse becomes too frequent, the heart beats too strongly, trembling comes on, and other ill effects follow. At the same time the imagination becomes excited, the thoughts wander, visions are seen, and a species of intoxication supervenes. Hence, while teetotalers enjoy their tea, their own principle should lead them to use it in moderation.

III. The third substance in tea is the *Tannin*, or *tannic acid*, the same which is found in oak bark, (tan.) If tea, in solution, be mixed with a solution of common copperas, (sulphate of iron, or green vitriol,) the mixture will become black. This is ink. This test shows the presence of tannic acid. To this tannin tea owes its astringent taste, its constipating effects on the bowels, and its property of blackening a solution of iron. It forms from 13 to 18 per cent. of the weight of dried tea leaf, and is more completely extracted the longer the tea is infused. It is not known

what are the full effects of the tannin on the system. It probably aids in the exhilarating or tonic effect of tea.

IV. *The Gluten*.—This is a highly nutritious substance, most necessary for forming muscular tissue, and is in abundance in bread, being one of the principal constituents (with starch) of corn flour. It is not, however, extracted by ordinary infusion from the tea leaf. Hence it is commonly lost. But *soda* extracts it, and for this reason the addition of a little common baking soda to the water with which tea is "made," gives it the property of extracting more of the nutritious property of the leaf. The alkaline extract of the tea has a twofold good effect, namely, in extracting more fully both the theine, which prevents the decay of animal tissue, and the gluten, which is in itself nutritious. Mixed with a little milk and meal, the alkaline extract of tea forms a staple food of the Mouglou tribes; but they drink as much as from twenty to forty cups daily.

The above are the principal ingredients of the tea leaf which pass into solution. It contains also some starch and gum, both of which are nutritious. The best test for tea is an accurate measurement of the amount dissolved by boiling water. Good green teas should give up in solution from 40 to 48 per cent., and black teas from 31 to 41 per cent.; that is, the dried tea leaves, after extraction, should weigh from 52 to 60 grains, (in the case of green tea,) and from 59 to 69 grains (in that of black) for every 100 grains infused.

Professor Johnston confines the nutritive property of beer and ale to the glutinous and extractive matters they contain, not to their alcoholic part. "God" ale contains about 4 or 5 per cent. of this nutritive matter. Wine contains scarce any, often none. Milk, the model food, contains 12 per cent. of nutritive matter. Beer, therefore, is scarcely a food at all, and yet stands first in the list of all intoxicants as a nutritive agent. Surely it is not worth while, for the sake of that small amount of food, 4 per cent., to risk all the evil which is produced by the other elements of beer—the alcoholic, which in strong ales ranges as high as 10 per cent. Surely it is better to look to the infused than to the fermented beverages, when we know that, regarded in the most favorable light, the latter is only as nutritious, as waste-preventing, as the former; that while from the infused no evil results follow, from the fermented more than half our catalogue of crimes proceed.

G. R. W.

From "The British Friend."

"If the Lord Will."

(Concluded from page 82.)

Our life is in the hands of God. It is of the Lord's will whether or not we shall live. He is the supreme arbiter of our destiny. Life and death are not left to the sport of chance, but are regulated in every case by his appointment. So Job says, "Seeing his days are determined, the number of his months are with thee; thou hast appointed his bounds that he cannot pass." So the psalmist says, "Thou turnest man to destruction; and sayest, Return, ye children of men." So Daniel said to Belshazzar, "And the God in whose hand thy breath is, and whose are all thy ways, hast thou not glorified." So, too, when the Lord Jesus appeared to John in the isle of Patmos, he said, "I am he that liveth and was dead, and behold, I am alive for evermore, and have the keys of hell and of death." "If the Lord will, we shall live." And he may or he may not so will. It may be his purpose to prolong our lives till extreme old age, or he may cut us down in

the very midst of our days; but whatever the length of life which he has allotted us is a secret which only the event of our death will reveal. All "times and seasons," whether of his own kingdom of righteousness, or of the nations of the earth, or of individual human life, he has "put in his own power." He has retained every one of them in his sovereign hand, and concealed them from all human knowledge. "He holdeth back the face of his throne, and spreadeth his cloud upon it." "For man also knoweth not his time: as the fishes that are caught in an evil net, and as the birds that are caught in the snare, so are the sons of men snared in an evil time, when it falleth suddenly upon them."

Nor is it only the uncertainty of life that is to be considered. We are not only to say, "If the Lord will, we shall live;" we are to say further, "If the Lord will, we shall live, and do this or that." "For all this, I considered in my heart to declare all this, that the righteous and the wise, and their works, are in the hands of God." And it is true of all, just or unjust, wise or unwise. "He doeth according to his will in the army of heaven and among the inhabitants of the earth; and none can stay his hand, or say unto him, What doest thou?" It may be his purpose that we shall be permitted to attain our fondest hopes; but it is quite possible that they may all issue in blank disappointment. What affecting illustrations we have seen of the uncertainty of all human affairs! And it may be that our coming fortunes will furnish illustrations equally striking. The firm health of to-day may to-morrow be exchanged for wasting sickness. The home which is to-day so bright may to-morrow be darkened by the gloom of bereavement and bitter sorrow. A change in fashion, an unexpected war, a hostile tariff, or a failing harvest, may to-morrow completely extinguish every prospect of continuing successfully the employment by which numbers are to-day providing bread for themselves and their children. To-morrow, many who are surrounded to-day by every comfort that wealth can purchase, may be steeped to the lips in utter poverty. It is most likely that at this very hour there are hundreds of letters on their way through the post, each one of them bearing tidings which will fill the hearts of those who will receive them to-morrow with dismay, and overwhelm them with the shock of calamities altogether unexpected—one perhaps telling the merchant that some house of business, largely indebted to him, has failed; another bearing to hopeful parents news of the death, or, worse than the death, the grievous misconduct of the son on whom they had centred their dearest hopes. Which of us is there that can tell what a day will bring forth?

Since, then, all allow that to-morrow is shadowed in such complete uncertainty, what is the course to which true wisdom prompts?

First of all, there should be sought immediately the salvation of the soul. How often, if not said in so many words, is it said in effect, "I am not going to die yet! I have before me many years of life. I have time to enjoy much pleasure; time to visit many scenes as yet unvisited; time to prosper; time to get rich; and then, when all these purposes are attained, I will think about my soul and its salvation, and prepare for heaven!" Is not this most evil, when Jesus has said, "Seek first the kingdom of God and his righteousness?" when the call of the gospel is so urgent, "Behold, now is the accepted time; behold, now is the day of salvation?" "To-day if ye will hear his voice, harden not your hearts?" And is it not, besides, most foolish when life and opportunity are so fleeting? "Serious things to-morrow," exclaimed

the captain of a beleaguered fortress, when his revelry was interrupted with the tidings that his enemy had resumed the assault, in a manner which demanded, on the part of the besieged, the utmost vigilance and energy. To-morrow the fortress was in the hands of the foe, and the thoughtless commander was a corpse! Serious things to-day and there are none so serious as those which belong to your everlasting peace. Jesus calls "Thy business," he says, "is not all. Thou has something more to do than to extend thy trade and lay up money, and enjoy the fleeting pleasure of time. Thou hast a soul, and it needs salvation; it is involved in guilt; it is deeply polluted; it is unfit for heaven. But there is mercy for thee if thou wilt only receive it. I died on the cross that thou mightest be forgiven; and if thou wilt but believe in me, thy sins shall all be purged away by my precious blood. My Spirit, too, shall renew thy heart, and fill thee with love to God and make thee meet for heaven, and gladden thy heart with the hope which shall never die." Go to him with the prayer, "For thy name's sake O Lord, pardon mine iniquity, for it is great." Let the cry ascend, too, "Create in me a clean heart, O God, and renew a right spirit within me." Thus pray, believing, and thine will be the joy of a present and an everlasting salvation.

We trust, beloved readers, that you will see salvation at once. Then, salvation secured, devote yourselves earnestly and with all your might to the discharge of every duty; but specially suffice us to urge on you the obligation of labouring with your whole soul, that Jesus may be honoured in the salvation of perishing sinners. Speak to those of your own household; then seek, in one or more of those spheres of christian labour which are to be found in connection with every rightly constituted church, to bless your city, your country, the world. And let it stimulate you to all possible vigour and earnestness, that not only is your own life uncertain, but that those for whom you are called on to labour are dying men. "Whosoever thy hand findeth to do, do it with thy might; for there is no knowledge, nor wisdom nor device in the grave, whither thou goest."

Thus saved through faith in Jesus, and thus living in his praise, whatever may betide you, will be well. Tried by deep sorrow, he will comfort you; sick, he will make all your bed in your sickness; dying, he will give you a song of triumph over the last enemy; and then he will receive you to himself in that world where there is no change, and where they weep no more.

A Glimpse in New Zealand.

I am a New Zealand shepherd. But if, gentle reader, this should convey to your mind the idea of a rural swain reclining on a mossy bank, hwoolly chafing spread "o'er the gowan lea," gravely chewing their cud in the shade of a wide spreading oak, while the notes of his caten reed float on the still noontide air; or of a smock-frocked, mittened, and comforted grandfather, a cold frosty morning, shifting bundles and filling troughs in a turnip-field, you are mistaken. You will accompany me in imagination on a two or three hours' walk, I will try to give you some idea of New Zealand shepherding and New Zealand scenery.

The time is early morn in summer; the scene my lowly cot. The prospect from my door is contracted, though very different from English scenery; steep, rough hills rise on every side within half a mile, their upper parts all hidden this morning by a dense fog. Breakfast is over the plate, panukin, knife, and fork, are washed and put on the shelf; the floor is swept, and the

is covered up; the bread is set for baking on your return; the dogs are loosed, and the puppy is chained up; my glass is slung over my shoulder, my dog-collar fastened to a button-hole, and I pull the door close by the green-hide strap, and the obbin jerks down, then jumps up; it is fast, and an off.

Away I go, across the small flat by the Manuka grove, Ned and Fly skipping and jumping in advance, poor puppy crying, because he is not big enough to go too; and I take a passing look at my sprig of potatoes, cabbages, and onions, and pluck a few of wall-flower for a nosegay. A way round the bend, across the creek, and behind the knoll; and now for the long, long pull up the steep side of Ben Moor, the top of which is at present invisible; but, at this time of the year the sun generally dispels the fog in the course of the morning. So, expecting that it will soon clear away, up I go, and the lower edge of the fog is no straggle. Here I pause for a breath—and it is so strange to look along the level bottom of the bog it appears like the ceiling of a great room, upward and upward again, right into the fog, and the lower world becomes indistinct and then disappears. And now, having nothing to look at but the grey, steamy-looking mist, I fall into a rown study, and think about old friends far away, about old times, and the dear "old country," and I am startled out of my reverie by an equally-startled ether, who sniffs the air, and rushes away into the mist.

But the summit is gained; and, standing there, gaze on a scene which, to be appreciated, must be seen. I seem to stand upon an island, small, deep, and rugged; but O, what a sea around! If the great ocean were, in the midst of a storm, to be suddenly frozen into pure white snow, with every foam-capped billow left standing, erect and featureless, it would well represent the scene around my mountain island. The upper surface of the snow, as level as a water-surface. Other mountains protrude their broken and jagged peaks rounded brows above the snowy sea, and appear like other islands; and the fog, clinging closely about each of these, filling in the hollows in their sides, and wrapping round the spurs, always maintains a uniform height; and the surface appears at the distance much more clearly defined than close at hand, which helps the illusion, and thus distance lends enchantment to the view." I could scarcely be surprised to see a silver canoe, with paddles of pearl, and carrying fairy forms, boat out from behind one of the islands!

But, though such a bright scene of sunshiny isolation surrounds me, though the mountains stand silent and immovable as ever, and the pliers on my aerial ocean roll not, yet sounds various and familiar strike on my ear. The dense all, which hides the lower world from my view, does not prevent me from hearing the warbling, creeping, and cackling of a thousand birds in the bush down the hill-sides. I hear, too, the occasional yelp of a dog, and the crowing of a cock at the home-station, the cracking of the bullock-driver's whip, and the hammer of the carpenter, who is building a new shearing-shed, and away to the left, inland, the bleating of the sheep, and the murmuring of the river; and, to the right, the hoarse constant roar of the sea, as it breaks on the rock-bound coast. Further away to the extreme right, round the bay, there is a still louder roar, for the surf is always high, and for miles and miles the beach is sand and shingle, and the rollers come in in regular unbroken lines, and the whole length breaks at once on the beach, with a roar like thunder, and then all is silent till another follows. The sound of this mighty, cease-

less, endless pulse-beating of the ocean, I find it impossible to describe, as I know of nothing with which to compare it; it being the most tremendous and terrible sound I ever heard. But whoever has lain in bed within a mile of it, and listened to it through the livelong night, when a storm was raging, will never forget it. But while I am trying to describe things indescribable, the scene around me is changing. Old Sol is asserting his supremacy over King Fog. I know only of one scene more splendid than the one I have tried to describe; and that is, when the fog gradually clears away, and admits to view the glorious panorama spread below. First, through a shapeless vista in the breaking mist, I catch a momentary view of a fragment of the coast, with the white water washing among the rocks, and the dark-green Karika trees extending to the water's edge. That vista is closed, but through another I catch a glimpse of the further shore of a tidal lagoon, and, on the top of the bank, a Maori hut. A third shows to me a part of the home-station on the plain, and some scraps of fences; another a large patch of the deep blue sea, and the distant horizon. But new scenes and wider views are bursting on my sight, faster than I can describe them. The fog is breaking up into huge masses; smaller ones disengage themselves, and, wandering alone, soon vanishes into thin air. I watch one mass of vapor just in front of me. It already becomes smaller—but not through distance, for it is almost motionless—it becomes less dense: the outer corners disappear. I can now see through any part of it: it gets more and more filmy and transparent: it is going, going—it has gone! And now all is clear and bright, and, from my lofty position, I can take a bird's-eye view of the glorious prospect of river, plain, and ocean, which lies below. The bullock-team is slowly creeping along the beach for fire-wood; a horseman is coming in the opposite direction; the boy is turning the cows out of the stock-yard, and old Joe is carrying two buckets of milk up to the house; a small steamer is passing about a mile from the shore, hugging the rocks as near as she dare to shorten the distance. Farther out in the offing is a topsail schooner, which has evidently a stronger breeze than we have here. Some one is now about to cross the lagoon from the home-station. A canoe, loaded with Maories, with their dogs and spears, is lazily paddling along toward the upper end of the lagoon; the men on a pig-bunting excursion, and the women to work in their gardens. One Maori woman is off to the beach for shell-fish, and old Waitai is mending his fences as usual. A mob of goats, belonging to Dickey Prouse, the old whaler, (who, with his old Maori wife, lives along the beach, just round "the point,") are grazing on the hill-side; and higher up are a few detached mobs of sheep.

Looking away to the "sou-west" with my glass, I can just discern the snow-capped Kaikara mountains on the next island. Looking inland, I see sought but hills behind hills, alps rise on alps, and other alps beyond. Looking more closely on the nearer hills and spurs, which I know so well, I see the sheep drawing down their accustomed tracks in single file, looking in the sunshine like strings of pearls; which reminds me that I, Dan, the shepherd, must cease for a while to expatiate on the beauties of Nature, and try, with the assistance of my two canine servants, to get hold of a small mob of wethers, and take them to the home station; or the cook will be short of mutton for to-morrow's dinner. This is easier said than done; for "steep and rough is old Ben Moor," and the sheep are very determined, cunning, and swift. But, fortunately, Ned is far

more cunning, I am quite as determined, and Fly is equally swift. So, if you will take my glass, and sit for the next half hour where we have been sitting the last, I think you will see me make them prisoners in the yard, at the corner of the paddock. Then, when I have had a bit of dinner, and a yarn with the cook, you may see me trudging up the hill side, *en route* for my "ware," driving up the sheep from the river side as I go along, my daily occupation just now being to prevent the sheep from crossing the river. If you take a look into my but a few hours later, you may see me take out of the camp-oven such a nice loaf of bread. But I am afraid it may be a little burnt, while I am scribbling nonsense about oceans in the air, and giving gratuitous advice to dissipated authors.

D. BAYLISS.

"Knock, and it Shall be Opened."—Where are we to knock? "I am the door," says the Saviour. "No man cometh to the Father but by me." When are we to knock? "Evening, and morning, and at noon," says King David, will I pray and cry aloud," and David knew. For what are we to knock? "Seek ye first the kingdom of God and his righteousness." Heaven in the soul, that is what we want; for heaven must first come to us before we can go to heaven. How must we knock? We must knock in earnest. We cannot knock too loud. Jacob said, "I will not let thee go, except thou bless me," and he got a blessing. We must knock perseveringly too. The Lord does not always come immediately. "I waited patiently for the Lord," said David, "and he inclined unto me and heard my cry." Here is the command, "Knock." Here is the promise, "It shall be opened!"

Water Spiders.—You are all familiar enough with spiders, and know how they spin their gauzy webs in every sly corner to catch unwary flies; but did you ever know one to build a boat? There is a curious insect called "the raft spider," which gathers together a little collection of leaves and tiny sticks, and winds its silken ropes about them in all directions, until the rough raft is perfectly seaworthy. The little voyager is quite dependent on the winds and tides, for he has no oars or rudder. When he sees a fine, fat mayfly or other insect sporting near the surface of the water, he quickly quits his little skiff, and runs over the water as swiftly as if he was on the land. Then he seizes his prey, and travels back with it as easily as he came.

Now and then a hawking swallow comes that way, dipping his dusky wings in the water, and catching up hundreds of insects every hour. Woe to the little voyager if swallow or kill-deer chance to spy him at a moment when he is not watching. That moment does not come very often, for let him but see the shadow of his enemy's wing, and he slips underside of his raft, and there conceals himself until the danger is past. I dare say he peeps out more than once before he ventures his well-fell body in such an exposed position. His little life seems of small consequence to us; but it is of vast importance to him, and he will take every method to preserve it that lies in his power.

The habits of his little cousin, the water spider, is still more curious, as he makes a little house of silk, which he spins and weaves himself below the surface of the water. This is his little nest; here his prey is carried to be eaten; and here his young are reared until they are old enough to make houses for themselves.

How wonderful are all the works of God—how

many lifetimes it would require for us to fathom them all.—*Presbyterian.*

For "The Friend."

The following beautiful lines, commemorate one of the touching incidents of the late war. The slave who thus bravely made his escape, was named Jack Frowers, a name that will long be remembered through these noble lines. It is from the pen of an American.

From "All the Year Round."

#### THE BOAT OF GRASS.

For years the slave endured his yoke,  
Down trodden, wronged, misused, oppress'd,  
Yet life-long serfdom could not choke  
The seeds of freedom in his breast.

At length upon the north wind came  
A whisper stealing through the land;  
It spread from boat to boat like flame;  
"Take heart the hour is near at hand!"

The whisper spread, and lo, on high  
The dawn of an unlooked for day;  
"Be glad, the northern troops are nigh,  
Their fleet is in Port Royal bay!"

Responsive to the words of cheer,  
An louder voice said, "Rise and flee!  
Be strong and cast away all fear;  
Thou art a man and thou art free!"

And full of new-born hope and might  
He started up and sea-ward fled;  
By day he turned aside—by night  
He followed where the North Star led.

Through miles of barren pine and waste  
And endless breadth of swamp and sedge,  
By streams whose tortuous path is traced  
In tangled growth along their edge.

Two nights he fled—no sound was heard;  
He met no creature on his way;  
Two days crouched in the bush—the third  
He heard the blood-bound's distant bay.

They drag him back to stripes and shame,  
And bitter unrequited toil;  
With red-hot gyves his feet they maim,  
All future thought of flight to foil.

We shuddering turn from such a cup,  
Nor dare to look on his despair;  
For them—Oh! let us offer up  
The Saviour's sacrificial prayer.

But the celestial voice that spake  
Ere in his soul, might not be hushed;  
The sense of birth-right, once awake,  
Could never, never more be crushed.

And brave of heart and strong of will,  
He kept his purpose, laid his plan;  
Though crippled, chained and captive still,  
A slave no longer, but a man.

Eleven months his soul he steeled  
To toil and wait in silent pain,  
But in the twelfth his wounds were healed—  
He burst his bonds and fled again.

A weary winding stream he sought,  
And crossed its waters to and fro;  
An Indian wife, to set at naught  
The bloody instinct of his foe.

The waters widen to a fen,  
And white birds beat their breastless, there,  
With brutal cries of dogs and men,  
The bunt went round and round his lair.

The baffled fowls have lost the track—  
With many a curse and many a cry  
The angry owners called them back,  
And so the wild pursuit went by.

The deadly peril seemed to pass,  
And then he dared to risk his head  
Above the waving marshy grass,  
That mantled o'er the river bed.

Those long broad leaves that round him grew  
He had been wont to bind and plait;  
And well with simple skill, he knew  
To shape the basket and the mat.

Now in their tresses sad and dull,  
He saw the hope of his escape,  
And patiently began to cull  
And weave them in canoe-like shape

To give the reedy fabric slight  
An armour 'gainst the soaking brine,  
With painful care he sought by night  
The amber weepings of the pine.

And since on the Egyptian wave,  
The Hebrew launched her little ark,  
Faith never to God's keeping gave  
So great a hope, so frail a bark.

Oh! silent river of the South!  
Whose lonely stream we'er feel the oar  
In all its course, from rise to mouth,  
That precious freight was that thou bore!

The grizzled oak and tall dark pine  
Stretch out their boughs from either bank  
Across the stream, and many a vine  
Festoons them with luxuriance rank.

The yellow jasmine fills the shade  
With golden light, and downward shed,  
From slender wreaths that lightly swayed  
Her fragrant stars upon his head.

But still the boat from dawn to dark  
"Neath overhanging shrubs was drawn;  
And loosed at eve, the little bark,  
Safe floated on from dark to dawn.

At length, in that mysterious hour,  
That comes before the break of day,  
The current gained a swifter power,  
The boat began to rock and sway:

He felt the wave beneath his swell,  
His nostrils drank a fresh salt breath,  
The boat of rushes rose and fell—  
"Lord! is it life or is it death?"

He saw the eastern heaven spanned  
With a slow spreading belt of gray,  
Tents glistened ghost-like on the sand,  
And phantom ships before him lay;

The sky grew bright, the day awoke,  
The sun flashed up above the sea,  
From countless drum and bangle broke  
The joyous Northern rattle.

Oh, white winged warriors of the deep!  
No heart e'er hailed you so before;  
No castaway on desert steep,  
Nor banished man, his exile o'er,

Nor drowning wretch, lashed to a spar,  
So blessed your rescuing sails, as he  
Who on them, first beheld from far  
The morning light of Liberty."

W.

#### Are they Small Matters?

(Continued from page 85.)

*Joshua Toft*, "was favored in the early part of his life with the knowledge of the blessed Truth, and by obedience thereto became, when young in years, an example of religion and virtue.

"His concerns in business at that time requiring his being much from home, and to be conversant with those unacquainted with the circumspect conduct and manner of behavior of the people he had joined in communion, he was exposed in the youthful part of his life to severe and ill treatment. But his mind being clothed with the patience of the holy Word, he experienced by its blessed fruits of meekness and love, not only the ignorance of foolish men silenced, but sometimes their wrath and enmity, through his faithful testimony, turned into respect and friendship."

*Catherine Burling*, "was taken ill of a slow fever, which weakened her gradually so that, to use her own expressions, she was reduced step by step, all means used for her help proving ineffectual. When she was brought low, and her recovery

appeared doubtful, she was for a time under great exercise of mind concerning her future state, and prayed to the Lord for a little more time, and that she might witness a better state; which he was graciously pleased to answer, not long after, she saying her mind was changed. She came to witness the child's state, filled with innocence, abounding in love; often saying, 'My mind is like a little child's.' Her heart came to be filled with the love of God, and in the abounding thereof, for several weeks before her departure, she was at times enabled to declare the Lord's goodness to her in a wonderful manner; and also to exhort many who came to visit her, to amendment of life, that when they came to lie on a sick bed they might be made enjoyers of that peace she was then partaker of; often saying she felt His peace flow in her mind as a gentle stream, and that her cup ran over. She advised her brothers and sisters to plainness of speech and apparel, saying, "Remember our blessed Lord, that great pattern of plainness, who when on earth went up and down doing good, and wore a garment without a seam. He was crucified, he was nailed to the cross for our sins: O love inexpressible!" She often exhorted and advised many young people, at different times, against reading romances and idle books, saying, 'It has been the greatest trouble and exercise of mind to me, more than any thing I have done. It has cost me many a wearisome night, and many a bitter tear, though I have never read but a few, and those that were deemed the most harmless. I know there are some who deem them innocent amusements, and say those books are instructive, and there are good morals in them. But O! must we go to such books for good morals? Read the scriptures, which are the best of all books. And there are other good books.' She departed this life without a sigh or groan, in the eighteenth year of her age."

*Lynnah Hill*, "was a child of a very sober and courteous behavior, a pattern of piety, plainness, and obedience to parents, and of a womanly and obliging temper to all, religiously inclined when very young, and diligent in reading the Holy Scriptures, as appears by the following testimonies given concerning her. Thomas Chalkley writes, 'I was well acquainted with this tender young maiden for several years before she died, which was in her twelfth year, and I took good notice of her conversation, which was bright and shining in that which is commendable in youth. Oh! saith my soul, that the youth of our age, and this city, might follow her example. It was my lot to be for some months a co-habitant in the family, and I observed that she was always very dutiful to her parents, loving to her friends and neighbors, and kind to the servants, both white and black. I also observed that many times when other children were at play in the streets, she would be either at her book or needle, at both which she was dexterous, and it rather seemed to delight to her than a burden. She had an extraordinary talent in reading the Holy Scriptures and other good books, in which she took much delight. May the minds of young people be stirred up by her example to put the same in practice, is my hearty desire.'

Griffith Owen, testifies of her, "I knew her from a child, and I never beheld any airy, light or indecent behavior or expressions from her, but her conversation was adorned with much gravity, modesty, meekness, and plainness. I was several times with her when on her death-bed, and was much tendered and comforted in a sense of the love and power of God that attended, in which time she uttered many wise and heavenly expres-

ns beyond what could be expected from one of r age. I was made to say, it is the Lord's ing, and it is marvellous in my eyes. It is for sake of the living I write this, and especially t regard to our young people, for whom my ret cries and prayers are often put up to the rd, that he would be pleased to work upon their arts, as he did upon the heart of this maiden, willingness to forsake the vanities, follies, pride, b-z-mindedness, and the many evils which are the world, and that they might be brought to e godly lives, and by an innocent and righteous overation, the work of regeneration might arly appear in all their actions and behaviour, at those who conversed with them and beheld air good works, coupled with the fear of God, ight have cause to acknowledge they are the ed which the Lord has blessed."

"When she took leave of her dear and only ter, and her cousin Lloyd Zachary, whom she arly loved, she expressed herself thus: 'Dear ter, my desires are that thou mayst fear God, dutiful to thy parents, love truth, keep to etings, and be an example of plainness. Dear usin, be a good boy, observe thy uncle's and n's advice, and the Lord will bless thee.' So e recommended her spirit to God, saying, 'lory, glory, glory,' and as with the sound of a mo, this innocent maid closed her eyes, and ired as one falling into a sweet sleep, without h or groan."

May the children and youth who peruse these racts be induced to turn to those valuable and resting accounts in "Piety Promoted," from hich most of them are abridged, and read a ore full account of these and other worthies who e walk in shining garments around the throne. e memory of the just is precious; and "It is ouraging to observe that the general traits, liverances, habits and sources of hope, are the e at every period of time."

Thomas Fyfe.—"He was of a sober thought- isposition in early life; and from his youth, continued to evince the effects of the preserv- ing influence of Truth. As his years increased, e advanced in usefulness in our religious Society. e was much concerned that its christian discip- e should be well supported; and much engaged e administration of it. He was a man of inness, sincerity and firmness. He spoke his imiments honestly, whether in meetings for dis- cipline or to individuals; and encouraged others e speak the truth, every man to his brother; he s also many times engaged to visit Friends in ilices. Nor was his usefulness confined to pre- pt alone; he acted as he recommended others act. He was an elder who endeavored to rule s own house well; being very solicitous that his ildren might walk in the path of simplicity, isistency, and safety. The preservation of em was one of the objects nearest to his heart."

e encouraged the appearances of good in them; e warned them of that which had a contrary eadcy; and, when he saw it needful, he added raint to admonition. Thus, by endeavoring eck every wrong thing at its beginning, and prevent its growth by it, he had gained strength, e was a blessing to his family. This wise, provi- nt, and one may almost say politic concern, of e man who had at heart the preservation of youth, ained with him almost to the last; for, not g before his departure in a large committee of e Yearly Meeting of Dublin, he addressed the eents on the subject of their deficiency in re- taining their children, particularly in dress. He pressed his apprehension that some parents eaking a plain appearance themselves, even led eir children into this deviation by dressing them

while very young in a way conformable to the fashions of the times."

Abigail Fyfe, "Proved," to the above men- tioned Friend, "an affectionate and sympathizing wife. In her youth she was of an orderly conduct, religiously disposed, plain in her attire, and studious to be consistent. After her marriage she was not only desirous to do what she herself thought to be right, but to encourage her husband to fulfil every duty to which he believed himself called, even though it might lead him into service at a distance, and deprive her of his company and encouragement at home. She was also, on her part, very anxious for the preservation of their children, solicitous to keep them out of hurtful company; and consonant with this caution, she was also desirous to restrain them from hurtful books. This is an insidious evil, and probably requires in many families a more vigilant care than it obtains. The advancing state of modern education, will sometimes leave the child to peruse writings of which the parent may have little knowledge; but it is probable that an upright awakened parent will generally have discernment sufficient to detect error and to observe a snare; to such it will be but a poor excuse that the children are deluded into sin by their ignorance and want of vigilance. In her domestic economy she was desirous to avoid superfluity, particularly in furniture; and she united with her worthy husband, according to the apostolic injunction, in a readiness to entertain strangers, especially such as were travelling in the service of Truth. This is a kind of hospitality often repaid by the benefit accruing to the younger branches of the hospita- ble family."

(To be continued.)

For "The Friend."

With the following extract, sent for insertion in "The Friend," is information that the writer of the letter is a Baptist clergyman, and that the spectacles alluded to, were given by our late friend John Richardson, and went in a box containing Bibles and Testaments, sent by the Executive Board of Friends' Association in Philadelphia.

Extract of a Letter, dated in Virginia, Eleventh month 6th, 1866.

"The Blessed Saviour said, it is more blessed to give than to receive. Happy must that people be, who have given these Bibles, Testaments, &c., if they are more blessed than these poor Africans. How true it is that those who have never known want cannot properly appreciate these things."

"The coloured people have a great reverence for God's [word's]; and it is astonishing how anxious each one is to have a Bible or Testament. My rule is to give only to those who can read. You would be amused to see me open one of the bundles in a large congregation; it sets these poor people perfectly crazy. I am sorry to learn that the giver of the spectacles is no more. I promised a Bible and the spectacles to any one who would read a few verses with them on; every old man and woman must jump up and try, and it so happened that those who could read, the spectacles did not suit, and wanted the Bible, and all wanted the specks who could see with them. After spending some time in great anxiety, one old soldier of the Cross said to one who could read without glasses, 'Well, spore you just take de book and keep it for de Lord's sake, and I will just take de specks and wear them for de man's sake what give them, and if I dies first den you'll be old enough to read wid them, and I'll will um to you; now say wout dat do first rate.' Of course I agreed to it and all was right. There are hundreds of these old glasses laid aside, which

would be a great blessing to these old people. It is true very few of those needing glasses can read, but in their work it would aid them much."

For "The Friend."

Thoughts for the Times.—No. 49.

Although the testimony of the Society of Friends against all wars and fightings, as forbidden by the Saviour, is one of our great characteristics, yet how to support it in time of war, by a consistent conduct, and how to reconcile it with the admitted authority of the government we live under, are questions which have exercised many minds. The terrible conflict in which the nation has been so lately engaged, has renewed these difficulties with some, and it is due to the cause we support and to our own consistency, to solve them if we may.

In refusing to fight, because it is contrary to the precepts of our Saviour, the Friend assumes these precepts to be the *supreme law*, which the commands of no man, and of no body of men can justify him in disobeying. What they cannot rightfully make me do, they cannot rightfully impose a penalty on me for refusing to do; so that the Friend who dares not fight, dares not pay an equivalent for being excused from fighting; but must in both cases, submit passively to the penalties inflicted for disobeying the commands of men.

But the government which we conscientiously refuse to obey when it orders us to take up arms, levies taxes for its own support, which we pay without hesitation; and we know that when engaged in war, a great part of these is spent for military purposes. Some of them, moreover, may closely partake of the nature of equivalents for active service in the army, or be raised for some specific warlike object; and such may, without sufficient discrimination, have been paid by our members along with other taxes; or being new, their real nature may not have become understood.

But whenever it is clear that these laws go beyond that general right of governments to levy taxes for their own support; when they call upon those who cannot conscientiously fight to perform this or that military service, to equip himself with deadly weapons, to serve in the army, to provide this or that means of war and destruction, or exact any penalty for not doing so—they overpass the line of demanding for Caesar, the things that are Caesar's, and ask for the things that belong to God: they infringe upon the rights of conscience, and require us to violate our sense of what we clearly believe to be the commands of Christ.

It is not difficult to point out the great principles which separate the two cases. For our social instincts form us into the society that constitutes the State, which provides for the administration of justice, the protection of property and the safety and peace of private life. *All the essential ends and aims of society are peaceful*; and without this social organization, there would ensue, universal discord, violence and sorrow. Although rulers and people may so far divert it from its legitimate path of peace and order, as to plunge nations into war and bloodshed; we cannot for this reason set ourselves against society. For we must never lose sight of the fact, that, beneath the confusion thus created, the great, peaceful, social mechanism, which no violence of man can permanently obstruct, is still at work. And therefore it is, that the christian, deeply as he mourns over the perverted ambition and the depravity of rulers and people, cheerfully renders to Caesar the things that are Caesar's—only disobeying him when he demands the things that belong to God.

It is very instructive to examine the history of

the discipline of our Society, much of which has grown out of events and been shaped by circumstances. For example, the practice of slave-holding had gradually crept in among the colonial Friends, and prevailed to a considerable extent. There were always members who saw and proclaimed how utterly it was opposed to the Divine commands. The number of these steadily increased; one Friend after another manumitted his slaves; slave-holding was now generally regarded as a crime, and became the subject of frequent and earnest concern in the meetings for discipline, till at length it was forbidden under pain of disownment, as being contrary to the law of Christ. It required half a century to bring the Society to this conclusion; for the offending members were as far as possible, to be saved to their friends and not cast off. Until the protest against slave holding became incorporated into our discipline, any Friend was at liberty to manumit his slaves, but could only use persuasion with his fellow slaveholders. When it was prohibited by the conscience of the body, all were bound to obey the law, whether satisfied of its justice or not, and became amenable to the discipline for disobedience.

So, likewise, when intemperance became a great evil in the land, our testimony against the use of ardent spirits, came to be more and more insisted on, and introduced new rules of discipline. The distilling of spirituous liquors from grain, was first forbidden, on the ground that it was a sinful perversion of the gifts of Providence to convert the staff of life into an intoxicating poison. At that time the superabundant fruits of our orchards were made into cider, and much of that cider was distilled into spirits, and so slow was our testimony against the use of intoxicating drinks, in spreading among our members, that for a time the traffic in spirits distilled from grain was a disownable offence, while that in apple whiskey and foreign brandies was simply discouraged. It was some years before this inconsistency ceased, and still longer before the use of ardent spirits as a drink, was disownable.

The same influence of circumstances may be noticed with regard to our testimony against war. The discipline is clear and full on the subject of personal service and its various equivalents; it considers the furnishing of wagons and horses for transporting warlike stores, as a military service, and forbids the members from dealing in prize goods, and from paying taxes levied expressly for the purpose of war, or fines imposed; while it does not discriminate in the case of taxes for general purposes, although they may be known to be chiefly expended in war. Now, in respect to these, if any Friend conscientiously refuse to pay them, and submit to fine and imprisonment for his refusal, he may do so. But the Society has not taken up its testimony against war at this point, nor given a decision respecting it. Sixty years since, there existed a duty on imported goods levied, because of the Algerine war, which many Friends could not conscientiously pay. It was a temporary levy, and the occasion passed by, or it might have claimed the attention of the body, and given rise to distinctions we do not now make; precisely as in the case of slavery and ardent spirits.

The Meeting for Sufferings of Philadelphia Yearly Meeting, in a recent address to its members, thus clearly sum up the whole subject. "Consistently with these views, Friends,—while in accordance with the juncture, 'Render to all their dues; tribute to whom tribute is due, custom to whom custom,'—they have not scrupled to pay the taxes and duties levied for the general

purposes of government, cannot conscientiously and consistently pay money, however small or large the sum, levied solely for warlike purposes, or in lieu of military service; whether to hire a substitute to do that which we believe to be sinful, or as a tax for the exercise of the right of liberty of conscience. To exact such a fine or tax from those who withhold compliance with the law on conscientious ground, they feel to be inflicting a penalty for the religious faith of the sufferer; to be contrary to the spirit and precepts of the gospel, and subversive of our inalienable right, as well as an infringement of the free exercise of our religion, guaranteed in the Constitution." "The object," they add, "to which the penalty or commutation money may be applied, does not change the principle. The money is demanded as an equivalent for military service or the price of liberty of conscience: it is not a mere voluntary gift, and though it may be used for that, to which, under other circumstances, Friends might freely contribute, the principle involved is the same; to pay it is an admission of the right of government to interfere with the religion of the citizens. Though the money may be applied to feed the hungry and clothe the naked, the payment of it in lieu of military service, is a practical avowal that human power may coerce a man's conscience; and consequently that government may establish, by penal enactments, a State religion, and compel a man to pay towards its support; and virtually admits the persecution of Friends and others, in past ages, for conscience sake, to have been a justifiable exercise of civil authority."

If any of our young Friends have been induced to pay these equivalents in consideration of the specific application of the money so levied, to purposes not in themselves objectionable, we think a more careful examination must show them, that our testimony against war is as much at stake in these, as in the other cases, respecting which there has never been a doubt amongst us.

Should the madness of rulers and the passions of the people plunge this yet happy country into a series of desolating wars, there can be little doubt that our Society will feel more and more the necessity of firmly upholding its christian testimony on the subject, and be forced by circumstances into more explicit declarations and stricter rules of discipline. It may be found necessary to place fresh guards against temptation, to watch more narrowly the path of our own members, and to shelter them from the surrounding confusion, and violence of wicked men. If the discipline should even then be open to some charge of inconsistency, the answer will suffice then, as now, if it can, with sincerity, say that it has sought in the light of Truth, to do the best in its power.

*An Example.*—In Milwaukee, a few weeks ago, a ragged boy called upon a merchant and asked the loan of fifty cents, for which he promised to give his note and ten per cent. interest. The merchant was struck by the novelty of the proposal, and finding the boy intelligent and apparently honest, gave him fifty cents, and, as he insisted on it, took his note. A month afterwards, when the merchant had almost forgotten the occurrence, the boy again made his appearance and asked to redeem his note. Upon inquiry the boy said he had invested the fifty cents in newspapers and oranges, and had already made about forty dollars. He was an orphan, but thought he was able to take care of himself. A more striking example of what energy will do among the poor and friendless we have seldom seen. It is worthy of imitation.

On the Present Critical Juncture for the Negro Race.

He gives twice, who gives quickly; but he gives best who gives quickly and repeats it, and still perseveres. Perseverance is as needful as promptitude, quite as difficult, and often less palatable.

Some of my friends tell me that I shall weary our Quaker public, and the general public, with my thrice-told tale—the claims of the negro, and the duties of England. I would rather weary them and wear myself out than that the hungry should starve, the naked perish, and the fetters be again welded on limbs that are now free.

The recent accounts from calm, and enlightened, and practical American philanthropists, of various creeds and of different States of the Union, demonstrate that the present juncture is one of critical danger, not only to the lives of thousands, but (what is of still more importance, owing to the magnitude of the issue) to the very existence of freedom for the whole negro population of the South.

Shall we, then, let the stone which has just reached, or all but reached, the top of the hill, roll back to the very bottom, like that of Sisyphus in ancient fable, for want of a little sustained effort?

I readily admit two things: 1st. That the duty of rendering to the freedmen *all* that they stand in need of, primarily rests with the Americans themselves; and, 2d. That English Friends have given promptly, liberally, and repeatedly. But it is also clear that, with political and other difficulties in the way of American philanthropists, they need our aid; and equally clear that it is a privilege, as well as a duty on our part to afford it, at least if we are to be the true successors of the Clarksons, the Wilberforces, the Buxtons and the Allens on this side, as they are of the Woolmans and the Benetons on that. And it is true also that notwithstanding a large amount of persevering bounty on the part of individual Friends in England, and even of the body of Friends in various localities, they have, in many places, not yet acted fully upon their neighbours by public meetings and associations in the way which they did so triumphantly in accomplishing the abolition of our own colonial slavery.

The cause has been so fully endorsed by the leading men of every denomination in this country, that Friends would, I believe, readily rally their fellow-christians to the standard, if they would but make the effort, either alone or with the aid of the agents of the "National Freedmen's Aid Union," who are proposing to hold public meetings in many of the provincial towns during the next few months.

The most plausible argument which I have met with against English philanthropic action in this great and good work is, that it is not only a purely American question, but an American government question; and that private bounty, whether of this or on the other side of the Atlantic, is no the true remedy for the existing evils. The error in this reasoning lies in the fact that the government action in America is paralyzed by the political difficulties of the present hour. Thus thy very pretext for not giving—and plausible pretexts are never wanting where the mind is preciously made up to withhold—the very pretext for not giving is a tremendous aggravation of the peril of the negro race in almost every Southern State.

And if slavery, whether in name or in substance, resume her desperate grip on the negro of the United States, the hopes of freedom for the slaves of Cuba, of Brazil, and of all the South

American States, are dashed it may be for half a century.

I write under the pressure of many duties and in haste, in order not to lose the present number, with winter at hand; but I write with the calm and firm conviction that none of those who love freedom and hate slavery should rest upon their arms, even though their arms are weary, as mine often are.

JOHN HODGKIN.

Friends' Institute, London, 12th of 10th mo. 1866.

**Boys Using Tobacco.**—A strong and sensible writer says a good thing, and a true one, too, for boys who use tobacco. It has utterly spoiled and utterly ruined thousands of boys. It tends to softening and weakening of the bones, and it greatly injures the brain, the spinal marrow, and the whole nervous fluid. A boy who smokes early and frequently, or in any way uses large quantities of tobacco, is never known to make a man of much energy, and generally lacks muscular and physical, as well as mental power. We would particularly warn boys who want to be any thing in the world, to shun tobacco as a most baneful poison. It injures the teeth. It produces an unhealthy state of the throat and lungs, hurts the stomach, and blasts the brain and nerve.

**New York Mails.**—The mails passing into the New York post office and out of it have been weighed for several days by Superintendent Knapp, and the result shows that the average weight of the matter each day was about thirty tons. The aggregate quantity of the letters, newspapers, &c., received in New York, amounts to ten or twelve tons daily; and the mail matter sent out of the city is about twice as large, being but twenty-three tons. These figures show an increase in a year of the weight of the mails equal to two and one-half tons a day.—*Late Paper.*

## THE FRIEND.

ELEVENTH MONTH 17, 1866.

One of the attractive features in the aspect of the "religious world" at the present time, is the parent disposition in the different denominations to draw nearer together, and to remove those differences and feelings, which have heretofore kept them separated, and often hostile to each other. Evangelical alliances and reunions appear to be more and more popular, and not a little of that is called "christian charity," is displayed in demands, coming from various quarters, to overlook or disregard what have heretofore been considered the distinctive characteristics of the respective societies, so that the whole may sufficiently assimilate to make one individual body of worshippers.

It is at all times grateful to witness the removal of jealousy, misjudging and prejudice from the minds of professed believers, and were the movement alluded to the legitimate offspring of a more general approximation to the gospel standing of purity and self renunciation, and a more prevalent desire among all to encourage and strengthen each other to reject the doctrines and positions which are merely the commandments of men, and to submit to the government of Christ, the alone Head of the Church; it would indeed be cause of rejoicing to every sincere christian.

But when we look at other manifestations within nearly every one of the different religious bodies, there is much to create a fear that some of the changes going on and producing greater familiarity among them, are not in the right di-

rection. Instead of their being an outgrowth of vital religion, transforming and renewing the mind, and calling forth among the members a wider and more sincere feeling of brotherhood, as disciples of one Master, they would seem to be a mere agreeing in greater laxity of principle and practice, and thus to be prepared for a unity which is very different from that enjoyed by those who are guided and governed by the unerring and unchangeable Spirit of Truth.

In the periodicals published weekly, and claiming to be respectively devoted to the interest of the religious denomination to which their conductors belong, there may be found reiterated references to changes effected or going on within each society, all in the direction of greater ritualism and more imposing outward performances, increased ornamentation in the architecture and furnishing of their places of worship, greater dependence on learning and oratory in their preachers, and a stronger disposition in the members to substitute will-worship, and activity in what are termed "religious works," for the crucifying, heart-cleansing baptisms of the Holy Ghost and fire.

Papistry, amid its losses of domain and secular power, remains apparently unmoved, and unchanged in its pretensions, waiting for some hoped for obscuration of light and knowledge, that may render the people willing again to believe its cunningly devised fables, and receive its iron yoke. In what is known as the "Episcopal Church," there is represented to be a large, increasing and influential party, whose aim appears to be to address their lessons to the eye, and by object teaching, to impress on the minds of those who flock to their gorgeous fanes and magnificent cathedrals, a conviction of the gratification they may receive from being connected with a "church" abounding in such splendid ceremonies, and such fantastically dressed actors. Here the points of interest discussed and absorbing a large share of attention with "laity" and "clergy" relate to "albs" and "opes" to "chaubles" and "tunicles," the placing of "crucifixes and amices," the arrangement of "lights and altars," and the propriety of the various shifting robes and ornaments in which the "priest" should be invested in the different scenes where he officiates. In all these there is said to be a close imitation of the mummeries and superstition so characteristic of popery, and it is bodily asserted by those opposed thereto, that these "high churchmen," in their teachings and efforts to remove differences and promote unity, are merely striving to lead those who will follow them, back to Rome. They profess to be scandalized with the grievous sin of schism, and, therefore, that duty bids them seek a restoration of unity with those high dignitaries of "the church," whose "apostolical succession" is more defensible than their own.

Among Presbyterians, Congregationalists, Independents, Methodists, Baptists, indeed all who in England would be classed as Dissenters, while it is represented that great activity prevails in their members, there is confessed to exist a similar disposition among many to copy after the rites and formulary of the body from which they originally sprung, and to adopt modes and practices once repudiated and testified against. Their plain and unpretending places of worship are giving place to highly ornamented and costly buildings, mostly of gothic style, and surmounted with towering spires. Instrumental music, once denounced by many of these Societies, as "an attempt to praise God by the aid of machinery," is now cultivated, and proficiency therein is deemed so necessary, that not unfrequently artists are engaged to give the

coveted charm to the performances. A late paper has the following: "According to the 'Patriot,' Dissenters are likely, before long, to follow the example of English Churchmen in holding choral unions. It is pointed out that music is one of the greatest of all helps to devotion, and that in this respect, 'the Church' is far ahead of other religious bodies, and that periodical gatherings of choirs is one of the best means of promoting this branch of worship. The Church Review states that in some Dissenting chapels a surplined choir has been introduced."

A writer in "The Christian Observer," discoursing on the subject to which we have alluded, says, "I can and do see, and would not wish to affect ignorance of the fact, that 'religiosity' is increasing among us." "Their chapels increase in number, and are better built than formerly, their schools and colleges and missions all advance. Among ourselves, too, there is a like external growth. In a particular way 'religiosity' increases very much." "I had seen in the case of the Methodists, by their own confessions, that the kingdom of Christ was not advancing among them. I had been forced to the same conclusion in the case of Dissenters, by a comparison of their outward circumstances with those of the Methodists. As to the evangelical portion of the church I have no such facts. But looking around me very closely, and remarking how seldom, how very seldom is the conversion of a grown up man or woman heard of, I cannot help fearing that a general state of coldness and apathy—a general withdrawal of the Holy Spirit's influences, is the distinguishing feature of the present age." Complaints similar in character to this are heard from nearly all quarters; all justifying the fear that while "religiosity" of a particular kind abounds, it is not of that character that shuts out the spirit of the world, or clothes its votaries with the humility and self-denial which are inseparable from the cross-bearing believers whom the world hates.

Notwithstanding the disposition so generally manifest by some within the different religious denominations, to recede from the position originally taken by them individually, and to adopt forms or practices they once deemed inconsistent with christian profession, it is encouraging to observe that the changes effected are not made by universal consent; there evidently being some among the members of each, who have withstood the defection, and are earnestly striving to set its course and counteract its effects. We desire that all such as are labouring, by precept and example, to stem the tide of latitudinarianism now sweeping over the professing church, may be clothed with strength from Him who is omnipotent, and cease not to contend for the truth as it is in Jesus. We should not have thus referred to what is going on in other religious Societies, but that something not dissimilar can be readily recognized within our own, and it may be well for some among us to consider how far they are giving their time and strength towards breaking the hedge, heretofore enclosing us as a people, and inciting those who are longing to assuilate and associate with others in "religious union" to wander back to the beggarly elements from which it cost our forefathers much to escape.

As there is a private letter connected with the valuable testimony given by James N. Richardson, and it is important to the full understanding of the subject, we would be obliged by being furnished with the name of the Friend who has sent them for publication in "The Friend."

Our readers must have noticed the omission in

our last five numbers, of the name of JOHN RICHARDSON, which has stood at the head of our paper for twenty-one years—the first three and the last eighteen of its existence. One of the original founders of "The Friend," he entered heartily into the views in which it originated, cheerfully undertook the office of Treasurer, and consented to place his name at its head, at a time when this course subjected him to much obloquy. And afterwards, when a reverse in his circumstances came upon him, he resumed his old place, and the agency of Friends' Bible Association, with their slender salaries, and stood cheerfully at his post till called by the great Master to the reward of a well spent life. His even temper—the kindness of his heart, and a clear, well informed mind, endeared him to his associates; and the higher qualities of a meek unambitious spirit—of cheerful submission to the allotments of Providence—his careful, humble walk through life, and his peaceful close, allow us to believe that through redeeming mercy he has entered the mansions of rest and peace.

His bodily frame was always slight, and for many years he was affected with symptoms of pulmonary disease. His last illness was but of a few hours duration, he was sustained in it by humble faith and serene hope in his Redeemer, and died on the 8th of the Tenth month, in the 77th year of his age.

#### SUMMARY OF EVENTS.

**FOREIGN.**—Gladstone, the late British Chancellor of the Exchequer, has been sent to France. The London *Times* says, that the object of his mission is to reconcile the Pope to his fate. Messages from Europe have been received in New York, between 8 and 9 o'clock in the morning of the day on which they were sent. There has been a large increase in the business of the cable since the change for messages has been reduced. It is said that the object of his mission is to bring home the French troops from Mexico. The *Paris Monitor* says, however, that Maximilian will remain in Mexico.

The king of Italy entered Venice on the 7th, and met with an enthusiastic reception. The Austrian Emperor's name has been suppressed. The trouble between the Sultan's government and the United States, growing out of the conduct of the Turkish officials towards the consul of America in the island of Cyprus, has been settled.

A Berlin despatch of the 7th says, Prussia sees in the appointment of Baron Buns as Minister of Foreign Affairs an attempt on the part of Austria to interfere in questions considered settled. If this view be correct, the Prussian government will complete more quickly and surely its national work in Germany.

The Bank of England has reduced its rate of discount to 4 per cent. At a recent banquet, Lord Derby, the British Premier, made an allusion to America, in which he said he hoped that every question between the two governments might be approached in a forbearing and conciliatory spirit, which might remove all bitterness, and cement the friendship of the two nations.

On the 9th inst. the heir apparent to the Russian Empire and the Princess Dagmar, of Denmark, were married in St. Petersburg. On this occasion of rejoicing, the Czar commated the sentences of a large number of prisoners, and remitted arrears of taxes.

In Paris, forty-two arrests have been made of members of a secret political society.

Great Britain has refused a delegation from Saxony, thereby recognizing the incorporation of Saxony with the dominions of Prussia. The Prussian force in Saxony has been reduced to a peace footing.

The British Parliament had been prorogued to the 20th inst. The short time movement among the Lancashire cotton mill owners respecting progress, and in view of a large decrease in production, has been settled. The London *Globe* still believes that a design is entertained by Prussia and Sweden to absorb Denmark, Prussia taking the mainland, while the islands are annexed to Sweden.

Rio Janeiro advices report a defeat of the allied forces of Brazil and Mexico. The battle occurred on the 23rd of Ninth month at Curupaty, Paraguay. The land and naval forces of the allies attacked the fortified pos-

sitions of that place, but were repulsed with a loss of nearly five thousand men. Several gun-boats were disabled in the action. The allied army had retired, and operations are suspended until the present season. The allied army of five thousand men, under Durango was still at Chihuahua on the 17th ult. Durango is held by the French and Mexican Imperialists. All northern Mexico, except Durango, was in the hands of the Liberals.

A London telegram of the 12th says, the Turkish government has granted a full amnesty to the Cretan rebels. The London *Times* has received a dispatch which states that the war in Japan is ended. The death of the Tycoon is confirmed. The Liverpool cotton market was heavy. Middling uplands, 14½d. Consols, 89½. U. S. 5-20's, 69½.

**UNITED STATES.**—The Public Debt on the first inst., less the amount paid, amounted to \$2,612,310,000. The national debt has been reduced \$22,026,136, during the Tenth month, and \$138,378,837 since Fifth month last last, a period of six months. The total debt bearing interest, payable in coin, amounts to \$1,333,558,841, that bearing currency interest to \$882,408,410, and that on which no interest is paid to \$428,680,771. On the first inst., the amount in the Treasury was \$99,413,018 in coin, and \$30,913,942 in currency. The compound interest notes are being gradually reduced, and steady progress is making in the conversion of Treasury notes into the permanent loan.

**OHIO.**—Lewis D. Campbell, of Ohio, has been appointed Envoy Extraordinary and Minister Plenipotentiary to the Republic of Mexico, and will be accompanied and aided by Lieut. General Sherman. Nothing is known of the nature of their instructions, but it is supposed they will endeavour to strengthen the Juárez government, and hasten the departure of Maximilian and the French forces. The steamer has sailed from New York to the United States trans-frigate Susquehanna.

**The South.**—Gov. Brockmorton, of Texas, has been notified of the nullification of Lieut. Grant's order authorizing military commanders in the South to arrest all persons who are threatened with the failure or inability of the civil authorities to do so.

The Committee on the Judiciary of the Texas Legislature, report that the sudden change, as well as the present condition of the negroes, requires that they should be protected by wise and just legislation. President Johnson has determined to remove Texas. It is suggested that he should urge the Legislature to make all laws involving civil rights as complete as possible, so as to extend equal and exact justice to all persons without regard to colour. Gov. Brockmorton accordingly, in a special message, asks the Legislature to pass a remedial act, obliging the State and counties to protect life and property, without regard to political sentiment. He suggests also that negro testimony be admitted in all cases, and recommends that taxes collected from the freedmen be applied to their education.

The Georgia Legislature has refused the constitutional amendment by an almost unanimous vote. The objection was supported by an argument that the States only can consider such amendments; that they must be pronounced by a two-thirds vote of all the States; that it was held by Congress and the President that Georgia was never out of the Union, and that the same is true of other southern States, and that therefore no constitutional amendment is necessary. The Georgia Legislature has now a delegation ready to enter Congress.

**The Elections.**—The twelve States which voted on the 6th inst., elected ninety-one members of Congress, viz: 68 Republicans, and 25 Democrats. In the nineteen States which have held their elections since 9th month last, 143 Republicans and 37 Democrats members were chosen. The six remaining northern and border States will probably choose 15 Republicans and 7 Democrats—making a total of 140 Republicans and 44 Democrats; in which case the relative strength of the two parties in the House of Representatives will be unchanged. The Republican majority in the Senate is expected to be a Republican gain of four Senators. The Republican majorities in most of the States have been increased. The aggregate majority in the nineteen States above referred to, amounts to about three hundred and sixty-two thousand.

**Philadelphia.**—On the 11th inst. week, 272, including 19 from abroad. The number of children in attendance at the Public Schools of this city is 98,347, and there are 4928 on the rolls awaiting admission. The number of teachers employed is 1371, only 86 of whom are men. The Controllers estimate the expenses of these schools for the next year at \$1,020,405.

**Worcester.**—The Liverpool papers report that ship-building in the Mersey is at an extremely low ebb, and thousands of workmen are out of employment.

Advices from the Red River of the north report very abundant crops in that region. The wheat, it was thought, will average forty bushels to the acre, and other crops were also heavy, and had almost entirely escaped injury from frost.

The correspondence between the Canadian government and the British minister at Washington, is understood to have resulted in the recall of the sentences of death pronounced against the condemned Fenians, and the substitution thereof of imprisonment for a term of years.

The number of deaths in New York city last week was 391; in Boston, 82.

The steamship Great Eastern has been chartered to carry visitors from New York to Brest during the Paris Exhibition, after which she will be taken to lay the telegraph between France and America.

The fisheries of Massachusetts employ 1244 vessels, and 16,649 men. The yearly value of the products exceeds twelve millions of dollars.

**The Markets, &c.**—The following were the quotations on the 12th inst. *New York*—American gold 144½. U. S. sixes, 138½, 114; ditto, 5-20, 139½, 110; ditto, 1865, 107½; ditto, 5 per cents, 10-40, 100½. Superior State flour, \$8.40 to \$10.50. Shipping Oats, \$1.10 to \$12.15. Baltimore flour, common fair extra, \$12.50 a \$14.25 trade and family, \$14.40 to \$17.25. Chicago spring wheat, \$2.48; inferior white Michigan, \$3.15. State corn, \$1.40 to \$1.51. Old, 72 cts. Western mixed corn, \$1.26 to \$1.28. Middling, 100 lbs. cotton, 26 cts. Cuba sugar, 11½ a 11½; refined, 16 cts. Philadelphia—Superior flour, \$8 a \$8.75; extra, \$9 a \$11; higher brands, \$12 a \$16.50. Red wheat, \$3 a \$3.28; white \$3.35. Rye, \$1.33 a \$1.35. Corn, \$1.25 a \$1.27; oats \$3 cts. Cloverseed, \$8 a \$9. Timothy, \$3.50 a \$3.62. Flaxseed, \$3.25 a \$3.30. The arrivals and sales of hessian cattle reached about 2600 head. Prices were unchanged, extra selling at 16 a 16½ cts., a few choice at 11 cts., fair to good, 14 a 15 cts., and common, 11 a 13 cts. per lb. About 12,000 sheep sold at from 6 a 6½ cts. for fat sheep, to 15 a 5½ cts. per lb. gross for common fat goats. Hogs sold at \$11 a \$12, the 100 lbs. net, Chicago No. 1 corn, 89½; do., 25 cts. Oats, 39½ a 42 cts. St. Louis.—Spring wheat, \$2.07 a \$2.15; fall wheat \$2.65 a \$2.80. New corn, 75 a 80 cts.; old, 95 a \$1.05.

#### RECEIPTS.

Received from Thos. S. Shearman, Co. \$2, vol. 40, from Jacob Hart, Pa. \$2, vol. 40; from Wm. C. Talbot, Mass., \$2, vol. 39; from Pelatiah Gore, Vt., \$2, vol. 39 and from David F. Knowles, 2c, to No. 50, vol. 40, and Dan'l Gove, \$2, vol. 40.

#### SCHOOL FOR COLOURED CHILDREN IN RASPBERRY STREET.

A well qualified female teacher is wanted to take charge of the boy's school under the care of the Monthly Meeting of Friends in Philadelphia for the Southern District. Application may be made to

Caleb Wood, 524 South Second St.,  
Thos. Elkinton, 118 Pine St.,  
Geo. J. Scattergood, 413 Spruce St.

#### WESTTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the Boy's SECOND MATHEMATICAL SCHOOL. Apply to

Samuel Hilles, Wilmington, Del.  
Thomas Ely, 817 Arch St., Phila.  
Joseph Scattergood, 413 Spruce St., Phila.  
Charles J. Allen, 304 Arch St., "

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR PRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSUAH W. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

—, on the 31st ult., at Friends' meeting-house, Muncy, Lycoming Co., Pa., EDWARD MARSHALL, of New York, to MARY E. HAINES, daughter of the late Jacob and Rachel E. Haines.

#### WM. H. PILE, PRINTER,

No. 214 Pearl street, between Dock and Third.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XL.

SEVENTH-DAY, ELEVENTH MONTH 24, 1866.

NO. 13.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

For "The Friend."

Are they Small Matters?

(Continued from page 93.)

*John Gough*, "was a young man of good natural disposition and capacity, well furnished with useful learning; and as he grew up, being favored with deep religious impressions, he sought for and attained best wisdom, to a degree in general exceeding his age. On his entrance into a new life, a propriety and steadiness of deportment, that might adorn advanced years, attracted notice and respectful regard of the best friends he had the opportunity of observing or being acquainted with him. He was a dutiful son, an affectionate brother, an exemplary pattern of plainness, sobriety and circumspection of life, giving evident indications he was early acquainted with the grace and truth which came by Jesus Christ. He was, for a season, an assistant to his father in a school, but meeting with an opportunity of engaging with a Friend of London, as clerk, he moved thither; in which station he conducted himself with fidelity and honor during the short time he continued in it. Being taken ill of a fever, which terminated his life, he said, a little before his departure, 'I have done all that I had to do, and must now go home.' His father, writing concerning him says, 'Through divine favor and assistance, I freely give him up; thankful for having such a son who hath left behind him too much like him in pure unmixt goodness, which diligently exerted itself to do well.'"

*Robert Pryor*, during a settled decline, "one day speaking to his brother about his will, he said that some might think he had given a great deal away from his children; but he was more afraid of their having too much than too little, as he had seen their riches do much hurt, especially in our society. He wished his children to be brought up plainly, and the boys to be put apprentices to sober honest Friends. One time on taking leave of his son Robert, who had been up to see him, he desired him to be a good boy, and to speak the truth, and to keep to the plain language, and not associate with bad boys, but choose the best for his companions. One day he said, 'Dear brother, do not be too anxious after the things of this world, for my inordinate desire to accumulate wealth has been a heavy burden to me; no one knows what I have suffered on that account. He further said, that his having been so solicitous after the world had made him a dwarf in religion; and that if it had pleased the Lord to spare his life,

he thought he should have found it his place to endeavor to be a more useful member in the Society; and to expend more of his income in charitable uses; that the love of money, and an inordinate desire after wealth, had pierced him through with many sorrows. One afternoon his nephew came to ask him how he did; upon his taking leave, after sitting some time in silence, he desired him to keep constantly to meetings, to love Friends' company, and not to launch out into the vanities of this world, or associate with those who were likely to draw him aside; reminding him that there would be an end, which would overtake all; and that we ought always to be prepared. He said that it appeared clear to him, that the less Friends talked about news and interfered in politics, the better. He thought they did not belong to them. He used to read the newspapers when at Bristol, to divert himself; but left it off, finding his time better employed in reading the scriptures.

"One time, going to bed, he desired me to shut the door, saying that it was his desire to supplicate, which he did on his knees, begging the Lord not to leave him, but be with him in the trying moment, and grant him a safe and easy passage into his glorious kingdom, hoping he would accept his late repentance, which he trusted was sincere, though upon a dying bed. The next morning, as I stood by his bed-side, he spoke to me as follows: 'Brother, I have been in a quiet sleep, and had a comfortable vision. I thought I had a foretaste of that glorious kingdom, where all is peace, serene, and quiet! Such a prospect as I had never before seen, and such as no tongue can express, the glory of that kingdom.'"

*Judith Hill*, "was educated in the profession of the Church of England, and brought up in the practice of dressing, dancing, singing, and other vain customs of this degenerate world. These she was often made uneasy with; and about the twenty-third year of her age, her understanding being enlightened, she gave up in obedience to the visitations of Truth in her own mind, joined in profession with Friends, and became a diligent attender of their meetings, and, from a sense of duty, declined the customs of the world in speech, dress, and deportment. This brought much suffering upon her from her parents, especially from her mother; but, being supported by that divine power that had convinced her judgment, she bore with much patience the reproaches with which it was her lot to be tried, which resignation was attended with peace; and in time she experienced the regard of her near relations, her mother expressing great satisfaction and full reconciliation with her. After her conviction she entered into a married state, and having in time a numerous family, she was concerned to educate them religiously." At the conclusion she could say, 'When I have to look back to my childhood and education, I have cause to acknowledge with great thankfulness, that His preserving hand, in the time of ignorance, kept me from joining with many evils and temptations which were in my father's family. When greater light and understanding were given, I gave up in obedience thereto; and

now, on a strict search, I find nothing stands in my way of eternal happiness.'"

*Abigail Knight*, being taken dangerously ill, "was under great exercise of mind for some days, doubting her future happiness; saying to her father she had done so many things she ought not to have done, and wished she had minded more the hints he had frequently given her.

"Desiring to be left alone with her father, she told him of the exercise of her mind, which she said she felt for attending religious meetings so carelessly. That she thought it mockery to sit in such an indifferent manner, and let the things of the world take up the attention of the mind; for which she had felt uneasiness, as much, she thought, as for any thing she had done amiss. She signified that when at times she endeavored to be more gathered in her mind, the enemy got in and obstructed it; and that she found herself so weak through unwatchfulness at other times, as not to be able to withstand his suggestions. After this conversation she said she felt herself more easy. To her sister she said, 'I have but little time, but if I had my time to spend over again, I would spend it very differently; and that if she might have the least place in the kingdom of heaven, it was all she desired; which she believed would be granted her.' A lad, a member of our Society, coming into the room, she desired he would take warning by her; saying, 'I little thought, three weeks ago, I should be so near death as I am; and thou dost not know how soon thou mayst be so near; asking him if he did not think he should be in great trouble if he was brought into such a situation. She advised him to use the plain language, and plainness of dress; that she had been too much inclined to dress, but felt great uneasiness, and hoped for forgiveness; but she added, 'I believe I shall be happy, I feel so easy in my mind;' and added, 'What a fine thing it is to have peace of mind on a dying bed. The nearer I come to the close, the more easy and clear my way seems. I do not dread death, but seem as if I could meet it with a smile; that it was a great favor, for which she could not be thankful enough; and that she could not have thought it possible for her to find forgiveness in so short a time.'"

*Sarah Waystaff*, to her son. "That my children and grand-children may be so conducted through untruth as that we may all meet in joy and bliss, I entreat in love, that thou and thine may mind your future state above all, and let not the hurry of this transitory world, with all its tinsel glare, pride, grandeur and vanity choke the good seed, which, as it is permitted to take root, will bring forth the good fruit, which will entitle you to discipleship, and give you a beauty and glory which all these things cannot give. Dear son, be on thy guard, and watch over thy children; repress all pride, ambition, and vain contentions in them as much as possible. O this world's fading enjoyments have overrun the major part of our Society! How few live up to what they profess! I write with a fervent desire for all your immortal souls, each of which is of more value than all the world, which, with all its

checkered pleasures and afflictions must soon end, as the bubble on the water, and then peace with our Maker will only stand us in stead."

For "The Friend."

### Smoke in Large Cities.

The contamination of the atmosphere by manufacturing processes in cities where bituminous coal is largely used, has become so great an evil in some districts, particularly in England, as to force itself upon the attention of the public at large. The following remarks are extracted from a paper upon this subject read before the Social Science Congress, at its late meeting in Manchester, particularly in relation to the atmosphere of that city, by Dr. Angus Smith.

"Warm interest has compelled me for many years to attend to the condition of the air of towns. \* \* \* Some time ago I calculated that 60 tons of carbonaceous matter were sent off in a day into the atmosphere of Manchester. A very small amount affects the atmosphere; a grain in 18 cubic feet is sufficient to convert good air into Manchester air. About one half the colour is due to tarry matter, and the other half to black carbon only. This black matter is the colouring material of all our smoky towns, and, to a great extent, of the clothes, as well as of the persons of the inhabitants. We live in houses coloured by it, we walk on roads coloured by it, and we can see the sun, the moon, and the heavens only after they have been to our eyes, coloured by this universal tincture. These are calamities of themselves; but, although some men would look on such a view of the case as mere sentiment, not one amongst us can fail to have his spirits tinged with the darkness of the sky.

"These dull days are caused in part by the climate, but their remarkable oppressiveness is unquestionably due in great part to the smoke. We do not consider that by the smoke we make we are affecting our own spirits and clouding our own judgment. It is my belief that this effect upon the spirits is the most powerful of all objections to smoke, even in the minds of those who believe themselves above such feelings. There is, however, no denying the next great fact, that everything coming in contact with a smoky atmosphere is so blackened that cleaning becomes difficult or impossible. Smoke gives to every household it visits either a greater amount of labour, or a lower social appearance. \* \* \*

"One product of the combustion of any carbonaceous matter is carbonic acid; this is inevitable, and must be endured. Another product is carbonic oxide, which has a deadly character, is invisible, and is not sent out by the domestic fire, and only to a small extent by high chimneys. From a sanitary, and economical and aesthetic point of view, we shall gain much by the removal of the carbon, and an additional gain will be obtained by removing the carbonic oxide. We are not, however, to suppose that all is then gained; we are not entirely safe until we have removed the sulphurous acid. To effect this is not a problem which we can expect to solve rapidly. The sulphur gases collect wherever there is any obstruction to ventilation. Sometimes the smoke is retained in the town as certainly as if a firmament were put over it of impetrative material. On a still day, with a clear sky, and considerable cold, the smoke lies on Manchester until the streets become dark at midday. It is then that the acids are found painful to the eyes, bad to the taste, dangerous to the breathing. The blackness might be removed; what shall we do with the sulphur? \* \* \*

"It is the sulphur acids which render the air

and rain of Manchester so destructive to metals. Iron roofs will not remain there; even houses cease rapidly to exist, and become old at an early period. The lime of the mortar becomes sulphate of lime, and the rain washes it away. The very stones decay under the constant action of acid, and the bricks crumble more rapidly. \* \* \* Great extremes of dryness and of rain are the best protectives, and, during heavy showers, the air of Manchester is not unpleasant to breathe, because the sulphur is carried down in the rain. The coal used here contains not less than one per cent. of sulphur, and one of sulphur makes three of vitriol. Some coals contain more. The amount of sulphurous acid sent out is enormous—it cannot be less than 180 tons per day. The rain is acid. It falls on the living grass and puts it out. Young plants struggle against it, but they cannot do so long.

"One of the foremost printers of Lancashire told me that there were some colours which he found almost instantly to fade. They were frequently sent back upon his hands. He was annoyed to find that the French sent the same colours to the same markets, without the risk of having them returned, and it was only after much time and loss that he found that the goods must not be allowed to pass through Manchester. \* \* \* He now sends such goods from his works without coming here, and he is as successful as his rivals in France.

"The deterioration of the air by the constant withdrawal of a portion of its oxygen, and the infusion into it of the deleterious gases arising from the combustion of so large an amount of coal has also affected the health of the inhabitants, particularly the children, who require much oxygen, and are instinctively fond of fresh air, and has caused several efforts to be made to devise a plan by which these noxious effects may be obviated, but so far without much success."

For "The Friend."

### Be not Conformed to the World.

John Pawson, a worthy man among the early Methodists, published a pamphlet entitled "A Serious and Affectionate Address to the Junior Preachers in the Methodist Connexion." Therein he says, "For a preacher of the Gospel to follow the foolish fashions of the world in dress, appears to me to betray a weakness and littleness of mind of which we ought to be ashamed. That conformity to the world is breaking in upon our people with a full tide, cannot be denied. Surely, then, no preacher should give it the least countenance; but on the contrary, bear a pointed testimony against it in all its forms. Time was when a Methodist might be known by his dress, as well as by his serious and devout behaviour; but this is far from being the case now. It is much to be lamented, that many of our people do not differ at all from the rest of the world in this respect, but run into all the changeable fashions of the times, however foolish or expensive; and I fear that some of our preachers see no evil in this, but rather encourage it."

He then refers to John Wesley, who, he says, "Saw with sorrow of heart, this deadly evil increasing among us, and he bore a faithful testimony against it even to the last. But after all he could say or do, this evil has abundantly increased in every part of the connexion. What can we expect the rising generation to be, if we suffer them to go unimproved who so openly break the rules of society? And supposing parents do not run into this evil themselves, yet how many there are, who can see no harm in suffering children, especially their daughters, to run headlong

into all the fashions of the most fantastical dress? dress that is so far from rendering their persons more comely or pleasing in any respect, that it certainly deforms those who wear it in the highest degree."

With what sorrow do the rightly exercised members of the Society of Friends see this same departure from plainness of dress taking place among many professing who hold its principles; and that even some who claim to be ministers of the gospel, in some meetings, dress in such manner that they could not be known as Friends by their appearance. Truly such ought not to expect to find the necessary faith in their hearers, to make their discourses of any avail towards slaying the spirit of the world.

### A Swiss Philanthropist.

HOW A CHARITABLE BANKER HELPS THE POOR.

Prime writes to the *New York Observer* from Switzerland:

"During my rustication among the hills in Canton Appenzel, Switzerland, I have found a gentleman whose life and deeds form as bright and beautiful a page in human history as the annals of any land or age will furnish. As soon as I had reached the village where I now am residing and writing, his name was mentioned to me, and the monuments of his philanthropy were pointed out, so many and so great as to challenge attention. It was not long before we were brought together, and I have already learned to regard him as one of the best and most benevolent of men. Walking with him over the hills on his errands of love, I drew from him by frequent inquiry all the leading facts of his history, and from others I have learned much that he did not tell me. The whole is one of those chapters in the book of life that makes us better to read, and ought to lead many who read it go and do like wise.

"Ulrich Zellwegger was born in this village Trogen, canton Appenzel, in the year 1803. Here he lived till the age of sixteen, having attended the common schools of the country, which were then far from being as good as they are now. A situation was found for him then in a banking house in Marseilles, away in the south of France, and there he went to begin the world for himself. On coming of age he went to England, and forming a connection with a banking house, he spent seven years in business and made a fortune which, however, he had the misfortune to lose much faster than he made it. Once more to begin the world he went to Cuba, and there formed an advantageous connection with a large commission house, having extensive relations with America as well as Europe. Business led him to visit the United States repeatedly, and to travel from Boston to New Orleans, forming acquaintance with the most prominent money-men, and many others. Among them were John Jacob Astor, Stephen Girard, Prime, Ward, King & Co., Washington Irving, Dr. Channing, Mr. Prescott, and several whose names I do not remember.

"In 1845 he returned to Europe with a large fortune, which he invested in French securities, and in 1848, when Europe was convulsed with the agonies of falling empires, he had great reason to apprehend that his property was to perish with them. He gathered it around him again, established a banking house in Paris, placed a nephew at the head of it, under his own general direction, retired to Basle as his winter residence, and to Trogen, his native village, as his summer abode. He has devoted his property to the good

his fellow-men, and finds his own enjoyment doing kindnesses to the poor.

"The principal employment of the people here weaving Swiss muslin, and embroidering it by machinery. He saw that the labour was chiefly skilled, and therefore comparatively unproductive. At once he established a model industrial house and shop, where he boards, clothes and uses to be instructed, at his own expense, thirty boys of poor parents. A drawing master must make them proficient in that art, as it is essential to success in this delicate work, and then all the looms and machinery necessary for the business, they are carried along till they are masters of the arts. Then they are able to provide themselves for life. But he believes that moral and religious principles are the only sure source of success, and over the doors of his buildings he has inscribed in golden letters, that 'This house is erected in the faith and for the glory of our Saviour Jesus Christ, who alone is the Way, the Truth and the Life.'

"Here is another beautiful house with a similar description over the door. It contains twenty orphans, of this village, all maintained by this good man, who has built the asylum, and will provide for them and as many more as the providence of God may lead to his paternal care.

"Another building of his is devoted to a school for training female teachers. Into this institution are received young ladies who desire to qualify themselves for the work of instruction, and have not the means to go to a boarding-school such as the larger cities or towns would furnish.

"Still another house is an infant school, and of these he maintains several, employing the young men trained for the purpose in his normal school. When one of them does not find a situation at once on being qualified, he establishes a school in some place where one is needed, and sees her at the head of it, and supports her at the school. Thus he diffuses his charity widely and judiciously, and by taking the young, his chief objects of attention, he makes his benevolence toll the most lastingly on the people. For he has confined his labor to the children, being the miserable state of agricultural knowledge, he went into the business of making cheese and butter to show the people how to economize land, labor, manure, milk, &c., and the hills and valleys now sing songs of praise to their benefactor. To crown all his other works, and I have named but a few of them, he has established religious weekly paper, the publication of which is personally superintended, and distributing it to subscribers at fifty cents a year, he pays the balance of its cost, and works at it besides. He justly regards as one of his most useful and important works, diffusing, as it does, the precious doctrines which have inspired him with these desires to do good to others.

"Pointing to one of his many benevolent institutions, he said to me, 'People wonder to see that house, but it is more of a wonder to me than to you one else; the Spirit of the Lord has led me to build it, and I wonder that he has ever put it to my heart.' And I noticed that even over the door of his cheese factory was written: 'In the love of God, for the good of the people.'

"As we walked through the streets and out into the country, every child we met ran up and gave him his hand; little barefoot and bareheaded urchins, three or four years old, three at a time, and their hands in his, yet he could scarcely stop, but spoke kindly to them and hastened on. He was a walking benediction as he passed. Men gazing rested from their work and took off their hats to have a good word from him. His

own children, boys and girls, kissed him when he came home, though gone but an hour. Everything loves him, for he loves everything."—*N. Y. Post.*

For "The Friend."

### Ball Rooms and Theatres.

Though private balls and parties may not be as openly indecorous and as demoralizing in their effects as those which are public, yet on a fondness for entertainments of this kind is once excited in youthful minds it is impossible to predict to what length it may carry them. Temptation succeeds temptation—vice is presented under more insidious and alluring forms—desire of pleasure become more and more vehement, and fosters the growth of disorderly passions, and when their danger is so apparent as to excite alarm, parental authority may be too feeble to restrain their inclinations. If we take a view of the interior of a ball-room or of a theatre, where dancing forms a prominent part of the exhibition, —if we examine into the character of those who fill them—listen to the conversation which passes among the spectators—notice the indecent apparel and gestures of the dancers, and the giddy levity which prevails throughout the whole assembly, we might easily imagine that licentiousness had chosen these for her favorite dwelling-places, and decked them with all the allurements which inflame the passions.

The following statement shows the number of church edifices, with their accommodations and churches, possessed by the various ecclesiastical bodies in the United States:

Denomination.	Accommo-	
	Churches.	Value.
Methodists,	19,823	\$59,759
Baptists,	11,221	3,749,558
Presbyterians,	5,061	2,088,838
Roman Catholics,	2,550	1,404,437
Congregationalists,	2,394	956,351
Episcopalians,	2,145	847,296
Lutherans,	2,138	757,627
Christians,	2,063	681,918
Union,	1,366	371,899
Camb. Presbyterians,	820	262,978
German Reformed,	676	273,697
Universalists,	664	235,219
Free-will Baptists,	520	148,693
Friends,	765	269,084
Reformed Dutch,	440	211,068
Tunners,	163	67,995
Reformed Presbyterian,	136	48,897
Mennonites,	109	36,425
Jewish,	77	34,212

Sabbath-day Baptists,	53	17,864
Moravians,	49	20,216
Spiritualists,	17	6,275
Shakers,	-12	5,200
Six Principle Baptists,	9	1,900
Minor Sects,	20	14,159
	54,009	19,128,751

—*Late Paper.*

**Renewed Consecration.**—This crossing of our wills must be in a humble and docile spirit. There should be no gloomy looks, no peevish complaining. It is our Father who sends it. That name is enough for us. Remember those who are walking the same way with us must be cheered, not discouraged. No matter how sick the heart, nor how fierce the warfare within, keep a cheerful face, have a comforting word for those around you. The very effort to do so will bring a blessing with it.

How often do I give myself to God, yield up my will to His, and as quickly take myself back again, and fall away from Him! Begin again.

Give thyself to Him afresh. Trust thyself to the power of thy Father, who has all power and might, and whose presence thou hast so often and so plainly felt, and art yet made to feel every day and hour. Trust Him wholly and seek His righteousness; for therein is His righteousness shown, that He abideth ever with those who heartily seek Him, and make Him their end, and give themselves up to Him. In such He reigns, and all vain care falls away of itself, in those who keep thus close to God, in true self-surrender.—*Thoughts for Weary Hours.*

### Take Care of the Pins.

Numbers iii. 37.

"Who hath despised the day of small things?" Not God. "As a father pitieeth his children, so the Lord pitieeth those that fear Him." The least effort made by the Lord's children is pleasing to Him. He will not break a bruised reed; He will not quench the smoking flax; He will not tread out the spark of a christian desire; He will not forget a cup of cold water; He will keep carefully the record of two mites contributed to the temple treasury by a poor widow. He who inhabiteth eternity, does not despise the day—the little, short-lived day—of small things. To Him the little day is as a thousand years, and the small things are all numbered and noted, just as much as if they were what some men call great. Yes! much more than what are called great things by the world. The world would think nothing of a man resolving in the strength of the Spirit of God to live to Christ, but the Lord would class that resolution among "the great things." How small is a grain of mustard-seed, but faith, as a grain of mustard-seed, shall remove mountains! Who art thou, O great mountain of perplexity? Before the believer, thou shalt become a plain. O ye children of God, ye Zerubbabels, remember what Christ has promised even to a little faith. The least tear on account of sin, and the faintest sigh after good things, are noted by Him. When Ezekiel had the vision of holy waters, he did not first see the deep, broad, rich, and fertilizing river. Look at the 47th chapter of his prophecy. First, we have the trickling rill, running feebly under the door of the temple. Then was he taken to the gate that looked eastward, and there the waters got deeper. That no mistake could be made, his guide had a line in his hand, and measured. Deeper and deeper still—deeper still—deeper and deeper. To the ancles, to the knees, to the loins—deeper far—waters for the infant Church, waters for the universal Church—waters which might represent the progress of religion in the soul of the believer—waters which might represent the spread of Christ's kingdom in the world. "Who hath despised the day of small things?" Look at the infant in the manger of Bethlehem! Look at the King of kings surrounded by millions of saints and angels in heaven!

And, dear christian reader, there is nothing so minute in your career that God will not notice it. He who feeds the sparrow, counts the hairs of your head, and numbers your steps. Look at Job xxxi. 4: "Doth not he count all my steps?" Your movements may be as the fittings of a bird, but note Psalm lvi. 8, "Thou tellest my wanderings." Again, there may be times when you leave your family, as Joseph did, and enter your chamber to weep. It is written, "Put Thine eyes in Thy bottle; are they not in Thy look?" God numbers the hairs of the head, the steps of the feet, the tears of the eyes, the sighs of the heart, the fittings, the wanderings, the highroad and byroad walks, the up-hill and down-hill, the

crooked paths, the rough paths, the thorny paths, are *all* noted by God. He despideth not small things. "Thou art about my bed," said David, and Jacob owned this when his pillow was rough stones. God was about *his bed*; and softer than the curtains his mother Rebecca perhaps drew about his couch in childhood, were the pious, the sheltering wings of glorious angels coming down the golden ladder, making his dreams sweet and heavenly.

Small things. We have seen that the Lord takes notice of lillies. May we walk more circum-spectly as to little things done or spoken by our selves. And, further, let us not despise the little beginnings of good in others. Of dear mothers and fathers, is it "the day of small things," with you? Are you labouring in prayer and faith for the spiritual good of your children? Do you see little or no fruit? Do not faint. "Ye shall reap if ye faint not." Pray for your children; pray with your children. Read to your children; and let your children, if they can, read God's book to you. Let nothing hinder you. The immortal souls of those dear children demand this. Do not you! Who art thou, O great mountain? Before these dear believing mothers and believing fathers, thou shalt become a *plain*; yea, a plain!

Satan knows the power of little beginnings. Ask thieves in prison how they began their career. It was by taking trifling things. Satan's rule is line upon line, little by little. The adversary's strength is in "the day of small things." The temptations of the wicked one would fail did he urge some dark deed all at once. It is by degrees that he steals a march on the citadel of man's soul. Little by little he introduces his own rules, and manners, and customs. Satan comes not to man's soul suggesting *murder* or theft at first. The vanquisher of myriads of slain has tactics much less repellent. He comes asking what is the harm of this or that—what harm is there in this trifling omission of duty, or that attempt to pass an hour pleasantly! But all the while the father of lies knows that the first step does all the mischief. Cain had never killed his brother if he had not fostered an angry spirit at home. Achan had never stolen the wedge of gold if he had kept his hands from picking and stealing up to that day of temptation.

When Satan first whispers some new temptation, he would have us think we can stop at any moment; he does not tell us it is more difficult to stop in any sin than to begin that sin. "Just this once," and "is it not a little one?" are favorite promptings of the devil; and they are arrows in the bow of the enemy that have brought down thousands on life's battle-field—brought down thousands, who, when the muster-roll of the King of Saints is read over, will not answer to their names! And no one shall answer for them that they died on the field of glory, but it shall be told that they died disobedient to the Captain of our salvation—they died the victims of LITTLE SINS. May the Holy Spirit assist us to throw aside little neglects, little failings, little unkindnesses, little self-indulgences, little fault-findings, little pro-custinations. "Take us the foxes, the little foxes, which spoil the vines, for our vines have tender grapes." Habits are formed little by little—bad habits more quickly than good, as gourds grow faster than oaks—yet little by little evil habits are formed in us. The cancer in its first stage seems trifling, but in the last it is a deadly enemy that takes the life. Little sins are like the letting out of water; a child may unlock the sluice-gate, but the whole British army cannot put the water back as it was before.

Now, we must add that no sin, in reality, is small. Before a holy God, the question is, "Guilty or not guilty?" "The soul that sinneth it shall die." Oh, remember this, dear friends, whose lives are exemplary, whose manners are pleasing, whose tempers are amiable, whose hearts are benevolent—what you call trifling sins are seeds of eternal death; and, if not removed by Christ's blood, must ruin you for ever and ever. God forbid that ever a trembling one should read these words and be discouraged. Reader, were it possible, we would gladly embrace Christ Jesus for you. But we know you must lay hold of him for yourself. We can go with you; we can tell you how we first went; we can tell Christ about your case; but if you would be saved, you must yourself lay hold of the Saviour. You may come stammering, faltering, trembling, weeping; but, if you come believing, you are saved.

ONWARD AND UPWARD.  
—Episcopalian.

*Preparation of Bones for Manure.*—Illienko, a Russian chemist, gives the following process, which it is said, has received the approbation of Liebig: The author mixes say 1,000 parts of ground bones with 1,000 parts of wood ashes containing 10 per cent. of carbonate of potash, and adds 600 parts of quicklime. This mixture he places in a tank or fosse with water sufficient to make the whole moist. In a short time the bony matter is completely disintegrated by the caustic potash, and the pasty mass formed is then taken from the tank, dried and mixed with an equal weight of mud, and is then ready to be distributed.—*Late Paper.*

#### How to Honor a Mother.

FOR THE CHILDREN.

One morning, a long time ago, a king of Sweden, called Gustavus the Third, was riding through a village in one of the beautiful valleys not far from Stockholm, the capital city. As he passed along he saw a young girl filling a picher with water that gushed from the cool rocks which overshadowed the roadside. He stopped at the fountain and asked the girl for a drink. She knew not the stranger, but gracefully stepped forward and lifted the picher to his lips as he sat upon his horse. She was evidently very poor, but her kindness, so tenderly expressed upon her countenance, together with her artless unembarrassed politeness, at once attracted the king's attention and touched his heart. Judging by her appearance that she was a child of poverty, he told her that if she would go to the city he would find her a pleasant home.

"Ah! good sir," answered the girl, "Providence placed me here, and I am not anxious to change my position in life. I am content, and if I were not content, it would be impossible for me to accept your kind offer."

"Indeed! Why not?" said the king in some surprise.

"Because my mother is poor and sickly," she replied.

"And you remain at home to take care of her." "I am her only help and companion," said the girl, looking upon the ground with a genuine modesty that won the sympathies of her royal auditor. "I am happy in my lot and am thankful I can take care of and comfort the one so dear to me. No offer, however tempting, could induce me to leave my mother."

"Where is your mother?" inquired the king, becoming more and more interested in the noble girl.

"In you little hut, by the side of the road,"

said she, pointing toward the humble dwelling. It was a low, thatched building, covered with moss and vines, very neat and clean, but so old and weather-worn that it afforded but a poor shelter in time of cold and storms.

Gustavus alighted from his horse, and followed the girl into the hut, to see her mother. He found her sick and suffering, lying upon a bed of straw—a pale, thin woman—sinking under her infirmities, and looking forward to the grave only as a bed of rest. The king was almost overcome at the pitiable sight, and said, with tears came into his eyes—ah, yes, and that tears were more beautifully radiant and glorious than the brightest dazles that ever glanced from the crown of diamonds—

"I feel sorry, mother, to find you so destitute and afflicted."

"Yes, yes, my dear sir," said the lady in feeble voice, "but I am so glad that God has given me an affectionate daughter. She is always trying to relieve me, and is my constant comforter. May God in His love remember and bless her—my dear child!" and her voice was choked back by sobs, and her face was covered with tears.

The good king wept with the poor widow. What a sight! The monarch never received such a blessing on his throne in the palace, as there in the lone hut by the wayside! He handed the daughter a purse of gold, and directed her to better house, where she and her mother might be comfortable, saying as he departed:

"Go on, young friend, in your way of dutiful love and care, and you shall lack for nothing while I have means to help you, I am your king—farewell!"

Gustavus ever remembered the poor family and made provision to have a sum of money regularly sent to the woman for her support; and at the mother's death, he presented the daughter with a handsome fortune. Honor thy father and thy mother.—*Christian Recorder.*

#### The Famine in India.

An appalling calamity has lately befallen a portion of British India. Famine has been making fearful ravages in the Bengal Presidency, and in the Madras Presidency the distress from the same cause is described as only less terrible than that in Bengal. Residents on the spot—trustworthy witnesses—in endeavoring to give some idea of the extent of the calamity, depict scenes of the most harrowing character. When the famine was at its height, the starving poor, we are told, crowded into the streets of Calcutta, and it was estimated that no fewer than 20,000 to 25,000 starving people were wandering about the capital. At Mutlick's Ghat, where the Bombay merchants raised a fund and distributed food, there was at one time 7,000 famishing applicants crowded up. They were described as placed in order upon an open space waiting for the distribution. "On one side nearly 4,000 Hindoos, each with a leaf platter before him, were scattered on the wet ground, hastily partaking of the scanty dole they received. On the other side were thousands of famishing Musselmans ranged in like manner, and watching with silent and greedy eagerness the meal of their Hindoo brethren, and counting with bitter longings the minutes till their turn should come. Under the shelter of the Ghat crowded the women, girls and children. Outside the gates were hundreds and hundreds who had lost their chance till the next distribution. But over all a horrible dead silence. No chattering or converse, hardly a sound, excepting when at intervals some wretch threw up his arms with an

aculation to Heaven, wrong from him by the appeasable pangs of hunger." More than this, officials wrote home descriptions of meeting dead bodies in every morning's ride—bodies lying in the road, with the village dogs eating them at leisure. A Calcutta journal stated that in Balasore, having a population of 12,000, the deaths amounted to 300 a day; and on the government demanding of its officials a report against the rebel, the collector of the District replied that on the 8th August he had 245 deaths in the city, on the 9th, 151, and for the week ending the 9th, 26 a day, the bodies sometimes remaining unburied for three days. The province of Orissa suffered the most severely, one paper declaring that 400,000 souls have perished in maritime Orissa alone. Indeed, a telegram from India announces that half the population of Orissa have perished in the famine—that is, fully two millions and a half of people! An English journal remarks: "It is impossible, inconceivable, incredible so transcendental a horror, one so utterly beyond all precedent, so utterly beyond imagination, should actually have occurred;" yet the same journal expresses serious misgivings, that when the truth shall have been fully ascertained it will be found that the estimate here given of the desolation wrought by the famine was not, after all, greatly exaggerated. It is thus put the matter: "Two millions and a half of people! twice the population of Denmark or of Greece, eight Suffolks, six Hampshires, five-sixths of Scotland, dead of hunger. \* \* \* Two millions and a half of men, and women and babies, our subjects, dead of hunger! Why, we are Christians, and if but one woman so dies, move the whole force of the State to secure inquiry and relief from a horror which chills the warm comfort of our wealth. It is a lie, incredible and absurd." And yet—and yet—and yet," it significantly adds, proceeding to adduce facts and figures calculated to show that, after all, the estimate might be nearer the truth than the British people imagine, or would be willing to admit.

For truly this famine—this fearful, desolating calamity—involves a terrible reproach to the Government of British India. India is ruled by the English on virtually despotic principles, the despotism being qualified professedly by the "parliamentary" element. The government exercises, in fact, absolute power over the natives. It has a vast revenue at command. It employs a host of officials in every district. It is backed by a immense military force. It rules as it pleases, without regard to the prejudices or the wishes of its subjects. It is all powerful in its sphere; and being so an occurrence like this famine cannot be regarded otherwise than as a deep national disgrace. The famine might have been foreseen and provided against. In the district where the suffering and the mortality were greatest, the crops were informed, failed almost entirely for three successive years. In 1864 a cyclone worked terrible ravages, driving masses of sand over the rice plains; the crops of 1865 were worse than those of the year before; and this year there have been none, an inundation having swept away the last chance of the wretched cultivators. Yet the Government, at the time the calamity fell upon the country, was busying itself with measures for increasing taxation, and drawing larger rentals from the natives; and while the famine was doing its work of death, depopulating whole districts, the Governor-General of India and the Lieutenant-General of Bengal, it seems, were in the pleasant hills of the Himalayas, enjoying the cool climate, and "ordering stately ceremonial." And it is thus that British India is ruled! England, we

are told now-a-days, holds India by a moral tenure, and for moral purposes; and by this argument it is attempted to justify what would otherwise be utterly indefensible as a monstrous usurpation. But if the sad history of the famine be an illustration of the way in which the country is governed, we fear the rulers of British India have yet to learn what their responsibilities are to the people of one of the most splendid regions of God's earth.—*New York Tribune, 11th mo. 12th.*

For "The Friend."

#### Thoughts for the Times.—No. 50.

The three subjects noticed in the last number of these series, viz: slavery, intemperance and war, are closely connected with the services of John Woolman—one of the most extraordinary men of any age or country, for the unworldliness and simplicity of his character, and for his near approach to the virtues of the primitive disciples. Often as the story of his early life has been read, there is a freshness and beauty about it, which never weary, and which, when regarded as the influences which contributed to mould his character, are most touching and instructive. His parents were persons of gentle and exemplary lives, and useful members of our Society, and his childhood was trained under the happiest auspices.

Where can be found, in the whole range of reading, a passage superior in its exquisite beauty, to the following?

"Before I was seven years old I began to be acquainted with the operations of divine love. Through the care of my parents, I was taught to read near as soon as I was capable of it; and as I went from school one Seventh-day, I remember, while my companions went to play by the way, I went forward out of sight, and sitting down, I read the 22nd chapter of the Revelations; 'He showed me a pure river of water of life, clear as crystal, proceeding out of the throne of God, and of the Lamb, &c.' and in reading it my mind was drawn to seek after that pure habitation, which I then believed God had prepared for his servants. The place where I sat, and the sweetest that attended my mind, remain fresh in my memory."

The boy, says the German proverb, is the father of the man; and how much of his tender compassion for the whole human race, and for all living creatures, must the following touching incident have been the beginning.

"A thing remarkable in my childhood was, that once going to a neighbour's house, I saw on the way, a robin sitting on her nest, and as I came near, she went off, but having young ones, flew about, and with many cries expressed her concern for them; I stood and threw stones at her, till one striking her, she fell down dead; at first I was pleased with the exploit, but after a few minutes was seized with horror, as having in a sportive way, killed an innocent creature while she was careful for her young. I beheld her lying dead, and thought that those young ones, for which she was so careful, must now perish for want of their dam to nourish them; and after some painful considerations on the subject, I climbed up the tree, took all the young birds and killed them; supposing that better than to leave them to pine away and die miserably; and believed in this case that scripture proverb was fulfilled, 'The tender mercies of the wicked are cruel.' I then went on my errand, but, for some hours, could think of little else but the cruelties I had committed, and was much troubled. Thus he, whose tender mercies are over all his works, hath placed a principle in the human mind, which incites to exercise goodness over every living crea-

ture; and this being singly attended to, people become tender-hearted and sympathising; but being frequently and totally rejected, the mind becomes shut up in a contrary disposition."

To the quick and tender conscience of the boy, John Woolman's deviations from the path of rectitude, which, to others may seem slight—were a heavy burden. He was fond of society, and though preserved from profane language or scandalous conduct, his backslidings affected him with sorrow. "While I meditate on the gulf towards which I travelled"—he wrote this in his thirty-sixth year—"and reflected on my youthful disobedience, for these things I weep, mine eye runneth down with water." After repeated resolutions and failures to lead a stricter life, "I was strengthened," he says, "to keep from such company as had been a snare to me. I kept steadily to meetings; spent First-day afternoons chiefly in reading the scriptures and other good books; and was early convinced in my mind that true religion consisted in an inward life, wherein the heart doth love and reverence God the Creator, and learns to exercise true justice and goodness, not only toward all men, but also toward the brute creatures. That as the mind was moved by an inward principle, to love God as an invisible, incomprehensible Being; by the same principle it was moved to love him in all his manifestations in the visible world. That, as by his breath, the flame of life was kindled in all animal sensible creatures, to say we love God as unsexen, and at the same time, exercise cruelty towards the least creature moving by his life, or by life derived from him, was a contradiction in itself.

"I found no narrowness respecting sects and opinions, but believed that sincere, upright hearted people, in every society who truly love God, were accepted of him.

"As I lived under the cross, and simply followed the openings of Truth, my mind, from day to day was more enlightened; my former acquaintance were left to judge of me as they would, for I found it safest for me to live in private, and keep these things sealed up in my own breast. While I silently ponder on the change wrought in me, I find no language equal to it, nor any means to convey to another a clear idea of it. I looked upon the works of God in this visible creation, and an awfulness covered me; my heart was tender and often contrite, and universal love to my fellow-creatures increased in me: this will be understood by such who have trodden in the same path. Some glances of real beauty may be seen in their faces, who dwell in true meekness.

"There is a harmony in that voice to which divine love gives utterance, and some appearance of right order in their temper and conduct, whose passions are regulated; yet all these do not fully show forth that inward life to such who have not felt it; but this white stone and new name is known rightly to such only who have it."

In his twentieth year he engaged as clerk with a Friend who kept a store in Mount Holly, and who was also a tailor by trade. After living with him for several years John Woolman concluded to learn his trade. "My mind" says he, "through the power of Truth, was in a good degree weaned from the desire of outward greatness, and I was hearing to be content with real conveniences that were not costly; so that a way of life, free from much engagements, appeared best for me, though the income might be small. I saw that a humble man, with the blessing of the Lord, might live on a little; and that where the heart was set on greatness, success in business did not satisfy the craving; but that commonly with an increase of wealth, the desire of wealth increased."

He worked at his trade as a tailor, and kept a small shop for such goods as were needed by his customers, till the increase of his business became a burden to him. He was not easy to trade in any things that served chiefly to please the vain mind in people. He seldom did it, and found that whenever he did, it weakened him as a christian. He believed that Truth required him to live more free from outward cumberers: his prayers were put up to the Lord, who graciously heard him, and gave him a heart resigned to His holy will. Then, says he, "I lessened my outward business, and in a while wholly laid down merchandise, following my trade as a tailor; myself only, having no apprentice. I also had a nursery of apple trees; in which I employed some of my time in hoeing, trimming, grafting and inoculating."

That he might keep his garments unspotted from the world, was the prevailing desire of John Woolman through life. His conduct was guided by implicit obedience to the Divine inspeaking word in his own breast, and not by any opinion of the best of those around him. And if his path was narrower than that of his most cherished friends, he was sustained in it by the conviction that it was the path of duty for him, and that the testimony he was called upon to bear to the universal love of God, required him to keep himself free from the least participation in, or imputation of selfishness, injustice or cruelty.

His whole life was an exemplification of his big great principle of action. He was often called upon to act as a conveyancer in writing wills and agreements of sale; and he would never do it till satisfied that the transaction involved no injustice or oppression. Early in life, he had as an executor, sold the time of a negro boy—a slave—who he was thirty years old; and years afterwards, feeling a concern to visit the West Indies, he thus writes in his journal: "My joining in the sale aforesaid, came heavily upon me; and my mind for a time, was covered with darkness and sorrow; and under this sore affliction my heart was softened to receive instruction; and here I first saw, that as I had been one of the two executors, who had sold this lad nine years longer than is common for our own children to serve, so I should now offer a part of my substance, to redeem the last half of that nine years; but as the time was not yet come, I executed a bond, binding me and my executors to pay the man he was sold to, what to candid men might appear equitable, for the last four years and a half of his time, in case the said youth should be living, and in a condition to provide comfortably for himself."

In the 5th month, 1772, John Woolman left home on a religious visit to Friends in England, in which country, an attack of small pox closed his valuable life in the 10th month of the same year. He went in the steerage, feeling it not to be right, by taking passage in the cabin, to aid in defraying the cost of the superfluous ornaments of that portion of the ship. His account of the exercise of mind he passed through during this voyage is most instructive and characteristic. The same care to avoid aiding in oppression, continued with him after his arrival. "Stage coaches," he observes, "frequently go upwards of an hundred miles in twenty-four hours; and I have heard Friends say, in several places, that it is common for horses to be killed with hard driving, and many others driven till they go blind. Post boys pursue this business, each one his stage, all night through the winter: some boys who ride long stages, suffer greatly on winter nights; and at several places I have heard of their being frozen to death. So great is the hurry in the spirit

of this world, that in aiming to do business quick and to gain wealth, the creation at this day doth loudly groan!

"As my journey hath been without a horse, I have had several offers of being assisted on my way in these stage coaches; but have not been in them: nor have I had freedom to send letters by these posts, in the present way of their riding; the stages being so fixed, and one boy dependent on another as to time, that they commonly go upwards of one hundred miles in twenty-four hours; and in the cold long winter nights, the poor boys suffer much. I heard in America of the way of these posts, and cautioned Friends in the general meeting of ministers and elders at Philadelphia, and in the Yearly Meeting of minister and elders at London, not to send letters to me on any common occasion by post."

After relating the circumstances attending a severe illness in America, in which he was carried in spirit to the mines, "where poor oppressed people were digging rich treasures for those called christians; and heard them blaspheme the name of Christ, at which I was grieved; for his name to me was precious. Then I was informed that these heathen were told, that those who oppressed them were the followers of Christ; and they said among themselves, If Christ directed them to us in this sort then is Christ a cruel tyrant. Here I saw that people getting silver vessels to set off their tables at entertainments, were often stained with worldly glory; and that in the present state of things, I should take heed how I fed myself from silver vessels. Soon after my recovery, I, going to our Monthly Meeting, dined at a Friend's house, where drink was brought in silver vessels and not in any other; and I wanting some drink, told him my case with weeping; and he ordered some drink for me in another vessel. The like afterwards went through in several Friend's houses in America, and have also in England since I came here; and have cause, with humble reverence, to acknowledge the loving kindness of my heavenly Father, who hath preserved me in such a tender frame of mind, that none I believe have ever been offended at what I have said on that occasion. After this sickness," he adds, "I spoke not in public meetings for worship for near one year; but my mind was very often in company with the oppressed slaves, as I sat in meetings; and though under this dispensation, I was shut up from speaking, yet the spring of the gospel ministry was, many times, livingly opened in me; and the divine gift operated by abundance of weeping, in feeling the oppression of this people."

Such were the deep baptisms in which the religious character of John Woolman was formed, and through which he became so bright an example of meekness, humility and purity.

For "The Friend."

#### The Channel Islands.

The islands of Jersey, Guernsey, Alderney and Sark, &c., on the coast of France, have been made the subject of a long and rather interesting article in the London Quarterly Review. We present our readers with some extracts.

"There is no portion of the British empire which offers more attraction within such narrow limits, than the channel islands. Situated close to France, lying in fact, within the shelter of a French bay, they seem by their geographical position to belong to the country, whose sandy coasts, whose very houses can be discerned. The doctrine of nationalities would assign those islands to Napoleon, not Victoria. But history has set at naught both geography and ethnology. These

French-speaking fellow-subjects of ours, have long to England and abhorred France through long centuries of war between the two countries. They have fought against the men using their own tongue, and in behalf of a people of another speech. Let us be accurate. They fought in behalf of their own independence. The sovereigns of England have been their sovereigns, but the islanders have ruled themselves. They have maintained their own constitution, laws, language, currency and army. They have contributed nothing to our revenue, and taxation is to them almost unknown. The representatives of their sovereign who have been sent to dwell amongst them and be at the head of their government have been welcomed so long as they have been contented with the *otium cum dignitate* of vicar royalty. But let them once assume active power let them once attempt to alter old customs or to correct hoary abuses, and they will find, as Napier the historian of the Peninsular war found, that the loyalty of these islanders is conditional, and that the condition is, that the queen of England may reign, but must not rule. This immovable adherence to old customs and old privileges makes the history and the present constitution of the islands full of interest to the antiquarian. For the naturalist and the artist they have an ever richer store of enchantments. The seas, the sands, the rocks, abound with fish and weed, and the creatures that hold a middle place between these two. The leaves are full of treasures for the botanist. The coasts present every variety of scenery—granite cliffs which, even at the lowest tide, stand fathoms deep in ever leaving water, long reaches of sand that when the tide is out stretch away for nearly a mile below high-water mark; little creeks, where the sand is dotted with black, serrated reefs, half covered by sea weed at the ebb, and all braced by the foam of the waves as they fret themselves into yeast-like spray at the flow. Most of the islands are so near together that they can be seen from each other, and the outlines, dim and soft through the summer haze, clear and sharp before the coming rain, blurred and broken in the storm, gives a beauty to the scene which is always wanting when the horizon in every direction is bounded by the sea. To add to the picturesqueness of the scene, the soil that lies between the chief islands is interspersed by innumerable small islets, some few the abode of perhaps a single family, with Crusoe-like proclivities; some covered entirely by a fort; some the resort only of the sea-bird; but all alike the dread of the sailor strange to these seas. Beyond these is the line of the French coast, yellow with the harvest or brown with the dun sands. All around is a sea of indescribably brilliant azure. It does not present to the sea-foam the wonderful gem-like sparkle of the Lago di Garda, probably the finest sheet of water in the world, but it has the hue of that water, the hue of the turquoise.

"The tourist in the Channel Islands, who makes Southampton his port of departure will find himself gliding down the Water and past the Needles soon after midnight, and about six hours later, if wind and sea have favoured him, he will come in sight of a group of rocks of which the highest is crowned with a strange looking structure. These rocks are the Casquets. That structure is a light-house, with its three separate towers and lanterns, forming the angles of a triangle, warns the sailor that he is near one of the most dreaded spots in the Channel. The Casquets cover a space of water a mile and a half in one direction, and half a mile in the other, and upon them many a ship has been dashed to pieces. If darkness or fog hide the rocks, they

not to be discovered by the lead, for all around them is water so deep that a line-of-battle ship may pass within ear's length of them. Until 1723, no beacon existed to warn off mariners. In that year a rude attempt was made to supply the deficiency, and at first coils were burnt, and afterward, oil lights were set in a copper frame. In 1790 the present light house was erected, but in 1823, exactly a century after they were first regarded as dangerous, a storm of unusual violence destroyed the lanterns and extinguished the lights. Two landing places gave access to the light-house, so great is the swell of the sea, that many vessels sometimes pass without permitting the visitor to land, and it is customary to keep not less than three month's supply of food for the inhabitants of the storm-battered stronghold. Formerly there was a spring of water on the main rock, but it has long since disappeared, and the keepers have to rely upon the supply, which is sent to them every month, and on the rain which they collect in a cistern. More fortunate than their brethren in the still more famous rocks of Eddystone, they are able to communicate constantly with their fellow-creatures, for a telegraph is laid between the Casquets and Alderney. A line drawn from the Casquets to Cape de la Hague, Normandy, would pass over one of the most dangerous portions of the Channel. The end of the sea is here very much elevated, and were it raised but 120 feet higher, the Casquets, Sark and Alderney would form one island. As it is, the line referred to, covers a mole for the most part submerged, about twelve miles in length, and forming a natural breakwater to the north of the bay which contains the Channel lands. As the steamer passes to the west of the Casquets, Alderney with its somewhat rounded outline is clearly visible on the left. Soon afterwards land is seen on the bow, and somewhere about eight in the morning the tourist stands upon the noble harbour of St. Peter's Port, the capital of Guernsey.

Guernsey has not the reputation of Jersey. Its range is smaller, its population less numerous; its wealth more limited. But it has scenery at least equal, and for boldness superior to that of the rival island. The tourist who does not disembark at St. Peter's Port, but passes on to St. Helier's makes a grievous mistake. For not only is Guernsey different from Jersey, not only is it well worth seeing for its own sake, but it is the centre of radiating excursions. Alderney may be reached by a Guernsey sailing boat, and even with this it is not always possible to return on the same day. Far nearer and smaller than Alderney is Sark, which can be reached during fair weather in two hours. Nearer and smaller still are the twin islands, Herm and Jethou, which are half the distance of Sark. Its situation, therefore, gives Guernsey the first place in its article.

Guernsey contains 15,500 English acres, of which about 10,000 acres are under cultivation. Geologically Guernsey is a wedge of granite, sloping upwards with tolerable regularity; so that while the northern extremity is on the level of the sea, the southern rises to a height of 346 feet. Close to the northern end the sea runs into so deep a bay as to nearly sever the little village of St. Peter from the rest of Guernsey. Midway along the eastern coast lies the capital of the island. It is seen by a passenger from England, St. Peter's Port, or, as it is commonly called, Peter Port, is a conspicuous and picturesque. Its principal buildings are not fine; on the contrary, the most eminent, Elizabeth College, is in the worst form of debased Gothic. Nevertheless the way in

which the town climbs the steep hill, and in which the houses lie scattered among the trees, gives an imposing air to the *tout ensemble* which certainly the details do not possess. Especially picturesque is Castle Cornet, of old historic fame. This fortress would stand but a short time against modern heavy artillery, but it serves as an appendage to Fort George, upon the hill, a more modern and a stronger work, but by no means contributing to the adornment of the landscape. By far the most important work of construction on the island is the splendid harbor, which is still unfinished. This work shows that though the Guernsey men are as yet without a railway, it is not from want of enterprise that the deficiency arises. In a land where the population is scanty, and the engineering difficulties would be very great, a railroad is not required, and the cost of it would be enormous. A good harbour can be turned to account, and, accordingly, one is nearly finished, on a scale which seems to be far beyond the present or the future requirements of the place. It took two centuries to make the old dock, though only four and a half acres in extent. But so sensitive have the islanders proved to what is called the progress of the age, that a little more than a dozen years will have sufficed to make docks covering seventy-three acres. The works include a harbor and a floating dock protected by two breakwaters, the one connecting Castle Cornet with the mainland, and the other stretching out from the shore eastward 1300 feet. The masonry is of granite, and has an appearance of solidity and massiveness not often seen even in the largest ports, and will be a flattering memorial to the engineer who planned, and the contractors who carried out the work. The cost has been defrayed by an export duty levied upon granite. \* \* \* The roads have for many years been very good; but half a century ago the then Governor was compelled to use every argument he could devise to make the islanders submit to the taxation necessary for the construction of passable routes. The Guernsey men were both shamed and persuaded into the work, and now the island is surrounded and intersected by highways, which have been judiciously laid out. \* \* \*

(To be continued.)

*Soap Plant.*—M. Payue has recently brought from China to Europe some specimens of the vegetable soap used throughout the empire. It is in the form of pods produced by two leguminous plants. Before using these pods for washing, the Chinese first cut away the greater part of the epicarpium, and then rub the wet linen with the pod thus denuded; after which it is enough to rinse the linen in fresh water.—*Late Paper.*

## THE FRIEND.

ELEVENTH MONTH 24, 1866.

We took occasion in our last number to remark on the disposition manifested within the various religious Societies, to run into ritualism and outward performances, to the neglect of that self-education and true cross-bearing, inseparable from the transforming effects of vital religion.

Running parallel with this, and equally incompatible with the simplicity and humility springing from the gospel, is a tendency to apply the same kind of reasoning necessary to the study and development of the physical sciences to investigations of the truths of christianity as recorded in the Holy Scriptures. Great progress has been made of latter years, in discovering and generalizing the laws regulating the material world, and

the pride of man prompts him to assume, that by the same power and the same process of induction, he can reduce religion to more simple elements, freed from antiquated dogmas, and more completely within the grasp of his intellect.

This self-confidence, and contempt for the experience of the past, when carried to their legitimate result, must end in doubt and skepticism, and, as is well known, a modified infidelity stands forth unblushingly within what is called the "church," and among those who claim to be its ministers. But the mischief is not confined to this sad anomaly. For even among those who verbally assent to all the truths of the gospel, and loudly condemn others' unbelief, the same self-sufficient spirit begets a reliance on their own natural powers to comprehend and apply those truths aright, and to perform the services belonging to membership in the mystical body of Christ.

Elated with the triumphs of science and the diffusion of what may be termed secular knowledge, it is forgotten that the religion revealed by the Author of Christianity is unchangeable, adapted not to one age and one class of men alone, but to the whole human race throughout all time, and therefore has no truths heretofore unknown, and to be found out and unravelled by human wisdom.

It is easy to perceive how the tone of thought pervading the minds of thinking men in this age of materialistic enquiry, while inducing a belief that the spirit of progress should characterize matters of faith, may engender doubts of all revealed truths on the one hand, and on the other lead professors into undervaluing the restraints of the cross, and increased dependence on outward forms and multiplied "good works."

This spirit of inquiry, and an idea of progress in religious truths, have been working for years within the Society of Friends. So far, though there is much activity and great efforts to graft many offshoots from other professions on the old stock of Quakerism, too often we look in vain for increased spiritual-mindedness, or a decided testimony against the spirit of the world. But in the present critical juncture in the professed christian church, what is the duty of Friends? Is it not to set forth unhesitatingly and to maintain meekly, but without compromise, the doctrines and testimonies of the gospel as believed in by them from the beginning? To banish from the Society all errors privily brought in, and disregarding the sneers of the self-sufficient, and the opposition of worldlings, to stand fast in the true faith and acquit themselves like men? If any among us are persuaded that in the progress of light and knowledge the differences between Friends and other religious Societies have been perceptibly abated, giving ground to believe they will finally fade away, let us remember that however men and their systems may change, the standard of Truth cannot be lowered; and as others approximate to us, so much the more imperative is the obligation resting on us to set forth the purity and spirituality of the gospel, walking by the same rule and minding the same thing that has made and preserved all true Friends from the rise of the Society. However near others may come to us, it is our duty not to go over towards them, lest we thereby induce them to stop short of complete emancipation from the trammels imposed by priestcraft and the commandments of men. Thus we will be found faithful witnesses of the truth as it is in Jesus, inviting others to have fellowship with us, and partake of that perfect liberty which is in Him, and which He has proclaimed in the "glad tidings" of this last dispensation. "The night is far spent, the day is at hand; let us there-

fore cast off the works of darkness, and let us put on the whole armor of light."

#### SUMMARY OF EVENTS.

**FOREIGN.**—The holders of rebel bonds are about bringing their case under the notice of the British government, as a set off against the claims of the United States for injuries inflicted during the siege of Alabama. It is reported that when the French troops evacuate Rome, the Romans will immediately vote in favor of being annexed to Italy.

The London *Times* says the government has no present intention to refer the Alabama claims to the consideration of a royal commission. The Commission is to study the merits of the neutrality laws, without prejudice to the Alabama claims.

The drowning of several thousand insured Cretans, by the rise of the tide in the Mediterranean, is denied. The Hungarian Diet has been convoked. There has been a decided improvement in the health of the Mediterranean. Negotiations are calculated to pacify Europe have been commenced between Prussia and Austria.

A conscription of sailors has been ordered in France, to man the vessels to take home the French troops from Mexico. The King of Saxony, in his speech opening the Chambers, pledged all his obligations to the United States with Prussia. The admiralty of Prussia is engaged in the creation of a strong fleet.

The Queen of England has placed St. James' Palace at the disposal of King George, of Hanover. By a colliery explosion near New Castle on Tyne, twenty-five persons were killed.

It is stated by parties authorized to speak for the Republic of Mexico, that it is the intention of President Juarez to order an election, in accordance with the constitution, for a President and members of Congress, as soon as it shall be practicable to do so. The city of Jalapa and the Fortress of Perote, have been captured by the Liberals. Other Liberal successes are reported. It is asserted that Maximilian has no intention of leaving Mexico at present.

Letters from Egypt state that the waters of the Nile were sinking, and that all fears respecting the cotton crop had disappeared.

Public dispatches from Bombay, report that the famine in India is abating. The government of Spain is taking strong measures to prevent a threatened political outbreak. Ricciooli, the Prime Minister of Italy, has issued a circular discouraging the agitation of the Roman question. Italy, he says, will be neutral and avoid the certain rights of her rights. Reports are in circulation that a truce has been resumed in Candia between the insurgents and the Turks. A London dispatch of the 19th, says that great floods are devastating the counties of York and Lancaster, and many persons have been drowned. Large numbers of Fenians have lately been landed in Ireland, but the government is said to be prepared for any emergency. Middling upland linters cotton, 14d. Breadstuffs firm and unchanged. Consols, 99½. U. S. 5-20's, 70.

**UNITED STATES.**—The disbursements of the Treasury last week on account of the War, Navy, and Interior Departments, were as follows: War, \$189,136; Navy, \$80,000; Interior, \$268,500—total, \$1,575,765.

**Bank Issues.**—The total amount of the circulation of the National Banks now amounts to \$297,065,059, for the redemption of which the government holds securities to the amount of \$340,291,400.

**The Presidential Policy.**—It is asserted by the friends of administration, that the President greatly regrets the disagreement between the Legislative and the executive branches of the government, and is disposed to yield something to effect a reconciliation. He will not attempt to force southern Representatives into Congress, or do any other act likely to disturb the country. He will also, it is said, execute all the laws with fidelity, and not those which he vetoes. It is further stated that he does not intend to make further removals from office on account of political opinions.

**Philadelphia.**—Mortality last week, 249, of which 5 were from cholera.

**The Votes of the Cities.**—The following were the votes polled at the recent election: T. in case of the large cities, New York, 113,585; Philadelphia, 103,590; Brooklyn, 48,919; Cincinnati, 40,448; Baltimore, 21,600; St. Louis 21,135; Chicago, 20,945; Boston, 14,570.

**Indian Affairs.**—The census of the Indian tribes, prepared for the annual report of the Commissioners of Indian Affairs, relative to the total number of Indians in the United States, is as follows: Governor Cummings, of Colorado, reports favorably of the disposition of the Indians in the vicinity of that territory. There does not seem to be any danger

of the threatened war with the Utes. A special agent of the Indian Bureau makes a similar report respecting the Arapahoes and Cheyennes, and the confederate band of Sioux.

**Canada.**—The British Minister at Washington has replied to the note of Secretary Seward, relative to the death penalty passed upon the convicted Fenians in Canada. He says that he is authorized to state that the whole question of the disposal of such of the prisoners as may be convicted, has been referred to the English Government, who will not certainly be animated by the desire to deal with it so as to secure peace and harmony between populations living in such immediate proximity. Thirty-nine Fenian prisoners were released from custody at Toronto on the 17th inst.

**South.**—By the returns of commissioners and assessors of taxes, for various counties of the State of Virginia, it is estimated that the State has lost nearly two-fifths of its colored population since 1860.

A resolution introduced in the Legislature of Arkansas, to reject the constitutional amendment, was referred to the Committee on Federal Relations. It is said there is a disposition to treat the matter with great deliberation.

The Supreme Court of Mississippi has decided that the government of that State during the war was rightful, legal and constitutional, and that its organization as a government was not destroyed or impaired by secession from the Union.

The Alabama *Montgomery Mail*, notices the recent erection of a number of cotton factories in that State. Several established in the neighborhood of Montgomery, to be run by water power, will give employment to about twelve hundred men, women and children.

On the 15th, five white men and a colored man were dogged in Richmond, Va., by order of the Hustings court, for stealing. This was the first time for many years in which stripes had been publicly inflicted on white men.

The cotton crop of Tennessee is about one-half the average. The tobacco is very good, and over a full crop, corn yielded nearly an average. The grain crops of East Tennessee are good.

The order issued by General Grant in the Seventh month last, directed the Federal commanders to arrest all persons who have been or may hereafter be charged with crimes and offenses against officers, agents, citizens and inhabitants of the United States and confine them in military custody until the proper judicial tribunals are willing and ready to try them. This order has not been revoked, as was asserted, but General Grant merely wrote a letter to Gen. Sheridan advising that it was not strictly enforced, and that civil rights bill is in operation, and under its provisions the judicial tribunals are open to all complainants.

**Miscellaneous.**—A great fire occurred in Chicago on the 18th, destroying property to the estimated value of \$450,000.

The Territory of Montana has now a population of about 20,000.

The bill making habitual drunkenness a sufficient cause for divorce, has passed the Vermont Legislature. The evil habit must have been of at least two years duration, previous to the finding of the libel.

It is stated that about two millions of people perished in England in the last famine.

There were in Great Britain, in the Third month last, according to the estimates of collectors of officers and the reports made by occupiers of land, 5,837,962 horned cattle, 22,604 lute sheep, and 2,527,245 pigs.

A census has been taken in Mississippi, which shows a loss in population since 1850. In 44 counties there has been a decrease of 6,799 whites, and 25,513 blacks.

If the decrease should be similar in the remaining 16 counties, the number of negroes in the State would be reduced in round numbers from 437,000, in 1850, to 380,000, and the white population from 353,000 to 345,000, making a total increase during six years, of about 8,000 whites and 57,000 blacks.

It is stated that the rebel General Pillow has cultivated his large plantation, near Helena, Arkansas, the present year, with great success. His crop of cotton is estimated at about 3000 bales, worth probably at least \$300,000.

**Markets, &c.**—The following were the quotations on the 19th inst. *New York*—American gold 140 a 141. U. S. sixes, 1881, 112½; ditto, 5-20, 1862, 108; ditto, 1865, 106½; ditto, 10-40, 5 per cent, 100. Balance in the Sub-treasury, N. York, \$36,005,763. \$100's Silver State Hour, \$3 a \$10.10. Shipping Oil, \$16.05 a \$17.75. Cotton to be sold to order to the extent of 1000 bales, by trade and family, \$14.05 a \$16.75. Winter red wheat, \$3 a \$3.10. No. 2 Chicago spring, \$2.20 a \$2.35.

Barley, \$1.15 a \$1.25. Rye, \$1.40 a \$1.42. Western oats, 65 a 69 cts.; State, 69 a 72 cts. Western mixed corn, \$1.26 a \$1.27; new yellow corn, \$1.11 a \$1.15. *Philadelphia*—Middlings cotton, 34 a 36 cts. Cuba sugar, 10½ a 10¾. Superfine coffee, \$3 a \$3.75; higher grades from \$9 to 16. Red wheat, \$3 a \$3.30; white, \$3.30 a \$3.40. Yellow corn, \$1.25. Rye, \$1.35 a \$1.40. Southern oats, 60 a 63 cts.; Pennsylvania, 63 a 64 cts. Cloverseed, \$9 a \$10.50. Timothy, \$3.25 a \$3.30. Flaxseed, \$3.30. The arrivals and sales of beef cattle reached about 2600 head. Market dull and prices about 1 cent per lb. lower. Extra sold at 15 a 16 cts., good, 13 a 14½ cts., and common, 10 a 12 cts. per lb. About 8000 sheep sold at 63 a 7 cts. for extra, 5½ a 6½ cts. for fair to good, and 5 a 5½ cts. per lb. gross for common. Hogs dull and lower, about 4000 were sold at from \$10 to \$11 per lb. at *Buffalo*—Corn, \$1 a \$1.05. Oats, 52 cts. Barley, \$1.05. *St. Louis*—Good spring wheat, \$2.12 a \$2.15; winter red, \$2.60 a \$2.72. Old corn, \$1.05 a \$1.12; new yellow corn, 90 a 95 cts. Oats, 45 a 46 cts. *Chicago*—No. 1 spring wheat, \$2.05 a \$2.11. No. 1 corn, 80 a 82 cts. Oats, No. 1, 36 cts. *Milwaukee*—No. 1 spring wheat, \$2.07 a \$2.08. Oats, 45 cts. *New Orleans*—Middling cotton, 31 a 34 cts. Fair sugar, 12½ cts. Molasses, 70 a 80 cts.

#### RECEIPTS.

Received from G. Gilbert, Pa., \$2, vol. 40, and for J. Gilbert, B. Gilbert, and Margaret Marsh, \$2 each, vol. 40; from J. Rogers, Pa., per W. Blackburn, \$2.50, vol. 10; from J. Adams, N. Y., for David Rockham, J. Rockwell, and S. Naram, \$2 each, vol. 40; from J. Fawcett, Act. G., for J. Reeves, \$2, to No. 12, vol. 41; for J. L. Kite, J. Lipsey, and J. Lynch, \$2 each, vol. 39; for J. Painter, T. Heald, J. Allman, S. Cook, E. A. Fogg, and Mary J. French, \$2 each, vol. 40, and for J. Heald, 10, \$2, vol. 38; from Jos. Evans, \$2, vol. 39.

Received from G. H., of Medford, N. J., \$10, for the Freedmen.

#### NOTICE.

A Stated Meeting of the Women's Aid Association will be held at No. 112 North Seventh st., on Seventh day the 24th inst., at 3 P. M.

SARAH LEWIS, Secretary.

#### ERRATA.

The death of John Richardson occurred on the 15th of Tenth month, not on the 8th, as published in our last number.

#### WANTED.

A Male Teacher for Friends' School at Ranocacs Application may be made to Henry Willis or Samuel Williams, Ranocacs P. O., Burlington Co., N. J.

**SCHOOL FOR COLOURED CHILDREN IN RASPBERRY STREET.**

A well qualified female teacher is wanted to take charge of the boy's school under the care of the Monthly Meeting of Friends of Philadelphia for the Southern District. Application may be made to Caleb Wood, 524 South Second St. Thos. Blinn, 118 N. 2d St. Geo. J. Scattergood, 413 Spruce St.

**WESTTOWN BOARDING SCHOOL.**

WANTED, A TEACHER for the Boy's SECOND MATHEMATICAL SCHOOL. Apply to Samuel Hiles, Wilmington, Del. Thomas Evans, 817 Arch St., Phila. Joseph Scattergood, 413 Spruce St., Phila. Charles J. Allen, 304 Arch St. "

**FRIENDS' ASYLUM FOR THE INSANE.**

SEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSUAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 837 Market Street, Philadelphia, or to any other Member of the Board.

DIED, 10th of Eleventh month, 1866, CHARLOTT BUCKER, aged 82 years, a member of Abington Monthly and Stroudsburg, Pa., particular Meeting.

WM. H. PILE, PRINTER, No. 214 Pearl street, between Dock and Third.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XL.

SEVENTH-DAY, TWELFTH MONTH 1, 1866.

NO. 14.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

For "The Friend."

## The Channel Islands.

(Continued from page 103.)

It would be difficult to spend a more enjoyable year than in making the round of the island, starting from St. Peter's Port, the tourist visits succession of little bays, each in its way the perfection of marine landscape. In one a garden, full of rare plants, slopes downwards to the sea, and all but touches the sands of dazzling whiteness. In another the cliffs form a precipitous bay, bounding some far retreating inlet. In a third the most famous of all, Moulin Huet, every arm of nature is combined. Sharp needles of rocks stand out as the advanced posts against the sea in its most aggressive moods; then the land runs inward with bosky clusters of wood here, there bluff rocks there, covered with lichens of all glorious orders, that they vie with the most brilliant autumn tints of the trees. Deep down the winding path, through heath and wild myrtle and gorse, is the creamy white sand, which the turquoise water runs, and then retreating, leaves a moist dun patch. Passing westwards along the south coast, the luxuriant loveliness of Moulin Huet gives place to sterner features. The rocks stand up uncompromisingly against the sea, and refusing to yield, allow little room to those nooks where beauty dwells sheltered from the storm. The unbragging wealth is gone which reaches its full perfection in Water Lane, leafy tunnel, through which scarcely a stray beam can find its way, to cast a shadow upon a moist fern-bordered path, and where there is twilight even at high noon. Cope's and grove sapper, and give place to the open common, which even the adventurous Guernsencen have attempted to cultivate. We round the south eastern angle, and see before us at a short distance seawards, coral reefs of rocks, guilty of the crime of many a gallant ship, but now made conspicuous by a warning light-house, the Hanois, erected but a few years ago, and after a long consultation between the local authorities and the corporation of the Trinity House. Then again the reef shifting scene changes. We have no longer jets of graceful curve, nor bluff rampart of cliffs, but a wide bay, whose waters are scattered over the innumerable low rocks. Sometimes a line reef; sometimes an inlet; and between them, even in summers calm, the sea frets and surges. No rock may claim the title of island. Lihore land it is called. Monks dwelt there in the old days, and their chaunted prayers must often have been drowned by the thunders of the billows.

Now there dwells here a Frenchman, whose heart is set on profit rather than on prayer, for he has the right to all the sea-weed on his island; and sea-weed, as we shall presently find, is a most important produce, whose harvesting is restricted by stringent laws.

In perambulating Guernsey, it is impossible not to be struck with the apparent absence of inhabitants. The population is, as every one knows, really far denser than in England. Yet at mid-day, one may traverse mile after mile of the leafy lanes in the centre of the island, or the open roads on the coast, without meeting a single person. Proofs of habitation there are indeed; for every where there are picturesque cottages, where the fuchsia attains the height of a tree, where the camelia is a shrub wide spread and taller than a man, where the hydrangea is as prodigal of blossom as in the bay of Glogeriff, which the visitor of the Irish Lakes knows so well, and where even the aloe and the myrtle flourish and flower: But if you try to enter one of these dwellings in order to ask your way, you will find the door fast, and the house empty. But the household are not far off. You may not see them, but you can hear the tinkle of sharpening scythes, or a murmur of human voices. They are all workers here; father, mother, son and daughter, alike, till the ground, for that ground is their own. Spade husbandry is carried to perfection here, where labour costs but little, and, to use Arthur Young's famous saying, "the magic of ownership turns the very rocks into gold." So all day long they toil in the field, and at eventide they divert themselves by toiling in their gardens. Their farms are little more than gardens. They are usually of from ten to twenty acres. Fifty acres is an exceptionally large holding. Thus the ground is made productive, thanks to the climate, and to the implement which has made the sands of Flanders a veritable Pactolus, and concerning which the Italian proverb says, that while "the plough has a share of iron, the spade has an edge of gold."

The sea-weed is of great importance to the agriculture of the Channel Islands. The writer says: "It is a portion of that great 'harvest of the sea' which we are too apt to undervalue. Locally the crop is called *erwic*, we should call it sea-weed. Though a weed, the picking of it is restricted by very stringent laws. It is only at two seasons of the year that *erwic* may be gathered; in July and in February. The summer crop is stacked in ricks and left to dry beneath the sun, and is used for fuel. The winter crop is spread upon the land as manure, and is a most valuable fertilizer, especially when mixed with stable refuse. The ashes of the summer crop also are applied with good effect to the soil. The cottagers get six pence a bushel for this. The sea-weed is of two kinds—that which adheres to the rocks, and the drift. The gathering of the latter is allowed to all persons throughout the year, from sun-rise to eight P. M. Sometimes after a gale a very busy scene is presented, especially in Rocquain Bay, at the south-west angle of Guernsey. A long row of peasants will be seen standing upon the beach, armed with rakes, and

by the side of them a mound of weed which they have gathered together, but which they must not take away until the sunrise gun announces the beginning of the day. No sooner has the disturbance been heard than they set at work with astonishing vigour, and carry off their treasure in carts, if they are fortunate enough to possess any, or more often in panniers carried by horses or asses. The regulations which provide for the cutting of that which adheres to the rocks, are still more strict. The first harvest begins at the first full moon after February 1st, and lasts five weeks. The second begins in the middle of June and ends on August 31st. The summer cutting is limited for the first month to the poor, or people who have no cattle. They are not allowed to carry it by barrows to a cart, but must transport it above high spring tide, and from thence it is carried away. \* \* \* The total amount of *erwic* collected yearly around Guernsey is about 20,000 loads, and as the value of a load is reckoned to be two shillings on the beach, here at once is a source of wealth equal to £3,000 a year. Jersey probably supplies an even larger amount. On an average about one acre in five, in the larger islands, and nearly as much in Alderney and Sark, is manured with litter and sea-weed to the amount of ten loads to the acre, or with the ashes of the weed that has already done duty as fuel. In potato culture this application has been remarkably successful, land so treated yielding on an average twenty tons (500 bushels) of potatoes to the acre. But it is not only for agricultural and domestic purposes that the sea-weed is available. It is used in the manufacture of barilla, and also in that of iodine. The Guernsey sea-weed is particularly rich in the latter salt, and at the present time over 20,000 ounces are sent yearly to this country. The annual yield of sea-weed is about 200,000 tons, of which a very small quantity is turned to the most profitable use to which it might be put."

In Alderney the writer enumerates many objects of interest, and speaks of portions of the rock scenery as being of the very grandest description, but we omit the details.

We go back to Guernsey in order to make a better start for the other islands. Exactly opposite St. Peter's Port lie Herm and Jethou, two islands that bear to each other the same relations as a frigate and her tender gun-boat. They form part of a reef of granite, most picturesque but most dangerous, which stretches towards Guernsey, and which makes the "Little Russell," the most difficult of all the many perilous passages in these waters. The first of them presents every variety of coast scenery, and is much after the same type as Guernsey. Like that island it is steep towards the south, and stretches along in long sandy flats northwards. The rocks being a softer granite than in Guernsey, it is more elift by the action of the sea. Herm abounds in caverns, wherein the brilliant green of luxuriant ferns is vividly set off by the black ground of swarthy cliff. Little bays lie surrounded by steep slopes, full of wild flowers, down the side of which the tourist has worn a winding path. Here the

sand is as smooth as velvet, as firm as marble to the foot, and the intense brilliancy and clearness of the water irresistibly inviting to bathe. The surface of the island is remarkably irregular. Here there is a steep hill with flanking valleys bounding to the sea. Here there are steep cliffs, at the foot of which it is possible to walk only at low water. Here there is a flat table land covered with coarse grass and margined by a long reach of sand. An enterprising man has undertaken to cultivate the island, and he has a comfortable house and convenient farm buildings. The soil is good, consisting of decomposed granite, which in Corwall yields such wonderful crops of early vegetables for Covent Garden. But the great deficiency of the island is the want of water. Through this it became necessary for the Lord of Herm to sell off his fine herd of Alderney cattle during a recent dry summer. The aborigines are as troublesome to him in their way, as the Maories have proved to the New Zealand settlers. These foes are the rabbits, and not only do they work havoc among the crops, but they are undermining the island, and are the cause of the frequent landslips, which are diminishing its area. Herm is not given up wholly to agriculture. There are granite quarries which of late have been worked with considerable vigor on account of extensive orders for the Thames embankment. The chief glory of Herm is its shell beach. The sands of Whitesand Bay, near the Lands End, are prolific in shells, but they cannot bear comparison with this wonderful shore. Here the sand is made up entirely of shells, whole or in fragments. Every handful contains myriad tenantless abodes of animal life. Exquisite in form, glorious in colour, they quite overpower the imagination with a reality so far beyond conception. \* \*

Jethon lies to the south of Herm, and is separated from it by a narrow but deep channel. Strictly speaking, it consists of a group of three islands, being itself by far the largest. It is steeper and higher than Herm, and it has one house, occupied by the tenant who farms the island. Southwards there is a series of dangerous rocks. In spite of the difficulties of navigation, visitors to Herm and Jethon are numerous.

(To be continued.)

For "The Friend."

#### Thoughts for the Times.—No. 51.

John Woolman's course through life was marked by the most careful scrutiny of his motives and actions, trying them by the standard of what he loved to call *pure wisdom*, that in all things he might act on an inward principle of virtue. When twenty-six years old he was engaged in a religious visit to Friends in the Southern Colonies. In this journey when he ate, drank, and lodged free of cost with people, who lived in ease on the hard labour of their slaves, he felt uneasy; "and as my mind," says he, "was inward to the Lord, I found, from place to place, this uneasiness return upon me, at times through the whole visit. Where the masters bore a good share of the burden, and lived frugally, so that their servants were well provided for, and their labour moderate, I felt more easy; but where they lived in a costly way, and laid heavy burdens on their slaves, my exercise was often great, and I frequently had conversation with them, in private, concerning it."

As he could not conscientiously prepare writings for the sale or bequest of slaves, he felt bound to explain his motives, and had sometimes the satisfaction of being thus the means of inducing the master to free them. In other cases this course appeared to give offence; and of one of

these he writes: "In this case I had a fresh confirmation, that acting contrary to present outward interest, from a motive of divine love, and in regard to truth and righteousness, and thereby increasing the resentments of people, opens the way to a treasure better than silver, and to a friendship exceeding the friendship of men."

In the year 1757 he paid another—his third—visit to the Southern Colonies, of which he writes: "As the people in this and the southern provinces live much on the labour of slaves, many of whom are used hardly, my concern was, that I might attend with singleness of heart to the voice of the true Shepherd, and be so supported as to remain unmoved at the faces of men. As it is common for Friends on such a visit to have entertainment free of cost, a difficulty arose in my mind with respect to saving my money by kindness received, which to me appeared to be the gain of oppression." After describing the affliction which attended him on this account, he says, "Being thus helped to sink down into resignation, I felt a deliverance from the tempest in which I had been sorely exercised, and in calmness of mind went forward, trusting that the Lord Jesus Christ, as I faithfully attended to him, would be a counsellor to me in all difficulties; and that by his strength I should be enabled even to leave money with the members of Society where I had entertainment, where I found that omitting it would obstruct that work to which I believed he had called me; and as I copy this after my return, I may here add, that oftentimes I did so, under a sense of duty: the way in which I did it was thus: when I expected soon to leave a Friend's house where I had entertainment, if I believed that I should not keep clear from the gain of oppression without leaving money, I spoke to one of the heads of the family privately, and desired them to accept of them pieces of silver, and give them to such of their negroes as they believed would make the best use of them, and at other times I gave them to the negroes myself, as the way looked clearest to me: as I expected this before I came out, I had provided a large number of small pieces; and thus offering them to some who appeared to be wealthy people, was a trial both to me and them; but the fear of the Lord so covered me at times, that my way was made easier than I expected; and few, if any, manifested any resentment at the offer, and most of them, after some talk, accepted of them."

He again visited Maryland, in 1766, under still more trying circumstances. "An exercise," says he, "having, at times, for several years, attended me, in regard to paying a religious visit to Friends on the eastern shore of Maryland: such was the nature of this exercise, that I believed the Lord moved me to travel on foot amongst them, that by so travelling I might have a more lively feeling of the condition of the oppressed slaves, set an example of lowliness before the eyes of their masters, and be more out of the way of unprofitable converse." He found a companion like minded with himself, in his beloved friend John Sleeper. "We being thus drawn the same way, laid our exercise and the nature of it before Friends; and obtaining certificates we set off the fifth day of the Fifth month, 1766. In the course of this visit we were at most of the meetings in Delaware and on the eastern shore, and from the last meeting at Sassafraz, went pretty directly home, where we found our families well; and for several weeks after our return, I had often to look over our journey; and that though to me it appeared as a small service, and that some faithful messengers will yet have more bitter cups to drink in those southern provinces, for Christ's sake, than

we had; yet I found peace in that I had been helped to walk in sincerity, according to the understanding and strength given me." Twice again, in 1767 and in 1768 he believed it to be his duty to walk into some parts of Maryland on a religious visit. "On the 26th day I crossed the Susquehanna; and coming amongst people in outward ease and greatness, chiefly on the labour of slaves, my heart was much affected; and an awful retirement, my mind was gathered inward to the Lord, being humbly engaged that in resignation I might receive instruction from him respecting my duty amongst these people.

"Though travelling on foot was wearisome to my body; yet thus travelling was agreeable to the state of my mind. I went gently on being weak, and was covered with sorrow and heaviness on account of the spreading prevailing spirit of the world, introducing customs grievous and oppressive on one hand, and cherishing pride and wantonness on the other. In this lonely walk a state of abasement and humiliation, the state of the church in these parts was opened before me and I may truly say with the prophet, 'I bowed down at the hearing of it; I was dismayed at the seeing of it.' Under this exercise, I attended the Quarterly Meeting at Gunpowder; and in bowedness of spirit I had to open, with much plainness, what I felt respecting Friends living in ease, on the labours of the poor oppressed negroes; and that promise of the Most High was now revived: 'I will gather all nations as tongues; and they shall come and see my glory. Here the sufferings of Christ, and his taste of death for every man, and the travels, sufferings and martyrdoms of the apostles and primitive christians, in labouring for the conversion of the gentiles, was lively revived in me; and according to the measure of strength afforded, I laboured in some tenderness of spirit, being deep affected amongst them, and thus the difference between the present treatment which these gentiles, the negroes, receive at our hands, and the labours of the primitive christians for the conversion of the gentiles, was pressed home and the truth came over us; under a feeling of which a mind was united to a tender hearted people in those parts; and the meeting concluded in a sense of God's goodness to his humble dependent children."

After his return from his first visit to the South in 1747, he wrote his "Considerations on the keeping of negroes," which were not printed till the year 1754. In the year 1762 he wrote and printed a second part to the Considerations, at which the Friends who examined it, offered to pay for the printing of it, out of the Yearly Meeting stock, he declined the offer, and printed the book at his own expense. "The stock," said he, "the contribution of the members of our religious Society in general; amongst whom are some who keep negroes, and being inclined to continue the in slavery, are not likely to be satisfied with the books being spread amongst a people where many of the slaves are taught to read, and especially not at their expense; and such, often receive them as a gift, conceal them. But as they would make a purchase, generally buy that which they have a mind for, I believe it best to sell them expecting, by that means, they would more generally be read with attention."

With such meekness, self-distrust, caution and forbearance, did John Woolman tread, while keeping always in view the object he had so much heart, and pressing steadily forward towards its accomplishment. In the mean while the good cause had been gaining ground among Friends in 1758 the Monthly Meeting of Philadelphia

ought the subject of buying negro slaves before a Quarterly Meeting, which sent the minute up to the Yearly Meeting of 1759.

"During the several sittings of that meeting, my nd," says John Woolman, "was frequently revered with inward prayer; and I could say with avid, that tears were my meat, day and night. In the case of slave-keeping lay heavy upon me; and I did find any engagement to speak directly on any other matter before the meeting. Now on this case was opened, several faithful Friends spoke weightily thereto, with which I was contented. Many Friends appeared to be deeply moved under the weight of the work; and manifested much firmness in their love to the cause of truth and universal righteousness on the earth; and though none did openly justify the practice of slave-keeping in general, yet some appeared concerned, lest the meeting should go into such assurances as might give uneasiness to many brethren; alleging that if Friends patiently continued under the exercise, the Lord in time to come might open a way for the deliverance of these people; and I finding an engagement to speak, said, 'My mind is often led to consider the purity of the Divine Being, and the justice of his judgments; and herein my soul is covered with awfulness: I cannot omit to hint of some cases where people have not been treated with the purity of justice, and the event hath been lamentable: my slaves on this continent are oppressed, and their cries have reached the ears of the Most High. Such are the purity and certainty of his judgments, that He cannot be partial in our favour. Infinite love and goodness, he hath opened our understandings from one time to another, conning our duty toward this people; and it is a time for delay. Should we now be sensible what he requires of us, and through a respect to private interests of some persons, or through regard to some friendships which do not stand on an immutable foundation, neglect to do our duty in firmness and constancy, still waiting for the extraordinary means to bring about their deliverance; it may be by terrible things in righteousness, God may answer us in this matter.'"

The good cause at length prevailed in this meeting, which continued near a week; "and for several days," says John Woolman, "in the forefront of it, my mind was drawn into a deep inwardness; and being at times covered with the spirit of supplication, my heart was secretly poured before the Lord; and near the conclusion of the meeting for business way opened that in the free flowings of divine love, I expressed what I felt upon me; which, as it then arose in my mind, I first to show how deep answers to deep in the hearts of the sincere and upright; though, in their fervent growths they may not all have attained the same clearness in some points relating to testimony; and I was led to mention the integrity and constancy of many martyrs, who gave their lives for the testimony of Jesus; and yet in some points, held doctrines distinguishable from those which we hold; and that in all ages where people were faithful to the light and understanding, which the Most High afforded them, they did not acceptance with him; and that now, though there are different ways of thinking amongst us on some particulars; yet, if we mutually kept to the spirit and power which crucifies to the world, which teaches us to be content with things really good, and to avoid all superfluities, giving up our hearts to fear and serve the Lord, true unity will still be preserved amongst us; and that if we were at times under suffering on account of some scruples of conscience, kept low and humble, and in their conduct in life manifested a

spirit of true charity; it would be more likely to reach the witness in others, and be of more service in the church, than if their sufferings were attended with a contrary spirit and conduct."

Words of pure wisdom! worthy to be remembered and observed. Were the spirit in which they were uttered to prevail, there would be neither schism nor division in the church, and the spirit of separation would fade before the spirit of meekness and the feeling of near unity with "the flock of Jesus Christ."

John Woolman was much engaged in the years 1758 and 1759, in company with other Friends, in visiting the families of members who owned slaves. "Entering upon this visit," says he, "I appeared weightily; and before I left home, my mind was often sad; and under which exercise I felt, at times, the Holy Spirit which helps our infirmities; through which in private, my prayers were, at times, put up to God, that he would be pleased to purge me from all selfishness, that I might be strengthened to discharge my duty faithfully, how hard soever to the natural part. We proceeded on the visit, in a weighty frame of spirit, and went to the houses of the most active members throughout the country, who had negroes; and through the goodness of the Lord, my mind was preserved in resignation in times of trial, and though the work was hard to nature, yet through the strength of that love which is stronger than death, tenderness of heart was often felt amongst us in our visits, and we parted from several families with greater satisfaction than we expected."

Through the favours of the Head of the church, these visits were so eminently blessed, that when the Society pronounced slave holding to be a disallowable offence, few members were found willing to incur the sentence of disownment rather than to manumit their slaves. Throughout all, the influence of the labours of John Woolman were evident; and to his instrumentality, more than that of any other individual, is the prevalence at that time of this righteous testimony due.

#### A Star on Fire.

BY EDWIN DUNKIN, OF THE ROYAL OBSERVATORY.

About the middle of May last astronomers were startled by the announcement that a new star of considerable brightness had suddenly burst forth in the constellation Corona Borealis, (the Northern Crown.) Its increase of magnitude must have been extremely rapid, for on the 9th of May an observer, who was occupied on that day in scrutinizing that portion of the heavens, felt certain that no object comparable to it was visible. On the 12th, three days afterward, the star shone with the brilliancy of one of the second magnitude, or equal to the three well-known stars in the belt of Orion. The important results obtained from the observation of this truly extraordinary astronomical object are sufficient reasons for our giving a brief and popular account of its short history, which we are sure will be duly appreciated by our scientific readers.

The first person who appears to have noticed this new variable star was J. Birmingham, of Tuam, Ireland, who observed it May 12th. Subsequently it was seen on the 13th, at Rochefort, by M. Courbebaissé, and on the same day at Athens, by M. Schmidt; on the 14th it was noticed at London, Canada West, by M. Barker, and on the 16th at Manchester, by M. Baxendell. These observers saw it independently, without any previous notification. Attention being now drawn to the star, it has since been regularly observed, either for position or for the inquiry into its physical constitution, at most of the public and private observatories in Europe and America.

Its brightness rapidly diminished after discovery but probably not in the same ratio as it had increased before. The relative magnitudes, determined by comparison with neighbouring known stars, are as follows:

May 12, . . . . .	2	magitude.
" 15, . . . . .	3	5
" 18, . . . . .	4	8
" 21, . . . . .	6	7
" 24, . . . . .	7	8
" 30, . . . . .	8	8

Very little change had taken place from May 30 to June 22. On the evening of the latter day the magnitude was reckoned at the ninth.

So far, this discovery would not probably have attracted any greater attention than that of any ordinary variable. The new star would most likely have been followed very closely only till the extent and period of its variability were satisfactorily established. Of such objects the firmament contains unsy extraordinary examples; stars which appear for a season and then disappear, again reappearing, performing in the mean time all their changes of brightness with perfect regularity. While there are some which complete their period in days, there are others occupying months, or perhaps years, between the intervals of maximum magnitude. If our new star had been, therefore, simply one of this class, interesting though it might have been from the abruptness of its first appearance, it would merely have added one to the list of those known variables which are to be found scattered here and there among the fixed stars.

But astronomical observations have unfolded other properties peculiar to this star, giving us an insight into physical composition different from that of others around it. This has been attained from the observation of its spectrum, as viewed through a spectroscope attached to an astronomical telescope.

On looking at an ordinary star through a spectroscope, its spectrum is seen with transverse dark lines across it, similar to Fraunhofer's lines in the solar spectrum. Some of these are common, or nearly so, in most stellar spectra; while each star has generally, in addition, its own peculiar dark lines. This would seem to show that, whereas certain metals or gases are indicated as being present in the majority of stars, each one contains materials peculiar to itself. Now this marvellous star in Corona Borealis, which has so astonished us all, has not only the ordinary stellar spectrum with the dark lines across it, but there is also a second spectrum, apparently superposed upon the other, in which four or five bright lines have been observed. M. Huggins, who has devoted his whole astronomical attention to this class of observations, has, in conjunction with Dr. W. A. Miller, concluded that the light of the star is compound in its nature, and that it has really emanated from two different sources. M. Huggins remarks that "each light forms its own spectrum. The principal spectrum is analogous to that of the sun. The portion of the star's light represented by this spectrum was emitted by an incandescent solid or liquid photosphere, and suffered partial absorption by passing through an atmosphere of vapors existing at a temperature lower than that of the photosphere. \* \* The second spectrum, which in the instrument appears on the one already described, consists of five bright lines. This order of spectrum shows that the light by which it was formed was emitted by matter in the state of gas rendered luminous by heat." Independent observations, made at the Royal Observatory, Greenwich, principally by Mr. Stone and M. Carpenter, and at the Imperial

Observatory, Paris, by MM. Wolf and Rayet, gave results confirmatory of those made by M. Huggins and Dr. Miller.

Such, then, is a brief account of the analysis of the light emitted from this temporary but brilliant visitor to our sky; showing with little doubt that, from some cause unknown to us, it must have been the subject of a terrible catastrophe at a period perhaps distant; for it must be borne in mind that, owing to its immense distance from us, we may be only witnessing the calamity of a past age. From the sudden blazing forth of this star, and then its rapid fading away, M. Huggins and Dr. Miller have suggested that, in consequence of a great internal convulsion, probably a large quantity of hydrogen and other gases were emitted from it; "the hydrogen, by its combination with some other element, giving out the light represented by the bright lines, and at the same time heating to the point of vivid incandescence the solid matter of the photosphere. As the hydrogen becomes exhausted, all the phenomena diminish in intensity, and the star rapidly wanes." That hydrogen gas in a state of combustion was present is very probable; for, by comparing simultaneously the bright lines of the stellar spectrum with those of hydrogen produced by the induction spark, taken through the vapor of water, it was found that two of the lines sensibly coincided. During a discussion on this star, at a meeting of the Royal Astronomical Society, on June 8th, the astronomer royal expressed his firm belief that this wonderful object was actually in flames.

If we were inclined to speculate on this unique astronomical phenomenon, or the probable consequences arising from such a sudden outburst of fiery gas, what an extensive subject for contemplation is opened to us. Astronomically we have known this minute star for years without suspicion; it has been classified with others of similar magnitude; it has been one of many millions of such; while now it will be remembered by all future generations as one of the most extraordinary among the most celebrated stars of the universe. Or, let our speculations be carried a little further, and let us reasonably suppose this small and hitherto nearly invisible object to be an immense globe like our own sun, and surrounded probably with planets and satellites depending upon their centre for light and heat, what would be the effect of this sudden conflagration on them? It makes one almost shudder at the idea of a system of worlds being annihilated at once without warning. But such must doubtless be the fact. We, however, in this quiet world of ours, even scarcely, perhaps, realize such a catastrophe; but to our sun, which is only a star analogous to those in the heavens around us, to be suddenly ignited in a similar manner to this distant and unknown sun, all its attendant planets and satellites, the earth included, would be destroyed.—*Leisure Hour.*

*A Successor of the Fishermen.*—At the Church Congress held lately at York, in England, there was an "Eccelesiastical Art Exhibition," at which all the vestments and priestly ornaments now in use among the advanced Ritualists of the Church of England were exposed to public view, having been previously arranged for the purpose. Here is a description of one of the sights of the show: "To the general public probably one of the most attractive features was the shape in No. 3 room on the ground floor, in the figure of a bishop in full vestments. Sandals of purple velvet, banded with cloth of gold, jewelled; cassock of purple silk, trained; rochet of fine lawn, edged with Irish point lace; alb and girdle

of fine linen; tunicle of blue silk, banded and fringed with silver; dalmatic of gold enamelled silk, banded, and fringed with gold; mitre of cloth of gold, embroidered with passion flowers; gloves of purple silk, embroidered with gold; ring, a sapphire surrounded with brilliants; pastoral staff of ivory and ebony, set with topaz, emeralds, and carbuncles. There is also a very elaborate and beautiful specimen of an altar, fully vested after the 'revived' fashion."

How the great apostle Paul, or his brother in the Lord, the impetuous Peter, would have wondered, or would have been moved to scorn, had they been called to walk through such an exhibition of ecclesiastical millinery. Yet the men who delight in such things say they are the only successors of those who followed the Son of man in his lowly earthly life, and afterwards preached his gospel in the midst of reproach and poverty. Alas for the Church if they are the representatives of the apostles.—*Presbyterian.*

#### THE LAST OF AUTUMN.

Selected.

"Hurt not the earth, neither the sea, nor the trees, till we have sealed the servants of our God in their foreheads."—Rev. vii. 3.

Why blowest thou not, thou wintry wind,  
Now every leaf is brown and sere,  
And idly droops, to thee resigned,  
The fading chaplet of the year?  
Yet wears the pure aerial sky  
Her summer veil, half drawn on high,  
Of silvery haze, and dark and still  
The shadows sleep, on every slanting hill.

How quiet shows the woodland scene!  
Each flower and tree, its duty done,  
Reposing in decay serene,  
Like weary men when age is won;  
Such calm old age as conscience pure  
And self-commending hearts ensue,  
Waiting their summons to the sky,  
Content to live, but not afraid to die.

Sure if our eyes were straid to trace  
God's unseen armies hovering round,  
We should behold, by angel's grace,  
The four strong winds of heaven fast bound,  
Their downward sweep a moment staid,  
On ocean cove, and forest glade,  
Till the last fowler of autumn shed  
Her funeral odours on her dying bed.

So in this awful armory, Lord,  
The lightnings of the judgment day,  
Pause yet awhile, in mercy stored,  
Till willing hearts wear quite away  
Their earthly stains; and spotless shine  
On every brow in light divine.  
The cross by angel hands impressed,  
The seat of glory won, and pledge of promised rest.

Little they dream, those haughty souls,  
Whom empires own with banded knee,  
What lowly fate their own contrals,  
Together linked by Heaven's decree.  
As bloodhounds hush their baying wild  
To wanton with some fearless child,  
So Famine waits, and War with greedy eyes,  
Till some repenting heart be ready for the skies.

Think ye the spirits that glow so bright  
In front of yonder setting sun,  
Stand by their own unsaken might?  
No—where th' upholding grace is won,  
We dare not ask, nor Heaven would tell,  
But sure from many a hidden dell,  
From many a rural nook, unthought of here,  
Rises for that proud world, the saint's prevailing prayer.

On champions blest, in Jesus' name,  
Short be your strife, your triumph fall,  
Till every heart has caught your flame,  
And heightened of the world's misrule,  
Ye soar those elder saints to meet,  
Gathered long since at Jesus' feet,  
No world of passions to destroy;  
Your prayers and struggles o'er, your task all praise  
and joy.

#### Resistance of Animals to the Effects of Cold.

Just a century ago the great English physiologist, John Hunter, made a series of experiments for the purpose of satisfying himself whether an animal which had been frozen and afterward thawed could live. He confesses that he no only thought it could, but that animals and man might be kept frozen for years, perhaps a century, and then thawed out alive, and thus by a series of freezings and thawings, life be prolonged to more than a patriarchal length. "Like other selemers," he said, "I thought I should make my fortune by it; but an experiment 'undecime me.'" One may well wonder that a man so eminently practical as Hunter should have given a second thought to such a dream. His experiments, however, not only undeceived him, but showed, contrary to the general belief, that various animals, such as dormice, toads, snails, and others, did not survive being completely frozen. In gold fishes and carps, when only the hinder half was subjected to this treatment, the frozen portions did not recover their activity, and in consequence, the death of the fish soon followed. The belief that various animals can be frozen and revive when thawed, has prevailed nevertheless from that time to this, and has gained strength from many sources, especially from the statements of some of the Arctic navigators. It is very probable that those statements are all wrong; but in view of the recent experiments of Pouchet in France, and Dr. John Davey in England, it must be admitted that much doubt is thrown over many of them.

Pouchet constructed a piece of apparatus which he calls a *frigidarium*, in which an animal can be placed in water, or in an air-chamber, as the case may require, be surrounded by a freezing mixture, and thus slowly cooled down until frozen. His experiments, more than eighty in number, were tried on beetles and their larvae, upon caterpillars, humble-bees, water-beetles, slugs, snails, earth-worms, fishes, frogs, and toads. None of these survived after being frozen from one to three hours. The only apparent exceptions were in those cases where the animals, though surrounded by ice, were not themselves frozen. Hunter had already proved that frogs and fishes when cooled down, as they approached the freezing point evolved heat enough to prevent freezing for a long time. There was a striking contrast between a living and a dead frog in this respect. If a live and dead frog were exposed to a temperature somewhat below 32°, the latter soon became solid, while the former did not freeze. He destroyed the life of an egg by freezing; after it was thawed, this and a fresh-laid egg were equally exposed to a freezing temperature; the fresh one showed its vitality by resisting the effects of the cold for more than double the time that the other did. Pouchet found in some of his experiments that, as the water froze and formed a solid, close-fitting wall around the enclosed frogs, the latter became torpid and, of double necessity, immovable; nevertheless they were not frozen, and, if thawed out, recovered. We have ourselves tried this experiment with the same result. Here then, unless the observer is careless, he may be led into error; he must not suppose that, because the water is frozen solid, the contained animal is too; or if, when the ice melted, he recovers his activity, that he has survived congelation. Every one who has seen in his own or other people's ears, the proof that a *penny* be frozen solid and live. Pouchet's experiments, however, go to show that the freezing solid of any considerable portion of an animal causes the death of the parts, and soon of the animal.

so. When Pouchet froze the hinder half of an eel, the fish died soon after being thawed, sooner even than it would have died if it had not been thawed at all. Of two eels frozen to the extent just mentioned, if one were thawed at once, and the other allowed to remain as it was, the latter lived six hours and the former died in half an hour. The same results followed when other fishes were experimented upon. In any case, the freezing of one-half of the body was soon followed by the death of the whole. The cause of death in these last experiments, Pouchet believes to be change produced in the blood-corpuscles. He gives satisfactory proof that these are much changed, and in various ways deformed; but since their parts, as nerves, muscular fibres, and spinal marrow, are also changed in their structure by freezing, he has not shown that these changes may not have as large or even a larger share in destroying life than those in the blood discs.

Dr. John Davey, one of the most careful of experimental physiologists, was induced to repeat M. Pouchet's experiments on frogs, toads, leeches, and several kinds of insects, and, contrary to expectations based on the results of more limited experiments made many years previously, Dr. Davey found Pouchet's investigations fully confirmed. If the whole body of either of the above mentioned animals was frozen even for fifteen minutes, they utterly perished. Even when only the hind legs of frogs and toads were frozen, the animals died soon after being thawed. He therefore agrees with Pouchet in rejecting the assertion so often made by physiologists, that certain animals, if completely frozen, recover their vitality when thawed.—*Nation*.

From "The British Friend."

#### Mission of a Friend to Madagascar.

The meeting to consider the proposal of Lewis Street, of Indiana, to go out with his wife and two children to reside in Madagascar, in accordance with his belief that it was his duty to go here as a religious teacher, was held at Devonshire House, on the 8th of Tenth month. Several friends besides the Provisional Committee on Missions were present. Extracts from the letters of Lewis Street, and some letters of those to whom he was known, were read; and the impression made on the meeting was so favourable, that no doubt was expressed of the fitness of Lewis Street, or of his being properly called to this work; nor did any one express a desire to discourage this noble effort to promote christianity among the heathen.

The opinions expressed were such as were perhaps natural to those who had been brought up in the belief that all efforts to promote religion by Friends should be under the official sanction or guidance of the Society. It was suggested that it would be more satisfactory if Lewis Street went out under the care of the Meeting for Sufferings, to which it was answered that that meeting only took cognizance of those religious concerns which were sanctioned by meetings in correspondence with it. Then some one thought that the mission should be under the care of the Meeting of Ministers and Elders. To this it was fully answered, that this could not be, as Lewis Street was neither minister nor elder.

It was a difficulty in the minds of some Friends that Lewis Street was not a member of the London Yearly Meeting, and it was suggested that he should be advised to get a certificate of removal to this country. This was not pressed, as a minister of enlarged and liberal views expressed the opinion that the objection was of so purely technical a character that it ought not to have

any weight. Indeed, it might well excite surprise that after it was agreed that Lewis Street was a suitable person to go out to Madagascar as a missionary teacher, the question of whether his membership was in Europe or America was thought of any importance. It was pointed out, that although it was a part of the duty of the church to attend to the promotion of peace, temperance, First-day schools, &c., yet it was found in practice that those objects were better promoted by a distinct organization; and, in answer to the opinion that missionary efforts should be under direct Society care, a member of the provisional committee expressed his belief that if it were left to the Society to originate these missionary efforts, they would not be undertaken at all. No Friend ventured to express his dissent from this opinion. It was ultimately resolved that Lewis Street should be invited to come to England without delay, where he might obtain some instruction in the language of Madagascar, &c., and that a meeting should be held at Birmingham in the First month of next year to consider the whole subject.

If so determined, it was thought that it might be arranged for Lewis Street to leave next spring for Madagascar.

For "The Friend."

#### Misuses and Memorials.

##### TOO MUCH ATTENTION TO ONE SUBJECT.

Except it be in the great business of this life, the working out the salvation of his immortal soul, through faith and obedience, a man may devote too much attention,—give too much of his time to the most important matter. A man of one idea, or who devotes his thoughts mainly to one subject, is apt to imagine it to have an importance which it does not really possess, and thus whilst giving all heed to one matter, he may neglect others which on the whole are of much greater consequence.

The father of Linnaeus, the great botanist, was very fond of plants, and had from youth a taste for botany. His mother was an enthusiastic lover of flowers, so much so indeed, as to become quite melancholy when the frosts of winter cut off all these natural beauties from the fields and her garden. Linnaeus was born in the Fifth month, at a time when his mother's garden was in full bloom, and as soon as it was suitable, the babe was taken out among the flowers. During the first year of his life he had no other plaything but flowers. The visitors and strangers who beheld him in his very young days, were surprised to see the child sitting alone, contented and happy, with nothing to amuse him but a lap full of flowers, many of them gathered for him from the fields and woods, through the agency of his mother, who desired her son to love such things with her love. Every night she made a little nosegay for him and laid it on his pillow. The poor mother little imagined she was sowing the seeds of sorrow for her after years. The child became an enthusiast like herself, but botany in his mind swallowed up so much of his time and attention, that the other and more important parts of his education suffered seriously.

When he was sent to the Gynnasium at Wexio, for education, he neglected his general studies, and devoted much of his time in wandering about collecting new specimens of plants and flowers. This was of course very contrary to the wisher of his instructors, and in the year 1724 they sent to his father what the Swedes call a "Job's pat," a bad news letter, in which they complained that the son would learn nothing. The father was in great trouble, and applied to a friend, Dr. Roth-

man, for advice and aid. The doctor took the young lad into his own house, and after examining him for a time, wrote to his father that although Carl would never become a divine, there was stuff in him for a doctor. He made no progress in Latin, until Dr. Rothman, in consideration of his great love for botany and natural history, put him in Pliny and the Georgics, both devoted to the subjects he most delighted in. The time came when Linnaeus must go to the university of Lund, and the professors of the Wexio High School gave him this "testamentor!": "Youth in schools resemble young trees in a nursery, some of whom after the greatest care bestowed upon them grow up straggling and ill-formed, yet as these said saplings when transplanted in a different soil, do sometimes change their nature and become bearers of good fruit, so we trust that you in like manner may, in the university of Lund, also thrive, and do credit to your teachers." Such was the best his teachers could say for him, and at this time his parents were in sorrow on his account. His mother was so deeply tried, that she took a dislike to flowers. She sent for her second son, Samuel, and advised him "to look on all flowers as prickly thorns and stinging nettles."

At the university at Lund, Linnaeus attained some distinction, and was patronized by Celsius, yet his way was made hard for him by his being given his whole energies to one study. He afterwards practised physic for a while, but he is only known to posterity for his botanical knowledge.

Even in religious opinions we may give so much place to one doctrine, as to throw in the back ground others of equal or greater importance. One man may hold and advocate the necessity of christian love, charity and forbearance, to such an extent as to weaken his hands and the hands of others in the duty of bearing a firm and unflinching testimony for the Truth; and on the other hand a zealous contender for fundamental principle, may so hold forth the necessity of always supporting the right with force and unflinching firmness, as to leave little room for any exercise of the christian virtues of patience, meekness and charity. It is desirable that we at all times, support the truth, the whole truth, and in the spirit of the Gospel. If we are really and truly concerned for the prosperity of the Redeemer's kingdom on the earth, we shall endeavour to bear testimony to it in all our actions. We shall be concerned that our lives and conversations amongst men, no less than the words of our mouth, shall be in accordance with its doctrines and testimonies. We shall not be easy to "hold the truth in unrighteousness," or be found contending for some point we think important, in a wrong spirit; nor will we endeavour to promote what we have by overmuch dwelling on it come to regard as of prime consequence, by any actions which are of a doubtful character. Every one of the Lord's commandments are of prime importance, and to be obeyed. Let us give heed to them all, and never, by too exclusively dwelling on any one of them, come to consider others may under any circumstances, be more lightly esteemed.

On Being Offended with those that Fall into Temptation.—It is of the infinite mercy and compassion of the Lord, that His pure love visits any of us, and it is by the preservation thereof alone, that we stand. If He leave us at any time, but one moment, where are we? and who is there that provoketh him not to depart? Let him throw the first stone at him that falls.—*I. Pennington*.

The following, which was found among the papers of our late friend James Emilen, has been kindly handed to us, with permission to place it in our Journal.—Eds. OF THE FRIEND.

Many of the readers of "The Friend" are well satisfied with the choice selections that often appear in its columns, from the writings of our early Friends. We cannot well improve upon them by original matter of our own; for both the style and matter are very agreeable to all who harmonize in religious feeling with them. Lessons of christian instruction, suited to young and old in age and experience, are often brought before us; and now in our times of trial and stripping they have felt to some of us, I presume, like the stores that were gathered in the years of plenty, (though truly they were years of suffering as to the outward,) and are now distributed amongst us for the preservation of life and of our ancient testimonies when they are in danger. The same lessons have to be taught over and over to each succeeding generation, and a thorough instruction in the rudiments or first principles, is indispensable to success in higher branches—so the instruction conveyed in those writings, we believe, has often served to confirm the faith of Friends in every generation since they were written. The selections of latter time have been particularly acceptable, and especially those passages which relate to the exercise of the ministry, which we view of such vital importance to the welfare of our religious Society. I have often thought if the remarks found on this subject in many of the letters and other writings of early Friends were brought more into view, they would form a most instructive variety suited, perhaps, to almost all classes of such as are engaged in this solemn and responsible calling.

For "The Friend."

#### Beet Sugar in France.

The following information respecting the manufacture of sugar, is derived from an article in the last number of the American Journal of Pharmacy.

Although the manufacture of beet sugar was first established in France, yet the fact that the best yielded sugar was first ascertained by Margraf, a Prussian, in 1747. Twenty-five years afterwards another chemist at Berlin, Archedard, renewed the investigation of the subject, under the encouragement of Frederic the Great, but it was not until 1795 that he published anything in reference to it. In theory he maintained the utility of the manufacture not only for the sugar that the beet would yield, but because of the profitable use that might be made of the leaves and pulp after the extraction of the juice, and the manufacture into alcohol or vinegar of the residues of the sugar manufacture. In 1799 he made the first sugar from a farm of sixty acres in the best cultivation. A commission reported favorably, and in the same year the subject was first investigated in France, and the society of agriculture of the Seine awarded a gold medal to Archedard. The wars of the first Napoleon leading to a blockade of the ports of the continent, sugar, in France, rose to 81.20 per pound. This forced the French emperor to a consideration of the best means of obtaining a home supply, and he appointed a commission to examine and report on the matter. In 1810 they made their report in favor of beet sugar. In 1812, Benjamin Delessert succeeded in producing refined crystallized white beet-sugar. Soon afterwards 1½ per cent. of sugar on the weight of the beet worked was

obtained, at a cost of 30½ cents per pound. In 1813, 3500 tons of 2240 pounds were made by 34 manufacturers.

The peace of 1814 raised the blockade from the ports, and the price of sugar fell to 14 cents, causing the stoppage of all the manufactories that had been established for the production of sugar from beets.

France at that time had, as cane producing colonies, Martinique, Guadeloupe, Guyana and Buelon, and in 1814 the government laid a duty of \$80 per ton on French colonial sugar, and \$200 per ton on all foreign sugar. In 1825 the manufacture of the beet sugar began to revive, and in 1828 there were 58 manufactories, yielding 2,685 tons of sugar.

At that time, in order to encourage the refining of sugar in France, foreign and colonial cane sugar was admitted in its brown state only, and a premium upon exportation of the refined sugar was allowed the refiners. These opposed the manufacture of refined sugar from the beet, and combining with the shipping interest in the foreign and colonial sugar trade, demanded an internal tax upon beet sugar. This demand was defeated, especially through the political events of 1830, and the production of beet sugar increased. In 1834 it was 20,000 tons, in 1836 40,000 tons, made in 436 manufactories. But the opponents to this domestic production continued the conflict; and at last succeeded in having an excise tax laid upon it of \$32.88 per ton in 1838. The tax caused a decrease of production, so that in 1840 but 22,000 tons were made, 166 factories were closed, and the manufacture of sugar ceased in 17 departments. In 1840 farther legislation was had, resulting in fixing a duty on colonial cane sugar of \$90 per ton, and an excise tax on beet sugar of \$50 per ton; a discrimination of \$40 per ton in favor of the latter. In 1842 the quantity of beet sugar rose to 35,000 tons, but the colonial opposition was renewed, and the government proposed to the chambers the entire suppression of the beet sugar trade. The chambers rejected this extraordinary proposition, and the controversy was settled in 1843 by an equal duty and tax of \$90 per ton on colonial and beet sugar.

In that year the manufacture of beet sugar was 28,000 tons; the import of colonial sugar 83,000 tons. In 1847 the first advanced to 50,000 tons, the latter to 88,000 tons. In 1850 the beet sugar production reached 62,000 tons, and the colonial cane sugar had decreased to 51,000 tons. In 1852 another change unfavorable to beet sugar was made by the tariff regulations, and this was followed by two seasons unfavorable for growing the beet; but in 1853 a disease of the vine greatly lessened grape alcohol, which doubled in price, when the makers of beet sugar turned their attention to the production of alcohol from the beet. The production of beet spirit in 1852 was 352,000 gallons, and in 1857 it had increased to 9,240,000 gallons. In this last year the vine recovered from the disease, and the manufacture of beet sugar was resumed. In 1858, 124,000 tons were made, and the importation of colonial cane sugar was 116,000 tons.

In 1860 the internal tax was again changed to \$69 per ton on beet sugar; a duty of \$52.88 was laid on colonial sugar, and of \$66.12 on foreign sugar.

The per cent. of sugar now obtained in France is from 5 to 6; the Germans get from 7 to 8; but in Prussia greater care is observed in the selection of the beets used. The cost in the production of beet sugar has been reduced to about four cents per pound; the tax is about three cents,

other charges about 1½ cents, and the selling prices from 9 to 11 cents per pound.

For "The Friend."

"If riches increase, set not your heart upon them. God hath spoken once; twice have I heard this; that power belongeth unto God. Also unto thee, O Lord, belongeth mercy; for thou renderest to every man according to his work." Psalm lxxi. 10, 11, 12.

True it is, that if riches increase, our hearts should not be set upon them, for oft they take wings and flee away. Those who are blessed with an abundance of this world's treasure, should remember, that power belongeth unto Him, who can bless, the little, and blast the much. Therefore how important is it, that we should be found using this blessing to His honor; for we shall have to render an account for this gift, as well as for the talents committed to our care for improvement; and now, while the poor, and him that hath no helper, is stretching out his hand towards this Society, let us open ours wide, and pour out, for the comfort of a people, who have looked upon us as their friend always, and especially in this time of their peculiar trial and need. For we that have plead their cause heretofore, and befriended them at all times, and on all occasions, let us rejoice that a door is now open for proving our brotherly kindness and christian love; and not only on this account, but an outlet is presented for the accumulated wealth in the Society, which might prove a snare to us and our children, and finally stand between us and Him, from whom the young man "went away grieved, for he had great possessions." The liberal man deserveth liberal things, and by liberal things, he shall stand.

For "The Friend."

The following communication was handed to Charles F. Wakefield and wife, by the writer, James N. Richardson, three days before his decease, which occurred in the Fifth month, 1847. With directions to make use of it in any way they may think proper. "Being confined with cold for near three weeks, and at the beginning, when having much time in my lonely hours for contemplation, my mind has been frequently turned upon our beloved Society, and the present afflicting state of it wherever located. I have endeavoured by right direction either to do or to suffer, and I think I have arrived at the conclusion, at present there is little room to move, for those who love and most surely believe in the ancient doctrines and testimonies committed to our worthy elders, and promulgated by them to the world fearlessly, through deep sufferings, grievous scourgings and buffetings, noisome prisons and filthy dungeons, even to the loss of life, which they did not fear dear in comparison of being found faithful to their Holy Leader, our dear Saviour, the Lord Jesus Christ, and handed down to us as a Society, to uphold and maintain undiminished and without compromise. My mind seems to settle down in the belief that the compact is so strong, and the influence so great, of the chief promoters of those unquakerly, Episcopalian doctrines and views, that the humble minded, faithful believer in the true christian views of our worthy predecessors, must be willing to suffer all the appointed baptisms. There seems arrayed so much talent, so much wealth, and so much worldly influence, combined with holding high stations in the church, that things are likely for a time to be carried in a wrong course. Their new views are agreeable to the people, who like an easy, worldly religion. Patient waiting exercise is tiresome; do not suit the itching ears. So, instead of the right qualification, waiting to be baptised into a sense and state of meetings, and concerned to feel

the renewal of Divine power, the people are fed with the mere recital of the truths of the gospel, and given to rest in an assent, or belief in the ever-lesser sacrifice, and what our dear Lord has done for mankind without us. By this belief they are taught to believe they are safe, without leading to deep searching of heart, and continued watching unto prayer, which will produce good works, fruits, and progress to sanctification; which must be attained before we are in a capacity to witness justification; here we have, (especially in England,) long, lifeless sermons, calculated to fill the head, but never reach the heart. Oh! how we have been tried with these communications like words of course, all the same from time to time, till the mind is wearied, and the heart that is panting for living bread is sick. I believe we must be vigilant, till the Lord sees meet to say that it is enough, bear and forbear, (the cause is His;) but I have no doubt that He sees the trials of His afflicted children, and although I may not live to see it, I fully believe this thing will not stand, but that the testimonies of Truth, and the christian doctrines given to this people to bear, will not be allowed to fall to the ground, but that an honest, unblemished, simple people, will be enabled again to raise the standard of Truth, and to promulgate the same, and to carry on the work assigned, thus warmed by zeal and creature activity, and that the heterodox writings of Gurney and Ash, will remain as on the shelf unasked for. Before the London Yearly Meeting it was insisted there should be no divisions, but all must be unity and harmony; as if true unity can be brought about or maintained by the contrivances of men, however influential. Surely the true unity is in our head, Christ Jesus, and emanating from Him, the fountain of love, to which all the contrivances of man will be found no more than a rope of sand. And whilst the harmony is being openly proclaimed around, hundreds know that no such state exists. I have carefully recurred to the time of our own Yearly Meeting, when unity did prevail to as great an extent as we have a right reasonably to expect in a large congregation, and I feel quite easy with our conclusions, and that we did what was best for us. We have not in any way committed ourselves, but by silence we have allowed me to unfold what may hereafter be our right course, and whoever may live to another annual assembly, if they should see right to continue the same course for another year, it might also be right, but that must be left to Him who knows the end from the beginning.

JAMES N. RICHARDSON."

Glenmore, Ireland, Tenth mo. 9th, 1846.

**A Worldly Spirit.**—A worldly spirit, when it rooted and cherished, runs through the whole character, insinuates itself in all we say and think, and do. It is this which makes us so dead in religion, so averse from spiritual things, so forgetful of God, so unmindful of eternity, so satisfied with ourselves, so impatient of serious discourse, and so alive to that vain and frivolous intercourse which excludes intellect almost as much as piety on our general conversation.—*Hannah More.*

respective neighbourhoods, in hope of having the desired information through this source, in time to lay before that meeting. Owing to some misunderstanding, the replies have been received but recently, and from them we make the following short compendium.

#### RALEIGH.

The answers from this section are not very explicit. The officer says the decrepit and worthless will be likely to suffer. How many are included in this category is not stated, nor what he considers to constitute the worthless. There is no information given in relation to schools.

**Rochingham County.**—In consequence of the drouth that prevailed during many weeks in the summer, the crops failed, and there has not been enough grain of every kind raised to feed the inhabitants. The superintendent says: "A great many freedmen that were working for a share of the crops will not make anything. It will take more than they have made to pay for what they ate while making it. They have had no clothing, and have nothing to buy clothes with. They are liable to get sick, and probably some of them will be; and the county is not able to help them much." I think there will be great suffering in several families for want of food, clothing and medicines." There is not a school in the county for freedmen.

**Columbus County.**—Partial failure of crops and consequent suffering among the freedmen, but the county able to relieve it. No schools for freedmen.

**Robeson County.**—Little destitution, principal want is for shoes for some of the children. A school much needed, but they are unable to obtain a school-house.

**Bladen County.**—Elizabethtown.—There are from fifteen to twenty grown persons and eight or ten children in this town who will be likely to suffer for food and clothing during the winter. No provision made by the county to aid them. The coloured people are very desirous to learn, and the superintendent has forty dollars deposited in his hands by them to aid in starting a school. He requests that aid may be extended to both those who are destitute and those who are so anxious to be taught.

**Brunswick County.**—The sheriff of this county states: "the civil authorities are unable to provide for the destitute whites and blacks, and that numbers must perish during the coming winter unless provided for by the government." Six schools established.

**Hanover County.**—The civil authorities say they are able to provide for the destitute of this county, but complaint is made that the suffering colored people are not cared for.

**Beaufort.**—Sub-District.—There is much suffering anticipated during the coming winter among both poor whites and blacks. The Poor Wardens are unable to meet the demands likely to be made on them. Schools good, and well attended.

**Roanoke Island.**—There are here about one hundred and fifty freedmen standing in need of food and clothing.

**New Bern.**—One hundred rations daily are and will be required to sustain the utterly destitute, who, if not helped must starve. At Johnsonville, about two miles from New Bern, thirty rations daily are required.

**Sub-District of Kinslow.**—Report states, "the freed people are in great want of food and clothing, and they will doubtless suffer this winter unless some means are taken to provide for them."

**James City.**—Sub-District.—"The actual cases of suffering at present are few, but during the

winter when work is scarce there will be suffering in a great many families." "The nature of the suffering will be from want of food and clothing." From 175 to 200 freed people, it is stated, will be in want. "Unless schools are opened by benevolent societies there will be about 700 children left without schooling."

**Washington, N. C.**—Poor Wardens able to take care of all who may require aid. A school for coloured children much needed.

**Plymouth, N. C.**—Poor Wardens make no provision for helping the freedmen. Frequent applications are made to the superintendent for assistance. "In some instances families have been driven off from the farms where they have worked all summer, upon the plea that they had too many children, and their employer did not feel able to support them through the winter; or with the complaint that they were unpuident." There will be much suffering for want of food and clothing. The protection of civil law not extended to the blacks. No schools for freedmen.

**Murfreesboro.**—Evidences of suffering for want of food and clothing, but to what extent not known.

Reports from Tarboro, Goldsborough, Johnston and Warren, state destitution and probable suffering for want of food and clothing during the coming winter.

When we take into consideration that in consequence of a failure of crops, a large section of the South, extending from the lower border of Virginia to Texas, and embracing the central portion of all the intermediate States, viz: North Carolina, South Carolina, Georgia, Alabama, Mississippi and Louisiana, is threatened with famine before another yield can be obtained from the soil, and that every article of food is already commanding exorbitant prices, we can readily understand why it is that the poor inhabitants, both white and black, are already suffering for the want of the necessaries of life. They have nothing wherewith to buy clothing, and unless it is dispensed to them by the hand of charity, many probably will perish from cold and the diseases resulting from exposure.

The government appears to have decided not to make further provision for the poor blacks, and the State authorities, if they do anything, will confine their assistance in most cases to the whites.

We have taken from the "London Friend" the communication headed "Mission of a Friend to Madagascar," in order that our readers may be apprized how the missionary project is progressing among those professing with us in Great Britain. We can unite with the opinion expressed by "a member of the provisional committee," that if it were left to the Society to originate these missionary efforts, they would not be undertaken at all." It therefore appears to us that the whole movement, and the conclusion to send out a member, living and having his right as such in this country, or any other member, "as a religious teacher," by a "distinct organization," unconnected with or responsible to any regularly organized meeting of Friends, is a wide departure from the principles and order of the Society of Friends.

The same "Provisional Committee on Missions," may, it appears to us, on the same ground, send out those professing to be ministers among Friends, to preach among the heathen.

We do not judge the motives or objects of those who have united together to forward this scheme, but we deplore the course taken in this as in other things deeply affecting the principles

## THE FRIEND.

TWELFTH MONTH 1, 1866.

Prior to the meeting of the Association of Friends of Philadelphia and its vicinity, to aid the colored Freedmen, held in the Tenth month last, some queries were addressed to officers of the Bureau in North Carolina, respecting the condition and prospects of the freedmen in their

and discipline of the Society, under the persuasion that it must ultimately lead to a sad result.

#### SUMMARY OF EVENTS.

**Foreign.**—A Paris dispatch of the 23d, says a popular outbreak against the government of Spain is likely to break out next month. There are vague rumors that the Queen will abdicate to avert the threatened storm.

Ratzava will succeed the Baron Ricasoli as Italian Minister of Foreign Affairs. This change is supposed to indicate a determination in Italy to terminate the Pope's temporal power. The government of Italy will once. Intelligence has been received in Florence, from Rome, that it has been decided in a secret consistory, that if the Pope be obliged to quit Rome he will seek an asylum in Malta. The ecclesiastical authorities of Malta have received a semi-official notification of this decision.

The Prussian Chambers have agreed in censuring the government for the sale of the Cologne Railroad without their sanction.

An imperial decree has been issued, remitting the exceptional imposts taxes and monopolies in force in four hundred and eighty-two communes. Four hundred thousand citizens and peasants will thus become proprietors of their estates in consideration of the payment of certain indemnities.

The war in Japan is supposed to be terminated. The Fenian agitation in Ireland continues, and many arrests of persons and seizures of arms have already taken place. It was reported that more troops would be sent to Ireland.

The condition of the Mexican empire is the leading topic in England and on the continent. The *London Times* believes that Maximilian has already abdicated. It is reported that twenty transports will be sent to Mexico in the next few days, immediately after the arrival of the next mail from Mexico. According to recent intelligence received at Washington, the Liberals hold the whole State of Puebla, the French keeping only the line of the main road from Vera Cruz to Mexico. Maximilian's abdication is finally announced in a special dispatch from New Orleans. He has left Vera Cruz for Mexico, leaving the government in the hands of Bazaine and Castelnau, the latter of whom is understood to have full authority from Napoleon to supersede Marshal Bazaine, if necessary. It is also stated that the preparations for embarking the French troops have been suspended for the present. The French have been defeated with heavy losses in a recent battle, no less than 3000 of them having been killed, and 2000 taken prisoners.

On the 26th the Liverpool cotton market was steady. Middling uplands, 13½ d. Brentfords unchanged. Cottons, 90. U. S. 5-20s, 7½ d.

**UNITED STATES.**—*The Alabama Claims.*—Nothing definite has yet been received from the British government in relation to the claims for indemnity growing out of the depredations committed on American commerce by the Alabama and other rebel privateers. The correspondence is still in progress between the two governments. The present British ministry, however, show a better disposition than the former one in the consideration of the subject.

*Philadelphia.*—Mortality last week, 270, none from cholera.

*The Mission to France.*—General Dix, the newly appointed minister to France, sailed on the 24th ult. He is instructed to inform the French Emperor that the arrangements entered into between the two governments, in regard to the withdrawal of the French troops from Mexico, must be carried out.

*New Mexico.*—Gen. Mitchell, Governor of New Mexico, reports the Indian war in that territory entirely at an end. There are only a few Apaches who still remain hostile, and they are quite insignificant in number. Silver mining is being prosecuted successfully. The Governor believes the territory is the richest mineral district belonging to the United States.

*The Third State.*—Only now consists of about 45,000 men. It is intended to raise it by recruiting to a total of 55,000, including 10,280 cavalry, and 5,650 artillery.

*Lake Superior Copper.*—A mass of copper, weighing 15,180 pounds, arrived at Pittsburg a few days since by the Cleveland and Pittsburg railway. It came from the Cliff mine.

*Ohio.*—The lake tunnel for supplying the city with water, was completed on the 24th ult., except a short distance which was perforated with an auger, and showed that the task of making the two ends meet had been accomplished with scientific exactness.

*The British Mills.*—The United States Postmaster-General has agreed upon a treaty with Great Britain whereby postages to and from are reduced to 12 cents, pre-paid. The postage is to be collected and kept by the government where the letter is mailed, and each side is to keep its own agents.

*The Cotton Crop.*—The receipts of cotton at all the southern ports, since Ninth mo. 1st, the opening of the cotton year, amount to only 320,000 bales, against 450,000 bales during the same period in 1865.

*Telegraph Extension.*—The Western Union Telegraph Company have opened their new cable line over the route to California via Denver City, Bridger's Pass, and the overland stage route as now travelled. This line is in addition to the old line via Fort Laramie and the South Pass. The same company have also opened a new line between Salt Lake City and Montana.

*Miscellaneous.*—A large meeting was held on Toronto, on the 21st ult., at which were adopted urging the Canadian people to take measures for annexation to the United States.

*The Christian Advocate,* of New York, gives statistics showing the rapid progress of Methodism in this country. In 1776, the Society had 24 preachers and 4,923 members; in 1857 the number of travelling preachers was 7,576, and of local preachers 8,602; the number of members was 1,032,184, not including the organization in the Southern States. By the separation of 1844, the Methodists lost 1,345 travelling preachers, and 495,298 members.

The population of Brazil is now estimated at 9,000,000, or about 1,707,000 are slaves.

A recent census of Chili shows a population of 2,001,145. By the census of 1858, Chili had 1,558,453 inhabitants. The export trade is given at \$31,760,942, against \$20,126,461 in 1857. Chili has become a large wheat exporting country.

It is estimated that the annual consumption of paper in the United States amounts to four hundred and fifty millions of pounds. In Great Britain about two hundred and twenty millions are used every year, and in France about one hundred and ninety-five millions.

The list of pensioners on account of the Revolutionary war, now reduced to a single individual, Samuel Downing of Saratoga county, New York. In 1861, the list of pensioners numbered 63, of whom 14 resided in the rebel States, and have not since been heard from, the others, numbering 48, have died.

A correspondent from the Chinese Islands writes, that the shipping at that place averages about ninety, that in two years it is disappearing so fast, that within three years at most, it will probably all be removed.

*The South.*—A commission has been appointed to award compensation to loyal slave-owners of Maryland whose slaves were drafted into the army during the war. According to the South Carolina and Georgia newspapers, the crop of Sea Island cotton is estimated for this year at from 15,000 to 20,000 bales. The largest crop ever raised was about 50,000 bales. The *Charleston News* says, the result of free labour in that State, notwithstanding many drawbacks, is rather encouraging. The cotton growers, who are situated in the manufacturing districts, are stated to have based their crop on a quarter of that before the war.

The Legislature of Arkansas has elected John T. Jones as United States Senator.

George H. Stuart, of Maryland, late a major-general in the rebel service, has been pardoned by the President, upon the recommendation of Gen. Grant and other Federal officers.

John A. Winslow has been elected United States Senator from Alabama.

General Foster's report presents on the whole a satisfactory view of affairs in Florida. Only at two points had it been necessary to send troops to assist the officers upon the barrier. The education of the blacks is progressing favorably, the whites being even desirous of seeing the freedmen educated and their schools prosperous. The close of the working season has brought with it numerous cases for arbitration.

*The Charlotte (N. C.) Times* speaks favorably of the conduct of the late fire occurred in Selma, Ala., on the night of the 15th, destroying property to the estimated value of over \$400,000.

*The Markets, &c.*—The following were the quotations on the 26th ult. *New York.*—American gold 140½. U. S. sixes, 1881, 112½; ditto, 5-20, 1862, 106½; ditto,

1865, 106½; ditto, 10-40, 5 per cents, 99½. *Superfine* State flour, \$7.65 a \$9.75. *Shipping* Ohio, \$10.25 a \$11.35. *Baltimore* flour, common to fair extra, \$11.40 a \$13.50; trade and family, \$13.90 a \$16.50. No. 4 spring wheat, \$2.30; amber State, \$2.40 a \$2.55. *Western* oats, 64 cts.; State, 67 cts. *Rye,* \$1.28. *New yellow corn,* \$1.05; western mixed, old, \$1.24 a \$1.25. *Middlings* cotton, 34½ a 35 cts. *Philadelphia.*—*Superfine* flour, \$8 a \$8.50; extra, family, and fancy brands, from \$9 to \$16. *Fair Pennsylvania* red wheat, \$2.70; southern red do. do., \$2.60. *Extra* do. do., \$2.50 a \$1.20; new, 95 a 98 cts. *Southern* oats, 59 a 60 cts. *Cloverseed,* \$9 a \$10. *Timothy,* \$3 a \$3.25. *Flaxseed,* \$3.25. *The arrivals* and sales of beef cattle reached about 2500 head. The market was dull and prices fully 1 cent per lb. lower. *Extra* beef, \$15 a 15½ cts.; fair to good, \$13 a 14 cts. and common, 10 a 12 cts. per lb. About 12,000 sheep were sold at 6 a 6½ cts. for extra, and 4 a 5½ cts. per lb. gross for common. Hogs were dull and lower, about 3300 sold at 10 a 10½ cts. per lb. net.

#### RECEIPTS.

Received from Wm. Picket and Jos. King, O., per E. Hollingsworth, Agt. \$2 each, vol. 40; from Henry Post L. R., \$2, vol. 40; from Lydia T. King, Pa., per Dr. C. E. \$1, vol. 39.

#### WANTED.

A Male Teacher for Friends' School at Rancocas Applications may be made to Henry Hills or Samuel Williams, Rancocas P. O., Burlington Co., N. J.

#### SCHOOL FOR COLOURED CHILDREN IN RASPBERRY STREET.

A well qualified female teacher is wanted to take charge of the boy's school under the care of the Monthly Meeting of Friends of Philadelphia for the Southern District. Application may be made to

Caleb Wood, 524 South Second St.  
Thos. Elkinton, 118 Pine St.  
Geo. J. Scattergood, 413 Spruce St.

#### WESTTOWN BOARDING SCHOOL.

WANTED, A TEACHER for the BOY'S SECOND MATHEMATICAL SCHOOL. Apply to Samuel Hills, Wilmington, Del. Thomas Evans, 817 Arch St., Phila. Joseph Scattergood, 413 Spruce St., Phila. Charles J. Allen, 304 Arch St., " "

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, — JOSHUA W. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, on the 22d of the Eleventh month, at Friends' meeting-house, Moorestown, ... J. SAMUEL L. ALLEN, of Cinnaminson, to SARAH H., daughter of Elisha Roberts, of the former place. To this dear friend we believe might be applied the words addressed by our adorable Redeemer to his disciples, "Behold an Israelite indeed, in whom is no guile." His circumspect walk and consistent example were well calculated to commend the religion he professed to those around him; while the scrupulous care and assiduity with which he performed his duties in this religious society, gave evidence of his desire to serve his generation according to the will of God. In his last illness he said, "Never in my whole life have I felt more unworthy of the goodness and compassion of my Heavenly Father, but never have they been more abundantly bestowed." "Mark the perfect man, and behold the upright, for the end of that man is peace!"

WM. H. PILE, PRINTER,  
No. 214 Peasr street, between Dock and Third.

# THE FRIEND.

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

For "The Friend."

## The Channel Islands.

(Continued from page 106.)

He who has not seen Sark has not seen the Channel Islands. The geography books that we read to learn when we were young told us that it was a barren and rocky island, and this was what they told us. We were left to infer that it was uninhabited and desolate, a place little favored by God and forsaken by man. Rocky it is, not barren. It is so rocky that the Lords of Admiralty once steamed round and round the island, and finding no landing place gave up their intended visit in despair. But the interior is fertile enough. The island is a bowl, and the country of it abounds with fruit and flower and fern, and there are nooks of luxuriant green and leafy ferns, such as Devonshire would not be ashamed of. So far is it from being uninhabited, that the only fear of the islanders is that they will be repopulated. The navigation thither is intricate and not a little perilous, so that the Sarkites who have learnt to thread the watery maze, do not encounter the dangers of rock and shoal, but a reputation for skill and hardihood. A trader goes from Guernsey to Sark, about once a week in summer, and luggers go every day, but in winter when the wind is tempestuous, and more often when there is a calm accompanied by a fog, it is often impossible to hold communication more than a week. Twelve days have been known to elapse before the Sarkites could learn anything of what was going on in the great world of Guernsey.

\* \* \* \* \*

There is one peculiarity which cannot but heighten the strange dreamy thoughts that the visitor must have at finding himself on such a spot as this. The Sarkites walk about in sable garments. In Guernsey there seemed to be an unusually large number of mourners going about the streets; but in Sark the whole population are clad in black. One is tempted to suppose that the great penitence has swept over the people, and left one-half of them lamenting for the other half laid in their graves. You cannot learn that such calamity has befallen them. Their needs appear to be due to other causes. The land is small, and the inhabitants intermarry so much that they are like one large family, of which one member suffers all the other members share. That is one reason; but there is another. The Sarkites are an economical race, and having had a good black stuff gown, or a good black coat, they will wear it until it is worn out. They do not adopt the modern London fashion of

wearing mourning three weeks. Tenderness and thriftiness alike forbid. They are not only tender and thrifty, they are independent. They pass their own laws, and no one has the right of veto save the seigneur. Their parliament of forty meets in the school-house, and there the island budget, about £80 a year, is voted. They have a prison, and tradition tells that there was once a prisoner, and that when she was about to be locked up for the night she begged that the door might be left open as she was nervous if left alone. The request was complied with, and the prisoner made no attempt to escape, thinking probably that concealment would be impossible in a country with such narrow limits as Sark. Once upon a time there was nearly a rebellion on the island. It was the introduction of the penny post which caused it. Before that event the islanders used to go to meet the boat which brought their mail, and seize their letters without asking leave. The necessity of seeing them carried away to the post-office, and of waiting until the eagerly expected missives were delivered, irritated them in the highest degree, and their anger was not quickly appeased. The chief authority in the island is a clergyman, who is not only seigneur, but high sheriff, president of the Legislative Assembly, and commander of the forces, which number about a dozen men, of whom about ten would be officers. His is a very mild despotism. The land tenure is regulated by the strictest primogeniture. The Sarkites are so careful that their island shall not be overpopulated, that the younger sons are not permitted to inherit their father's estate, but are expected to leave the island and push their fortunes in Guernsey or the great world beyond. Notwithstanding these precautions, land attains very high price of £300 an acre. French is the language almost universally spoken; but by no means Parisian French, but a *patois* to which the people cling so tenaciously, that although taught English in the schools, they speedily forget it. The seignory is the chief sight of the island, and very charming is it. A quaint castellated building, with terraces on which peacocks display their fans, with velvet lawns in front and hollyhocks of many colours growing ten feet high, and a brilliant blaze of flowers such as are not often seen north of Italy, and luscious fruits that crowd the walls, and bushy glens through which one descends to a precipitous glen, that looks across a narrow gulf of sea upon an island which to those who know Cornwall, will at once suggest Tintagel—such is the seignory.

Little Sark is joined to Sark by a very narrow neck of land or rather of rock. A pathway, eight feet broad with cliffs sheer down 200 feet on either side, and with no protection for the dizzy traveler, is the highway from great to little Sark. As might be expected, there is not much communication between the two, and it is stated that some of the inhabitants of the smaller division have never once ventured beyond its boundaries, and they seem to think it so wide a world that they tie up all their fowls by one leg lest they should stray. The people subsist by farming and fishing. To go from Sark to Jersey is to return from

almost eremite seclusion to the turmoil of the world. St. Helier's, the capital, is a place of 30,000 inhabitants, a population nearly equal to that of all the islands, save Jersey, put together. Your first contact with the Jerseymen does not give you a favorable impression of them. The porters that beset you as you land at the quay are most obtrusive in their offers of service; but though competition is keen there is no abatement of price, and the pertinacity with which they follow you is equalled by the largeness of their expectations if you engage them. The cabbies are less numerous and are therefore more extortionate. The fares which they demand would astonish even the most audacious of their *cafres* in London; and they have this advantage, that their extortion is legalized. The antipathy which these first specimens of Jerseymen excite, is softened by the sight of the Jersey women. These are as remarkable for beauty as their sisters in Devonshire, and both have the same style of beauty. St. Helier's is a town that does not improve on acquaintance. The public buildings are poor; the streets are narrow, though the shops are good. The market is capacious, but here as at Guernsey the visitor gets undecieved as to the supposed exceeding cheapness of living in the Channel Islands. True, the taxes are light, and thus one item of expenditure is saved. Brandy and all kinds of spirits can be obtained at little more than the cost of manufacture—the other and purely legitimate articles of household expenditure are not apparently lower in price than in many of the smaller towns of England. House-rent, moreover, is by no means low, so that the popular belief about the small expenditure required in the Channel Islands, if it were true some years ago, is no longer so.

Between Guernsey and Jersey there is more of rivalry than of intercourse. The two are jealous of each other. They are however alike in many respects. Among others, they both have a rock fortress guarding the harbor, with a distinguished history attached to it, but are picturesque rather than useful. Modern works of defence upon the hills above overlook and supersede the island stronghold. Fort George overshadows Castle Cornet; Fort Renon overshadows Elizabeth Castle. The two castles were alike in holding out for the king, Charles I, when the islands had declared for the Parliament. Both were reduced at last; Castle Cornet after a gallant resistance of nine years, Elizabeth Castle after a resistance of about six weeks; capitulation being induced less by the strength of the enemy than by the accidental explosion of powder which caused the death of a large number of the garrison.

\* \* \* \* \*

The climate of the Channel Islands is singularly agreeable. The mean daily range of temperature in Guernsey, is but 8° 1', just one half of that at Greenwich, and during November, January, and February, is but 6° 2'. The mean temperature of the year is 51° 5', which is 2° 5' higher than at Greenwich. The consequence is, that snow and frost are almost unknown; the geranium, the fuschia, the myrtle, and the camellia, grow out of doors through the year, and the

last, especially, attains to the dimensions of a tree. The highest recorded reading of the thermometer is 85°, the lowest 24° 5', the two extremes having been reached within six months of each other—namely, in the summer of 1846, and in the January of 1847. The mean rain fall is under 85 inches. Dense fogs are somewhat frequent, especially in November. In Jersey the range of temperature is somewhat greater than in Guernsey. It seems strange that there should be any difference of climate between two islands so closely adjoining as Guernsey and Sark. Yet there is so great a difference that Guernsese men, languid for the want of change of air, go to Sark to be braced. The bracing nature of Sark air is quite proverbial, and this quality may be partly due to the fact that the ground in that island is higher than in Guernsey.

(To be continued.)

### Some Observations on Christ's Sermon on the Mount.

"And seeing the multitudes, he went up into a mountain: and when he was set, his disciples came unto him, and he opened his mouth, and taught them, saying," &c.

Our Lord seeing the multitudes, for the advancing his Father's glory, his own kingdom, and the good of souls, went up into the mountain, and set in the power of the Father; and when so sat down, his disciples came unto him; which shows the necessity of coming to Christ, to hear his word, and that Christians ought to assemble themselves before him, that he may speak to them either immediately, or by his ministers if he pleases to enlarge the heart of any of them to declare his word; and as his disciples then personally came unto him, so now we ought to come to him in spirit; and when but two or three are so come to him, He is as really present spiritually, as he was personally in the mount. And as this meeting in the mount was powerful and glorious, so will all these be, in measure, where Jesus is really present in spirit.

"And he opened his mouth, and taught them." Thus when true believers meet before Christ, he teaches them, and opens the mysteries of the kingdom of God, and speaks truly to the state of the people, even now spiritually, as he did then vocally; and his word is with power and great glory. Oh! may all his servants and ministers, who are sensible of his divine call, minister according to their several gifts and capacities, in his power, and by his holy and divine authority. This must change the hearts of poor mortals, and forward the work of reformation, which, with godly sorrow it may be truly said, goes on but too slowly in this world. Christ being thus set in the power of his Father, opened his mouth and let fall a shower of blessings on these hearts who were prepared to receive them. For his great love and tender compassion are generally manifested to poor souls when they, with love and zeal to him, and for the honor of his great name, assemble before him. He begins and says,—

"Blessed are the poor in spirit, for theirs is the kingdom of heaven."

It is a safe and blessed state to be spiritually poor, and to be rightly sensible of it before the Most High. For then we are nothing, and have nothing, but from the Lord: and without him man sees himself undone: his soul must starve, he must go naked, if the Almighty do not feed and clothe him. When people see themselves poor and wretched, miserable, blind, and naked, without Christ, notwithstanding all the fine things they may enjoy in this world, which is of a fading nature, oh, then, how the soul cries and begs for

mercy and grace! A dry form of words will not satisfy it, but it begs with tears, Lord help me, or I perish! Save me, or I am undone forever! Here the soul humbly approaches the throne of grace by prayer; and if an answer is not quickly received, for such a soul is apt to think the time long, it waits patiently with that servant of God, who said, "Though he slay me, yet will I trust in him:" for I know there is no help for me but from thee, oh, my God, and my Saviour! saith the truly poor soul. The food which must keep life in me, is thy word: and the raiment which I want, is thy righteousness, as thou wroughtest it for me, and werkest it in me also. The Lord looks with a compassionate eye on such souls, and doth not use to turn them away empty; but as they abide in the patience, waiting for his appearance in hope, he assures them of the kingdom; and a great change is witnessed; for the blessing of Christ makes them rich, which adds no sorrow with it. Their greatest sorrow was, and is, for want of it; now their treasure and heart is in heaven, and heavenly things are their chiefest delight; now they are clothed with Christ's righteousness, he hath put it upon them, and they show it in the sight of men, a thorough change being wrought both within and without also; "The holy Spirit bearing witness with their spirits, that they are the children of God;" and Christ says theirs is the kingdom of heaven.

"Blessed are they that mourn: for they shall be comforted."

The mourning here spoken of, is of a godly sort, which may sometimes appear outwardly. First, The soul may mourn for its own sins and iniquities; Second, For want of a Saviour; and Third, For the iniquities of others. "All have sinned, and come short of the glory of God;" and since we have all sinned, we have all need to mourn before the Lord, and bow ourselves before the Most High; and when he sees that we are humbled before him, he will comfort us. Christ will send the Comforter, the Spirit of Truth in his name, who will come unto us; and when he is come, we may plainly know that it is he, by what he doth, according to Christ's own rule, which is infallible and certain. He says, "When he is come, he will prove, or convince the world of sin, of righteousness, and of judgment; of sin, because they believe not on me; of righteousness, because I go to my Father, and ye see me no more; and of judgment, because the price of this world is judged." Thus, according to Christ, that which shows us our sins, which convinces us of them, is the Spirit of Truth, the Comforter; and after we have mourned for the sins of which he convinces us, then he comforts us with inward comfort and consolation. This Comforter also convinces us of our formal righteousness, when it is only formal, without the power of Christ; and then the soul mourns after the life and power of godliness, which indeed is great gain, with true contentment; and hath the promise of the things of this life, and of that also which is to come. Here we are comforted by the Spirit in the promise, in which we have faith to believe in Christ, that he will verily do as he hath promised. It also convinces us of judgment, when we judge with a wrong judgment; and when we mourn for our mistake, he makes us sensible of his righteous judgment, which judges the prince of this world, who is judged by Christ; and then instead of mourning, we are ready to sing with the saints of old, "Salvation, and glory, and honor, and power, unto the Lord our God, for true and righteous are his judgments, for he hath judged the beast which did corrupt the earth, and hath revenged the blood of his servants at her hands."

The soul being truly in love with Christ, and he being absent from it in some sense; or if he seem to stay a great while from it, although it be only to prove it; this makes it mourn like the spouse in the Canticles, who sets forth the beauty and excellent parts and comeliness of her beloved, and her sorrow is, that he has withdrawn himself, and well may she soul be sorrowful, when Christ spiritually withdraws himself. The children of the bride-chamber mourn in the Bridgroom's absence, but rejoice in His presence, who is the very perfection of beauty and holiness. But the soul abiding in his love, seeking him and waiting for him, in his own time he will certainly come to that soul; for He is the truth who saith, "Blessed are they that mourn, for they shall be comforted."

Again, pious souls cannot but mourn for their sins and abominations of the times, which are a great exercise to them, and affect them with sorrow and mourning; but they are comforted with blessed promises, which the Holy Ghost, at times immediately applies to their souls, as recorded in the holy Scriptures; and let it be remembered that all our good times are in the hands of a Lord. It is recorded in the holy Scriptures, that God would have his people comfortably spoken to; and that he would "give them beauty of ashes, the oil of joy for mourning, and the garment of praise for the spirit of heaviness; that they might be called trees of righteousness, the planting of the Lord, that he might be glorified."

"Blessed are the meek: for they shall inherit the earth."

Be not high-minded, saith one of his servants, and another saith, God resisteth the proud, I giveveth grace to the humble. Again, "The meek will be taught his way, and the meek will be guided in judgment;" as the holy Scripture witnesseth. Well said our holy Saviour, that the meek shall be blessed: grace is given to them, and God their teacher and their guide in judgment; a blessed gift, teacher, and guide. It is a great blessing indeed, to receive grace from Almighty God, to be taught his ways, and to have the One to be our guide in judgment. He who hath all power in heaven and in earth committed in his hand, says that the meek "shall inherit the earth;" they have the truest enjoyment of all things of this life; whereas the proud and self-sufficient are a burden to themselves and others, hardly any thing pleases them, or is good unto them; when, on the other hand, the meek contented mind hath a continual feast.

"Blessed are they who hunger and thirst after righteousness; for they shall be filled."

Let it be remembered, that as our mortal body cannot enjoy health long without a natural appetite for meat and drink, so our souls cannot live into holiness without a spiritual hunger and thirst after the righteousness which Christ puts upon his saints; not by imputation only, actually also. Such souls he will fill, as M<sup>r</sup> witnessed and bore her testimony to the T<sup>r</sup> thereof, viz: "He hath filled the hungry with good things, and the rich he hath sent empty away. When we are emptied of sin and self, there is room for the Almighty to pour his Spirit into us. If we would fill any thing, it must be emptied; so must we be empty, if we hunger and thirst after righteousness: then shall we pray to our heavenly Father for divine food, it will be our meat and drink to do his will; we shall delight to feed upon his word; as Christ says, "Man shall not live by bread alone, but every word that proceedeth out of the mouth of God." This is holy food for the soul, which nourishes and keeps it alive unto God; with

is it is dead, notwithstanding it may have the me of a living soul. As this hunger and thirst, desire, must be spiritual, so must the food be so; it being "The Spirit that quickens," and rest of life; therefore let a spiritual hunger and thirst after God and his righteousness be in the soul. A righteous man being greatly thirsted after a living Lord, cries out, "As the hart panteth after the water brooks, so doth my soul after the living God." And this holy thirst was greatly quickened, so that his heart was times sweetly quickened to praise the Lord. It is true, we have an adversary, that would be filling us with many guises, fleshly, worldly, and satanical; but we are shut our hearts against him, to keep out all those things, and to stand open to Christ, empty before him. If we find our adversary too hard for us, we are to flee and cry to the Lord for succour and help, who is a God not only afar off, but near at hand, a present help in the needful time, as many of his servants and children have experienced. Wherefore, to be hungry and thirsty after Christ and his righteousness, entitles us to his gracious promise, who says they shall be filled.

(To be continued.)

For "The Friend."

### Destruction by Grasshoppers in Kansas.

Accounts lately received from several parts of Kansas, Nebraska, and Minnesota, represent that a very great damage has been done to the standing crops and vegetation generally throughout a large tract lying within these States, by devastating armies of grasshoppers which have swept over the country in countless numbers.

These insects appear to have only lately become numerous as to attract much attention, but within the last two months they have made their appearance in such multitudes as to very seriously cut the prospects of the farmer in those neighborhoods. The *Lawrence Journal* states "that Brown county they covered a track twelve miles in width, and consumed pretty much everything green. Trees were stripped of their leaves, as eaten up, and corn fields literally stripped the stalk." "In north-western Kansas they ate the air so as to obscure the sun. They have been traced to a distance of two hundred miles west of Fort Kearney." From the fact that they have invaded these settlements from the West, we have popularly received the name of the prairie, Colorado or western grasshopper. Benj. Walsh, in the *Practical Entomologist*, gives an account of this insect, and informs us that it properly the *Caloptenus spretus* of Uhler, a species closely resembling the common red-legged grasshopper of the Eastern States, but differing in that in having its four wings much longer, that instead of flying only a few yards at a time, it can with ease fly a great distance. It is noticed to have been very abundant in Colorado in 1864, from whence it has journeyed eastward, having probably been assisted in passing over the intervening comparatively barren plains westerly winds.

The following notices of their appearance in the district alluded to are extracted from that journal. A correspondent of the *Rock Island Union*, writing from Nebraska city, says—

"Fourteen miles north-west of Nebraska city, are lately been a witness to a sight, rare and singular to me. The last day of August, near the middle of the afternoon, quite a number of grasshoppers were seen alighting, and the number rapidly increased till a little before sunset. The next morning they appeared much thicker, but were only so from having crawled more into the

open air to sun themselves. About nine o'clock they began to come thicker and faster from a northerly direction, swarming in the air by myriads, and making a roar like suppressed distant thunder. By looking well up to the sun they could be seen to the good advantage, and could be seen as high as the eye could discover an object so small, in appearance like a heavy snow-storm. The number was beyond imagination—the leaves of the timber in this section of the territory would be but little in comparison. The air was literally full of them, and continued so till long in the afternoon, when the air was free of them, countless millions having passed on leaving other countless millions covering the earth to devour vegetation."

On the 1st of Ninth month, as an observer at Council Grove, Kansas, writes, "a tremendous shower of grasshoppers came from the south, completely filling the air as high as one could see, and looking like a driving snow-storm. In a few moments the ground, trees, bushes, and everything green was completely covered. In less than two hours the leaves of trees, bushes, corn and everything green was devoured. The weather since then has been cool and wet, so that they could not leave, as they move only in hot, dry weather. The grasshoppers are now lying thick over everything, eating the ears of corn, oats, all the bark off the trees and shrubs, watermelons, cucumbers, cabbage-heads, pumpkins, &c. It will be impossible to sow fall wheat here unless they leave soon."

Another observer at Lawrence, Kansas, writing under date of Ninth month 27th, says: "Coming so late in the season, they have not done much damage, except in a few cases where they have attacked fall wheat, corn blades, and tobacco." \* \* They first made their appearance about Salina, high up on the Smoky Hill fork of the Kansas, and from thence have spread over Eastern Kansas. There is something weird and unearthly in their appearance, as in vast hosts they scale walls, house tops, and fences, clambering over each other with a creaking, clashing noise. Sometimes they march in even regular lines, like hosts of pinyon cavalry, but generally rush over the ground in confused swarms. At times they rise high in the air, and circle round like gulls in the sunshine. At such times I think they are caught by currents of our prevailing westerly winds, and are thus distributed over vast tracts of country. They are now depositing their eggs, and we shall probably have a second edition next spring. One farmer informed me that on his place there were about four holes to every square inch; and in some places I have seen them even thicker than this."

"How remarkable," says B. D. Walsh, "do the above graphic descriptions agree with that given by the prophet Joel of the locusts of scripture, 'A day of darkness and of gloominess, a day of clouds and of thick darkness.' \* \* The land is as the garden of Eden before them, and behind them a desolate wilderness; yea, and nothing shall escape them! \* \* Like the noise of chariots on the tops of mountains shall they leap, like the noise of a flame of fire that devoureth the stubble, as a strong people set in battle array. Before their face the people shall be much pained; all faces shall gather blackness. They shall run like mighty men; they shall climb the wall like men of war; and they shall march every one on his ways, and they shall not break their ranks.'" \* \*

The above statements forcibly bring to mind, and enable us to realize more fully those passages of scripture which allude to ravages of the locusts or grasshoppers which in former times were brought upon the land of Israel as a punishment

upon its inhabitants, as is declared in 2 Chron. vii. 13. "If I shut up the heavens that there be no rain, or if I command the locusts to devour the land, or if I send pestilence among my people." And may also properly excite to thoughtfulness whether there be not a cause for this similar visitation within our limits.

In reference to their probable re-appearance in increased numbers in the future, B. D. Walsh says: "There can be little doubt, I think, that wherever the insect has laid eggs this autumn, there the great bulk of the eggs, unless previously destroyed, will hatch out next spring. In this case the mischief will be a hundred fold as great as any inflicted in 1866. For then the country will have to sustain them, not only for a few weeks in the perfect or winged state, but for several months, while they are slowly and gradually attaining maturity." From other considerations, however, it seems probable that after the second year their number will diminish, since it is evidently strictly an alpine insect; and when it arrives in Kansas and Nebraska it arrives at a point many thousand feet nearer the level of the sea than its native home, and where consequently the "conditions of life," as they are called by naturalists, i. e. food-plants, climate, density of the air, temperature, moisture, &c., &c., are very different from those of its native home," and where it will consequently in accordance with natural laws, probably soon die out, unless fresh swarms descend upon these countries from Colorado. In the summer of 1867, however, it may be expected that the grasshoppers will very seriously injure the district of country in which their eggs have this year been so thickly deposited.

Oh! the streams of the celestial fountain or waters of life stand open to all that are athirst, that they may drink; and that they may have wine and milk without money and without price. I wish that there was a more general thirst in the children of men, to drink of this water, which Christ our Lord has promised to give to true believers, and that it should be in them a well of water springing up into everlasting life; and he has said of himself, "I am the living bread which came down from heaven, if any man eat of this bread, he shall live forever."—*Daniel Stanton*.

*Natural Mathematician*.—Many years ago Miraldi, being struck with the fact that the lozenge-shaped plates of the honey-comb always had the same angles, took the trouble to measure them, and found that in each lozenge the large angles measured 109 degrees 28 minutes, and the smaller 70 degrees 32 minutes—the two together making 180 degrees—the equivalent of two right-angles. He also noted the fact that the apex of the three-sided cup was formed by the union of three of the great angles.

Some time after, Reaumur, thinking that this remarkable uniformity of angle might have some connection with the wonderful economy of space which is observable in the bee-comb, hit upon a very ingenious plan. Without mentioning his reasons for the question, he asked Kœnig, the mathematician, to make the following calculation. Given a hexagonal vessel, terminated by three lozenge-shaped plates, what are the angles which would give the greatest amount of space with the least amount of material.

Kœnig made his calculations, almost agreeing with Miraldi, and Reaumur concluded that the bee had very nearly solved the difficult mathematical problem.

Mathematicians were delighted with the result, and for a long time the calculations were not

questioned. However, Maclaurin, the well-known mathematician, was not satisfied with even so slight a difference between the two mathematicians. He wanted precision, tried the whole question himself, and found Miraldi's measurement correct.

Another question now arose: How did this discrepancy occur? How could so excellent a mathematician as Koenig make so grave a mistake? On investigation, it was found no blame was attached to Koenig, but that the error lay in the book of logarithms which he used. Thus a mistake in a mathematical work was accidentally discovered by measuring the angles of a bee-cell—a mistake sufficiently great to have caused the loss of a ship whose captain happened to use a copy of the same logarithmic tables for calculating his longitude.—*Homes without Hands.*

For "The Friend."

Extract of a letter from Jacob H. Vining, Superintendent of Schools in Virginia, belonging to the Friends' Association of Philadelphia and its vicinity, for the Relief of Coloured Freedmen.

Yorktown, 11th month 24th, 1866.

The people seem overjoyed at our return. \* \* We have had four large schools running here all the week, day and evening; about 200 pupils in all. Two more school-rooms are ready, and will be filled as soon as teachers arrive. The brick house at Fort Magruder, assigned for use of teachers, and the school-house there, are in readiness; the scholars and people are anxiously waiting for M. and M., who cannot leave here until others come to take their places.

One of the late rebels appears much changed for the better since I was here last. C. S., a prominent man in York county, said, on meeting me at Williamsburg, "I am heartily glad to see you with us again; we recognize your mission as in our interest, and we wish to assure you that we will do all we can to aid you. Your school at F. is on my land, and you shall be welcome as long as you will keep a school for these people there. We are changing our views about the coloured people; we now want them educated, and you are the people, above all others, that we want here in the work, for we know that you will do both them and us good."

This same man opposed our schools last winter. The President of William and Mary College, also gave me an equally hearty greeting, and when it was intimated that on account of the unhealthy climate, and the want of funds to carry on our operations here and elsewhere, we might have abandoned the Peninsula after this year, he exclaimed, "You must not think of doing so, we feel the benefit of your influence, and our citizens have agreed to do all they can to aid you, and to keep you with us."

I was at Williamsburg about two hours, and had six different pressing invitations to dine with the most influential there, and only was excused by promising to do so, as I visit that place from time to time. Several near Yorktown also have taken pains to express their unity with our labours, and their hope that we will remain here.

We have a very comfortable home and school-houses, compared with last winter; and every thing bids fair for successful labour. \* \* We have got nicely settled, and only want a carpet for our sitting room; it is 18 feet by 21; a good rag carpet would do very well.

These three men all at once to death the slender-poison burns;  
That one who speaks, the one who hears, the one whom it concerns.

For "The Friend."

#### CONSIDER THE LILIES.

Two lovely lilies grouped together,  
Within a vase of classic form;  
This, an exotic from the orient  
Where gases blow soft, and skies are ever warm.

The other,—native of our valleys,  
Of our oft changing seasons born,—  
Unfolds its richly glowing chalice,  
Beside cool waters to the dewy morn.

Alike in form, their scroll-like petals,  
With graceful curve are fashioned fair;  
One, ruby-flecked, the other garnet,  
And both a tair of velvet-tassels wear.

Though oceans part their native valleys,  
Their queenly features are the same;  
Thus sealed with God's omnipresence,  
Who writes on all his works his wondrous name.

The same in type, yet sweetly varying  
In colours, are the graceful pair;  
The exotic to a royal maiden,  
Of pure Caucasian lineage I'd compare—

And thou, my beauteous complotriot,  
To an Indian chief-ain's child,—  
The pearly cheek of *this, rose-tinted,*  
Whilst *golden,* shows my princess of the wild.

With such as these fair Eden's bowers  
Scented; and the grass of Palestine,  
Was clothed with like resplendent flowers,  
When spake the Son of God these words benign—

"The lilies of the field consider,  
They toil not neither do they spin,  
Yet are richly dressed in all their glory,  
Arrayed as one of these, have never been."

Transcendent praise! from Him who only  
God's boundless love could comprehend,  
With mild rebuke of earth-born splendor,  
And aims, that with this brief *sermon* must end.

To those who seek the crown immortal  
With earnest heed,—assurance blest,  
That nothing fearful is withholden  
While journeying onward to their glorions rest.

Selected.

#### BEFORE ENTERING ON DOMESTIC DUTIES.

O Thou that in thy lowly sojourn here,  
Wouldst of retire from the thronged thoroughfare,  
Wouldst stay awhile Thy healing touch, and leave  
The listening crowds that hung upon thy lips,  
To shure the meal domestic, and to join  
In social converse, 'neath the quiet roof  
Of thy loved Lazarus; O! be with me  
 Amidst my household duties, and thou wert  
 With all thy sisters. May thy gentle voice  
 Speak to my heart in sweet encouragement  
 Or mild reproof, and let me feel the gaze  
 Of those meek eyes fix'd on my every act,  
 And watching all I do. Grant me the grace,  
 Whilst Martha's busy office I attend  
 My lesser care, to cast my better thoughts  
 Down at thy feet, to sit with Mary there  
 And listen to thy words of truth and love.  
 Teach me, with mind untrifled and serene,  
 To meet the hourly accidents of life;  
 And let the tones of gentle patience lend  
 Their soft sweet music to my lightest word.  
 O! may I hear in mind, that from the roots  
 Of withered and neglected duties spring  
 The rankest sin-weeds which infest the heart;  
 That wisdom infinite has placed me here  
 To work thy will, watched o'er by angel's eyes,  
 Cherished and cared for, not alone by those  
 Whom thou hast given to tread life's path with me,  
 But with a love beyond all human ken.  
 By Thee, on whom my hopes of heaven depend;  
 My Lord, my God, my Saviour, and my Friend.

John Barclay says: "It was the remarkable testimony of an eminent elder in the Truth, 'Not all the persecutions, not all the apostates, nor all the open or private enemies we have ever had, have done us, as a Christian Society, the damage that riches have done.

Ice: Does it Expand or Contract by Cold?

Kirkwall, Orkney, October, 1866.

I have recently conversed with persons who had attended the admirable course of lectures at the Royal Institution. They all seemed to be of opinion that ice continued to expand as its temperature was reduced; and one of the experiments of Prof. Tyndall—our greatest and best authority on such subjects—was quoted as a proof of this.

The experiment was as follows:—

A compact mass of ice, at or very little below the freezing point, was pressed tightly into a strong (metallic) vessel, which vessel being placed in a strong freezing mixture was burst asunder, supposed to have been caused by the expansion of the ice inside.

My opinion is that the strong vessel was broken by its own greater and more sudden contraction (metal being a good conductor of caloric) on the solid unelastic ice inside, which, even if it expanded by the abstraction of heat, would, as bad conductor, be much more slowly affected than the freezing mixture than the vessel inclosing it.

The wise law of nature by which water at temperature of 39° begins and continues to expand as it cools down to the freezing-point of 32° is so well known as to require no comment; but I believe that after ice is once formed, it is acted upon by reduction of temperature in the same manner as almost every other known substance that is, it contracts.

In travelling over the large frozen lakes (W. Nevez, for instance) in America during winter a calm and cold night (say 30° below zero) allows a somewhat mild day, loud cracks like pistol shots and moaning sounds are heard on the ice continually; and next morning when travelling resumed large rents (occasionally several feet wide, which can be caused by contraction only with open water in them, are seen in the ice across which there is often both difficulty and danger in passing.

These rents are soon firmly frozen over, perhaps in a day or two the temperature rises some 20°, when there is a repetition of the noise on the lake ice, not to the same extent however, and arising from an opposite cause,—namely, expansion of the ice, which is either forced into ridges, or pushed up on the shore, as there is now more ice on the lake, by the amount forced in the rents spoken of, than will cover the moderate temperature; therefore it has to force up somewhere.

These contractions and expansions go on during the winter, to a greater or less extent according to the greater or less number of changes of temperature that occur.

I believe glacier motion on a large extent surface, such as Greenland, to be in a great measure caused by the contraction and expansion of the ice.

Thus, the ice contracts in winter, forming wide and deep cracks or crevasses. These are filled with snow, and when the ice expands again during the warmth of summer, these crevasses being filled up, the ice is pressed out at the edges, and must expand somewhere.

There may be nothing new in the views I have ventured to express; but I have never heard them promulgated by any one, which is my only reason for troubling you with this long letter on a cold but interesting subject.

JOHN RAIN  
—Athenaeum

#### Interior of a Russian Railroad Car.

Russian cars are built on the American principle as far as form is concerned, but internally divided into three parts. A saloon at each

with broad, continuous seats around its sides, without division, to be used for couches, and a handsomely furnished middle saloon. This chosen by us collectively, was nicely carpeted, and supplied with high-backed arm-chairs, not placed two and two, but divided into sections of three, two joined and one opposite. We had no other persons in the compartment, which supplied places for a dozen.

A peculiarity is the frequency and length of the halts. We must have stopped as often as every quarter of an hour, sometimes for four or five minutes, sometimes longer, and in addition, twice for dinner, twice for supper, and twice for breakfast, and each time half an hour.

These stations were exceedingly nice, large, and convenient, with lovely grounds surrounding them. In two or three rooms tables were set, and at dinner a *table d'hôte* is served. At equal distances on the side are long stands with smaller refreshments for the less hungry—coffee and tea in tumblers, great cakes of snowy whiteness moulded into the forms of fishes, &c. and here and there that peculiar feature of Russia, the tea-urn, a grand, shining brass machine, with a charcoal fire inside, that sends forth volumes of steam like the panting locomotive without. The appetite appeased, every body lights a cigarette, (Russian ladies too,) and walks up and down the wide platform until the bell sounds. This sort of thing is repeated so frequently, and the Russian ladies eat so much, and smoke so often, that one is inclined to wonder whether they will live to get to their destination.—*Late Paper.*

For "The Friend."

#### Thoughts for the Times.—No. 52.

The sweetness and purity of John Woolman's character are beautifully shown in the short treatises bound up with his printed journal. These are very remarkable productions, being written with a simplicity which regards all exaggeration as falsehood, and which shuns mere ornament as the writer himself would have shunned fine clothes. Yet this severe simplicity rises at times into sublimity, and the clear perception of right and truth shows a depth of thought and mature wisdom which the ablest philosophers of the schools can scarcely surpass.

How fine for example and how just, are the distinctions drawn in the introduction to his Considerations on the keeping of negroes: "Natural affection needs a careful examination: operating upon us in a soft manner, it kindles desires of love and tenderness, and there is danger of taking it for something higher. To me it appears an instinct like that which inferior creatures have; each of them, we see by the ties of nature, loves self best; that which is a part of self, they love by the same tie or instinct. In them it does in some measure the offices of reason, by which, among other things, they watchfully keep and orderly feed their helpless offspring. This natural affection appears to be a branch of self-love, good in the animal race, in us likewise with proper limitations; but otherwise is productive of evil, by exciting desires to promote some by means prejudicial to others.

"Our blessed Saviour seems to give a check to this irregular fondness in nature and at the same time a precedent for us, 'Who is my mother and who are my brethren,' &c., thereby intimating, that the earthly ties of relationship, are, comparatively, inconsiderable to such, who, through a steady course of obedience, have come to the happy experience of the Spirit of God, bearing witness with their spirits that they are his children.

"This doctrine agrees well with a state truly complete, where love necessarily operates according to the agreeableness of things, on principles unalterable and in themselves perfect.

"If endeavouring to have my children eminent amongst men after my death, be that which no reason grounded on those principles can be brought to support; then to be temperate in my pursuit after gain, and keep always within the bounds of those principles, is an indispensable duty, and to depart from it, a dark unfruitful toil.

"In our present condition to love our children is needful; except this love proceeds from the true heavenly principle which sees beyond earthly treasures, it will rather be injurious than of any real advantage to them; where the foundation is corrupt, the stream must necessarily be impure.

"That important injunction of our Saviour, Matt. vi. 33, with the promise annexed, contains a short but comprehensive view of our duty and happiness. If, then, the business of mankind in this life, is to first seek another; if this cannot be done, but by attending to the means; if a summary of the means is, not to do that to another which in like circumstances, we would not have done unto us, then these are points of moment, and worthy our most serious consideration."

So, likewise, in his Considerations on the true harmony of mankind and in those on pure wisdom and human polity:

"My mind," says he, "hath often been affected with sorrow, on account of the prevailing of that spirit, which leads from an humble waiting on the inward teaching of Christ, to pursue ways of living, attended with unnecessary labour, and which draws forth the winds of many people to seek after outward power and to strive for riches, which frequently introduce oppression and bring forth wars and grievous calamities."

"When we love the Lord with all our hearts, and his creatures in his love, we are then preserved in tenderness both towards mankind and the animal creation; but if another spirit gets room in our minds, and we follow it in our proceedings, we are then in the way of disordering the affairs of society.

"If a man successful in business expends part of his income in things of no real use, while the poor employed by him pass through great difficulties, in getting the necessaries of life, this requires his serious attention.

"I feel a concern in the spring of pure love, that all who have plenty of outward substance, may example others in the right use of things; may carefully look into the condition of poor people, and beware of exacting on them with regard to their wages."

"If they who have plenty, follow their fellow creatures in that love which is divine, and in all their proceedings have an equal regard to the good of mankind universally, their place in society is a place of care, an office requiring attention, and the more we possess, the greater is our trust and with an increase of treasure, an increase of care becomes necessary. When our will is subject to the will of God, and in relation to the things of this world, we have nothing in view, but a comfortable living equally with the rest of our fellow creatures, then outward treasures are no farther desirable than as we feel a gift in our minds equal to the trust, and strength to act as dutiful children in his service, who hath formed all mankind and appointed a subsistence for us in this world."

"Great treasures managed in any other spirit than the spirit of truth, disorder the affairs of society, for hereby the good gifts of God in this outward creation are turned into the channels of

worldly honour, and frequently applied to support luxury, while the wages of poor labourers are such, that with moderate industry and frugality they may not live comfortably, raise up families, and give them suitable education, but through the strictness of their condition, are often drawn on to labour unto weariness, to toil through hardships themselves, and frequently to oppress those useful animals with which we are entrusted.

"From age to age, throughout all ages, divine love is that alone, in which dominion has been, is, and will be rightly conducted.

"In this the endowments of men are so employed, that the friend and the governor are united in one, and oppressive customs come to an end."

"To labour that our children may be put in a way to live comfortably, appears in itself to be a duty, so long as these our labours are consistent with universal righteousness; but if in striving to shun poverty we do not walk in that state where

'Christ is our life,' then we wander; 'He that hath the Son hath life'; 'This life is the light of men.' If we walk not in this life we walk in darkness, and 'he that walketh in darkness knoweth not whither he goeth.'

"Through departing from the truth as it is in Jesus, through introducing ways of life attended with unnecessary expenses, many wants have arisen, the minds of people have been employed in studying to get wealth, and in this pursuit some departing from equity, have retained a profession of religion; others have looked at their example, and thereby been strengthened to proceed farther in the same way."

"Friends in early time refused, on a religious principle, to make or trade in superfluities, of which we have many large testimonies on record; but for want of faithfulness some gave way, even some whose examples were of note in Society, and from thence others took more liberty; members of our Society worked in superfluities, and bought and sold them, and thus dimness of sight came over many. At length Friends got into the use of some superfluities in dress, and in the furniture of their houses, and this hath spread from less to more, till superfluity of some kinds is common amongst us.

"In this declining state many look at the example of one another, and too much neglect the pure feeling of Truth. Of late years a deep exercise hath attended my mind, that Friends may dig deep, may carefully cast forth the loose matter, and get down to the rock, the sure foundation, and there hearken to that divine voice which gives a clear and certain sound.

"And I have seen in that which doth not deceive, that if Friends who have known the Truth, keep in that tenderness of heart, where all views of outward gain are given up, and their trust is only on the Lord, he will graciously lead some to be patterns of deep self-denial, in things relating to trade and handicraft labour; and that some who have plenty of the treasures of this world, will example in a plain frugal life, and pay wages to such who may hire, more liberally than is now customary in some places. The prophet speaking of the true church said, 'They people also shall be all righteous.'

"Now Christ, our holy leader, graciously continueth to open the understandings of his people, and as circumstances alter from age to age, some who are deeply baptized into a feeling of the state of things are led by his Holy Spirit into exercises in some respects different from those which attended the faithful in foregoing ages, and through the constraints of pure love, are engaged to open the feelings they have to others.

"In faithfully following Christ, the heart is

wearied from the desire of riches, and we are led into a life so plain and simple, that a little doth suffice; and thus the way openeth to deny ourselves, under all the tempting allurements of that gain, which we know is the gain of unrighteousness.

"The language of Christ is pure, and to the pure in heart this pure language is intelligible; but in the love of money, the mind being intent on gain, is too full of human contrivance to attend to it.

"It appeareth evident that some channels of trade are defiled with unrighteousness, that the minds of many are intent on getting treasures to support a life, in which there are many unnecessary expenses.

"And I feel a living concern attend my mind, that under these difficulties we may humbly follow our Heavenly Shepherd, who graciously regardeth his flock, and is willing and able to supply us both inwardly and outwardly with clean provender, that hath been winnowed with the shovel and the fan, where we may 'sow to ourselves in righteousness, reap in mercy, and not be defiled with the works of iniquity.

"Where customs contrary to pure wisdom are transmitted to posterity, it appears to be an injury committed against them; and I often feel tender compassion towards a young generation, and desires that their difficulties may not be increased by us of the present age."

*Influence of Silica on the "Lodging" of Grain.*  
—Years ago it was shown by chemical analysis that the straw of the cereal grasses and particularly wheat straw, contains a very considerable quantity of silica. Since the plants thus rich in silica are exceedingly hard, stiff, and rigid, it was not an unnatural inference that the strength of a wheat plant was likely to be nearly proportional to the amount of silica contained in it. The opinion was, in fact, quite generally received that it is from lack of silica in its stalk that the spear of grain is weak and liable to fall down.

The suggestion has often been thrown out that grain might be prevented from lodging by dressing the soil with some one of the soluble preparations of silica, and so furnishing to the growing plant the supposed desideratum in a readily assimilable condition.

The distinguished French agricultural chemist, Pierre, has recently subjected the whole question to the test of experiment. He finds that the ideas and hypotheses above mentioned are not borne out by facts. As the result of numerous analyses, he finds that of the different parts of the wheat plant the leaves contain far more silica than the smooth portion of the stalk, and the stalk much more than the knots or joints, which prove to be comparatively poor in silica, in spite of their apparent hardness. In equal weights, the leaves contain seven or eight times as much silica as the joints, and four or five times more than the spaces between the joints. The portion of the plant least rich in silica is the lower part of the stalk, at precisely the place where the stiffness and rigidity are most necessary. If, then, silicated manures be offered to the wheat plant, the larger proportion of the assimilated silica will accumulate in the leaves and not in the stalk; and, as a consequence of this excessive development of the leaves, it follows naturally that grain highly charged with silica might fall down and lodge, while grain exposed to similar conditions, but less rich in silica, might stand firm and suffer no harm.

It has long been noticed that, other things being equal, those samples of grain of which the

leaves are most highly developed lodge first. This is not surprising, for in this case the foot of the stalk remains shaded, and, as a consequence, soft and feeble, while the elevated stalk is forced to carry an excessive load, which presents a great surface to the crushing pressure of rain and wind. On the other hand, it is notorious that the wheat grown upon poor land rarely lodges, and the explanation of this fact is evidently that, in the absence of vigorous leaves, the stalks, besides having no great load to carry, are rendered by the action of sun and air.

The practical lesson suggested by these experiments is that, in order to prevent the lodging of grain, the farmer must, for the present at least, look rather to improved methods of sowing, by means of which light and air shall always be freely admitted to the stalks, than to any chemical specific which has yet been suggested. In the course of time means may perhaps be found to induce the deposition of strengthening ingredients at those parts of the stalk where strength is most needed, but until that time arrives it will be best to follow the lesson taught by the natural growth of the wheat plant, and not to depart too far from the physical conditions which are essential to its healthy development.—*Notion.*

*Discovery of Capernaum.*—Keith Johnston, and other gentlemen engaged in the exploration of Palestine, recently made an important discovery. At Keith Johnston's suggestion, who believes that Fell Hum is the true site of the ancient Capernaum, they dug into the mould, hoping to find the remains of the synagogue there, popularly called the "White Temple" and, according to letters just received, were rewarded with complete success, finding the supposed building near or quite entire. Should these tidings prove correct, the explorers have found the only building in which the Saviour actually was when on earth, which can be identified at this day.—*Littell's Living Age.*

#### The Bank of England.

A correspondent writes: The Bank of England is an immense affair, covering an area of eight acres, and employing upwards of 1000 clerks, &c., in its vast operations. By the kindness of a friend we were admitted to the parts of it from which the public are excluded. We first went to the bullion vaults. There we saw a pile of bags filled with American gold, containing about \$1,000,000, and some twelve or fifteen trucks, on each of which lay piles of gold, each one of which contained about \$3000 worth of metal. By a rough calculation of mine, I reckoned the gold on the trucks to be worth about \$6,000,000. In another room we saw bags, boxes and kegs of silver to a very large amount.

We then went to the cancelled note room. You must remember that every Bank of England note is printed in duplicate, and one copy repaid out twice from the bank, but every one that comes are then recorded in books for the purpose, tied up in bundles and stored away for seven years, and then burned. Hence, if any legal question arises about any note, it can be found and traced in a few minutes, so perfect are their arrangements. When you remember that a Bank of England note is about twice as wide as a "greenback," and that between £10,000 and £50,000 often come in during the day, you see how vast the accumulation will be.

We were in one room that had the receipts of two years, and there were about \$3,000,000,000, a sum that bewilders one to imagine. A package containing £1,000,000 was placed in my hands,

so that for about half a minute I was a millionaire, but like all other millionaires, I had to give up my treasures, only I had not quite as much trouble with mine as many of the others, not having to take care of it so long; but it did me quite as much good as theirs often do. I saw one note that was issued in 1699, and had been out of the bank for nearly one hundred and fifty years, and others nearly as old as that one.

We then went to the printing and binding rooms, for they do all their own work of that kind, and saw all the various processes. The printing machines number each note as it is struck off, a curious arrangement in the press, and every note is registered by the machine itself as it is printed, so that none can be stolen by the workmen. The paper is also manufactured here, and it is in the water-marks of the paper that the difficulty of counterfeiting lies. The notes are signed also by machinery, and the whole process is very curious.

The testing room for coin was also interesting. The gold sovereigns, as they come in, are put in a large hopper, which distributes them into tubes. These tubes are then placed on a weighing machine so delicately adjusted that it will register the one hundredth part of a grain. The sovereigns slide slowly from the tube into a little channel, where they are weighed as they pass. If full weight, the machine drops them on one side, if light, it tosses them over to the other with an almost contemptuous fling, and they are taken to another machine, and there cut through the edge, so that they cannot go into circulation again. About thirty-five thousand per day may be tested in this way. In the coin room we were shown bags on bags of various coin, and one containing £1000 was put into my hands, giving me command of more gold than I am likely to handle again. These details will be enough to enable you to see what a vast concern is this great Bank of England.—*N. American.*

For "The Friend."

John Dunstone.

[Our readers will probably recollect that mention is made of John Dunstone in one or two of the letters of Benjamin Bishop recently republished in this journal; some correspondence having taken place between them. Both appear to have been in very humble life; but were for many years blind, and both attained to an establishment in the unchangeable Truth, and were preachers of righteousness. We have received a small pamphlet containing a brief memoir of J. Dunstone, which we think will interest most of the readers of "The Friend." He was born in 1787, was married in the twenty-fourth year of his life, and became a member of the "Wesleyan Society," where he continued until the year 1838, when having become convinced of the truths of the gospel as held by Friends, he joined them. He was blind during the last forty-four years of his life, and suffered much from disease. The author says:—

"At one of my frequent calls on John Dunstone, I endeavoured to learn some of the particulars of his earlier years; when he began by acknowledging that goodness and mercy had followed him all the days of his life.

The first circumstance worthy of record occurred about the eighth year of his age. A prayer-meeting being held weekly at a neighbor's house, he felt one evening a desire to attend it and creeping in and hiding himself, as well as he could, behind a clock case which stood in the room, he there, with tears, poured forth his soul in silent prayer. On reaching home, he said no

thing of what had occurred, but with a peaceful mind retired to rest. By the following evening, when he returned from his labor, the circumstance had reached the ears of his parents, who were then careless of divine things, and hence they threatened him, that if they knew of his attending another such meeting, his punishment should be severe. He greatly feared his parents, and their word was his law; he dared not disobey them, so he went no more to the meeting; but in his childish way he often prayed, and sought, in solitary places, renewed evidences of divine favor; sometimes retiring to bed before his little brothers and sisters, and there seeking communion with his Maker.

Thus he continued about six months, when the fervor of his religious feelings abated, and childish vanities resumed their ascendancy; yet he was not at any time left wholly to himself; for the good Spirit of the Lord never entirely forsook him, but by reproofs and convictions often fell upon him, testifying for truth and righteousness, and embittering to his taste the pleasures of sin. So powerfully was he affected, that not infrequently, when walking alone, he stood motionless in the public road, the good hand of the Lord pressing him sore, in mercy arresting him in his downward progress of vice, and graciously inviting him yet again to drink of the cup of salvation.

Much after this manner he lived till about the twenty-fourth year of his age; his sinful propensities more and more obtaining the mastery; a love for idle and dissipated society was cherished; and the ale-house was his frequent resort; but here he had no peace.

About this time it pleased the Almighty to visit him with partial blindness. He had gone into the field to prepare some ground for potatoes, and while thus engaged, his sight suddenly failed him. It seemed, to use his own language, "as though a wind from the Lord had blasted him."

In this state, he groped his way to the house; medical assistance was procured, but in vain; hisarkness became entire. Now it was that the solateness of his situation came fully upon him. He remembered God, and was troubled; he complained, and his spirit was overwhelmed; he called to remembrance his song in the night; he communed with his own heart, and his spirit made diligent search."

In this condition of mind, he was led one evening to the Methodist Chapel; the preacher spoke of the dangerous situation of those who had not fully given up their hearts to God, but who, convinced of the necessity of doing so, were yet, at seasons, overcome of evil. "Sinning and repenting," emphatically exclaimed the preacher—"sinning and repenting is the high road to hell!" Here the sword of the Spirit entered into his soul, and his heart instantly responded: "Then am I in the road to hell at this moment;" while such was the perturbation of his mind, that his feet smote together for very anguish. Thus oppressed and affected, he left the chapel. "And now," said he, with deep emotion, no doubt calling to remembrance "the wormwood and the gall," "my circumstances were distressing indeed—wholly dark without, while a darkness incomparably more awful pervaded all within." Will the Lord cast off forever, and will he be favorable no more? Is his mercy clean gone forever? Doth his promise fail for evermore? Hath he forgotten to be gracious? Hath he in anger shut up his tender mercies?" Such was in effect the language of his soul.

On the following First-day morning, he was

again led to the chapel, when the same minister officiated; John Donstone hoping that, as he had already been instrumental to his renewed awakening, so it might please divine goodness to make him also the messenger of peace and consolation; but in this expectation he was disappointed. He left the place more heavily laden than when he entered it, so that he might again adopt the language of the Psalmist: "I sink in deep mire, where is no standing. I am come into deep waters, where the floods overflow me."

In returning, a strong desire prevailed in his mind to visit a sick man who resided about a mile from his dwelling—an individual who had, like himself, drunk deeply of the cup of conviction, but had become a rich partaker of that peace and joy which spring from believing in the mercy of God, as manifested in Christ Jesus. On requesting his brother's assistance to conduct him to the house, he betrayed unusual reluctance, and did all he could to dissuade him from his purpose; this, however, increased his desire, and he urged his plea prevailingly. "For in walking to the place," he said, "such was the state of my mind, that I seemed less to walk than to fly, so lightly did I pass over the ground."

On being introduced to the sick man's apartment, the latter addressed him with a few words, the force of which he felt, although no particular impression remained; but afterward, while a young man was engaged in supplication, every petition that was offered up came with power to his heart, piercing its inmost recesses, and breaking it in pieces before the Lord. And now it was that the Almighty Deliverer passed by, proclaiming the name of the Lord, "the Lord God, merciful and gracious, forgiving iniquity, transgression and sin." On this memorable occasion, his sackcloth was put off, and his soul girded with gladness. He returned to his dwelling a happy man, praising God, and in effect saying: "Glory to God in the highest, on earth peace, and good-will toward men."

It may be right here to remark, that that for which he felt most deeply condemned, and for which, beyond all beside, trouble and anguish came upon him, was his having for so long a period, by rebellion and evil, resisted and grieved the Holy Spirit of the Lord; that Spirit which had so often convinced him of sin, of righteousness and judgment, and which had so long and so powerfully striven to draw him from the paths of the destroyer."

(To be continued.)

For "The Friend."

#### Fertilizers.

Having experienced the great value of bones, either crushed or dissolved, as a manure, the writer desires to call the attention, more particularly of young farmers, to an article in "The Friend," No. 13, of present volume, headed "Preparation of Bones as a Manure."

The author says, "Mix say 1000 parts of ground bones with 1000 parts of wood ashes, and add 600 parts of quick lime, with water enough to keep it moist." It is a most excellent combination, and any one trying it, either as a top dressing for grass land, spread broad east on corn or wheat ground, and harrowed in before sowing will, it is apprehended, be well satisfied with the result; the effect being perceptible nearly as soon as that from guano, and far more permanent. It is not requisite, however, that the bones should be ground; broken up with a sledge or heavy hammer, or even left long enough in their natural form, and they will be found to be entirely

eaten up and incorporated with the other ingredients.

A quicker but more expensive method is to get a tight hoghead out in two, and sink both ends one half their depth in the bath, banking up the sides. In these put the bones, filling near to the top, pour over first, twenty gallons of water, and then the contents of one carboy pure oil of vitriol to each tub; in the course of a few weeks it will be found to be a pasty mass,—pure phosphate—and which can then be mixed with dry loam or plaster, and made ready for application by either the hand or shovel. In this way we can return to the soil, particularly those that have been long under cultivation, certain ingredients, which are carried off in making butter, furnishing milk or growing stock, which it does not get through the barn yard.

Chester Co.

W. P. T.

*Average Mortality and Duration of Life.*—Dr. Farr, who presided over the late session of the British Social Science Association, instituted a comparison between the leading nations of Europe in respect of public health. According to the statistics of the lecturer, Norway is the most healthy country in Europe, the average age attained by the inhabitants being about 50 years, and the annual rate of mortality only 17 in the thousand. In Belgium, France, and England it is 22, in Germany from 29 to 30, in Italy 30, and in Russia 36, per thousand. It is supposed that the large annual mortality in Russia is partly owing to the great consumption of brandy in that country. The mean duration of life is stated to be 25 years, or just half that of the people of Norway. The Germans do not live 30 years on an average; in England the average length of life is about 35 years. In sixty years the increase of the Anglo-Saxon race all over the globe has equalled the present population of France.

*Gratitude.*—The apostle Paul admonishes us to covet earnestly the best gifts, and I know none better than a grateful heart. It is gratitude which makes the host of heaven sing redeeming love and grace; without gratitude on earth the greatest blessings are turned into curses, for they aggravate our guilt; but he that is grateful for all that he enjoys is like the earth that receives blessings from God, spreading fragrance all around, yielding "bread to the eater, and seed to the sower."

*Railways and the Holy Land.*—The directors of the Smyrna and Aidin Railway have had surveys made for great extensions of their system. Smyrna will continue to be the chief station, and a new line, if executed, will pass to the north round the head of the Gulf. It will then take an easterly course in the direction of Sardis and Philadelphia, but stops short of these once renowned cities, upon the ruined portals of which, in common with those of the other "seven Churches in Asia" "Ishabod" may be written. The railway, on the other hand, strikes southward in the direction of Ephesus, which will be reached by a branch line. The projected main-trunk takes an easterly course from Aidin, to which it has already been opened. In its route it will touch at, or pass by Antioch in Pisidia, Laodicea, Colosse, and Hierapolis. Pergamos and Thyra are to the north of the northern extension. The company is at present in an impecunious condition, and the extensive works are postponed for an indefinite time. The revenue is expected to be derived from the carriage of cotton, wool,

and other produce of the country, and from passenger traffic.—*Building News.*

## THE FRIEND.

TWELFTH MONTH 8, 1866.

### SUMMARY OF EVENTS.

**FOREIGN.**—The Fenian troubles in Ireland have assumed considerable proportions. The cable dispatches mention the departure almost daily, of troops for France. The British Government appeared to be taking energetic measures to prevent or suppress a serious outbreak. The chief Fenian organizer, James Stephens, was reported to be in Paris. The London *Morning Herald* says, that the United States Minister Adams, has revived the Alabama claims, and that the British Cabinet will soon give the case the consideration which its importance deserves. The Government has preemptorily refused the use of the London Parks for trade reform demonstrations.

It is stated that the United States Minister at Paris recently told the French Emperor in person, a very grave and decided dispatch from the United States Secretary of State, requiring France to fulfil the engagements she had entered into with regard to the Mexican question. A Paris dispatch says the Emperor Napoleon has telegraphed to his aids in Mexico to hasten the evacuation of the French troops from that country. It is also stated that an arrangement has been agreed upon that the French landholders shall not be disturbed in their rights. A Trieste dispatch of the 1st says: Preparations are being made to receive the Emperor Maximilian, who is expected to arrive in an Austrian war vessel at an early date. The case of the Emperor Carlotta is thought by her consulting physicians to be hopeless.

The King of Prussia has decided to send Prince Adolph, lately created an admiral, to the United States, to study the modern improvements in naval construction.

The *Journal des Debats* says, that Rome will be evacuated by the French on the 12th inst.

A great reform demonstration took place in London on the 3d inst., and was participated in by all the trade societies. Fully 50,000 people, it is said, walked in procession to the place of meeting. They were addressed by John Bright and fifty other speakers. The assemblage was orderly and manifested great enthusiasm. The cotton market was moderately active. Middling uplands, 14d. Breadstuffs of good demand. Consols, 8½. U. S. 5-20's, 70½.

The Province of Upper Canada, during last year, expended nearly \$1,500,000 for the support of public schools. The number of male teachers employed is 2300, and female teachers, 1791.

**UNITED STATES.**—The *British Postal Treaty.*—The U. States Post Office Department has simply agreed on a preliminary basis for a postal treaty with Great Britain. The articles, therefore, remain to be formally executed, and the time fixed for its operation. It is expected that the treaty will fall into force by or before the first month of 1868, at which time the present postal treaty between the United States and Great Britain will expire by limitation. The announcement that a treaty on the subject had been already made was inaccurate.

**The South and the Freedmen.**—The United States law on cotton is complete in its details, and has been promulgated in southern States. Many of the United States Secretaries of the Treasury to recommend to Congress a reduction of the tax.

The annual report of the Baltimore Association for the moral and intellectual improvement of the freedmen, shows \$53,000 expended, and \$43,000 received in 1866. The number in operation 74 schools, (including 22 in Baltimore,) in which 7000 scholars are taught. Most of the teachers are coloured.

The plantations heretofore belonging to Jefferson Davis and his brother Joseph, have been leased to an association of coloured men.

The Legislature of North Carolina has elected Judge Manly to the United States Senate. He was an original secessionist, and held judicial office under the rebel Government.

Governor Orr, of South Carolina, in his recent message to the Legislature, says: "The experiment of free labour, which has not been entirely satisfactory, is being now trying a failure. Where the blacks have been adequately compensated and kindly treated, they have generally laboured faithfully." He recommends proper provision for the aged, the infirm and the helpless.

It is believed there is an increasing disposition in the South to admit qualified suffrage, impartial as to color. In the Alabama House of Representatives, Brookes, of Louises county, presented a bill to alter the constitution of the State so as to admit conditional negro suffrage. The conditions are that the voter shall possess property, and shall not be a convict before Congress. In the Convention of the State and of the United States, and write a legible hand; and the same conditions to apply to white men. After an exciting debate the bill was tabled. A large meeting of the coloured people of the District of Columbia has been held in favor of negro suffrage, and to aid in bringing the subject before Congress. In Florida, the freedmen are availing themselves of the Homestead Law, and from 8th mo. 26th to 10th mo. 31st last, had entered 30,000 acres.

**Philadelphia.**—Mortality last week, 246.

**Miscellaneous.**—On the 24 inst. Secretary Seward received a dispatch by the Atlantic cable, dated on the 1st inst. from the U. S. Consul-General in Alexandria, Egypt, saying, "I have arrested John H. Surrait, one of President Lincoln's assassins. No doubt of identity." A San Francisco dispatch says, "The next steamer here takes 500 barrels of flour for New York, by way of Panama, the order having been received for 5000 on the 24 inst. The Atlantic cable message was transmitted by the cable and overland telegraph, and the order filled and advices returned to the sender of the order on the same day by telegraph." The great suspension bridge at Cincinnati was opened to foot passengers on the 1st inst., and about 50,000 persons crossed it.

**Jefferson Davis.**—Both branches of the Georgia Legislature have unanimously adopted resolutions expressive of their respect for the character and services of the "illustrious prisoner of state Jefferson Davis." The resolutions speak of him as a fallen champion of a once dear but now abandoned cause, and that the noblest affections of the southern people are centred. The President of the United States is earnestly appealed to on his behalf. Davis was recently visited by the committee appointed by the Legislature of Mississippi to intercede with the President for his pardon or parole. They did not give him reason to expect the application of the act of Congress, but he was promised to find him in such good health and spirits. His imprisonment for some months past has been made as little irksome as possible.

**Congress.**—The second session of the 39th Congress commenced on the 3d inst., quorums present in both Houses. The President's message was read. There were two new members from Vermont, two from New Jersey, and one from New Hampshire were admitted to their seats. The credentials of two from Texas were presented and laid on the table. Sherman, of Ohio, presented a bill to prevent the illegal appointment of officers of the United States. It was read, but no money could be paid to any person, nominated for any office who has been rejected by the Senate, and subsequently re-appointed by the President, and prescribes penalties to be inflicted on any person who enters upon the duties of an office after such rejection, and upon any accounting officer who may pay claims of such appointees. The House passed the bill. The House also passed three new members from Kentucky and three from Tennessee. The House passed a bill repealing the act of 1862, which authorized the President to grant pardon and amnesty to persons who had participated in the rebellion. Various bills and resolutions were introduced. Among others on the 10th inst. the Secretary of the Treasury to sell at public auction in New York, \$2,000,000 in gold every week, and to invest the proceeds in the interest-bearing bonds or obligations of the United States. Referred to the Committee on Ways and Means.

**The President's Message,** and the documents accompanying it, give a gratifying view of the general condition of the country. The President has not changed his views in regard to reconstruction, and still urges the admission of the Senators and Representatives from all the States lately in rebellion. It contains no reference to the Freedmen's Bureau Bill or the Civil Rights Bill. He closes the message with the hope that the efforts of the nation will be promoted by the revival of fraternal relations, the complete obliteration of our past differences, and the inauguration of all the pursuits of peace. Directing our efforts to the early accomplishment of these great ends, let us endeavor to preserve harmony between the co-ordinate departments of the Government, and let each and every citizen may daily cooperate with the other in securing the maintenance of the Constitution, the preservation of the Union, and the perpetuity of our free institutions."

**The Markets, &c.**—The following were the quotations on the 3d inst. New York.—American gold 141. U.

S. sixes, 1841, 112½; ditto, 5-20, 1865, 107; ditto, 10-40, 99½. Superior State flour, \$7.40 a \$9.55. Shipping Ohio, \$10.15 a \$11.20. Baltimore flour, common to fair extra, \$11 a \$13; trade and family, \$13.25 a \$16.25. Middlings cotton, 33 a 34 cts. Philadelphia.—Superfine flour, \$8 a \$8.50; higher brands, \$9 to \$15. Pennsylvania, white, \$2.65 a \$3.30. Pennsylvania rye, \$1.40. Old yellow corn, \$1.12 a \$1.14; new, 90 a 98 cts. Oats, 57 a 59 cts. Cloverseed, \$9 a \$10. Timothy, \$3.25. Flaxseed, \$3.25. The arrivals and sales of beef cattle reached about 1800 head. Extra sold at 15 a 16 cts., fair to good at 13 a 14 cts., and common, 10 a 12 cts. About 10,000 sheep sold at 6 a 6½ cts. for extra, and 5½ cts. for common to fair, per lb. gross. Hogs \$9 a \$10 per 100 lbs. net.

### RECEIPTS.

Received from Mary Thistlethwaite, N. Y., \$2; to No. 17, vol. 40; from Isaac Huerta, Agt., O., \$2, vol. 40; and for Jesse Hiatt, \$2, vol. 40; and Deborah Dewees, \$2, vol. 39.

Received from Mary Thistlethwaite, East Shelby, N. Y., \$8, for the Relief of the Freedmen; and from Friends and others about Middleton, Ohio, through Samuel Shaw, \$65.25.

### AGENT APPOINTED.

Edward Stratton, of East Fairfield, Ohio, has been appointed Agent, vice Wilson Hall, resigned.

### NOTICE.

A Stated Meeting of the Women's Aid Association, will be held on No. 112 North Seventh St., on Seventh-day the 8th inst., at 3 P. M.

SARAH LEWIS, Secretary.

### A CARPET WANTED.

The new Term has opened very anxiously for the work amongst the freedmen near Yorktown, Va. At our mission-house, however, there is an urgent need for a carpet, for the comfort of the family. Any Friend or other material, part-work carpet of any description (rag or other material) about 18 feet by 21, will confer favor by sending word to the Association, or by sending the carpet to its Room, No. 501 Cherry St., Philadelphia.

### WESTTOWN BOARDING SCHOOL.

A Stated Meeting of the Committee who have charge of the Boarding School at Westtown, will be held on the Fourth-day the 19th of Twelfth month, at 10 o'clock A. M.

The Committee on Admissions will meet at 8 o'clock the same morning, and the Committee on Instruction at seven o'clock the preceding evening, instead of at 7 o'clock as heretofore.

The Visiting Committee attend at the School on Seventh-day afternoon, the 15th inst.

SAMUEL MORRIS, Clerk.

For the accommodation of the Visiting Committee conveyances will be at the Street Road Station of Seventh and Third-day afternoons, the 15th and 18th inst., to meet the trains that leave West Philadelphia at 2.30 and 4.45 P. M. On Fourth-day morning, the regular stage will meet the train that leaves Philadelphia at 7.50 A. M.—due at the Street Road at 9.26.

### WANTED.

A Male Teacher for Friends' School at Rancocas Application may be made to Henry Will or Samuel Williams, Rancocas P. O., Burlington Co., N. J.

### FRIENDS' ASYLUM FOR THE INSANE.

NEAR EXETER, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSUAH W. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, on the 14th of Eleventh month, 1866, of Friends' Meeting, New Garden, North Carolina, Gideon Dixon, Superintendent of Philadelphia Friends' Free Men's Schools, to EUNICE CONGON, of New Bedford Massachusetts, Principal of the Freedmen's School, Danvers, Vt.

WM. H. FILE, PRINTER,  
No. 214 Pearl street, between Dock and Third.

# THE FRIEND.

AT NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Advance, when paid quarterly in advance, five cents.

## The Channel Islands.

(Concluded from page 114.)

"Peculiar interest attaches to the agriculture of Guernsey and Jersey on account of the tenure the land. Mill, Kay, Fawcett, and especially Norton, in his *Plea for Peasant Proprietors*, look upon these islands as an illustrious example of the advantage of small freeholds. And to a certain extent they are justified in doing so. The population is about twice as dense as in England. Indecency and pauperism are almost unknown. There are two so-called hospitals which exist in Guernsey, as much for the poor as for the sick, containing inmates who have been compelled to go there for want of work, but only the drunken and the absolute, who have impoverished themselves by vice. The cottages are palaces compared with the hovels in which our farm labourers too often live. They are beautiful without, in their covering of creeping, flowering plants, and surrounded by air fragrant with fruit and flowers. Within there is comfort, and more than comfort. They nearly all have two stories. In every room there are alley windows, with large square panes of glass, instead of the leaded casements and small diamond shaped panes of our own cottages. The crockery and kitchen utensils are abundant, and there is generally a good-sized fitch of bacon hanging on the kitchen ceiling. The inmates are well clad, and are never seen ragged or disreputable. On the week days they wear a blue blouse, like that worn by the Breton peasants; on the Sundays they are clad in broad cloth. In Jersey the houses are not so well built, nor are they so well furnished, but there is always an ample accommodation for the maintenance of decency, which is sorely wanted in English cottages. In both lands gavelkind prevails. Each child inherits an equal share of the father's property, save that the eldest son is entitled to the house and sixteen acres of land surrounding it, in Guernsey, and thirty acres in Jersey. The consequence is that the estates are very small, and are worked by the owners, with the unfilling industry, the wearying toil, already referred to. It does not appear that the estates are becoming smaller and more numerous. In some cases, as in France, the younger sons, when they find that they cannot profitably work their inheritance on account of its restricted limits, sell it to their elder brother. Marriage also tends to keep the estates pretty much as they were. As to the effect of the law of inheritance upon the practical agriculture of

the islands, there is very strong and conclusive testimony that it has acted advantageously. The crops are large, and the land as a whole is well cultivated, though here and there one may see patches of nettles and weeds where they ought not to be. As a rule, cultivation is carried to the utmost pitch of perfection. The owners know that they cannot afford to lose any portion of their small estates. Of course in farms that rarely exceed ten acres, there is no demand for the costly implements which the owners of large estates love to use. This absence is, in fact, the main objection which the owners of large estates have to the petty freeholds of the Channel Islands. Such small occupations must ever stand as the one great obstacle to the general introduction of implements. The subject is one in which there is much to be said on either side; but it does not follow that because in England, labour being dear and machinery cheap, it is better to have large farms where machinery can be used than small ones where they cannot, that the same rule applies to a country where human labour is cheapest of all commodities.

Although the foundation rock of the Channel Islands is granite, the soil is often very fertile. In Jersey especially, there is a large quantity of rich loam. This island is well studded by trees of many kinds, but of late years a large number of apple trees have been cut down, and the orchards turned into arable land. The land is held on various tenures, but chiefly on leases which must not exceed nine years, or as freehold. The latter tenure may be acquired in a manner which is, so far as we know, unique. A portion of the purchase money is paid down, and the rest paid in rent, being in fact, a permanent mortgage, with the difference that the mortgagee has no power to foreclose. So long as the rent is paid, so long is the owner left in undisputed possession; should he fail to pay, the land returns to the original proprietor. This practice often works well, by enabling persons of restricted means to become land owners; but it sometimes tempts men without any resources to purchase land, and to commence building houses which they are unable to finish for want of funds, and they are frequently compelled to surrender their incomplete work, simply because they have not resources sufficient to pay their rent. No landholder has the power to devise land by will, but it must follow the law of succession, by which two-thirds are divided among the sons, and one-third among the daughters. This law leads to a great sub-division of land, and in Jersey there are no estates exceeding sixty acres, and in Guernsey few so high as forty. The rent of land is high. Near St. Heliers it reaches £9 an acre, and at a distance varies from £1 10s. to £7 10s. In Guernsey the price is not so high, and land may be obtained within a mile of the town at £5 an acre. The rotation of crops is very much the same in both islands. In the first year are grown turnips, mangold, parsnips, &c., in the second, potatoes, carrots, and parsnips; in the third, wheat, in which are sown clover and rye-grass; in the fourth and fifth years, hay. A farm of twenty acres will have ten acres

of hay and pasture, four and three quarters of roots, two acres of potatoes, and of wheat three and a quarter acres. The stock would generally consist of two horses, six heifers, six cows and eight pigs. The manure from these animals is carefully collected for use on the land. Such a farm would require the services of two men and two women. As a rule, the farmer would not go beyond his own household for labour, since every member of it would work upon the farm. Where hired labour is necessary, the wages would be 2s. a day for men, and 1s. for women, without food; where food is given, half these amounts. In a few instances servants are boarded and lodged, and they then get £12 to £14 a year if men, and £8 to £10 if women. The cattle of the Channel Islands are famous all the world over. They are called Alderney because they originally came thence, but that island supplies very few now. In Jersey and Guernsey they abound; and so proud are the islanders of them, that very stringent laws are in force to prevent the introduction of other breeds. The Alderney cattle are small and beautifully shaped. The colours most prized are red and white and grey and fawn; the bridled are rare and are little valued. In the winter the cows are housed at night. They are always tethered, and it is usual to shift the stake every three hours. There are some cows milked three times a day. An average yield is fourteen quarts per day, and from eight to nine pounds of butter a week. A two year old heifer will sell for £12, a first class cow at four years will fetch £25. Sheep are scarcely to be seen throughout the island. Fertile as the islands are, they cannot supply entirely their own wants, and it is necessary to import meat, eggs, and cereals from England, France, and America. \* \* \*

The constitution of the Channel Islands seems to be peculiar and very complicated for such small communities. As has been observed, the people are also inflexibly opposed to changes, not believing that any proposed innovations can be improvements. Each separate island, too, has its own governmental arrangement. Though these are doubtless deemed very important by the islanders, they are necessarily of small interest to the rest of the world.

"The Channel Islands are eminently prosperous communities. Taxation is light, the public debt small, there is no want of enterprise in carrying out improvements, as the harbours of St. Helier's and St. Peter's Port prove. The confidence of the islanders in the stability of their own credit is proved by the readiness with which they will take up the bonds issued by the local government, when it is necessary to raise a loan. \* \* \* That the islanders are too wedded to old customs, when proved to be bad, cannot be doubted; and the obstinate resistance which the Guernseymen offered to political reforms that were sorely needed, is one of the least creditable facts in their history. In both of the two larger islands there is a good deal of class feeling. The old families are too apt to look down upon those who are not owners of territory, but have made money in trade and commerce, although in so doing the latter have greatly

contributed to the prosperity of the whole community."

The manners and morals of the inhabitants have, to some extent, suffered by the great increase of tourists, and especially by an influx of late years of an undesirable class of residents, chiefly persons from France, Scotland and Ireland. Drunkenness is rather prevalent, but the writer thinks not to so great degree as might be expected, when it is remembered that a great temptation to this vice exists in the low price at which intoxicating drinks can be obtained. There are, however, no drink shops in the country parishes. In three respects Guernsey is said to be superior to Jersey, the people are longer lived, better educated, and more religious. These three advantages are doubtless closely connected, good morals, education and religion, tending to promote longevity. The people generally profess some form of the Protestant religion. In Guernsey Methodism early took root, and has now a strong hold upon the affections of many of the inhabitants. In the chief towns there may be found the usual variety of religious professions, but in the country parishes the inhabitants—who almost universally attend Divine worship—are with few exceptions, either Churchmen or Methodists. "In the town churches it is customary to hold the services in two languages, generally French in the morning, and English in the evening. In the country churches French is for the most part exclusively used. The Wesleyans have two distinct organizations. They have chapels and circuits in which English alone is used, and others in which French is exclusively employed. The latter are more numerous, and in nearly all the country parishes in the two principal islands, the French chapels stand alone. Crimes of violence are exceedingly rare in all the islands, and property is respected in a community where beggars are unknown, and every one possesses something that he can call his own. Altogether the English tourist, and indeed the Englishman in search of a comfortable home, may go farther and fare worse, than he will fare in this Anglo-Norman archipelago."

The population of Jersey, in 1851, numbered 57,155. The island has an active trade. In 1852 the number of registered vessels belonging to it was 370, exclusive of a large number of boats engaged in the oyster fishery. Butter and cider are exported in large quantities. Guernsey, in 1852, had 29,757 inhabitants. The chief exports are cider, potatoes, cattle and granite. Alderney, much smaller than either of the preceding, had, in 1852, only 1030 inhabitants.

#### Some Observations on Christ's Sermon on the Mount.

(Continued from page 115.)

"Blessed are the merciful, for they shall obtain mercy."

It is highly necessary for mortals to show mercy in all their words and actions one to another; and also to the creatures which God hath made for the use of man. It is usually said, that a merciful man is merciful to his beast, which generally is true; and if men are merciful to their beasts, how much more ought they to be merciful one to another. Where mercy is to be extended, it ought not to be done sparingly, since thereby, according to Christ's blessed doctrine, we are to obtain mercy. That servant who showed no mercy to his fellow, had no mercy showed to him from his lord. It is also recorded, in the name of the Lord, "He hath shown unto thee, O man! what is good, and what doth the Lord require of thee, but to do justly, love mercy, and walk humbly with thy God." By which it appears that we

are not just in the sight of God, if we are cruel and unmerciful one to another. And we ought not only to be merciful, but to love it, which, if we are truly humble, we shall certainly do. Mercy will lessen, and not magnify weakness, failings, or small and trivial things, one in another; and sometimes, as the case may require, larger things. Yet there is room for seasonable reproof and correction; but mercy must be mixed with justice, else the correction may end in tyranny. We ought to be gentle to all men, which is a token of true gentility; so to be truly merciful, is to be blessed, and to obtain mercy.

"Blessed are the pure in heart, for they shall see God."

By which we may understand, that we are to take care of our hearts, and to keep a strict watch over them; and not admit unclean or unchaste thoughts, or sinful desires, to have an entrance therein. And if at unawares they should at any time enter, we must not entertain or love them, but turn them out; for we, in this, should be like our heavenly Father, of purer eyes than to behold iniquity with any allowance or approbation: otherwise it will hinder us from seeing God, and from the sweet enjoyment of his most precious presence, and from beholding the only begotten of the Father, and the fullness of his grace and truth, which we cannot see if our hearts are impure. We have an instance in the scribes and pharisees, who, though they were outwardly righteous and clean, yet within were very impure, so that they could not see God, though he was in Christ reconciling the world to himself: notwithstanding their nice discerning eyes, yet they could not see him, for the impurity of their hearts; which was so great, that they murdered the just One, their hearts being full of deceit and hypocrisy. "Make clean the inside, and the outside will be clean also," says Christ: from whence it appears, that a true Christian must be clean both within and without. The beginning of the work of purity and sanctity must be within; and being innocent and pure in heart, we shall then see the glory of the Father, the lovely beauty of the Son, and the power of the Holy Ghost, or Spirit.

"Blessed are the peacemakers, for they shall be called the children of God."

This peacemaking is excellent work, and a blessed calling; what pity it is, that there are not more workmen in the world who would set themselves heartily to it, which if they did, in a right spirit, God would certainly prosper the work in their hands, and plentifully reward them with his own peace, which passeth the understanding of the natural man. If our ingenious men, our men and women of skill and good natural parts, would take a little pains, when the case requires it, a great deal, the Almighty would richly reward them. This work is not too mean even for princes and nobles; no, not even the greatest monarchs on earth, unless it be too mean for them to be called the children of God. And if the children of God are peacemakers, what and whose children are they who break the peace of nations, communities, and families? Wherefore we should seek peace with all men, and ensue it, or sue for it, by our continual seeking of it, being a precious jewel when found; and though this office may seem a little unthankful at first, yet in the end it brings forth the peaceable fruits of righteousness, as many so labouring have witnessed. And Christ, to encourage the work, says, "They shall be called the children of God," which are the words of the King of kings; and if the princes of this world would promote this work among themselves, it would save a vast expense of treasure and of blood; and as these peacemakers are to be called the

children of God, they who are truly concerned herein, are not only so called, but are so in deed and in truth.

"Blessed are they who are persecuted for righteousness' sake: for theirs is the kingdom of heaven."

Persecution may be considered in relation to calumny and reproach, and in imprisonments, confinements, or the like, or taking away life or goods on a religious account, for conscientious scruples, &c. What sad work hath there been of this account in the world, not among Turks or Jews only, but among professors of christianity, which is indeed a great reproach to that holy name. Persecution for righteousness' sake is not fit for Turks or Jews, much less for the professors of our meek Lord; his disposition and gospel being absolutely the reverse of it, which is shameful sin to all men in all nations. However the persecuted have this comfort in the midst of all their sufferings: they are blessed of Christ their Lord, who himself suffered for them; and they are promised by him the kingdom of heaven. By which doctrine it may be safely concluded, that the members of his true church never persecuted any, though they have been often persecuted; but the eyes of many are now open to see the evil of it, and a spirit of moderation begins to grow and spring in divers parts of the earth.

It is to be desired, that the moderation of christians might more and more increase, and appeal to all men; because God is at hand, who will justify the innocent, whom he knows better than any man, because he sees their hearts, and he will condemn none but the guilty. How shall the Jews be converted, or the Turks be convinced of the verity of the christian religion, while its professors are tearing and rending one another: but it not been for the immoderation and persecution among professors of Christ in christendom, I called, it is probable christianity would have made far greater progress in the four quarters of the world long before this time, than it hath done. Persecution hath been proposed by the immoderate to ally heats and divisions, and cut breaches; but the ancient history of persecution and the modern practice of it, fully convince us that it hath always tended to make the hot hotter, the divisions greater, and the breach wider, and so the contention to grow endless; which nothing will end but a calm and quiet temper, the mind being cooled by the gentle influences of the holy Spirit of Christ, the immaculate Lamb, who came not to destroy, or devour, but to seek and to save that which was lost and gone astray, that he might bring them home to his fold of rest in his Father's kingdom.

"Blessed are ye, when men shall revile you and persecute you, and say all manner of evil against you falsely, for my sake."

"Rejoice and be exceeding glad: for great your reward in heaven: for so persecuted they the prophets who were before you."

There is a persecution as before hinted, by calumny and reproach, or reviling, by evil speaking and falsities, which, for the most part, it better patiently and quietly to suffer for Christ's sake, and if we are abused to appeal to him; for many times words break words, till at last it comes to prejudice, and breaks the unity and peace between brethren and families. So that in a general way one had better suffer the calumnies and reproach of evil men, with a tender concern for God's glory resting in the blessing of Christ; and that the wilt most surely feel if thou canst appeal to him on this wise, "Lord, thou knowest I suffer thee wrong for thy sake." In such sufferings there is an inward joy, a spiritual rejoicing, and the less

the persecuted is abundantly more glad, through a blessing and goodness of Christ, than the persecutor, whose conscience accuset him in secret. And as to personal persecution, it is no more than a prophets and our Lord suffered before us: and that that consideration Christ comforts his suffering seed: Those who suffer with him and his end, these have the promise of reigning with him; and himself hath promised them a reward, less than the kingdom of heaven.

"Ye are the salt of the earth: but if the salt hath lost its savor, wherewith shall it be salted? it is thenceforth good for nothing, but to be cast out, and to be trodden under foot by men."

Here Christ sheweth that his followers must season the earth, by living a savory life, and by walking according to his doctrines, which is wofully set forth in this excellent sermon. If we live up to those holy rules, we shall be serviceable in our generation, and our lives will teach people as well as our words, and better too, how much example is better than precept. I indeed christians ought to be careful in both: life to live holy, and in words to be sparing, serving to "Let their words be few and savory, seasoned with grace, that they may minister grace to the hearers." Thus should we season our world, and salt it with the salt of the covenant; if we lose this savor of grace, and take a worldly which Christ and his truth do not allow speaking things at random, which are not content or edifying, but altogether unsavory, then, according to our Master, who is in heaven, we are dead for nothing but to be cast out, *i. e.*, out of church, to be trampled upon by men, as in this world we deserve: not that our bodies are to be destroyed; for the door of the church is always open to receive true penitents: but for this world and good purpose we are chastened of the Lord, that the soul may be saved in the day of judgment. And those who know godly sorrow for their sins, and turn from the evil of their ways, amendment of life, those Christ forgives, and setteth his church to do the same, saying, "If ye repent, forgive him;" which repentance is manifested by a new life and a holy and peaceable conversation.

### Animal Life in South Africa.

By H. CHESTER.

Although narratives of travel and of sporting adventures in Africa have of late become so numerous, the amount of information to be acquired through their medium respecting the peculiarities of the animal world in these regions, still beyond the first game countries of the older continent, is (with one or two exceptions) scanty indeed. We propose in the following pages to notice a few among the many points thus generally overlooked.

Commencing with the hugest specimen of nature's handiwork, the elephant, we have generally found two curious points overlooked or ignored by writers—one is the rapid and noiseless movements of this animal in the thickest cover; the other, his capabilities of passing over ground for an apparently utterly unfeasible. The elastic and noiseless footfall of the elephant has been frequently referred to by writers on Indian subjects. It has been rightly asserted to be the most agreeable feature in journeying on elephant-back. Its peculiarity may be easily explained by an examination of the structure of the animal's foot: it is the silent stealthy way in which he will pass through the densest thicket, literally "*slipping away*," when his acute sense of smell or hearing

warn him of danger, has been generally overlooked, and appears to us somewhat difficult of explanation. Let any one unskilled in the mysteries of "bush ranging," attempt to move even a few paces in an ordinary fox-covert without noise, and he will form some idea of the difficulties presented to the passage of so huge an animal as the elephant through the dense tangled undergrowth of a South African "bush." Yet that the animal, despite his enormous bulk, will "draw off" when within a few yards of his pursuer, without the slightest noise, and with the greatest rapidity, even in the thickest cover, is undeniable. We may, however, remark that this faculty or by whatever other term it may be described, is not peculiar to the elephant alone, for it has been observed to a marked extent in the moose or cariboo of North America.

Again, his powers of passing over difficult ground are often underrated even by hunters. When experiments were first made in India in training elephants to draw the guns, it was observed with surprise that the animal's powers of ascending steep and rugged ground were far greater than had been anticipated. The gun, a light six-pounder, with which the trial was first made, was drawn up a slope so steep as to require the animal to crawl upon its foreknees, without hesitation. On the other hand, hampered by the gun and harness, the elephant (a small female) showed unusual dread of soft and swampy ground. In Africa, marshes do not seem to possess the same terror for these animals in their wild state, for if they offer tempting pools, however uncertain the footing may be, the elephants appear to find a track across them. In the river courses too, deepened as they are by the torrent of the rainy season many yards below the surface of the surrounding country, and having banks nearly perpendicular, small shady pools close sheltered from the sun's rays, often remain in the hot season when the rest of the stream has disappeared, and to these, should no other way be open, may be found tracks of the animals, leaving no doubt they have reached the coveted water by slipping down on their posteriors. In what position the hinder legs are placed during this operation we cannot tell, but the "spoor" leaves no doubt of its having been repeatedly adopted in places apparently unaccessible.

The elephants generally remain in the thickest part of the forest during the day, making for the water, to which they often go long distances, shortly before midnight, and returning to cover some hours before dawn. We may be remarkable that although these animals, owing no doubt to their acute sense of hearing and of scent, have never been surprised in a recumbent position, there is ample proof that the bulls at any rate, usually rest lying on their sides. The late Gordon Cumming was, we believe, the first to note this fact, which we can ourselves confirm. He remarked that the sides of the enormous ant bears so common in this region, were apparently preferred, and that the ground was often distinctly marked with the impression of the under tusk as well as of the animal's body.

The influence of the particular tract of country in which they are found upon these animals, and the influence which they, in their turn, like all other living creatures, exercise on their habitat, should not escape a short notice.

On the borders of the Cape Colony and Natal, we find the few elephants that remain large in size, but with comparatively small tusks of inferior ivory. As we approach the equator, although food is far more plentiful, we find the animals smaller in size, having far larger tusks, the latter

too being of an ivory far superior in hardness and closeness of grain. Indeed, although naturalists have not recognized more than one species of the African elephant, the varieties of ivory exported from the north, west, south-west, south-east coast, and the Cape, have each marked differences of quality by which they are easily recognizable. The animals in their turn, however, likewise affect the economy of the country they inhabit. The damage done even by a single elephant in a very short time to a patch of cultivated ground is truly frightful, and having been once seen, would lead one to imagine that when these animals are herded together in vast troops such as the one seen by Dr. Livingstone on the banks of the Zambezi, consisting of over eight hundred, covering an extent of two miles of country, their course would be marked by utter desolation. The havoc thus caused is not however perceptible, a fact which that observant traveller has attributed, no doubt rightly, to the care shown by the elephants in the selection of their food—a point, as he justly remarks, often overlooked in estimating the quantity of food required by the larger animals.

Again, all these animals, rhinoceri and hippopotami included, are, as M. Krapf observed, the true pioneers, "the real path-makers of the tropical forest, which without their tracks would be often utterly impenetrable to man." Further, these paths leading as they most frequently do, to water, are often the only open channels for the surface-flow of the heavy rainfalls, and thus materially contribute to the continuance of the water supply of the district, to the very existence of which they owe their formation. While the elephant does not thus destroy vegetation which would ruin the shelter which appears indispensable to him, on the other hand he directly assists the production of new growths by his habit of searching for the many succulent bulbs to be found below the surface of the soil in every open space.

Gordon Cumming, in whose time elephants were more plentiful in the neighbourhood of the colonial frontier, than they are at the present, described large patches of many acres each in extent, as being thus ploughed up to a depth of several inches by the tusks of the elephants in quest of roots and bulbs; thus doubtless bringing to the surface germs of a fresh vegetation which would otherwise lie dormant. It is curious to remark that Pliny was acquainted with this habit (generally overlooked by modern writers) and he describes the "Indians" (?) as sowing their corn in the furrows thus provided for them by the elephants.

We have already alluded to the influence of locality on the size of the elephant, and the same remark appears to hold good with other animals. Many of the so-called varieties of antelope are asserted by Dr. Livingstone in a note to his last work to be but local variations of other species already known. The same remark applies to the carnivora; the varieties of lion, the yellow and black, as they are styled by the colonists, thus appear to be one and the same animal at different ages and under the influence of different localities; the darker colour coming with age, and the thickness of the coat and the shagginess of the mane being apparently in a great measure dependent on the nature of the ground frequented by the animal.

(To be continued.)

*Mining Phenomenon.*—It is a curious fact, connected with deep mining, that from the hours of twelve at night till eight in the morning, the disturbing influence in the bowels of the earth ob-

tains increased activity. At that time it is observed by miners that water falls from places where none is observable during the day. The volume in the wheel is perceptibly increased, the atmosphere is charged with gases which often prevent the lights from burning, and small particles of earth and rock are observable to fall from the tops of the drives. Whether this phenomenon is to be attributed to the diurnal motion of the earth, or other causes, it is worthy of the attention of the curious.—*Geology Advertiser.*

## THE LIVING TEMPLE.

BY G. W. HOLMES.

Not in the world of light alone,  
Where God has built his blazing throne,  
Not yet alone in earth below,  
With belted seas that come and go,  
And endless isles of sunlit green,  
Is all thy Maker's glory to be seen,  
Look in upon thy wondrous frame,  
Eternal wisdom still the same!

The smooth, soft air with pulse-like waves  
Flows murmuring through his hidden caves,  
Whose streams of brightening purple rush,  
Fired with a new and livelier blush,  
While all their burden of decay  
The ebbing current steals away,  
And red with Nature's flame they start  
From the warm fountains of the heart.

No rest that throbbing slave may ask,  
Forever quivering o'er his task,  
While far and wide a crimson jet  
Leaps forth to fill the woven net  
Which in unbroken ceaseless tides  
The flood of burning life divides,  
Then, kindling each decaying part,  
Creeps back to find the throbbing heart.

But, warmed with that unchanging flame,  
Behold the outward moving frame,  
Its living marbles jointed strong  
With glistening band and silvery thong,  
And linked to reason's guiding rings  
By myriad rings in trembling chains,  
Each graven with the sacred zone  
Which claims it as the master's own.

See how you beam of seeming white  
Is braided out of seven-hued light,  
Yet in those lucid globes no ray  
By any chance shall break astray.  
Hark how the rolling surge of sound,  
Arches and spirals circling round,  
Wakes the hushed spirit through thine ear  
With music it is heaven to hear.

Then mark the cloven sphere that holds  
All thought in its mysterious folds;  
That feels sensation's faintest thrill,  
And dashes forth the sovereign will!  
Think on the stormy world that dwells!  
Locked in its dim and clustering cells!  
The lightning gleams of power it sheds  
Along its hollow glassy threads!

O Father! grant thy love divine  
To make these mystic temples thine!  
When wasting age and wearying strife  
Have sapped the leaning walls of life,  
When darkness gathers o'er all,  
And the last tottering pillars fall,  
Take the poor dust thy mercy warms,  
And mold it into heavenly forms!

Selected.

Peace has unveiled her smiling face,  
And woos thy soul to her embrace;  
Enjoyed with ease, if thou refrain  
From earthly love; else sought in vain.  
She dwells with all who truly prefer,  
But seeks not them who seek not her.

Yield to the Lord, with simple heart,  
All that thou hast, and all thou art;  
Renounce all strength, but strength divine,  
And peace shall be forever thine;  
Behold the paths the saints have trod,  
The paths which led them home to God.

Guyon.

## John Dunstone.

For "The Friend."

(Continued from page 119.)

Shortly after this manifestation of divine goodness, he and his wife were brought into distress, on account of inability to meet the demands of their landlord; who, for the small sum of thirty shillings, inconsiderately pressed hard on these poor afflicted people. They had struggled hitherto, out of their bare weekly allowance, to keep up the payment of the rent; not unfrequently, in order to do so, living sparingly, even on bread and water. However, this proved insufficient, and, notwithstanding all their efforts, an accumulation of debt seemed unavoidable. In his perplexity, he left the house to seek, in some sequestered place, divine counsel and direction. "I will remember," said he, "the spot on which I stood; and there, in deep retirement before the Lord, it pleased my Heavenly Father to pour out of his love and mercy on my soul. And now," said he, "raising my hands toward heaven, I exclaimed: 'My Heavenly Father, condescend to show me how to proceed in this matter, and whatsoever my hand shall find to do, either now or hereafter, with thy gracious assistance, I will do it with all my might, leaving the event to thy Divine Providence.'" He returned to his house with a peaceful mind, fully assured that He, who heareth and answereth prayer, would deliver them out of their difficulty.

Just at this time, his mother and two of his brothers came to see them. John Dunstone and his wife informed them of their circumstances, expressing, at the same time, their willingness to go to the parish work-house, had the inmates been of sober habits; but this not being the case, the prospect of such society was distressing. His brother kindly replied: "You shall not go there; we will build you a little hut on the common, but that hereafter you shall have no rent to pay." To meet the present demand, was now his remaining difficulty; and, to accomplish it, an appeal to the parish vestry seemed his only resource. This course he took, and such was the feeling induced in the minds of those present, that they at once expressed their willingness to pay the arrears. The humble dwelling was quickly commenced; and when, after a few days, the mud wall was raised about six feet high, "I will remember," said he, "feeling my way into the corner where I am now sitting, and here, on the bended knees both of body and soul, I consecrated my little dwelling to the Lord; telling him it should be his house, dedicated to his service, and earnestly supplicating that all who should live in it might live in his fear, and that all who should die in it might die in his favor. And this, through divine goodness, has been hitherto mercifully the case—three members of my little family having exchanged mortality for life since we first settled under its roof, each leaving a precious testimony to the grace and mercy of the Redeemer."

It will be right for me here to observe, that in every season of pecuniary difficulty, he conscientiously avoided obtaining even the necessities of life on credit, as he might have done; and from the hour when he first became sensible of the light of Christ illuminating his mind, the inconsistency of obtaining the property of another, without a reasonable prospect of early payment, was clear to his view. Faithful to the conviction, he ever chose, even in times of great extremity, rather to cast himself on Divine Providence than in this respect to infringe on the divine law.

About the same time, he was deeply exercised on the subject of praying occasionally with his family; there were times when the duty pressed

heavily on his mind; but so weighty did the engagement appear in his view, and so encompassed with weakness and infirmity did he feel himself, that the struggle was nearly overwhelming to his weak, emaciated frame; and when at last a conviction of duty rose above every other consideration, he rather fell on his knees than deliberately bowed them before the Lord.

In this manner he continued to act; not periodically entering on the awful engagement, but at those seasons when the good hand of the Lord was upon him, preparing the sacrifice, and strengthening him with might in the inner man, to approach the throne of heavenly love with earnest and prevailing supplication, to the comfort of his own soul, and the furtherance of the work of grace on the souls of his household.

One of the most remarkable passages of his life now took place. Poverty, with all its usual concomitants, had long been the portion of himself and family (except indeed that in their case thankful and contented spirit appears uniform to have prevailed,) but at this time the pressure of want was heavy upon them; their barley-cake (and this was all their provision) was nearly exhausted, and several days must elapse ere they would be likely to find the means of procuring more. The wife, leaving her baby, with an elder child, to the care of their blind father, had gone in the morning to a neighbouring farm to work, and returned at the dinner hour, far less with the object of satisfying her own hunger than that of ministering what she could to the sustenance of her child; and having accomplished this object, she again went to her labour. Shortly after she had left the house, he took a small piece of what yet remained of the loaf, and with it a cup of water, and sitting down in his usual corner, lifted up his heart in thankfulness to his Heavenly Benefactor, for the provision his hand had made while tears of emotion followed each other down his cheeks. "I have tasted," said he, "many sweet things in my life, both the honey and the honeycomb, but nothing so sweet to my taste as the bread and water of which I had now partaken."

Having thus finished his meal, without however, satisfying his hunger, choosing rather to deny himself, in order that a little might be kept for the use of his wife after the toils of the day, it was powerfully impressed upon his mind that he would, in an especial manner, dedicate the afternoon to the Lord, by seeking renewed evidences of his love and favor. With this view, he placed the infant in the cradle, and quickly sought to sleep. Its little sister he led to the grandmother's, who lived just by on the common, and returned to his empty dwelling.

On entering, he locked the door, and drew down the curtain, sought the accustomed corner where, in silent retirement, he sat down to wait upon the Lord, and in the ability which he might give, to draw near in spirit unto him. He knew the heart of his servant, his deep devotedness, his unfeigned humility, his lively and cheerful faith in a merciful Providence, unwavering notwithstanding the utter destitution of his present circumstances—He who knew all this, condescended, in a remarkable manner, to reveal himself to his disciple. If I might venture to draw such a parallel, his case must have been, in considerable degree, similar to that spoken in this language: "Whether in the body, I cannot tell; or whether out of the body, I cannot tell; or whether out of the body, I cannot tell; or whether out of the body, I cannot tell; or whether out of the body, I cannot tell." Though I feel a degree of hesitation in introducing these words to my readers, yet I cannot find language better adapted to portray the real circumstances of the case. For

urs, at least, must have passed away in this manner, during which, without uttering a word, far as he knew, he remained in deep tranquillity and fervor of spirit, swallowed up in the luminous essence of the Lord, and reposing (if I may so speak) under the wings of the cherubim before a mercy seat, insensible to all around him, and if no longer an inhabitant of this world. "And then," to use his own language, "I came a little myself, all was light and life around; and although conscious of my blindness, yet it appeared me that if a pin had been on the floor before me, I could readily have picked it up." The glory of the vision gradually declined, till, after a little time, he found himself the same poor, weak, suffering creature as before, though still retaining, and that for a long season, a precious sense of the mercy of the Most High, thus remarkably enjoyed by his soul. His sense of anger now returned, with a feeling of condemnation for want of faith in Divine Providence, which would have led him to satisfy it without being careful for the future, seeing how marvelously his Heavenly Father had often dealt with him; and again lifting up his heart to the Fountain of mercy, his former peace was restored. By this time his wife had returned from her labour, and an invitation had reached them to take a meal with her mother's. This they thankfully accepted; and the refreshment was very seasonable.

Although they had carefully avoided making known their circumstances, even to their nearest relatives, yet, on the following day, a loaf came from one quarter, a tub of potatoes from another, and from a third, &c., so that in no week of their lives were they more plentifully cared for than in this; and, remarkable as it may appear, from that day to the end of their lives, a space of more than thirty years, they never knew absolute want; the same ever gracious Providence still watching over them, and verifying in their experience the truth of his own blessed saying: "The young lions do lack, and suffer hunger; but they that fear the Lord shall not want any good thing."

(To be continued.)

For "The Friend."

#### North Carolina.

The following letter is one of many—all reliable—of the same import. It was not written for the public eye, but believing that such facts as are referred to, should be known, and that however powerless "appeals" founded on them may prove in arousing the reader's sympathies, the facts themselves will arrest the attention of many blessed with the means of relief.

It is hoped also that it may suggest to the committees in the different Monthly Meetings engaged in collections for the Freedmen, whether they are working with an earnestness conporting with the very decided feeling and action of the meeting at the Arch Street Meeting House on the 25th of the 10th mo. Y. W.

Salisbury, 12th mo. 3d, 1866.

DEAR FRIEND:

There are several very pitiful cases of destitution and suffering among the freedmen in my neighborhood.

Duncan and Jane Neely, an aged couple, are, through sickness and crippled limbs, rendered all most entirely helpless, and dependent upon occasional charities.

Caroline Carson, who has seven children, is a widow, and only three of her children are self-supporting; the other four have been wandering with her over the highways for some time, begging piteously for employment and food.

Beside these there is a long list of women and

children, having no husbands or fathers to depend upon, who must undergo indescribable suffering this winter, if not cared for.

Please call the attention of your charitable Association for the relief of indigent freedmen to these cases. They are indeed needy and deserving. The failure in our crops will render their condition really alarming.

Thy attached friend,

EDWARD PAYSON HALL.

P. S.—Anything in the line of either clothing or provision will be thankfully received by me for them, and distributed among them, with all the care and judgment I can exercise.

Respectfully, E. P. H.

For "The Friend."

#### Thoughts for the Times.—No. 53.

These views of John Woolman are but the development of the one great principle, that the Divine inspeaking Word is the supreme guide of life, its teaching being the appointed law of conduct. The peculiar merit of the essays lies in the fidelity and clearness with which he applies this Divine rule to our human concerns, to the outward business of life and the government of the inner man; surveying the great interests of humanity and the duties of each class to every other, from the stand-point of that pure wisdom, which feels the perfect equality of all in the Divine sight, embraces in the common brotherhood of man, all kindreds, tongues and complexions, and extends even to the brute creation its kindness and compassion.

When John Woolman arrived at manhood, the colonies on the Delaware had been blessed with fifty years of unbroken peace and happiness. The Friends were still among the foremost inhabitants in wealth and respectability, and they did not deny themselves these conveniences and comforts of life which their ample means placed within their reach, and which their high standing in society might seem to require. There are tendencies in such a community to formality in religion, to the varnished selfishness of polished life, and to the substitution of schemes of philanthropic benevolence for the humbler, but sterner and more imperative duties of self-denial and obedience to the Divine law.

This state of things did not escape the penetrating eye of Samuel Fothergill. "A people," he observes, "who had thus beaten their swords into ploughshares, with the bent of their spirits to this world, could not instruct their offspring in those statutes they had themselves forgotten. As every life begets its like, a generation was likely to succeed formed upon other maxims, if the everlasting Father had not mercifully extended a visitation to supply the deficiency of their natural parents. It consisted with his wisdom and mercy to reach forth a hand of love to many of them of the younger sort, and to subject their hearts to the work of his own power."

Among the most eminent of these chosen servants was John Woolman. The life of purity and simplicity into which he was led, was so peculiar and distinct from that of his brethren in faith, as these were in character from the professors around them.

A certain writer has said that the Quakers were the Protestants of Protestantism; and in the same manner it may be said that John Woolman was the Quaker of Quakerism. And although the mere imitation of him in the things into which he was led, can never constitute christian virtue, yet none can go astray in following implicitly the Guide whom he followed; whose in-

structions are ever adapted to the peculiar condition of each, and will lead not into absolute identity of practice, which would be, or would end in being artificial and formal, but into that unity of the Spirit which is able to bind all classes and conditions of society into one holy brotherhood.

What then was the significance of John Woolman's character? In the dealings of the Almighty with mankind, we find that a holy example has ever been the most powerful means of enforcing and spreading the Truth. To take the highest instance of all, that of our Saviour himself—deeply as we reverence his condescending love, his atoning sacrifice, his redeeming mercy, we cannot but feel that it is the immaculate innocence and purity of his walk among men while here on earth, that independent of the visitations of his Spirit, touch the heart and enable us, through thus contemplating his human nature, to realize his Divinity, and through the aid of that Spirit, qualify us to follow in his footsteps, and to become indeed his disciples.

And in all ages when a backsliding, rebellious people had to be awakened and recalled to their allegiance to truth and duty, it has been by the instrumentality of men raised up for the work, and giving proof of their call by their holy, self-denying lives.

Especially was this the case with George Fox and the early Friends who were sent forth to republish the doctrines of the primitive christians.

The "holy experiment" of William Penn in founding the colony which bears his name, was successful beyond all precedent, and its prosperity severely tried the consistency of the Friends. The disciples of Fox and Dewsbury became the owners of slaves and indulged in a luxurious style of living, that led them off from the primitive simplicity of their fathers. There had not been wanting faithful disciples who deplored and reproved these departures.

But it was the preaching and still more the life of John Woolman, as instrumental means, that first effectually convinced the Society of the wickedness of slave-holding. The presence of a man who would not draw up a writing which conveyed or bequeathed a slave, who would not share the hospitality of a master living at ease on their labour, without making what he deemed a just compensation to the slave; who travelled through their country on foot as a minister of the gospel, in the garb of a servant, that he might more fully enter into their sufferings; who would eat and wear none of the products of their forced labour; who wet the floor where he sat in meetings for business, with tears of pity for the oppressed, and of contrition for his brethren, was a living protest against the iniquity, more effective than words, and won over all that was good in the Society to his side.

And this protest against slavery was but a branch of John Woolman's protest against all injustice and oppression, against excessive and unnecessary labour, and all that disturbed the true harmony of the creation. Like the primitive Friends he carried his entire belief over into practice. He kept a small shop for the sale of his tailor's goods, and gave it up because it was attended with much custom. He worked at his trade without even an apprentice, and would put up superfluities on the garments he made. When he was prevented from setting off in due time for meeting, he would not hasten his horse, but chose to take his seat after the meeting was gathered, rather than oppress his beast. He thought that dyed clothes was a means of hiding dirt, and opposing to that true cleanliness which becomes a

holy people, and he wore garments of the natural colour of the wool and fur. He had read of the cruelties practised in working the mines of the precious metals, and he was not free to drink from a silver cup, or to use articles of gold or silver. He bore his testimony against the eager hurry of business, and the cruelties practised upon stage horses and post boys in England, in the excessive labour to which they were subjected, and he refused to ride in a postchase, or to have his letters sent by mail.

These singularities of John Woolman were looked upon by some as mere eccentricities, which were greatly in the way of his usefulness. Those who saw deeper, knew that they were essential to the completeness of his character, as a man raised up for a sign to Israel. They were dictated by a sense of duty, in a mind singularly gentle and unselfish, and tremblingly alive to the reproofs of instruction. Nor was his example lost upon the Society. He was one of those eminent men, who were chosen and sent forth to en-act it to its primitive faith and practice, and whose influence upon it, is to be felt even to this day. For it is greatly owing to the apostolic labours and pure example of such men as John Smith of Marlborough, John Churchman, John Woolman, William Jackson, and their consistent contemporaries and successors in the church,—labours and examples still held in grateful remembrance—and especially to John Woolman in the remarkable writings which he left behind him, that the Yearly Meeting of Pennsylvania has, through the Divine blessing, held fast to the ancient doctrine, to the form of sound words, and to comparative plainness and simplicity of life and manners, amidst surrounding changes in fashion, and departure in principles.

John Woolman was deeply concerned on account of the oppression of the poor by the rich, their hard and incessant labour, and their wages inadequate to the real wants of life. This inequality of condition between the two classes seemed to increase with the increase of wealth, as if the abjectness of the poor were a reaction from the elevation of the rich. And in that day there seemed to be no escape from this condition of things, but in going back to the simplicity and rudeness of patriarchal times, as if, for once, the inevitable law of human progress was at variance with the beneficence of the Creator.

But a mighty change was at hand. The invention of the steam-engine had already altered the face of society, and revolutionized the industry of civilized man. At this day that marvellous agency is doing work which millions of human hands could not perform—a labourer that never tires, nor eats or sleeps, nor asks for wages, and that year by year is taking upon itself fresh tasks of severe drudgery, from which it relieves the toiling workman, asking only in return his skill in guiding the almost thinking machinery it propels. Hitherto the advantage of this vast saving in the cost of production, has been to the consumer and to the wealthy owner of machinery.

But the labourer has learned from the capitalist the secret of co-operation. As the co-operative stores of the English labourers are introduced into other countries, the beneficial society, the saving bank, the school and the lecture room will follow in their train. The artisans are learning to combine their small savings and to conduct successfully various branches of business and manufactures. They are setting limits to the requisitions of the master, both as to the hours and wages of labour.

The sure effect of all these changes will be to raise the social condition of the working man, to

lighten the severe and incessant toil to which he has been subjected, to render a general intelligence and a knowledge of the useful arts, the necessities of his condition, to promote the accumulation of small savings so as to render old age comfortable, to put him in a condition to maintain his social rights and to feel the dignity and responsibility of his social duties. Thus will the beneficent wisdom of the Almighty in so framing our social instincts as to connect progress in the arts of life with progress even in virtuous sentiments, be indicated by the union of capital with labour—the effective cure, it is believed, of those dangerous inequalities of condition, which corrupt the rich and debase by oppressing the poor; and which have hitherto baffled every effort to equalize them.

It is obvious that we are approaching this condition of the social relations—which is even now at our door, and to which we must submit, whether we will or not. What concerns us here, is the moral consequence of this mighty change. It is as if vast tracts of a wild and desolate region were suddenly opened to industry, and rendered capable of tillage and husbandry. The soil indeed will require long, patient and careful cultivation before its full capacities can be developed, which only the dews, and rains, and warmth of Heaven can quicken into life. But never since the dawn of modern civilization has there been a period more full of hope and promise, which called so loudly for the aid of all wise, and thoughtful, and religious men, in guiding its tendencies, and elevating it to the level of its duties.

Without presuming to say how the Society of Friends may be led in the future now before us, we cannot doubt that if faithful to its own principles, it will keep its hands clean from the gain of oppression, prove by its humble, watchful course, its reliance on the guidance of the Holy Spirit, strive earnestly to promote useful learning and pure religion among all; especially the working classes, present a pattern of true wisdom and simplicity in its manner of life, and lift up its voice against all injustice and violence.

Were John Woolman still living, his gentle and sensitive spirit would no doubt turn aside from the strange hurry and noise of the world in which he would find himself; he would still feel himself set as a mark in Israel; but there can be little doubt that he would deeply sympathize with the toiling thousands who are working their way upwards into higher regions of intelligence and morality, and that he would find in them an eager audience for the reception of his gospel message of "peace on earth and good will among men."

Selected for "The Friend."

#### The Mustard Tree of the Bible.

The word *sinapi* is met with in the Gospels according to Matthew, Mark and Luke, and it has been translated *mustard tree*. Much difference of opinion has existed as to the plant here intended. It is thought that it cannot be the common mustard of the country, which is an herb of annual growth; whereas the evangelists speak of the plant as a tree having branches, on which the fowls of the air lodged. \* \* Our Lord also alludes to the smallness of the seed in Matt. xvii. 20, and Luke xvii. 6. The mustard plant was a branching tree with a small seed. Dr. Royle has examined this subject with his usual care and acuteness, and finds that the mustard plant of Palestine at the present day, is a tree which answers in every respect to the description of the sacred writers. The tree grows near Jerusalem, and most abundantly on the banks of

the Jordan, and round the sea of Tiberias. It is known to botanists as *Salvadora Persica*, and belongs to the natural order *Salvadoraceæ*, which is considered as being nearly allied to the olive family.

The trunk of the *Salvadora* is sometimes twenty-five feet high, with a diameter of one foot. Its branches are very numerous, spreading, and with their extremities pendulous, like the weeping willow. The flowers are minute. The berry is very small, much less than a grain of black pepper, smooth and red. Each fruit contains one seed, which is pungent, and is used as mustard. The fruit has an aromatic smell, and tastes like garden cress. The bark of the root is acrid, and is used in India for causing blisters.

Some, however, still think that the black mustard plant, (*Sinapis nigra*) is referred to in Scripture, inasmuch as the *Salvadora Persica* is a subtropical plant, found in the valley of Ege-di, and not a common plant in Palestine. The common black mustard plant has been seen in the Holy Land as high as the horse and his rider, and birds would naturally settle or rest upon it. The parable illustrates the increase of Christ's kingdom, which from small beginnings is destined finally to extend over the whole earth.

Professor Hackett tells us that when crossing the plain of Akta, in Palestine, he saw before him a little grove of trees. On coming nearer they proved to be a grove of mustard plants. Some of the trees were full nine feet high, with a trunk two or three inches in circumference, throwing out branches on every side. He wondered whether they were strong enough for the birds "to lodge in the branches thereof." Just then a bird stopped in its flight through the air, alighted down on one of the limbs, which hardly moved beneath the weight, and began to warble forth a strain of sweetest music. The professor was delighted with the incident, his doubts "were charmed away," the "least of all seeds," was actually grown into a substantial tree.—*The Plants of the Bible*, by Prof. Balfour.

*Value of Insects.*—Great Britain pays annually \$1,000,000 for dried carcasses of that tiny insect known as the cochineal; while another—also peculiar to India—gum shellac, or rather its production, is scarcely less valuable. More than 1,500,000 human beings derive their sole support from the culture and manufacture of the fibres spun by the silk worm, of which the annual circulating medium is said to be \$200,000,000. In England alone—to say nothing of the other parts of Europe—\$500,000 are spent every year in the purchase of foreign honey, while the value of that which is native is not mentioned, and all that is the work of the bee; but this makes no mention of 10,000 pounds of wax imported every year. Besides all this, there are the gall-nuts, used for dyeing and making ink; the cantharides, or Spanish fly, used in medicine. In fact, every insect is contributing in some way—directly or indirectly—in swelling the amount of our commercial profits.—*Late Paper*.

For "The Friend."

The remarks of Robert Pryor, in "The Friend," were very striking, and should make a lasting impression on our minds, viz: "Dear brother, be not too anxious about the things of the world; for my inordinate desire to accumulate wealth, has been a heavy burden to me; you one knows what I have suffered on that account." He also acknowledged that his having been so solicitous after the world, had made him a "dwarf in religion," exemplifying the truth of the declaration

our blessed Saviour, when He said, "No man can serve two masters: for either he will hate the one and love the other; or else he will hold to one and despise the other. Ye cannot serve God and mammon." He was also made sensible not having been as useful to Society as he could have been, and that the love of money, and an inordinate desire after wealth, had pierced in through with many sorrows."

Of the truth of those expressions we need not doubt, for they were spoken in an honest hour, and should convince the living in such a manner to arouse them from their lethargy, and speedily get in practice the advice of one standing in the awful presence of the Judge of the whole earth: who will sooner or later bring us all to an account for the deeds done in the body, whether they be good or whether they be evil. But let us not wait to have one sent from the dead as Jesus wished, to convince us of the truth of these things, but let us rather listen to the Prophet of prophets, who has told us, "to seek first the kingdom of God, and His righteousness, and all these things shall be added unto you." How much better to believe Him who said, "Take no thought for your life, what ye shall eat or what shall drink; nor for your body what ye shall put on;" than to wait to be convinced when it is too late to put in practice our belief in them.

Far be it from us to discourage any from making proper efforts to gather enough of this world's goods to make them and their children comfortable while passing through time, and to use some also for the needy; for while they have eyes in view, they are often, if not always blessed with baskets and in store. The Searcher of hearts knoweth who are gathering with this object in view, and those for aggrandizement and show. Therefore, let us keep before us the advice of an Apostle, "to let our moderation appear unto men."

**Hardening Copper.**—A correspondent of the *Cincinnati Gazette* states that a Mr. Disman, of Cooper Sautdusky, Ohio, has discovered the process of hardening copper, an art which has been lost since the days of King Solomon. It is well known that the ancients possessed the art of hardening copper and making it equal to the best of steel, and for nearly three thousand years all knowledge of the method has been in oblivion.

## THE FRIEND.

TWELFTH MONTH 15, 1866.

If we believe that the life of Christ, as set forth by the evangelists, is a model of perfection which are called to imitate, we must admit the obligation to show forth the virtues of Him who has led us to his kingdom and glory. However much we may feel that that example, so far as He is divine, is above our level, and that in us the weakness of the flesh often controls the willingness of the spirit, yet neither can exonerate us from conforming to the laws to which our great Saviour himself teaches obedience by his own practice. His whole life was a beautiful exhibition of the religion he introduced and taught, and his disciples are enjoined so to conduct themselves that they too may adorn the doctrine of him, their Saviour. But if we were to judge of Christianity from the course pursued by ordinary, worldly christians, we could hardly escape the conclusion that instead of being a system of purity and self-denial, it inculcated self-indulgence and devotion to the world.

Our Saviour who knew perfectly the relations of this state of being to that which is to come, and the value of every thing that can engage the attention of man while here, has told us emphatically there is a constant and potent snare in any other riches than those which we may lay up in heaven; yet the possession of gold and silver, as representatives of this world's wealth, appears to be the great object towards which the large proportion of his nominal followers turn their fondest wishes, devote the greatest portion of their time, and bend their choicest energies. The fullest blessings and rewards pertaining to a strictly christian life, can be seen only by the eye of faith, and the promises of the gospel are addressed to those, and those only, who are willing to take up their cross, and deny themselves. But surrounded with evil examples, and prone, from the promptings of their animal appetites to self-indulgence, men, while they admit the truth of the theory, readily permit their attention to be absorbed by that which promises present gratification; and are thus easily allured from the narrow path of righteousness by the desire for wealth and worldly importance, as ministering to the pride of life and the pleasures of sense. Thus they voluntarily renounce the protecting power of the religion they profess, while they throw themselves into the way of temptations, they seldom have innate strength to resist.

We think this is to be constantly seen at the present time, and in our own country. The eager pursuit of riches, the rampant growth of luxury, and the inordinate thirst for splendor and gait, clearly indicate that the restraining principles of the religion of Christ, so generally professed, are either unrecognized, or thought of but little account; while the frequent instances of wholesale swindling, embezzlement and theft among those holding stations of trust and responsibility, show unmistakably, with how little force mere conventional laws of morality and honor, check the downward career of men who rely on nothing better to oppose the temptations abounding amid the general struggle for money and the pleasures it can command.

The bold and flippant manner in which the unrighteous gains of speculators and government contractors are acknowledged; the open-faced frauds practised in stock-jobbing, and the legalized gambling in the gold market, if read aright, with the few commentaries they call forth in the public press, show that a widespread demoralization has overtaken the community, blinding that nice sense of justice, honor, and honesty which characterized our forefathers, and which is inseparable from a sound belief in the christian religion.

These sorrowful lapses are probably more glaringly displayed in cities than in country places; but the spirit of gain and greed of gold have pervaded all portions of the land, often urging those engaged in agricultural pursuits to exchange their slow but surer accumulations, for the more hazardous ventures of mercantile business, and not unfrequently betraying the devotee of mammon into inextricable difficulties, ending in disgrace to himself, and loss to all who have reposed confidence in his integrity.

Such facts are well calculated to alarm every sincere believer in the truths of the gospel, and make him tremble for himself, for his fellow-professors, and for his country. If sufficiently alive to his responsibilities and the dangers that surround him, he can hardly fail to recognize the various forms assumed by this besetting sin, and that he, in common with his fellows, is exposed to its insidious contagion. This last considera-

tion, properly impressed, he will not be neglectful of close attention to that Monitor within, which alone can give him a clear insight into the sources of his own weakness, and knowledge where availing strength is to be obtained; teaching him how to act for himself and towards others; and richly rewarding him for every act of obedience. In this connection we would impress on the minds of our readers the following extracts from the advice of Philadelphia Yearly Meeting on the subject of trade.

"We affectionately desire, that Friends may humbly wait for Divine counsel in all their engagements, and duly attend to the secret intimations and restrictions of the Spirit of Truth in their business and trading, not suffering their minds to be hurried away by an inordinate desire of worldly riches; remembering the observation of the apostle in his day, and so often sorrowfully verified in ours, that 'They who will be rich, fall into temptation and a snare; and ering from the faith,' pierce themselves through with many sorrows.' Even when riches, to any extraordinary degree, have been amassed by the successful industry of parents, how often have they proved like wings to their children, carrying them beyond the limitations of Truth, into liberties repugnant to our religious testimonies, and sometimes into enterprises which have terminated in irreparable damage to their temporal affairs, if not an entire forgetfulness of the great work of the soul's salvation."

"The standard which the world adopts, and even defends, in its pursuit of trade and its desire to gather riches, is not a safe one for the disciple of Christ. 'Men will praise thee when thou doest well for thyself;' and we sorrowfully see that this praise is often bestowed with but little regard to the means employed to acquire wealth. But we are taught by the Saviour himself, that 'that which is highly esteemed among men is an abomination in the sight of God,' and we fear that it is true as respects some of the modes of conducting business, and many of the schemes for procuring money, which are resorted to in the present day. Earnestly do we desire that all our dear Friends may be scrupulously on their guard, not to suffer their nice sense of christian integrity to be blunted or benumbed by the examples which pass unrepined in the community, but steadily adhere to that strict uprightness, in all their transactions and converse, which becomes the disciple of Christ, and which so remarkably distinguished our worthy predecessors. How exact were they in the fulfilment of their words and obligations! how careful to avoid all evasive and insincere dealings; and how conscientiously not to engage in any thing of a doubtful or objectionable character! Their strictness in these respects gained for them and for our religious Society a high reputation, and the Lord blessed their honest endeavours, so that they prospered in the world. May their noble example influence us of the present day to follow in their footsteps, that so our conduct may bring no shade over the brightness of our christian profession, but that walking and acting in the holy light of the Lord Jesus, we may by our example, commend our principles to those who behold us, and experience in ourselves the truth of the Scripture declaration, 'The path of the just man is as a shining light, that shineth more and more unto the perfect day.'

"We believe the desire after large business is one of the besetting temptations of the present day, and we would affectionately entreat our members to beware of being caught with it. 'Seekest thou great things for thyself?' seek them

not," is the language of Holy Scripture applicable, we believe, at this day, to every one who desires to be a partaker of the joys of the righteous. The happiness of man's life consisteth not in the abundance of the things which he possesseth, but in the love of God shed abroad in the heart, and daily communion with Him. Trade, or business, or speculation in property, which holds out prospects of a rapid accumulation of riches, often destroys the tranquillity of the mind, and leads to perplexities which not only lessen the desire, but disqualify for a patient, humble dependence upon Him, who is the author of all our mercies, and whose blessing alone maketh truly rich. May none of our members involve themselves in worldly concerns of such magnitude, or of so absorbing a character, as to disqualify them for acting the part of faithful stewards to God, in the right use of their time, their talents, and the temporal substance intrusted to their care; or prevent them from being concerned, in all things to pass the time of their sojourning on earth in fear, and by daily watchfulness unto prayer, to have their lamps trimmed, and oil in these vessels, that when the solemn close of life shall come, they may be prepared, through the mercy of God in Christ Jesus, to enter unto the joy of their Lord."

#### SUMMARY OF EVENTS.

**FORBID.**—The Fenian troubles in Ireland continue. At a large meeting of the citizens of Genoa, the magistrates were requested to recommend the government to enrol the loyal people and increase the number of troops. Many more have been sent from England, including two regiments of cavalry. The government officers are, it is stated, increasingly vigilant in arresting suspected persons. All the depots of arms in Liverpool have been searched, and the excited state of feeling among the Irish population rendering this precaution necessary.

The *France* newspaper, of the 8th, asserts that Maximilian has telegraphed to some of the physicians attending the Empress Carlotta, to meet him at Gibraltar by the middle of this month.

The French troops are leaving Rome. The *Paris Patrie* of the 9th, announces that the convention on the subject of the Pspal debt has been formally signed.

An Imperial ukase has been issued at St. Petersburg, declaring all the relations of Russia with the Pope of Rome abrogated, and annulling all special laws of the empire which have heretofore been made in accordance with such relations.

Dispatches from Candia state that the Cretans are submitting to the power of the Turks, all means of further resistance having been exhausted. It is rumored that the Emperor of Russia has been invited by France to send a fleet to take some measures by which three governments may arrive at a mutual understanding in regard to affairs in the Island of Candia.

The *London Times* declares that the Alabama case ought to be settled promptly and amicably, and thinks it matter of deep regret that it was not compromised and disposed of long ago. The *Times* agrees with the President of the United States, as set forth in his annual message.

The *Paris* papers state that the French troops in Mexico will all have returned to France before the end of the second month next. The representatives of the United States government have commenced legal proceedings to prevent the sale of the rebel arms in France which furnished ships and materials to the parties during the late war.

On the 26th ult., a detachment of United States troops under General Sedgwick, took possession of Matamoras, Mexico, for the alleged purpose of protecting the lives and property of American citizens. The movement was disapproved by General Sheridan, and the troops were withdrawn subsequently to the north of the Rio Grande. Oaxaca has been surrendered to the Liberals, and their forces seem to be gaining ground everywhere. The United States will not recognize any other government than that of the United States.

Liverpool dispatches of the 10th report breadstuffs dull at a small decline in prices. Cotton active, middling lands, 14d. Consols, 88½. U. S. 5-20's, 71½. The *Examiner* follows the *Times*, and calls for an early settlement of the Alabama claims. It believes the popular voice is strongly in favor of an amicable adjust-

ment. Cardinal Cullen has issued a pastoral address urging the Irish people to obedience to law and avoidance of all secret societies.

**UNITED STATES.—The Public Debt** on the first inst., after deducting \$95,163,816 in coin, and \$40,195,821 in currency then in the Treasury, amounted to \$3,549,631, 238, which is less than for the corresponding month of the previous month. The currency was reduced \$4,753, 936 during the month.

**Public Lands.**—The Secretary of the Interior reports that 4,629,312 acres of lands were disposed of during the year ending 6th mo. 30th last. One million eight hundred and eighty-two thousand and one hundred and sixteen acres were entered under the homestead acts; 1,199,656 acres were approved to States as swamp land; 651,066 acres were located with agricultural college-ship; 403,180 acres were located with military warrants; 388,294 acres were sold for cash, and 93,957 acres approved to States for railroads.

**Gold and Silver.**—The value of the bullion received at the Mint and branches during the last fiscal year, was \$31,911,719. The coinage for the same period was as follows: gold coin, \$28,313,940, gold bars, \$9, 115,486; silver coin, \$680,264; silver bars, \$916,382; one, two, three, and five cent pieces, \$649,570; and copper and nickel last week, 223. The mean temperature of the Eleventh month, according to the record kept at the Penna. Hospital, was 48°. The highest during the month was 69°, and the lowest 29.00°. The amount of rain during the month was 1.76 inches. The average of the mean temperature of the Eleventh month for the last ten years is 47.7°; for the last twenty years, 43.29 degrees. The highest during that entire period (in 1845) was 50.50°. The lowest (in 1827 and 1842) 38°.

**Miscellaneous.**—The vintage of France this year is of an inferior quality, from the absence of sunshine and the late setting in of the autumn rains.

During the Eleventh month, 66 emigrant vessels arrived at New York from Europe, bringing a total of 21,008 passengers.

The *Mobile Tribune* estimates the cotton crop of the present year at 1,500,000 bales. The estimate at Charleston, S. C., makes it only 1,300,000 bales. There are then a difference in time in South Carolina, eleven cotton factories in successful operation.

Accounts from the interior of Alabama, show a greater breadth of ground than ever before sown in wheat. The wheat crop of Texas is heavier this year than in any previous one.

**Deaths.**—By the census of 1865, the State has a population of 373,700, being an increase of 101,671 since 1860.

**The South.**—The Governor of Alabama has sent a message to both Houses of the Legislature, advising the adoption of the constitutional amendment. The message caused much excitement, the majority of the House being opposed to the ratification. The Florida House of Representatives has rejected the amendment by a unanimous vote. Gov. Perry, of South Carolina, opposes the constitutional amendment, and advocates a general convention of all the States. The Legislature of the same State has passed a bill postponing the payment of debts till 1866. A bill has been reported to the Arkansas Legislature, bestowing civil rights on coloured persons. The Gov. of Virginia recommends the Legislature to adopt the constitutional amendment. The public debt of Virginia is over \$42,000,000. The chain gang has been revived in Richmond, Va., but it is contended that it is a relic of the old British barbarism, which should not be tolerated in any enlightened community.

**New York.**—The Board of State Canvassers of New York have declared the result of the late election for Governor as follows: For R. E. Fenton, 306,315; for J. A. Seward, 253,536. Total vote 1,198,841.

**Congress.**—The Judiciary Committee of the Senate has reported favorably the bill which has passed the House of Representatives to repeal the act giving the President power to grant amnesty to the rebels. A bill has been introduced for the admission of Nebraska into the Union. Senator Sumner has introduced a bill declaring the jurisdiction of Congress over the whole subject of reconstruction, the illegality of existing governments in the rebel States, and the exclusion of such States, as now organized, from representation in Congress. It is expected that the bills for the admission of Colorado and Nebraska will receive early consideration by the Senate.

The House of Representatives took up the bill to amend the national currency act, but after some discussion the bill was postponed until the Twelfth month next. A resolution referring the soldiers bounty act of last session to the Military Committee for amendment,

and the increased pay of members of Congress to the Judiciary Committee for repeal, was adopted. A resolution was adopted, yes, 119, nays 32, insisting on the adoption of the constitutional amendment by the State lately in rebellion, before the propriety of giving such States congressional representation shall be considered. The Committee on Territories was instructed to inquire into the expediency of providing territorial government for the rebel States. The House has appointed a committee to investigate the New Orleans riots. A bill has passed the House providing for an additional session of Congress to commence on the 4th of Third month next.

**Jefferson Davis.**—It is stated that the President is determined not to interfere in the case of Davis, who will be kept in confinement until arrangements shall be made for his trial.

**The Markets, &c.**—The following were the quotations on the 10th inst. *New York.*—American gold 137 1/4 U. S. dollars, 1881, 112½; ditto, 5-20, 106½; ditto, 10-40, 5 per cents, 100. Superfine State flour, \$7.50 a common, \$6.50. Shipping Oil, \$10 a \$11.15. Baltimore flour, \$9.50 to fair extra, \$10.30 a \$12.50; trade and family, \$12.60 a \$16. No. 2 spring wheat, \$2.20; State, \$2.90 a \$2.95. State barley, \$1.20. Western oats, 61½ a 63 cts. State corn, 65 a 68 cts. Western midland corn, \$1.12; new yellow, \$1.08 a \$1.10. Middings upland cotton, 33 cts. *Philadelphia.*—Superfine flour, \$8 a \$8.50; high grades, \$9 to \$15.50. Pennsylvania red wheat, \$2.65 a \$2.80. No. 2, \$2.90 a \$3.10; white, \$3.20 a \$3.30. Rye, \$1.30 a \$1.40. Old yellow corn, \$1.12 a \$1.17. New do., \$1.05 a \$1.10. Clover seed, \$2.50 a \$2.75. Timothy, \$3.50 a \$5.75. Flaxseed, \$3.10 a \$3.15. The arrivals and sales of beef cattle reached about 240 head. Extra sold at 15½ a 16 cts., a few choice at 16½ fair to good at 13 a 14 cts., and common, 10 a 12 ct. About 6000 sheep sold at 6 a 6½ cts. for good to extra, 5½ a \$3 cts. for fair, and 4½ cts. per lb. gross for common. Hogs were dull and lower, sales of 5000 from \$8 a \$9, a few extra at \$9.25 per 100 lbs. net.

#### RECEIPTS.

Received from Israel Hall, Ind., \$4, vol. 10; from James McGrail, O., \$2, vol. 40; from Blackburn, Pa., \$2, vol. 40, and for Nathan M. Blackburn, \$2, vol. 40.

Received from Wm. Blackburn, W. Brownsville, Pa. \$30; from New Garden Monthly Meeting, Ohio, \$38; and from Pennsville Monthly Meeting, Ohio, \$60, for the Relief of the Freedmen.

#### WESTWON BOARDING SCHOOL.

A Stated Meeting of the Committee who have charge of the Boarding School at Westwton, will be held on the Fourth-day the 19th of Twelfth month, at 10 o'clock A. M.

The Committee on Admissions will meet at 8 o'clock the same morning, and the Committee on Instruction at seven o'clock the preceding evening, instead of at 10 o'clock as heretofore.

The Visiting Committee attend at the School on Seventh-day afternoon, the 15th inst.

SAMUEL MORRIS,  
Twelfth month 3d, 1866. Clerk.

For the accommodation of the Visiting Committee conveyances will be at the Street Road Station on Seventh and Third-day afternoons, the 15th and 18th inst., to meet the trains that leave West Philadelphia at 4.30 and 4.45 p. m. On Fourth-day morning, a regular stage will meet the train that leaves Philadelphia at 7.10 A. M.—due at the Street Road at 9.26.

#### SCHOOL FOR COLOURED CHILDREN IN BERRY STREET.

A well qualified female teacher is wanted to charge of the boy's school under the care of the Month Meeting of Friends of Philadelphia for the South District. Application may be made to Susan O'Leary, 217 Second St. Thos. Elkinton, 118 Pine St. Geo. J. Scattergood, 413 Spruce St.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSUAH H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, of 430 and 4.45 p. m. On Fourth-day morning, a regular stage will meet the train that leaves Philadelphia, or to any other Member of the Board.

Some Observations on Christ's Sermon on the Mount.

(Continued from page 123.)

"Ye are the light of the world: a city set on a hill cannot be hid."

True and faithful christians are indeed as stars of God's firmament, which are of excellent use to the people in the night, and more especially when they are not clouded, and in a particular manner those who travel on the seas, for when they are not seen the sun for a season, then they are good guides to the sea-faring man; and likewise the wilderness on the land. This world is like wilderness, and like the troubled sea, to some of our souls; and good men and good women are as viceable to reprove and instruct in righteousness: "Such," says Daniel the prophet, "shall be as the brightness of the firmament, and as stars, forever and ever." And these are like city set upon a hill, which cannot be hid.

"Neither do men light a candle, and set it under a bushel, but on a candlestick; and it giveth light to all that are in the house."

Men, when divinely enlightened by the grace of the spirit of Christ, ought to exert themselves to their Master's glory and excite others, and stir them up to their duty; and to endeavor, as much as in them lies, to promote the kingdom and interest of our dear Lord. For men are God's candles, as the scripture saith, "The spirit of man the candle of the Lord;" and this candle is enlightened by Christ, who "Lighteth every man that cometh into the world," and is the fruit of the great Father of lights. The great and good end of Christ's lighting man's spirit, and illuminating him with divine light, is, that may shine out to others in a good conversation of a holy life, which is serviceable to others and self also, and answers the end of Him who lightened him by the fire of his word, or with coal from his holy altar; being thus lighted and walking in it, as the nations of them that are dead shall walk in the light of the Lamb. Here the house, or society, is truly lighted by such gifts; and those who have received greater gifts, degrees of divine light from Christ, than some others, and may have a larger share of natural or acquired parts, ought not to hide it, as our Lord presses it, under a bushel, but put it in its proper place, on a candlestick; and as the candle is of use when it is put out, therefore we ought to be very careful to keep to watchfulness and prayer, that it be kept lighted in time of dark-

ness; for "The candle of the wicked is often put out."

"Let your light so shine before men, that they may see your good works, and glorify your Father which is in heaven."

Since there is a bright and shining nature and quality in the holy lives of Christ's servants, and in the conversation of his faithful followers, therefore it should be manifest and appear before men; our lamp should be burning and our light shining; and we should take care to keep holy oil in our vessels, that therewith our lamps may be supplied, otherwise folly instead of wisdom will appear in our conversations, which will be a hindrance, when our great Bridgroom cometh, to our entrance into life, or God's kingdom, and greatly hindereth our Master's glory, of which we are by all means to endeavor the furtherance. Men generally take more notice of our evil works, and when an evil eye is open, will sooner see them, than our good ones; so that we had need to be very careful, and keep a holy watch in our conversations, that our light may so shine, that our Father who is in heaven may be glorified, in our bringing forth much good fruit.

"Think not that I am come to destroy the law or the prophets: I am not come to destroy, but to fulfil.

"For verily I say unto you, Till heaven and earth pass, one jot or one tittle shall in no wise pass from the law, till all be fulfilled."

The excellency of the dispensation of the glorious gospel of Jesus Christ is wonderful: having no tendency to destroy the law of God given by Moses; for Christ's doctrine comes up through it, fulfills it, and goes beyond it, in perfection and in the beauty of holiness, and in the life and power of pure religion.

"For I say unto you, except your righteousness shall exceed that of the scribes and pharisees, ye shall in no case enter the kingdom of heaven."

These scribes and pharisees had a righteousness, but it was of their own making, an outside one only, whereas within they were full of deceit and hypocrisy; they cried up righteousness in words, and yet cried out against Him who taught it in the greatest purity, and sought his destruction; they were notable examples to all persecutors for religion. Our Lord and his servants did not speak against outward holiness, but that the inside should be the same; for living righteousness leads to inward and outward purity, which is manifest by its fruit; and those fruits are fruits of the Spirit, which are, love, meekness, temperance, patience, experience, hope, and charity, or brotherly love; of which those people showed very little to Christ. He was sensible of their envy and malice, which were very contrary fruits to holiness; and therefore he tells them that hear him, that their "Righteousness must exceed that of the scribes and pharisees, or they in no case shall enter the kingdom of heaven."

"Ye have heard that it was said by them of old time, Thou shalt not kill; and whosoever shall kill shall be in danger of the judgment.

"But I say unto you, that whosoever is angry with his brother without a cause, shall be in

danger of the judgment: and whosoever shall say to his brother, Raca, shall be in danger of the council: but whosoever shall say, Thou fool, shall be in danger of hell-fire."

Here we may learn that the law provided nothing against anger, only in this case, against shedding of blood, and many times if anger is too much kindled it sets the soul on fire of hell, if it be not timely quenched. People, as it grows hotter, call one another out of their names, and take the name of the Lord in vain, break the third commandment, swearing by him, and cursing men. We may plainly see by Christ's doctrine, that anger, without cause, is dangerous. Soft words from a sedate mind will wonderfully help in this case: it is not easily conceived what a mighty advantage Satan hath upon one that is angry without a cause: and we are often apt to think we have cause when we have none at all; and then we make work for repentance, without which we are in danger of hell-fire. Wherefore every true christian ought to watch against the evil of anger; and yet there may be anger where there is real cause, without sin.

"Therefore if thou bring thy gift to the altar, and there rememberest that thy brother hath sought against thee;

"Leave there thy gift before the altar, and go thy way; first be reconciled to thy brother, and then come and offer thy gift."

The christian religion admits of no malice or guile; the worship of it is in spirit, and truth, and love, without hypocrisy, without deceit or hatred: if we come with these to the altar, they will hinder our acceptance. Though we may indeed have a gift, we are to seek reconciliation, and not say, Let him come to me, I will not go to him; but Christ tells us we must go to him; and if thou go to the offended in a meek and christian spirit, and seek reconciliation, if thy brother will not be reconciled, if the fault be in him, thou hast done thy duty, and thy gift will be received, and Christ will manifest himself to thee by his grace and spirit. But yet art thou to seek for peace, he having ordained it, and laid it as a duty incumbent on thee.

"Agree with thine adversary quickly, whilst thou art in the way with him; lest at any time the adversary deliver thee to the judge, and the judge deliver thee to the officer, and thou be cast into prison.

"Verily I say unto thee, Thou shalt by no means come out thence, till thou hast paid the uttermost farthing."

It is plain from hence, that Jesus is for a quick and speedy end to differences; "Agree with him quickly;" for it is of dangerous consequence to let disagreements lay long, they eat like a canker, and they destroy the very nature of religion: Personal differences are a great hurt to families, to churches, and to nations and countries, especially when espoused by parties; then what rending, tearing, and devouring work it makes; wherefore take Christ's counsel, and agree quickly. If the difference be on the account of debt, and the debt be just, it is better to offer up one's self and all that he has in the world, than to stand out with

one's adversary, till it come to the utmost extremity; and for christians to go to law one with another, is contrary to the apostle's advice; and oftentimes the gainer of the cause loses by going to law; so that it is good to agree quickly; it being profitable so to do, both spiritually and naturally. \* \* \*

"And if thy right eye offend thee, pluck it out, and cast it from thee: for it is profitable for thee that one of thy members should perish, and not that thy whole body should be cast into hell.

"And if thy right hand offend thee, cut it off, and cast it from thee: for it is profitable for thee that one of thy members should perish, and not that thy whole body should be cast into hell."

Christ compares the sinful lusts and inclinations which are the cause of men's destruction, and their being cast into hell, to a right eye, or a right hand, two of the most useful and serviceable members of the body; not that he intended that we should cut off our natural members, but that we should cut off these sinful lusts, and cast them from us, though they were as a right eye or hand. It is very much against nature, and very painful, to pull out an eye, or cut off a hand; so sin of many kinds is very agreeable to the natural man, and it is very hard for him to part with it; he pleads the use of it, and when Christ, the physician of the soul, comes to put his knife to it, which is his word, poor man is too apt to fly from it, and to shrink from under its stroke: the holy baptist, John, understanding our Lord's doctrine, and being sensible of the powerful working of Christ's word and spirit, says, "Now also the axe is laid to the root of the trees, every tree therefore, which bringeth not forth good fruit, is hewn down and cast into the fire."

(To be continued.)

From the "Intellectual Observer."

### Animal Life in South Africa.

BY H. CHICHESTER.

(Concluded from page 123.)

We may here briefly refer to the effects instanced in the case of those two formidable foes of domestic animals the "fly," or tsetse, and the lung sickness or peripneumonia of South Africa, both of which appear so dependent on locality. The "Tsetse" is a small active bee-like insect found in certain regions only, which sucks, in mosquito fashion, the blood of every creature it comes across. Its bite is harmless to man (even to the smallest children), to the mule, ass, and goat, to calves while sucking, and to all wild animals; yet it is certain death to the horse, ox, and dog; the symptoms, which last for months, pointing apparently to a strong poison introduced into the system. The localities in which this formidable pest is found are very circumscribed. Dr. Livingstone relates that although the south bank of the river Souta was a noted "fly" district, he found on the north bank the plague was unknown, the river being scarcely fifty yards wide, and tsetse being frequently carried across on the bodies of dead game by the natives.

Again, peripneumonia, known as "lung sickness" when it attacks the oxen, and "horse sickness" when it affects the horse, which is in fact the rinderpest of which we have of late had so much bitter experience, and which is equally fatal to domestic cattle and to the bovine antelopes and quaggas, appears unaccountably to be restricted to certain localities. In some parts of the Cape Colony there are very limited tracts of moderate elevation which appear to procure for horses while kept there a perfect immunity from the attacks of the disease, from which they have acquired from the Dutch the name "Paarden bergen," or

horse hills. They appear to possess no peculiarities of soil, vegetation, elevation, or climate to distinguish them from other spots around, and the cause of the immunity they enjoy remains as obscure as when it was noticed by the Dutch traveller Sparrmann a century ago.

A remarkable instance of the influence of the animal on the vegetable world, occurs in the migrations of game which annually takes place, from the desert towards the Cape Colony and Natal. In some cases these may be due to the state of the herbage, which varies considerably at different elevations, but in the more marked cases as the migrations of the Spring-bok (*Antelope cuclione*) this is not the case. These animals leave the desert at the time the grass is best, and track down towards the colony. The difficulty of estimating the numbers of a herd of animals in movement is always great; indeed, during the frontier struggles with the Kaffirs, it was always remarked that the number of cattle driven off or recovered, was in every case overrated by the most experienced stock keepers, even where no object was to be gained by misrepresentation. With these antelopes the difficulty is greatly increased by a certain quivering motion of their horns which they maintain, and also by the gleams of white from the beautiful fan-like manes which extend along their backs, and which they invariably erect when moving; considering, however the great numbers afterwards found in the colony when the main body has divided, it appears probable that the estimate which places the numbers at between thirty thousand and forty thousand at starting, does not exceed the truth. On certain seasons, generally recurring about once in ten years, there is a vast increase in numbers which causes the movement to take some of the features of an American "stampede." We have ourselves witnessed instances on these occasions, when the animals hurried along and seemingly bewildered by the numbers round them have allowed themselves to be caught by the hand.

It is to these larger occasional migrations that the Dutch Boers more especially apply the term "trek bokkens."

A scarcity of food in certain seasons inducing greater numbers thus to migrate, is the cause usually assigned to these movements.

Dr. Livingstone assigns another cause, viz., the wary habits of the animals which induce them to leave the high and rank grass and choose more open feeding grounds, an instinct by the way, often displayed by domestic oxen.

Wherever the herds of antelope are found, whether the numbers be large or small, they appear materially to influence the herbage of the district they frequent. Their close, cropping bite resembling that of sheep, opens out a place for the young shoots, while their droppings not only fertilize the ground, but return to it the seeds in the most suitable for fecundation.

Dr. Livingstone has related some instances where the game having been destroyed, the grass totally disappeared, being succeeded by a growth of mesembryanthemum-like plants, a change, which it is needless to say, would materially affect the water supply of a scantily watered country.

The migratory habits of these animals also prevent the herbage, and consequently the water supply, of any particular district being affected by over-cropping. In the Cape Colony, near Graaf-Reinet (and, we have been told, in some of the Merino districts in Spain,) the reverse of this picture may be seen. In these cases, by overfeeding certain of the sheep-walks, the herbage

has first become impoverished, and in the end, like the water supply, has nearly disappeared.

The number of these animals is also kept in check by the large proportion of the carnivora. Lions, indeed, are getting scarce; but the various species of leopard and tiger cat, known to the colonists under the general name of tigers, and of hyenas (called wolves) still abound. The beneficent purpose these animals fulfil in the great scheme of nature has been admirably pointed out in the "Bridgewater Treatise" of the late Dean Buckland.

It is indeed trite and superfluous to say that this intimate relation between every department of nature may be traced by the attentive observer upon every spot on the earth's surface, but in South Africa it possesses especial interest. There is no region we can point to where those relations as they now exist, have been longer in force; there is also none where the retreat of animal life before the almost imperceptible encroachments of civilized man has been and is progressing in a more marked or obvious manner.

For "The Friend."

Remarks of Jesse Haines, of Muncy, Lyncoln Co., Pa., who died on the 8th of Ninth month, 1856. "He was a beloved and valued minister of the gospel, aged one hundred years lacking six days."

He said evidently under a weight of exercise "When the anointing is upon me, I speak which is given to me, and when it ceases, I return the praise to the great Giver, feeling that I can do nothing of myself."

"The valley of humility is a place of safety."

Communicated for "The Friend."

Extracts from a letter written by the Superintendent, dated at Yorktown, Va., 11th month 29th, 1866.

Our schools, both day and evening, also those held on First-days, are overflowing. The interest for learning has largely increased. Our expenditures in erecting substantial and commodious buildings, together with the change in public sentiment here, from opposition to the support of their education, has in no small degree contributed to this happy result.

Our buildings which are finished, comprising all at Slabtown, are very substantial and as comfortable as need be.

The Acertown buildings are all finished except plastering. They would be filled with scholars if opened. The dwelling-house there will be plastered this week for R. S. to occupy. Shall we have the large school-house there plastered?

The nice brick house at Fort Magruder, assigned to us, was vacated last week, and fearing we might not find it vacant when we might want it, I moved M. and M. at once, and they are now very nicely set up in it and their school commenced. R. S. kindly consented to teach here this week in their place. We anxiously hope that H. A. C., and the other teacher asked for my last, will reach us by to-day's boat. We are suffering for their help every day and evening.

While the coloured people here are generally better clothed and provisioned than they were last fall, there are many women with children in very destitute condition, and they never needed aid more than now.

I find there have been sent several pieces of uncut goods which we propose to make up and employ these poor women. My wife will give attention to the cutting and making in connection with E. P. We have a suitable room, and as we have the cloth and thread, it will be no additional

ence to our Association. We shall allow them all wages, and when they have worked enough pay for a garment which they or their children could, they can have it, and at reduced prices. And the little beginnings, which we make in a way, prove satisfactory. I hope it may be continued through the winter. I fully believe that the establishment of an Industrial School here, this winter, would be the most judicious and of charity that could be bestowed, and I believe it might be nearly self-sustaining. At any rate, I do not doubt but that it might be carried at less final cost to the Association than any of the day schools. \* \* \*

Some excitement is just now caused by an order to remove the coloured people from Acren, Slabtown and other rented lands. The order is peremptory.

I have had interviews with General Armstrong and Lieut. Massey, Supts. of the Bureau, by whom the order is to be executed, if executed at all, and it is arranged by the Bureau and the owners of the land, to re-rent to all who, during the past year, have paid their rent or exhibited industry and habits of industry, and to remove others who have neither paid their rent nor endeavored to do so. This will be done between the 1st and New Year's time, and the removal will be made. Though severe, I think it is perfectly right, and that it will prove salutary. The bodies, among those turned off, will have to be sent to the government hospital here, and cared for, so that I think the excitement will subside, and nearly the same population remain. \* \* \*

We are all in good health, and are having very delightful weather, and all seem happy in their work. We feel that it pays cost every day. I think that the Committee could come and look in on the work. I think that they would feel well satisfied could they do so. \* \* \*

M. E. A., a teacher who has recently commenced her duties at Danville, writes under date of the 9th month 9th, 1866. \* \* \* I had heard of hardships, the trials and provocations of a soldier among the freedmen, and felt prepared almost any thing, but never did I imagine there was so much pleasure connected with it. I fully paid before I leave the school room after half a day's work.

Some of the children are dull of course, as in other schools, but most of them are doing finely. I have on my day list about eighty names, with average attendance of between fifty and sixty. Pleasant days our school is full, but a frost has the effect of leaving us with empty benches. They are very much afraid of the cold. They are generally clean and well behaved, doing great credit to the teachers who have been working on them. They seem to enjoy making us seats of things in their power, apples, potatoes, flowers, &c.

The division which I have at night consists of a group of men who are commencing to write together, and their eager faces would form a good subject for a picture, especially one old man who is so slow but very desirous to learn. If, by and by, he reads one word without aid, the tears start to his eyes and he can scarcely continue his work.

I have never seen people so desirous and so determined to learn. Teaching them is a continual source of interest.

Many of them have large families and are very poor, which is not to be wondered at when people are charged from six to fifteen dollars per month for log houses containing one room and a loft. They contrive methods to cheat them out of their

earnings, too, and try in every possible way to keep them down and prevent them from owing property or saving money.

Every one here, both black and white, carries a pistol or some other weapon. \* \* \*

The weather is variable—yesterday, the eighth, we sat all day with windows open, and without fire. I can scarcely imagine that Christmas is so near.

#### For "The Friend."

#### John Dunstone.

(Continued from page 125.)

Shortly after this season of peculiar favor, as he was on one occasion leaning forward, having in his hand an axe to cut a piece of wood, suddenly, and as it were, in an instant, while in this position of body, the enemy assaulted him; a blasphemous thought was presented to his mind, and it appeared to him that it was not without difficulty that he avoided putting it into words. He, however, quickly regained an upright posture, and lifting up his heart to the Source of all strength, exclaimed: "Bless the Lord, Oh my soul, and all that is within me bless his holy name."

This, for the time, put the enemy to flight, but it did not prevent his renewed attempts to harass and distress him, for many months, in various ways, and under different circumstances; yet, being enabled uniformly to repel these assaults, he found each succeeding attack weaker than the former, till at last, to use his own words, "They seemed as light as the touch of a feather."

Although totally blind, and otherwise greatly afflicted in body, yet anxious to do what he could toward the maintenance of his wife and children, he now obtained work in one of the mines in the neighborhood—his employment being simply that of blowing the bellows at the smith's forge. This labour he continued till increasing bodily affliction rendered him unequal to the task; and when no longer able to work, a monthly allowance was kindly made him by the mine adventurers, and continued for many years.

Shortly after going to the mine, he received into his house a widowed sister and her afflicted daughter: the former could read, and it became her frequent practice to read the Holy Scriptures to her blind relative and his family. On one occasion, when she was reading the first chapter of Luke, an earnest desire arose in his mind to commit to memory some part of it, which then particularly affected him; and it seemed suggested to him, that if he really desired to do so, he might surely accomplish it. He fell in with the suggestion, resolving that nothing should be wanting on his part to obtain the desired object; and he accordingly requested her to assist him in committing one verse to memory, to which she readily assented. This, to his great satisfaction, he soon did, and then, with equal facility, a second, and so on to the fifth. "By this time," said he, "I had as much as I could hear; my mind was affected with a deep sense of obligation, and with a grateful heart I retired to acknowledge it, and to entreat that that portion of divine truth which I had learned might be so engraven on my mind as never to be forgotten." Persevering in the same course, he at length acquired an intimate acquaintance with, and could repeat correctly by heart, thirty-five chapters from the historical and prophetic parts of the Old Testament; sixty-five of the psalms of David; thirty-nine chapters from the gospels; and thirty-five from the epistles; making together one hundred and sixty-nine chapters. "And this," says he, "has been made

a blessed means of strength and comfort to my soul." In the language of the prophet, he could say: "Thy words were found, and I did eat them, and thy word was unto me the joy and rejoicing of my heart; and it might be truly said that the Lord opened his eyes to behold wondrous things out of his law. His solitary hours were now cheered, his sleepless nights comforted, his bodily infirmities (though neither few nor light) rendered comparatively easy, and his many mental conflicts relieved, by drawing from the storehouse of his own mind those precious sayings, which, through a blessing on his perseverance had been laid up there. Here it may be proper to state, that John Dunstone never acquired a knowledge even of the alphabet; yet, notwithstanding this great disadvantage, he and his wife having in the abundance of their poverty, struggled hard to pay for three months' instruction of their children, that they might learn their letters, he afterward labored assiduously to promote their progress in reading, by means of those chapters with which he was most conversant. The children learned the letters, and their father, by previous acquaintance with their connection, gave expression to the words; in this way they succeeded so well, that after a while they could read the Scriptures, or indeed any other book, with facility and satisfaction.

And now came on a season of peculiar and aggravated bodily distress; in addition to entire blindness, three or four polypi had formed in his nostrils, producing at times very distressing sensations, and, in a considerable degree, preventing respiration. To this succeeded a severe asthmatic affection, and the effects proceeding from a heavy fall, by which the whole frame had been greatly shaken, and serious injury produced on the lungs. Thus circumstanced, in a time of close confinement and trial, the enemy again assaulted him, representing that the hand of death would soon be on him, and that at that awful season the Lord would cast him off; that his intellect would fail him; that his bodily distress would swallow up every other consideration, and that darkness and dismay, more awful than death itself, would assuredly overwhelm him.

Soon afterward it pleased the Lord really to bring him to the gates of death, and it appeared, both to himself and to those around him, that these were about to close on him forever. "And now," said he, "everything was the reverse of what the enemy had insinuated; my intellect was perfectly clear, my breathing free, my body without pain, and my mind filled with the love of God in Jesus Christ and with peace and joy in him. The enemy, ashamed and confounded, durst not appear; and had he," said he emphatically, "I could have laughed him to scorn."

On another occasion of this kind, when life seemed fast ebbing away, when his speech had utterly failed, and he had become wholly insensible to things of an outward nature, an inward consciousness of existence alone remaining, his spirit, borne on the wings of faith and love, ascended toward the heavenly mansions, and approaching still nearer his "Father's House," the breathing of his soul in these circumstances was, in effect: "Open to me the gates of righteousness; I will go into them; I will praise the Lord."

Many indeed, and very varied, were the deep and distressing conflicts of his soul, and many, and very remarkable, were the deliverances he experienced; often, when bowed down by distress of body and anguish of mind, the Lord mercifully interposed, and his dark and solitary dwelling was filled, as he believed, with his divine and

sensible presence; so that, had he been in perfect health, and in possession of perfect vision, enjoying all the beauties of the outward creation, his peace and joy would thereby have known no enlargement; one boundless good seemed to occupy every avenue to his soul, leaving space for nothing of an inferior character to enter. It may be truly said, that his was that "peace which passeth all understanding;" that joy which springs from the inspiration of Christ, his Saviour and his God.

It was his frequent engagement during sleepless nights (and almost every night was to him a sleepless one, sometimes not enjoying one night's rest in a month,) to meditate on those portions of the Holy Scriptures to which the good Spirit of the Lord directed his mind, taking one verse at a time, and dwelling upon it till its import was perceived, as in the light of the Lord; and how remarkably these holy sayings were in this way opened to his view, I believe my pen cannot fully set forth; suffice it to say, that he was thus made, in no ordinary measure, deeply acquainted with the spirituality of the divine law, and "wise in a wisdom divine."

On one of these occasions, while meditating on the contents of a chapter in the New Testament, it appeared to him as though the subject was taken from him, and another from the Old Testament opened to his view. It was the case of Elijah's fight from Abab. All the particulars of that interesting chapter, (although previously its contents were but partially known to him) passed in review before his mind; and deep and abiding was the impression produced, especially as its respected the "barrel of meal and the crust of oil," and their unfailling supply.

It was on a Third-day night that this took place, and it seemed to occupy his mind, till the exclusion of almost every other subject, till the Seventh-day following. On the afternoon of that day, his wife went to the market, and there learned, without any previous intimation, that the friendly society, from which her husband had been receiving four shillings a week, (one half of their income) was unable any longer to make good its payments. In great distress, she returned and informed her husband of the fresh trial which had been permitted to overtake them. Then it was that the tender care of the "good Shepherd" was made clearly manifest, in having prepared his mind for this unlooked for and serious privation. He attempted to comfort his wife, confidently assuring her that the divine hand would be again stretched forth on their behalf; that "want, like an armed man," would not be permitted to enter their dwelling; that the "barrel of meal would not waste, nor the crust of oil fail." This was literally accomplished.

In many ways, without interference on their part, and from various sources to which they made no appeal, relief came; and during the period when the club stipend was suspended, they were even better cared for than they had previously been. Thus again did he prove the faithfulness and care of that Almighty Being, whose gracious providence is in ceaseless operation for the preservation and defense of his believing and obedient people; of all those who put their trust in Him; and thus strikingly was established the truth of the psalmist's declaration: "It is better to trust in the Lord than to put confidence in man; it is better to trust in the Lord than to put confidence in princes."

(To be continued.)

### Another Terrible Accident on Mont Blanc.

The news of another disaster comes to us from Chamounix. It appears that the fine weather had attracted a considerable number of families to that place, and among others Captain Arkwright, an Englishman, with his mother and two sisters. On Friday morning last, he resolved to attempt the ascent of Mont Blanc, and one of his sisters decided on accompanying him as far as the Grands Mulets. Early on the following morning Captain Arkwright took his departure with two guides and a porter, and about 9 o'clock they were seen ascending the Grand Plateau. In advance of the party went Sylvain Couttet, the proprietor of the new huts on the Grands Mulets, attached by a rope to a coachman of the Royal Hotel, known by the name of Nicholas, who wished to profit by the opportunity to ascend Mont Blanc.

On reaching the Grand Plateau, the parties agreed to take the passage which had been usually followed before 1820, but which was subsequently abandoned in consequence of a catastrophe similar to the present. They adopted it in preference to the "Corridor," from its shortening the journey by two hours, and because they calculated to have much less ice to cut through, as was experienced during the summer by three or four other parties.

They were about half an hour in their ascent, when Sylvain Couttet, who was in advance, suddenly heard above him a loud detonation. He looked up, and to his horror saw an avalanche rushing down with fearful rapidity. He instantly shouted out to those who were below him, "Save yourselves! to the right! to the right!" He threw himself in that direction, advanced a few steps, struck his staff into the snow, and clung to it with all his might, and his companion Nicholas did the same. They both threw themselves flat on their faces and buried their heads in the snow.

They had hardly done so when a tremendous crash followed, and the immense mass thundered along quite close to them: so close that they were all over splashed with the fragments of the ice. In a few minutes, when the avalanche had passed, they raised themselves up, and looked about for their unfortunate companions. They saw nothing—noting but a furrow under them, and further down on the Grand Plateau, a mass of blocks of ice.

Couttet and Nicholas descended in all haste in the same direction, and searched everywhere, in the hope of hearing a cry or a moan to indicate that some had survived the catastrophe. They at last perceived an arm. At great risk to themselves they reached the spot, and dragged out from between the blocks a dead body, the skull crushed and the breast laid open. They laid it on the snow and resumed their search, but found nothing more. They resolved to descend and announce to the sister and to the other families that there was no hope beyond the faint one of finding on the following day, the three other bodies buried in the ice. They reached the Grands Mulets, where Miss Arkwright had been left, and informed her that it was useless to wait any longer, and that she herself must, without a moment's delay, descend with them. The writer of a letter from Chamounix, says:

"Imagine the scene that took place—the lamentations of the mothers of the three widows, and of the nine orphans. The pen is powerless to describe it. Mrs. Arkwright bewailing her son; her two daughters weeping for their brother; but calm and firm, and relying on the will of God, who tries them so severely. They are

still hoping, unfortunately, against hope, for the recovery of the bodies of the victims."

On Sunday morning, fifteen men, selected from among the most intrepid of the population, left on the search. An American family, who did not wish to have their names mentioned, gave the major 250*fr.* for the three widows. The names of the three guides who perished are: Francois Tournier, whose body has been found; Ferdinand Tournier, of Bois, and Michel Simonds, of Peccles, both places close to Chamounix.—*Late Paper.*

For "The Friend."

### Sarah Cresson.

Extracts from her Letters and Diary.

Sarah Cresson was the daughter of Joshua and Mary Cresson, and was born in the City of Philadelphia, on the 27th day of the 1st month, 1771. Her parents were members of the religious Society of Friends, and Sarah was early in life brought to value the beauty there is in the Truth, and to long after a greater degree of purity of heart than she had attained. Many mental trials were her portion, as she found her spiritual attainments often falling short of her earnest desires after an increase in holiness. As she took up the cross to her own will, and endeavoured in humility to follow the leadings of her blessed Lord and Saviour, she grew in grace and in christian stability, and in lowliness. In her eighteenth year she commenced making some memorandums in the nature of a diary, which she never wholly discontinued until near her close. The following are some of the first notes she made.

"3d mo. 15th, 1789. A day of renewed visitation to my soul, in which I was made sensible that I could do nothing without the help of my kind Creator. In the consideration whereof I much desire I may be attentive to His gracious direction, who is so wonderful in mercy as to show me the way wherein I should walk."

"10th mo. 20th. Our endeared Friends Mary Ridgway and Jane Watson arrived here from Ireland. Mary Ridgway and Jane Watson feeling their minds drawn to visit families belonging to our Monthly Meeting, engaged therein, it company with John Pemberton and David Bacon."

"12th mo. 6th. Dear Mary Ridgway was at our meeting to-day, and wonderfully led in testimony, particularly to the youth. She expressed her belief there was a powerful visitation extended to them, and earnestly entreated them in the love of the gospel to enlist under the banner of Christ the Captain of salvation. She said she believed there were some among them, who as they kept under the Lord's humbling hand, would be mad valiants in His service. She believed it was His gracious intention to wash and to cleanse, in order to fit and qualify them for service.

"It was a day of eminent visitation to my soul I desire to be enabled to praise the name of my gracious Lord."

"3d mo. 26th, 1790. O, dearest Lord, be pleased to make me thy child by adoption. Turn and overturn. Let not thine holy hand spare nor thine eye pity. I know that there is more within me that must be consumed. Wash me again and again in the laver of regeneration, that I may be clothed upon with the blessed robes of Christ's righteousness, and know all my own to be filthy rags; that I may be able to say to Lord alone is my righteousness, and may address Thee by the name of Father. Thou art worth to receive the sacrifice of my whole life; be pleased to assist me to render unto Thee the merits of my days, and to give unto Thee glory and honor all the days of my life."

The christian cannot rejoice but through suffering.

"3d mo. 28th. The time of our Spring meeting. Dear Mary Ridgway appeared eminently faithful in testimony and supplication. In testimony nearly after this manner: She had with weight and sorrow to see, that Israel had become blind, and that some who ought to have been as way-keepers, she feared were not only part blind, but most totally so. That notwithstanding things appeared sorrowful, she would not have the youth discouraged, as the Almighty was the same as her ho was."

"4th mo. 9th, 1790. Dearest Lord, be pleased to influence my conduct in such a manner, that nothing that is not consistent with thy ever blessed will may draw my mind from serving thee, who art everlastingly worthy to be worshipped and adored."

"4th mo. 13th. The outward sun shines with great splendor; Oh may my soul be afresh animated by the influence of the Sun of righteousness, and press forward toward the perfect day of God's salvation."

"15th. At aunt Armit's to day, unexpectedly met with the dear Friends from Europe; they had a solemn opportunity with aunt, and very comforting, believing her warfare to be nearly accomplished. Mary Ridgway addressing herself to some that were young, who might have many years to stay, desired they might eye the captain of their salvation, and obey His commands, that they might be prepared to enter into rest."

"Oh that these times of favour, of unexpressed favours, may tend to make me more diligent, more industriously concerned to do anything that may be clearly shown to me I ought to do; and that I may dwell humble, so that I may be able to distinguish the voice of the true Shepherd, in his sincere desire."

"4th mo. 16th, 1790. Not much to say this day. Lord be thou pleased to increase my stability."

It was during this year, we believe, that Sarah Crosson first appeared in the ministry. In preparation for this service, it is evident from her diary, that she was deeply baptized and humbled; and as she kept her dependence on the Lord, He who had bestowed the gift upon her, enabled her to grow therein, and to become valiant in his cause.

(To be continued.)

*The Number Seven.*—On the 7th of the 7th month a holy observance was ordained to the children of Israel, who fasted 7 days and remained 7 days in tents; the 7th year was directed to be a Sabbath of rest for all things, and at the end of 7 times 7 years commenced the grand jubilee; every 7th year the land lay fallow; every 7th year there was a grand release from all debts, and bondmen were set free. From this law might have originated the custom of binding young men into 7 years' apprenticeship, and of punishing incorrigible offenders by transportation for 7, twice 7, or three times 7 years. Anciently, a child was not named before 7 days, not being accounted fully to have life before that periodical day. The teeth spring out in the 7th month, and are shed in the 7th year, when infancy is changed into childhood. At three 7 years the faculties are developed, manhood commences, and man becomes legally competent to all civil acts; at four times 7 a man is in full possession of his strength; at five times 7 he is fit for the business of the world; at six times 7 he becomes graver and wiser or never; at seven times 7 he is in his apogee, and from that decays; at eight times 7 he is in his first climacteric; at nine times 7, or sixty-

three, he is in his grand climacteric, or year of danger; and ten times 7, or three-score years and ten, was, by the royal prophet, pronounced the period of human life.

#### NEARER HOME.

One sweetly welcome thought,  
Comes to me o'er and o'er;  
I'm nearer home to-day  
Than I've ever been before;

Nearer my Father's house  
Where the many mansions be;  
Nearer the Great White Throne,  
Nearer the Jasper Sea;

Nearer that bound of life,  
Where we lay our burdens down—  
Nearer leaving the cross,  
Nearer gaining the crown.

But lying dully between,  
Winding along through the night,  
Lies the dark and uncertain stream  
That leads us at length to the light.

Closer and closer my steps  
Come to the dark abyss,  
Closer Death to my lips  
Presses the awful chrisms;

Father, perfect my trust!  
Strengthen my feeble faith!  
Let me feel as I would when I stand  
On the shores of the river of Death—

Feel as I would, were my feet  
Even now slipping o'er the brink;  
For it may be I'm nearer home,  
Nearer now, than I think!

#### THE PEACE OF GOD.

O peace of God, sweet peace of God!  
Where broods on earth this gentle dove?  
Where spread those pure and downy wings  
To shelter him whom God doth love?

Whence comes this blessing of the soul,  
This silent joy which cannot fade?  
This glory, tranquil, holy, bright,  
Pervading sorrow's deepest shade?

The peace of God, the peace of God!  
It shines as clear 'mid cloud and storm,  
As in the calmest summer day,  
'Mid chill as in the sunlight warm.

O peace of God, I earth hath no power  
To shed this nectar o'er the heart;  
Its smile can never bring it here,—  
Its frown o'er bid its light depart.

Calm peace of God, in holy trust,  
In love and faith, thy presence dwells,—  
In patient suffering and toil  
Where Mercy's gentle tear-drop swells.

Sweet peace, I see thy heavenly ray,  
And long to light my taper there;  
Then should I meet the cares of life,  
Like angels, answering to prayer.

#### Railways in London.

\* \* \* The other way in which the Londoners accomplish the object of getting from one part of the city to another, is by building a railway overhead. Not in any such way as we have had proposed in New York, to arch over Broadway and run a railroad directly over the street, but a viaduct of brick arches, say 30 feet high, is carried along behind the streets, and as much away from the best parts of the city as possible, spanning whatever streets it may be obliged to cross by an iron bridge, and terminating at stations at the most frequented parts of the city. On this, trains run every fifteen minutes for the local traffic.

The viaducts already mentioned are not built merely for the city traffic, but the majority of the principal lines of railway into the country are

brought over them to stations in central portions of the city.

What would be thought in England of such an arrangement as that of the Harlem and New Haven railroads for getting their passengers into town? Some of the viaducts are wide enough to carry six separate pairs of rails, and in some places even more. The railway stations in London and throughout the kingdom are well deserving of notice. They are invariably, and as a matter of course, roofed over, the roof being generally of glass, and in some cases of great size. The roof of the central station at Birmingham has, until lately, been the largest single span in the world, viz., from 180 feet at one end to 212 feet at the other, it being 800 feet long, but this is about to be exceeded by the one at St. Pancras station, in London, which will have a single span of 240 feet, the station being 700 feet long. One of the railways that has been opened within the past few years for local traffic, is a line from the South Eastern Railway Co.'s station, on Cannon street, to the London, Chatham, and Dover Railway Co.'s station, Charing Cross. The distance from the Cannon street station to Charing Cross is about two miles. After crossing the river the road runs along on a brick viaduct, about on a level with the roofs of the houses, crossing the streets, if small, by arches of the viaduct, or otherwise by iron girders, of which there are eleven, and finally recrosses the Thames by the Hungerford bridge—another magnificent structure—and enters the Charing Cross station, a building, as I have said, very similar to the one already described. Trains run every fifteen minutes, taking something less than five minutes to make the run. The fare—first class, 6d, second 4d, third, 3d. The cost of such a railway will be seen from the description I have given of it to be very great, but when the wants of the community demand it, the outlay of capital is well warranted.—*Correspondence of Scientific American.*

For "The Friend."

#### John Churchman.

In the Journal of John Churchman, 6th vol. Friends' Library, the following instructive remarks are to be found.

"About this time, as I sat in one of our own meetings, I felt a flow of affection to the people, for many of our Society came there, perhaps out of curiosity, several young ministers having come forth in public testimony; in which extraordinary flow of affection, I had a very bright opening as I thought, and expected to stand up with it very soon, but being willing to weigh it carefully, was not very forward, viewing it as decreasing brightness, until something said, as it were, within me, 'Is the work in it; is necessity laid upon thee, and therefore, woe if thou preach not the gospel.' This put me to a stand, and made me feel after the living presence of Him, in whose name and power I desired to speak, if I appeared in testimony; and not feeling the pure life and power of Truth, so as to stand up, the brightness of the vision faded, and left me quiet, humble and thankful for this preservation."

*The Bricks of Egypt.*—Professor Unger, the celebrated Viennese botanist and palaeontologist, has recently published some remarks on the bricks of the ancient Egyptians, especially those of the pyramid of Dashour, which was built 3400 years before our era. One of them being examined through a microscope by the Professor, he discovered that the mud of the Nile, out of which it was made, contained not only a quantity of animal and vegetable matter, but also fragments of

many manufactured substances, whence we may conclude that Egypt must have enjoyed a high degree of civilization upwards of 5000 years ago. Professor Unger has been enabled, by the aid of the microscope, to discover a vast number of plants which at that time grew in Egypt. The chopped straw clearly discernible in the body of the bricks confirms the description of the manner of making the latter, such as we find in Herodotus and in the Book of Exodus.—*Paris Galignani.*

For "The Friend."

Wm. Penn's Belief in the Atonement—does it encourage Hicksism?

The writer is apprehensive that it is a prevalent idea at this time, among some of our Society, who have not very carefully perused the doctrinal writings of Wm. Penn, that his views were not thoroughly orthodox respecting the cardinal doctrine of the vicarious atonement for the sins of mankind, offered by Christ in his body of flesh, and that of justification by faith in Him, as set forth in the New Testament; and being well satisfied himself that this suspicion is unfounded, and is also calculated to entail loss upon our younger members by their avoidance of the perusal of the works of this eminent and truly apostolic servant of our Holy Redeemer, the following extracts have been taken from them, with the view of their republication in "The Friend," and the hope, that they may tend to counteract the impression alluded to.

"Primitive christianity revived in the faith and practice of the people called Quakers," was written and published by Wm. Penn, in the year 1696, when he was about 32 years of age, and was intended to include in a compendious form a general illustration and defence of the doctrines of Friends. Section 8th of the treatise opens thus:

"Objection. Though there be many good things said how Christ appears and works in a soul, to awaken, convince and convert it; yet you seem not particular enough about the death and sufferings of Christ, and it is generally rumored and charged upon you by your adversaries, that you have little reverence to the doctrine of Christ's satisfaction to God for our sins, and that you do not believe that the active and passive obedience of Christ when he was in the world, is the alone ground of a sinner's justification before God." Wm. Penn then proceeds to answer these objections, first negatively and then affirmatively, in the following words.

"Third. We do believe that Jesus Christ was our holy sacrifice, atonement and propitiation; that he bore our iniquities, and that by his stripes we were healed of the wounds Adam gave us in his fall; and that God is just in forgiving true penitents upon the credit of that holy offering which Christ made of himself to God for us; and that what he did and suffered, satisfied and pleased God, and was for the sake of fallen man who had displeased God; and that through the offering up of himself once for all, through the eternal Spirit, he hath forever perfected those (in all times) that were sanctified, who walked not after the flesh, but after the Spirit."

"Section 9. First. And lest any should say we are equivocal in our expressions, and allegorize away Christ's appearance in the flesh, meaning thereby only our own flesh; and that as often as we mention him we mean only a mystery or a mystical sense of him, be it as to his coming, birth, miracles, sufferings, death, resurrection, ascension, mediation and judgment; I would yet add, to preserve the well disposed from being

staggered by such suggestions, and to inform and reclaim such as are under the power and prejudice of them: That we do, we bless God, religiously believe and confess, to the glory of God, the Father, and the honor of his dear and beloved Son, that Jesus Christ took our nature upon him, and was like unto us in all things, sin excepted: that he was born of the virgin Mary, suffered under Pontius Pilate, the Roman governor, was crucified, dead and buried in the sepulchre of Joseph of Arimathea, rose again the third day, and ascended into heaven, and sits on the right hand of God, in the power and majesty of his Father; who will one day judge the world by him, even that blessed man Christ Jesus, according to their works."

"2nd. But because we so believe, must we not believe what Christ said, "He that is with you shall be in you." "I in them and they in me," &c. "When it pleased God to reveal his Son in me." "The mystery hid from ages is Christ in the gentiles, the hope of glory." "Unless Christ be in you ye are reprobates." Or must be industriously represented as deniers of Christ's coming in the flesh, and the holy ends of it, in all the parts and branches of his doing and suffering, only because we believe and press the necessity of believing, receiving and obeying his inward and spiritual appearance and manifestation of himself through his light, grace and spirit in the hearts and consciences of men and women to reprove, convict, convert and change them? This we esteem *hard and unrighteous measure*; nor would our warm and sharp adversaries be so dealt with by others; but to do as they would be done to, is too often no part of their practice, whatever it be of their profession."

"5. \* I say we do believe and confess that the active and passive obedience of Christ Jesus affects our salvation throughout, as well from the power and pollution of sin, as from the guilt, he being a conqueror *as well as a sacrifice, and both through suffering.*"

From a work issued by Wm. Penn about 1692, entitled "A key opening the way to every capacity how to distinguish the religion professed by the people called Quakers from the perversions and misrepresentations of their adversaries," the following abstracts are made.

"Section 6. Of the divinity of Christ.  
"Perversion 10. The Quakers deny Christ to be God."

"Answer. A most untrue and unreasonable censure; for their great and characteristic principle being this, that Christ as the Divine Word lighteth the souls of all men that come into the world with a spiritual and saving light, according to John 1. 9, viii. 12, which nothing but the Creator of souls can do, it sufficiently shows that they believe him to be God, for they truly and expressly own him to be so according to scripture; viz: In Him was life and that life the light of men: and he is God over all, blessed forever."

"Section 7. Of the manhood of Christ.  
"Perversion 11. The Quakers deny the human nature of Christ."

"Answer. We never taught, said or held so gross a thing, if by human nature be understood the manhood of Christ Jesus. For as we believe him to be God over all, blessed forever, so we do as truly believe him to be of the seed of Abraham and David, after the flesh, and therefore truly and properly man like us in all things, and once subject to all things for our sakes, sin only excepted."

"Section 8. Of Christ Jesus, his death and sufferings.  
"Perversion 12. The Quakers expect to be

justified and saved by the Light within them, and not by the death and sufferings of Christ."

"Answer. This is both unfairly and untruly stated and charged upon us." \* \* \*

"We say that whatever Christ then did both living and dying, was of great benefit to the salvation of all who have believed, and now do and who shall hereafter believe in him unto justification and acceptance with God: but the way to come to that faith is to receive and obey the manifestation of his divine light and grace in their consciences, which leads men to believe and value and not to *disown or undervalue Christ, as the common Sacrifice and Mediator.*" \* \* \*  
"And because this people say that Christ's outward coming and sufferings, profit not to their salvation who live in sin and rebel against this Divine light, some have untruly and uncharitably concluded that they deny the virtue and benefit of Christ's coming and sufferings in the flesh as a sacrifice for sin: whereas we only deny and oppose a false and dangerous application of them in and to a disobedient state."

"By all which it is evident to any moderate inquirer, that we acknowledge Christ in his double appearance: as in the flesh of the seed of Abraham, so in the Spirit as he is God over all, blessed forever. Wherein is a full confession to him both as a blessed person, and as a Divine Spirit of light and life in the soul, the want of which necessary and evident distinction occasions our adversaries frequent mistakes about our belief and application of the Scriptures of Truth concerning Christ in that two-fold capacity."

"For it is not another than that eternal Word, Light, Power, Wisdom and Righteousness which then took flesh and appeared in that holy body by whom they have received or can receive any true spiritual benefit: they holding that Light is only from him, forgiveness only through him, and sanctification only by him. So that their ascribing salvation from sin and death eternal, to him who now appears by his holy Spirit to their souls as before expressed, cannot render him no Saviour in that age, or make void the end and benefit of his blessed appearance in the flesh on earth, or his mediation now in glory for those who believe on him in this age. Whose doctrine pierced, whose life preached, whose miracles astonished, whose blood atoned and whose death, resurrection and ascension confirmed, that blessed manifestation to be no less than the Word God, (the life and light of men,) manifested in the flesh according to the Apostle Paul for the salvation of the world; and therefore properly and truly, He was the Son of man on earth, and is now as truly the Son of man in glory, as the head of our manhood which shall also be glorified if we now receive him into our heart as the true light, that leads in the way of life eternal, and continue in well doing to the end."

"Section 9. Of good works.  
"Perversion 13. Thus it is the Quakers set up works, and meriting by works like the papists: whereby justification by faith in Christ is laid aside."

"Answer. By no means: but they say with the Apostle James, ch. II, that true faith in Christ cannot be without works any more than a body can live without a spirit: \*

"Nor yet do we say, that our very best works, proceeding from the true faith itself can merit; no nor faith joined with them, because eternal life is the gift of God." \* \* \*  
"So that as the people called Quakers do not hold that their good works merit, neither believe that their good works justify them; for though none are justified that are not in measure

netified, yet all that man does is duty, and therefore cannot blot out old scores; for that is re grace and favour, upon repentance, through Christ, the Sacrifice and Mediator, our great hope goat. So that men are not justified because they are sanctified, but for his sake that sanctified them, and works all their good works them and for them, and presents them blameless, to wit, Christ Jesus who is made unto them, he was to the saints of old, Wisdom, Rightness, Sanctification and Redemption; that he at glorioth, might glory in the Lord."

C. R.

New Jersey, Twelfth mo., 1866.

Communicated for "The Friend."

An Appeal.

The Women's Aid Association of Friends' of Philadelphia, have for nearly three years been conducting Orphan Asylums in Virginia for the colored children who were left friendless and destitute.

In the fall of 1865 the number increased so greatly that the committee in charge was obliged to bring many of them North. About 150 were various times, brought to Philadelphia, and no were old enough, have been placed at so many remained as helpless infants.

Association, being  
 iscs, was  
 R. R. H.

and so poor and destitute, that it is impossible for them to share any benefit of schools, and in fact there are no schools in the country besides this, in all this large district. Our teachers are very anxious to select and take in, from the poorest classes, those who may soon be useful.

"Many of the freed people will be as poor at the close of this year, as at last; not however because they have not worked; we hear no such complaints. Many women with families of children, will not be able, under the present order of things, to get employment next year. The planters will not be encumbered with them; now what will become of the little ones? Can we not secure a "widows' fund" from some of the very wealthy widows or others, at the North, to pay the expense of keeping their children here, buying their rations, clothing, &c., and put them into our school immediately?"

"Who will do a present good? Their contracts generally close this year at Christmas, and then will be a fitting time to "gather them in." Now who will send us a few or many hundreds of dollars, and some boxes of clothing, (or goods to

solemn for any vocal voice to be heard, the cloud and glory so great, that none could minister.—

THE FRIEND.

TWELFTH MONTH 22, 1866.

INDIANA YEARLY MEETING.

Through the kindness of some unknown friend, we have received a copy of the printed minutes of this Meeting, which was "held at White Water Meeting-house in Richmond, Indiana, on Fourth-day, Tenth month 3d, 1866."

The London General Epistle, and epistles from other Yearly Meetings with which correspondence is held, were read, and a committee appointed to prepare answers thereto. "An epistle addressed to this meeting by the 'Indiana Yearly Conference of the Wesleyan Methodist Connection of America,' has been read, and after a full and free consideration thereof, the meeting, appreciating the christian spirit and brotherly feeling manifested by the committee "to pre-

A committee was appointed to attend the opening of the new Yearly Meeting in Canada, and an epistle was addressed to it.

There is a "summary" in relation to "First-day Schools" and "Missionary Labors."

A report from a committee appointed to take under consideration that paragraph in the Discipline under the head of "Other Spiritual Gifts," states it is "united in the belief that the clause alluded to has been greatly misunderstood by many of the Monthly Meetings, and liberties granted under it not intended by the Yearly Meeting. We do not deem it proper to suggest any change in the discipline at present, and while we desire that Monthly Meetings should open the way for the proper exercise of all the gifts dispensed to individuals in the church; yet we earnestly desire that they do so with proper caution and prudence, and not to grant to persons with such gifts (but not acknowledged as ministers) the privilege of appointing meetings for religious services, or extended visits to meetings or families—neither within nor without the pale of our religious Society—which privileges are only intended to relate to recon-

Prussia are disposed to renew their commercial relations.

The United States government has commenced legal proceedings in the first tribunal of the Seine, to recover the amount of 2,250,000 francs paid M. M. Arman Filis, by the agents of the confederated government, on account of building five iron clad vessels, intended for the rebel navy, though the vessels were never delivered.

A telegram from Hanover reports the commencement of oppressive measures against the people by the Prussian authorities.

It is stated that peace will be shortly concluded between Spain, Chili, and Peru. The articles constituting the basis of the treaty show that there was never any cause of war.

The London *Times* of the 17th, contains a telegram from Berlin in which the writer says, the Pope of Rome has been officially invited to visit the United States.

The Liverpool cotton market, on the 17th, was active. Middling uplands, 14½d. Consols, 89. U. S. 5-20's, 71½.

UNITED STATES.—Congress.—Both Houses have passed the District of Columbia suffrage bill, by majorities of more than two-thirds. It may therefore be regarded as virtually a law. The bill extends the franchise to all adult male citizens or residents, white or coloured, except rebels and criminals. The precedent is important, and seems to mark the policy of the Republican party. The bill for

ers, assaults, and difficulties between citizens, often resulting in serious wounds and death, have for years occurred without the serious notice or action of the civil authorities; and in those neighbourhoods where it has heretofore seemed to the population officers to arrest and punish citizens for assault upon each other, they can hardly be expected to yield with any grace to arrests for assaults and outrages upon negroes."

*Philadelphia*.—Mortality last week, 238.

*The Indians in Kansas*.—Two delegates from each of the tribes in Kansas have been invited to Washington to consult in relation to the removal of their tribes to the Indian country.

*The Cholera*.—During four months, ending 12th 1848, the number of deaths reported from this disease was 10,805, of which 1189 occurred in New York, 8 in Philadelphia, 899 in Memphis, 978 in Chicago, and 3532 in St. Louis.

*California Breadstuffs*.—The San Francisco *Times* says, since January 1st of the present year, we have exported 23,900 tons of flour, 66,000 tons of wheat, 11,700 tons of barley, and 6740 tons of oats, of the aggregate value of \$4,500,000. There is a surplus remaining on shipment which, valued at present prices, is worth about nine millions of dollars more.

*Internal Revenue*.—The receipts of internal revenue from 7th month 1st, 1846, to 12th month 16th instant, amounted to \$18,700,839.

*The Markets, &c.*—The following were the quotations the 17th inst. *New York*.—American gold 137 S. sixes, 1831, 111½; ditto, 5-20, 1865, 166½; ditto, 5 per cents, 99½. *Superfine State flour*, \$5. *Shipping Ohio*, \$10.75 a \$12. *Baltimore* 11 trade

Observations on Christ's Sermon on the Mount.

(Continued from page 130.)

Again, ye have heard that it hath been said of old time, Thou shalt not forswear thyself, but shalt perform unto the Lord thine oaths.

But I say unto you, Swear not at all; neither by heaven, for it is God's throne:

Nor by the earth, for it is his footstool: neither by Jerusalem, for it is the city of the great King.

Neither shalt thou swear by thy head, because thou canst not make one hair white or black.

But let your communication be, Yea, yea; Nay, nay: for whatsoever is more than these, shall be accounted unto you for perjury.

It was allowed to the Jews to vow to the Lord, and to swear by his name, provided they performed their vows and oaths. But here our Lord proscribes and abolishes all swearing with an "I say unto you, Swear not at all." Though swearing

prohibits will have it that he here prohibits only swearing, or common swearing, this cannot be, because the oaths he here speaks of were in, and to the Lord. And the apostle James

us, We must not swear by any oath. Neither the primitive christians swear at all; and

oaths ought to be so just in their conversations that their solemn words or promises would

themselves credit without any need of oaths. If

than yea, yea, and nay, nay, be evil, it must

be evil to require more, and that it is evil if

more, as all vows and oaths are, we have

proof for our author, a good foundation to build

on. Ye have heard that it hath been said, An eye

for an eye, and a tooth for a tooth:

But I say unto you, That ye resist not evil:

whosoever shall smite thee on thy right cheek,

to him the other also.

And if any man will sue thee at the law, and

take away thy coat, let him have thy cloak also.

There was liberty by the law of Moses, for a

man to revenge himself, if he had an injury done

himself, and take up Christ's cross daily, and follow him, if he will be his disciple: and as for the law, it is better never to meddle with it, in a general way; and if thy coat by law is taken away, thou hadst better give him thy cloak than stand another trial with him: and it is much if thou art not a gainer by so doing. But the gain is not urged as the motive; but obedience to Christ, our great Lord and good Master, who said, "If ye love me, keep my commandments."

"Give to him that asketh thee, and from him that would borrow of thee, turn not thou away."

We are here to suppose the asker to be in real want and necessity, and the borrower also to stand in need, and the asked to be in a capacity and of ability to supply and assist the asker and borrower; and in such case we are by no means to refuse to give him that asketh, nor turn away from him who would borrow of us. If we are not in a capacity to supply, we are yet to use mild and friendly expressions; for christians should be courteous and kind to all, and particularly to the distressed. And if we think the askers or borrowers are not worthy or deserving for their own sakes, we should, if need be, give aid lead for Christ's sake, and in obedience to him, though it cross our own inclinations.

"Ye have heard that it hath been said, Thou shalt love thy neighbour, and hate thine enemy."

But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them who despitefully use you, and persecute you;

"That ye may be the children of your Father who is in heaven: for he maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust."

The Hebrews had liberty to hate their enemies; but by no people, by any dispensation, had liberty to hate their neighbours or friends; so that those who are in that state are far beyond the line of truth. But, says our holy Lawgiver, "I say unto you, love your enemies." If we love our enemies, we can in no wise destroy them, although it were in our power. Again, "Bless them that curse you." But, alas! how apt are men, and even those who would think it hard to be told they are disobedient to Christ, to render railing for railing, and cursing for cursing, instead of blessing. "Do good to them that hate you." If we are sensible that anybody hates us, and have demonstration of it, for sometimes we imagine it when it is not so, yet we are to do them all the good turns we can. "And pray for them who despitefully use you, and persecute you." Thus we are not to render evil for evil, but to overcome the evil with that which is good. Sweet was our Lord's example to us in this when he said, "Father, forgive them, for they know not what they do." If spiteful persecutors really know what they do when they persecute the just, their damnation must needs be very great; but if we do good for evil, as Christ hath taught, then are we the children of our heavenly Father, "Who maketh his sun to rise on the evil and on the good, and sendeth rain on the just and on the unjust."

"For if ye love them who love you, what re-

ward have ye? do not even the publicans the same?"

"And if ye salute your brethren only, what do you more than others? do not even the publicans so?"

Our virtue is much more shining in loving those who do not love us, than in loving those who do. It is natural for us to love those who love us, and we should be ungrateful if we did not; but the reward is greater, if we love them who do not love us, which must be manifested in deeds, as well as words; for saying and doing sometimes are two things, which made the apostle say, "Our love must not be with word and with tongue only, but in deed and in truth."

As to friendly and hearty salutations, that may be necessary or needful, we should not only manifest them to our brethren, but as occasion requires to all, it being a shining virtue in christians to be kind to strangers, and to show forth a generous and loving temper and deportment to such as may not be of us; though not in a flattering, modish, or complimentary way, but hearty and respectful, according to the plainness of Christ and the simplicity of his gospel, without respect of persons, respect being too generally shown to high, more than to them of low degree. As we are not to refuse our friendly salutations to the great, or the rich, so we are not to neglect the poor, for the publicans do so.

"Be ye therefore perfect, even as your Father which is in heaven is perfect."

Christ would have us to be perfect in the practice of his doctrine, and to live up to it in perfect obedience, according to the best of our judgment and understanding, and not to do his work by halves, but honestly and perfectly, according to the measure of grace received. Some have received twice, some thrice so much as some others, as the parable of the talents plainly sheweth; but whatever discoveries or manifestations of grace, light, or truth, we have received, we ought to walk up to them perfectly; "Even as your Father which is in heaven is perfect." As the Almighty is perfect in his love, justice, mercy, grace, and truth, unto poor mortals, in Christ Jesus, his only-begotten, and in all his works, so ought we to be perfect in our known duty: as it is written, "Ye shall be holy, for I the Lord your God am holy." So must we be according to the degree of grace received.

It is supposed that nobody will imagine that any mortal can come up in degree with the Almighty, but according to our measure, gift, and degree of grace received, we are to be holy and perfect, as God, our heavenly Father, and Christ, our dear Lord, are so in fulness.

"Take heed that ye do not your aims before men, to be seen of them: otherwise ye have no reward of your Father which is in heaven."

"Therefore when thou doest thine alms, do not sound a trumpet before thee, as the hypocrites do, in the synagogues and in the streets, that they may have glory of men. Verily I say unto you, they have their reward."

"But when thou doest alms, let not thy left hand know what thy right hand doeth:

"That thine alms may be in secret: and thy Father which seeth in secret, himself shall reward thee openly."

The christian religion, in its purity, according to the doctrine of the Founder of it, is a compassionate religion, and full of pity, as well as piety. It is a holy composition of charity and goodness. The apostle thus describes it: "Pure religion, and undefiled before God and the Father, is this, to visit the fatherless and widows, in their affliction; and to keep himself unspotted from the world." This is pure religion, and this is the christian religion: happy are those who walk up to it, and live according to the precepts of Him who dictated them; then the widows and the fatherless would not be neglected; the poor would be very generously taken care of, and our garments kept clean, and all done as secretly as may be. For when we proclaim our alms-deeds and charity, we lose our reward from our heavenly Father. Also when alms are given, it ought to be done in the spirit of love and meekness, and so received; else the receiver loses a second benefit, and the giver his heavenly reward. To give to the poor is to lend to Him that made us, and we shall have good and greater measure returned us again. If we hope to have the gates of Christ's kingdom opened to us at last, our hearts must also be opened to the poor and needy, when in distress; remembering the words of Christ, where he says to some who were waiting for, and wanting an entrance into the kingdom, "I was hungry, and ye gave me no meat; I was naked, and ye clothed me not. I was sick and in prison, and ye visited me not." They answered, "Lord, when saw we thee hungry, naked, sick, or in prison, and did not feed thee, clothe thee, and visit thee?" He answers, "Inasmuch as ye did it not to one of the least of these, my brethren, ye did it not to me." He sympathizes with his poorest and meanest members, whatever others do, and takes that which is done to them, as if done to himself, whether it be good or bad. We should be good to all, but especially to Christ's members, or the household of the faithful keepers of his commandments. Our alms being thus distributed, according to our ability and the necessities of the object, without ostentation, and in secret, our munificent Father, who sees in secret, will openly reward us.

How many rich men are there in the world, who have made great and costly entertainments for their rich friends, neighbours, and relations; and if their substance be so great that it is not felt by them, they had the more need to remember the poor; when they never so much as spare the tithe of it to them, though the poor have ten times the need of it; and though Christ says, "When thou makest a feast, invite not thy rich friends, for they will invite thee again; but call the poor, the lame, and the blind," &c.

(To be continued.)

*Discovery of a Mastodon.*—Recently, during the excavations of a peat bed in Cohoes, New York, for the foundation of a new mill, now in course of erection by the Harmony Manufacturing Company, the jaw-bone of a mastodon was discovered about 30 feet below the surface of the earth. This relic of the antediluvian age is of immense proportions, and has attracted the attention of geologists and students of nature from all parts of the country—letters of inquiry respecting it, and personal examination having been made by some of the most distinguished savans of the United States. But even this wonderful discovery was eclipsed by the excavation of still further fossiliferous remains, which complete nearly the

bones or frame-work of the mastodon. Eighty-five feet below the earth's surface, and about 50 feet below the place of the original discovery, the workmen came upon the remaining bones, consisting as follows: Two tusks, back-bone, the upper jaw and cranium, a number of the ribs, the hip bones, shoulder-blades, and the bones of the hind legs. The tusks were each nearly six feet long, and about nine inches in diameter. One of them, upon exposure to the light, crumbled to pieces like clay, resembling that substance in appearance and texture. The ribs, of which there were 14 found, are about 4 feet long, the largest being 4 feet 9 inches. The upper jaw bone is 4 feet 9 inches long from the extremity of the mouth to the cranium, and across the forehead measures about 3 feet. So heavy is it that it was with difficulty four labourers could move the mass. The sockets in which originally were located the eyes of the monster are almost large enough to admit the head of a man. The hip-bone is 5 feet long, and weighs 100 pounds; the shoulder-blades measure 2 feet 9 inches, and weigh about 50 pounds each. The bone of the leg at the knee-joint measures 15 inches in diameter. The vertebrae of the back-bone are 8 inches in diameter. The other fragments found are in harmonious proportion to those already mentioned.

Professor Marsh, of Yale College, was present soon after the discovery was made, and pronounced it the most remarkable scientific event of the age. The structure will now be united in its several parts by means of wire, and thus a very accurate idea can be formed of the size and weight of the monster to which it belonged. After a separation of countless ages, probably the several parts will be re-united.—*N. Y. Tribune.*

For "The Friend."

#### Thoughts for the Times.—No. 64.

True religion, that namely which so changes the heart, as to justify the bold figure of our being born again, is, to adopt another lively metaphor of our Saviour, a vital growth in us, the least of all seeds, which becomes the greatest among herbs. In recognizing those earliest convictions for sin, which all have felt, as the reproofs, and the peace attendant on obedience to the warning voice within, as the consolations of the Holy Spirit:—in listening to the divine speaking Word, as to the appointed guide of life—whose instructions, like a wise schoolmaster's, being adapted to the condition of each—lead us on from the lowest to the highest degrees of spiritual knowledge—and are in every stage the inspiration of the same Holy Spirit which is the guide of the most experienced disciple, we place spiritual knowledge on the basis of sure experience, and connect by a chain which cannot be broken, the highest attainment of the christian with his earliest feelings of right and wrong; thus building spiritual religion on the same foundation of fact and experience on which all true knowledge rests.

Often as these ideas have been repeated in this series—it cannot be too much insisted on, that the peculiarities which so separate the Society of Friends from most other professing christians, result from this our great distinguishing doctrine, and from the stress we lay on obedience to these divine intimations.

That growth in religion which the true disciple experiences, always follows upon obedience, and renders him watchful, humble, undisturbed, less anxious about the theory of religion than about his own daily walk; content with the openings of divine truth to his own understanding, not perplexing himself with doubtful questions, or curious speculations, but satisfied that while

he dwells in faith and patience, sufficient for the day is the knowledge vouchsafed. It was thus that the religious life of all the eminent men in our Society, who have been here spoken of, grew and was developed. And all may rest assured that this is the path of the flock of the companion of Christ—the only path to his kingdom. When therefore, persons curious in exploring the theory of religion, spend much time in discussing points of doctrine and questions of what is called theology—whatever conclusion they may reach, it is not the *saving knowledge*, but mere speculation. Undoubtedly—such is the mixed and imperfect condition of human affairs—these speculations may be indulged in by those who are far from being ignorant of the rewards of obedience: but so far as there is in these, a continuance of spiritual growth it is due to their obedience; and so far as this speculative propensity is indulged, it impede their progress in vital experimental religion.

Their experience of every humble exercised mind may be appealed to for the truth of these sayings: Those who choose the old paths to walk in, can not therefore hear without concern of innovation in our usages, the object of which is, the cultivation of a spirit of theological enquiry and of public discussions of religious questions often, may be, by inexperienced though well meaning persons, in associations unknown to our discipline. Those who set them on foot need only look around them in some of the Yearly Meetings for the tendency and sure results of such practices. Although the deep indwelling of the spirit with Christ our holy head, the patient, earnest, reading of the scriptures in private and in the family; the solemn awful silence of our meetings for worship, and the baptizing, living ministry, still, infinite mercy, vouchsafed to us—had lost the ancient power to build up and preserve in the most holy Faith!

Nor is this all. Christ being the leader of his flock, chooses and fits for service in his church according to his own perfect wisdom. The officious busy body and the meddling, have no business there. It was scarce ever heard of, that any disciple canvassed for an office in the Society, or was anxious to procure one. Every member that church becomes so, by obeying the Divine speaking Word, whether to do the service of silent burden bearer, or to be prepared for more public duties among his brethren. The frame mind thus formed is quiet, patient, turned inward, with an ear attend to the Divine voice, and moving forward only at its bidding. The resolve of Joshua "Let others do as they will, as for me and my house, we will serve the Lord," and the rebuke given to Peter "What is that to thee follow thou me," sufficiently indicate the course of the true disciples who earnestly seek to know and to do their Master's will concerning them.

These maxims of conduct may seem antiquated and out of date to some; but they are very necessary to be remembered in the times we live in when the walls of our Zion are decaying in place, and seem broken down in another. worldly indifference prevail so as to render meetings for worship dull and lifeless, and oppress the true seed, and close the Spring of the living ministry; there may, through the impatience of the natural man, rise up a preaching which undertakes to deliver the doctrines of scripture without the true authority, filling the ear with words and captivating the superficial mind. Where sound judgment is wanting in those holding prominent positions in the Society, this specious appearance of religious zeal, may be allowed and encouraged to increase till it entirely supersedes the living ministry of the gospel. Or may

ny think to revivify the expiring zeal by making social gatherings and our meetings for worship more attractive to the indifferent, not only by encouraging young and forward preachers—but other contrivances, such as the stated reading of the scriptures and the singing of hymns. The inevitable result of all this will be, the shifting of the Society from its original foundation, and our only safety is in returning to first principles, simple faith and implicit obedience, to the surrender of our own will to that of our divine Master, and to the patient waiting for the putting forth his holy hand to lead in the way of his requirement.

"The glory of this day," said William Penn, and the foundation of the hope that has not done us ashamed, since we were a people, you know, is that blessed principle of light and life Christ, which we profess and direct all people as the great instrument and agent of man's conversion to God: it was by this we were first created, and effectually enlightened as to our inward state; which put us upon the consideration of our latter end, causing us to set the Lord before our eyes, and to number our days, that we might apply our hearts to wisdom. In that day we judged not after the sight of the eye or the hearing of the ear; but according to the light and grace this blessed principle gave us, we judged and acted in reference to things and persons, ourselves and others, yet towards God our Maker, being quickened by it in our inward man, we could easily discern the difference of things, and what was right, and what was wrong, and what was fit, and what not, both in reference to religion and civil concerns. That being the bond of the fellowship of all saints, it was in that our fellowship stood. In this we desired to have a sense one of another, acted towards one another and all men in love faithfulness and brotherly.

"In the feeling of the motions of this principle drew near to the Lord, and waited to be prepared by it, that we might feel those drawings and movings, before we approached the Lord in prayer, or opened our mouths in ministry. And our beginning and ending with this stood our comfort, service and edification. And as we ran our race or fell short, we made burdens for ourselves, bearing our services finding in ourselves a rebuke, instead of an acceptance; and in lieu of 'well done,' who hath required this at your hands? That day we were an exercised people; our very unthankfulness and deportment declared it.

"Care for others was then much upon us, as well as for ourselves, especially the young concerned. Often had we the burden of the word of the Lord to our neighbours, relations, and acquaintance, and sometimes strangers also: we were in travail for one another's preservation; not seeking, but shunning occasions of any coldness or misunderstanding, treating one another as those that believed and felt God present; which kept our conversation innocent, serious and weighty, guarding ourselves against the cares and friendships of the world. We held the truth in the spirit of it, and not in our own spirits, or after our own will and affections. They were bowed and brought to subjection, inasmuch that it was visible to them that knew us, we did not think ourselves at our own disposal, to go where we list, or say or do what we list, or when we list. Our liberty stood in the liberty of the Spirit of Truth; and no pleasure, no profit, no fear, no favour could draw us from this retired, strict and watchful ease. We were so far from seeking occasions of company that we avoided them what we could, pursuing our own business with moderation, in-

stead of meddling with other people's unnecessary.

"Our words were few and savoury, our looks composed and weighty, and our whole deportment very observable. True it is, that this retired and strict sort of life from the liberty of the conversation of the world, exposed us to the censures of the many, as humorists, conceited, and self-righteous persons, &c. But it was our preservation from many snares, to which others were continually exposed by the prevalence of the lust of the eye, the lust of the flesh, and the pride of life, that wanted no occasions or temptations to excite them abroad in the converse of the world.

"I cannot forget the humility and chaste zeal of that day. O, how constant at meetings, how retired in them, how firm to Truth's life, as well as Truth's principles, and how entire and united in our communion, as indeed became those that profess one head, even Christ Jesus the Lord!"

#### Difference of Time between New York and London.

Dudley Observatory, Nov. 10th, 1866.

Editors N. Y. Journal of Commerce:

In reply to your letter of yesterday, I would state that the difference of time between London and New York city is 4h., 55m., 18s. 95-100s.

For the former place, the time is reckoned from Mr. Bishop's Observatory, Regent Park, and for the latter from Mr. Rotherford's, corner of 11th Street and 2nd Avenue.

As the difference of longitude or time varies one second, in this latitude, for every eleven hundred feet, it is necessary to start from certain definite points. When it is noon in New York, it is therefore 4 o'clock 55 minutes and 19 seconds P. M., at London.

The difference of time between Cambridge, U. S., and London, was determined by three chronometric voyages between the two stations. And between Cambridge and New York by means of telegraphic communication.

Now that the Atlantic Cable has been put in successful operation, it will be possible to determine with great exactness, the difference of time between London and any point in the United States, by means of simultaneous observations made at both ends of the cable; making of course the necessary allowance for the retardation of the electric current, which has been stated to be about one second of time through both cables.

Very truly yours,

G. W. HOTTEN, Director.

John Dunstone.

For "The Friend."

(Continued from page 132.)

Another circumstance not to be omitted was the following: One night he had retired to rest, but sleep was removed far from him by disease and pain. Thus affected, he struggled to get up, felt his way down stairs, and having gained his well known corner, sat down greatly oppressed in body, and equally so in mind. The enemy, taking advantage of his situation, suggested that he was hardly dealt with, and this temptation, finding entrance for a moment, added greatly to his perplexity, so that, bowed down in unutterable anguish, he could only pour forth his soul in groans unto God.

After remaining some time in this distress, that Scripture, accompanied with light and life, was conveyed to his mind: "Whereby the Day spring from on high has visited us, to give light to them who sit in darkness to guide our feet into the way of peace." "What!" exclaimed he, raising his enaciated, feeble frame—"what! my Heav-

enly Father, art thou come indeed to guide the feet of thy poor dust into the way of peace?" And now, he who had been the deeply distressed mourner, relieved in both body and mind—for the healing virtue affected both—was enabled to rejoice in God with joy unspeakable.

Under a sense of heavenly peace, he groped his way up stairs, but ere he got to the top, he turned round, as if "to behold once more," as he expressed himself, "the glory with which he had been encircled." On reaching the bed where his children lay asleep—"Ah! my children," he exclaimed, while tears of gratitude fell from his sightless eyes, "you are enjoying sweet and uninterrupted repose; but what are your circumstances compared with mine?" Truly, "He joyed according to the joy in harvest, and as men rejoice when they divide the spoil."

One other occasion of this sort may interest the reader. He had retired to rest, but the asthmatic affection so heavily oppressed him, that, unable to lie down, he supported himself in a sitting posture, and recurring to the Fountain of all good, was sweetly comforted. As he maintained his patient waiting on the Lord, the precious feelings increased in strength, and his mind became absorbed, if I may so speak, in the divine presence. In this state, he was favoured to continue till the opening day, of which he was made sensible by the sweet notes of the birds saluting his ear.

This sound gave birth to a new train of meditation; he was led to contemplate them as fully answering the end of their creation; and, contrasting this fact with much of his own former life, he would fain, had it been possible, have hid himself from the divine presence. "I have often," said he, "admired the music of these little creatures, and not unfrequently has my mind been raised hereby in songs of praise to their and my Creator; but never was I so affected with their melody as now; never, as at this time, did so much of divine inspiration seem to influence their songs."

I have frequently thought, while engaged in preparing these pages, that many of my readers may suspect that my statements have been coloured with us parsimonious hand, but in nothing am I aware of having exceeded the truth respecting this spiritual-minded disciple; indeed, I think I shall be justified in saying that the whole has not been told.

It was about the year 1830, that some journals and other writings of Friends were brought under the notice of John Dunstone. These unfolded to his mind views, on certain points, differing from those which he had previously entertained, and he apprehended that he saw in them a nearer approach to primitive christianity than in those generally received. Being ultimately confirmed in this apprehension, he sought to put into practice these things which he believed to be the divine will concerning him.

The first point to which his attention was drawn, and by which his mind was exercised, was plainness of speech, and the addressing of individuals in the singular number, agreeably to the language of Holy Scripture. This practice, he felt, was required of him—its analogy to the simplicity and self-denying character of the divine law being opened clearly to his view. To this succeeded a conviction, that for man, (poor, frail and fallen as he is,) to give flattering titles to his fellow-man, or to receive such, is opposed to the testimony of Truth, and to the entire tenor of the New Testament. On this followed the unlawfulness of swearing for christians, when tried by the precepts left on record by the Divine Lawgiver

himself. His views on worship also underwent considerable change; he saw clearly the inward and spiritual character of this act—that man's place in worship was to sit in abasement of soul at the feet of Jesus, and that nothing could be offered up here that would be edifying to the worshipper, or well-pleasing to the supreme object of worship, but that which emanated from himself; his Holy Spirit sanctifying the worshipper, and preparing him to offer sacrifice in righteousness. Ministry and prayer were now recognized as divine gifts, to be exercised in the will of Him who calls for them.

All these things for sometime he kept to himself, examining and re-examining them by the evidences contained in those portions of Holy Scripture with which he was acquainted; earnestly desiring to know the mind and will of the Lord herein; and, when known, openly to confess to the Truth. This desire introduced him into great conflict, till at length he came to a clear understanding of the apostle's language: "For the word of God is quick and powerful, and sharper than any two-edged sword; piercing to the dividing asunder of soul and spirit, and of the joints and marrow; and is a discerner of the thoughts and intents of the heart."

*Process of Enlarging Engravings.*—One of the most interesting processes recently introduced is that for enlarging engravings. A sheet of vulcanized rubber, prepared in some special way, and coated with an elastic composition on which has been printed a copy of an engraving, is fixed to an iron frame-work with hooks and rings attached to small iron bars, crossing so as to form a square; and by means of screws the rubber sheet is stretched, according to a graduated scale, until the inked impression attains certain increased dimensions. The whole being fixed, it is taken to a lithographic press, and the rubber laid with the inked side on a clean lithographic stone, is passed repeatedly through the press. An inked impression is thus completely transferred to the stone, and from that in a few minutes an impression of the enlarged engraving is worked off—this impression being very perfect in its artistic appearance.—*Late Paper.*

Sarah Cresson.

For "The Friend."

Extracts from her Letters and Diary.

(Continued from page 133.)

"4th mo. 18th. Mary Ridgway and Jane Watson were at meeting First-day morning. Dear Jane appeared in testimony with power; said that most of her employment in the meeting had been in inquiring, 'What brought me hither?' to worship the God of heaven and earth. Oh the awfulness of the occasion!—said that nothing either within or without ought to be suffered to draw our minds off from a humble waiting upon Him, that we might have an offering prepared that might be acceptable. Said she believed some were loving covetousness, desiring the wedge of gold and the Babylonish garments: speaking to the parents that the accursed thing was still in the camp; yet she thought there was a number who were concerned that their children might inherit that which is unchangeably good. With these she had sympathised, when her lips had been sealed with silence. Lord be pleased to forgive the vivacity of my youth. I know I ought to be serious, and thou art worthy of my whole consideration. I ought to consider Thee as a tender Father, always present.

"Oh I have not language to set forth the greatness of my gracious Creator, who is so wonderful in mercy as to repeat His calls to us. Oh

may we be mindful of them, or great will be our condemnation."

"4th mo. 23d, 1790. Mary Ridgway, Jane Watson and Casper Haines set off on their journey towards the southward. Oh may the good council and unwearied labours of these dear ambassadors of the Lord, live in my mind; may I be truly thankful for the invitations and admonitions from the Lord conveyed by them; may I love them when absent on their Master's work, labouring to turn many to righteousness. They have their reward in this world, and great, I trust, will be their reward in Heaven. They that turn many to righteousness shall shine as the stars for ever and ever"

"5th mo. 2d. Sorrowful indeed is the great declension from the right way of the Lord, how are the people carried away with the vanities of this world. Lord be thou pleased to preserve me, for I greatly fear being drawn away in the torrent, it is so rapid. I have been much affected in looking at our Society, to see and to feel how much a light mind prevails, and considering how the ancients are removed, 'The fathers are gone; and the prophets, where are they?'"

"5th mo. 9th. Though there are many removed of the worthies, some by death and other means, from amongst us, yet I have had to see the Lord is the same that ever He was; a sure Friend that will not remove except we turn from Him; and under this sense I have been desirous of drawing to, and living near the Lord, who is the alone everlasting Friend and sure Helper, who, blessed be His worthy name, is waiting to do His people good."

"5th mo. 12th. My weakness is so great I am almost ready to despair, and to think I never shall attain to the desired port. Oh may I be powerfully made obedient, and through and under the humbling hand of the Almighty, come to be steadfast, unmoveable, and always watchful.

"18th. Being absent from home at this time, the earnest desire and breathing of my spirit is to the God and Father of my life, the great upholder of my being, that he may be pleased to preserve me, that I may not deny my Saviour, but confess Him in all company whatsoever, that I faithfully bear the testimony of our Lord Jesus Christ given me to bear."

"20th. I may with gratitude acknowledge to the preserving power of the Almighty [on this visit] my desire is that I may be more and more attentive to His voice, who turneth the heart as a man turneth the water-course in His field."

"31st. Who is like unto the Lord our God, who leudeth an ear to all who earnestly and in sincerity crave His assistance, and at times is mercifully pleased to grant their request."

"6th mo. 25th. Heard of the death of Norris Jones, who departed the 23d of 6th mo., aged 37 years. Oh how is my mind affected with the loss society sustained by his removal. May the Lord (in that He hath seen meet in unerring wisdom to take him to His everlasting habitation to receive the blessed reward of righteousness, when to the view of the outward eye we might have expected long enjoyment of his society, and he to have been continued a faithful labourer in the cause of Truth) raise up others to supply his vacant seat. Oh may I endeavour to prepare to follow him.

He's dead they say, and yet behold he lives,  
And freed from death a twofold life receives;  
Lives in memorial in each virtuous breast,  
And lives eternal in the realms of rest."

"7th mo. 4th. Now is the appointed time, now is the day of salvation; this I do believe. Oh that I may not get from under the sense thereof!

Lord be pleased to keep me humble, watch and attentive to thy voice, and when thou givest the word of command with a clear evidence it is thou that speaks, may I obey. Blessed God, he has preserved a powerful, living minister among his people; although things look sorrowful yet He hath not forgotten to be gracious, His power is the same that ever it was."

"7th mo. 14th. I am jealous over myself, I should not maintain the warfare. Oh that I may be thoroughly redeemed from this worst Dearest Lord, be pleased to stain all the glory thereof in my view."

"8th mo. 13th. Oh dearest Lord, be pleased to influence my conduct in such manner, that whenever Thou calls me from time to time to an unchangeable eternity, I may, through adorable mercy, inherit a mansion in Thy glory, forever to magnify Thy great and excellent name."

"10th mo. 2d. Our Yearly Meeting concluded under a degree of solemnity, having been a time of renewed favour and extension of divine grace may the sense thereof remain with me. Dear Mary Ridgway and Jane Watson attended nearly all the sittings."

"10th mo. 4th. Peter Yarnall called to us, which visit I endeavoured to receive as from the hand of the Almighty. He spoke much my comfort, advised the young persons present 'to buy the Truth and sell it not'; mention the passage in Psalms, 'Great peace have they who love thy law, and nothing shall offend them. Encouraged to perseverance in the right way pressing us to follow the Light; and adding They will follow on to know the Lord, will know His going forth prepared as the morning, and that He would come unto us as the former and the latter rain, that so we might be admitted amongst the worthies, who have fallen asleep in Christ."

"11th mo. 21st. The desire of my mind this day has been, that the Lord may be pleased to redeem me entirely from the world.

(To be continued.)

For "The Friend."

### The Chicago Tunnel.

One of the greatest efforts of modern engineering in this country has lately been brought to successful termination at Chicago, in the construction of an aquaduct under the bed of Lake Michigan, of two miles in length. This was projected for the purpose of obtaining a supply of water from the lake, at such a distance from the shore as to be entirely free from contaminating influences of the discharges of refuse matter from the city, which in the rapid increase of its population and manufactures have had a very perceptible effect upon the purity of the waters of the lake immediately adjacent to it. The quality of the water obtained at this distance from the shore is excellent, and the tunnel is capable of conveying upwards of 50 millions of gallons daily—a quantity sufficient to supply the city when several times its present size. The contractors were Sall and Gowan, of Hamburg, Pa., and its cost has been about one million of dollars. The following detailed description it is condensed from an account published in the *New York Tribune*.

"The tunnel consists of three parts; the tunnel proper, the shore shaft, and the lake shaft. The shore shaft is located within a few feet of the lake shore, and the outer shaft or terminus, is cased in a huge crib of ponderous masonry, situated at a distance of two miles directly out in the waters of Lake Michigan. The first 30 feet of the shore shaft is enclosed in iron cylinders, three in number, one resting upon another and firm

lited together. Each cylinder is ten feet long, six feet in diameter, two and a half inches in thickness, and weighs about 30,000 pounds, or in aggregate, the three together reach the enormous weight of 90,000 pounds. When the first of these cylinders was placed in position on the surface of the ground, the miners commenced the work of excavation on the inside. As the earth was thrown out, the cylinder of course, settled down. Another section of the cylinder was placed in position upon the top of the first; when it had sunk to a level with the surface of the ground, the two were firmly bolted together, and then the work of excavation proceeded. The third having been attached in its turn, the work was pushed forward until the shaft reached a depth of 30 feet. This brought the miners through the soil and quicksands, and some feet into the fine clay formation, wherein they were safe from the irritation of water. After reaching the above named depth, the shaft was contracted to a diameter of eight feet, and thence pushed downward to a depth of 47 feet below the bottom of the cylinder, or 79 feet from the surface of the ground. From the cylinder downward the shaft is lined with brick measuring twelve inches thick, laid in three shells in the best of cement. The shore shaft, now, as completed, measures 77 feet in depth, six feet in diameter for the first 30 feet, and six feet diameter for the remaining 47 feet.

"The tunnel commences at the bottom of the shore shaft, 77 feet below the sea-surface of the earth, and extends, at right angles, a distance of exactly two miles. It is almost circular in form, being 5 feet 2 inches high, and 5 feet wide (in the clear), the variation from a true circle being made on account of the keystone of the arch. It is lined with brick masonry, 8 inches thick. The brick is laid lengthwise of the tunnel in two shells, with "toothing-joints." None but hard burned, clear-ringing, well-formed bricks, entirely free from lime; and eight inches long by four and-a-half inches wide and two and-a-half inches thick, were used in the construction of the tunnel, and they were laid in the best of cement, only one measure of clean, sharp sand being allowed to one measure of cement. Including the shore-shaft, there are nearly 5,000 cubic yards of masonry which required in round numbers about 4,000,000 bricks. The actual excavation of the tunnel, in order to give it a diameter of 5 feet inside the masonry, is about 7 feet in diameter, requiring the removal of about 16,000 cubic yards of earth.

"When the tunnel was first projected, it was objected by many persons, including even some eminent engineers, that no practicable plan could be devised for the construction of the outer or shore-shaft. The difficulty of sinking a shaft through the water of the lake down into the bed of the lake was thought to be an insuperable obstacle. It would be necessary, of course, to erect some permanent structure to shut out the water of the lake while the shaft was in process of construction, and the storms and gales which often rage on Lake Michigan with a violence hardly surpassed by the most terrific ocean hurricane, would, it was thought, render it utterly impossible to accomplish the desired object. But the projectors of the undertaking, with resolute confidence in the feasibility of their project, had devised the plan of a huge crib or coffer dam. This crib was constructed upon the north pier near the entrance to the harbour, and was one of the most monstrous structures ever launched upon the waves. It was forty feet high, and had five sides, each of which was fifty-eight feet long, making the structure about ninety feet in diameter. It had three walls—the outer wall, the centre wall

and the inner wall, each constructed of twelve inch square timber, and caulked and paid like a first-class vessel. The frame work, as thus constructed, formed a powerful combination of massive timber and iron firmly bolted and braced in every direction. Within the walls of the crib were fifteen separate water-tight compartments, and the inside wall inclosed a cylindrical well, open at the top and bottom, and twenty-five feet in diameter. Each angle of the structure was protected from ice by an iron armor two-and-a-half inches thick. After its completion, this marine structure was launched in June, 1865, and towed to its position over the outer terminus of the tunnel, where each of its 15 water tight compartments was filled with clean rubble stone. By this means the crib was sunk until its bottom rested upon the bed of the lake, where it was securely moored by immense cables, reaching in every direction to huge mooring-screws forced 10 feet into the earth. The water here is 35 feet deep, and the top of the crib was therefore five feet above the ordinary surface of the lake.

"After the crib had been securely moored in its proper position, the work of constructing the lake shaft was commenced. An immense cylinder, 64 feet in length, divided into seven sections like that used in the shore shaft already described, and weighing in the aggregate 203,000 pounds, was first sunk in the well in the centre of the crib, of which mention has been made above. The bottom section having been first suspended in the well, the next was placed upon and firmly bolted to it, the joint being entirely water-tight. The two were then lowered when another section was placed upon the top, and so on until all were firmly bolted together and the bottom rested on the bed of the lake. A few inches of sand covered the clay at the bottom of the lake through which the cylinder forced itself by reason of its great weight. By means of a steam engine working upon the crib, the water was pumped out of the cylinder. After this, the sinking of the cylinder to the required depth in the clayey bed of the lake was accomplished by the pneumatic process. A brief description of this process is worthy of perusal.

"The cylinder being in position in the central well of the crib, and all water having been pumped out, the top is closed and made as nearly airtight, as possible. A powerful air-pump, driven by the steam-engine is then set at work, and the air having been withdrawn, the atmosphere then forces the cylinder downward with tremendous power. And by this pressure the cylinder was forced many feet into the hard blue clay at the bottom of the lake.

"When the cylinder had been driven down into the clay to its proper position, the work of constructing the outer shaft was carried on and finished in a manner precisely similar to that adopted in the construction of the shore shaft already described. The bottom of the east end, or outer shaft of the tunnel is 65 feet below the ordinary surface of the water, or 36 feet below the bed of the lake, and the bottom surface of the tunnel slopes uniformly to the shore shaft at the rate of 2 feet per mile, so that whenever repairs are necessary, and the 'inlet gates' are closed, the water can be entirely pumped out at the west end.

"From the foot of each shaft a narrow railroad track was extended as the work of tunnelling progressed. Cars capable of carrying one and-a-half cubic yards of earth, drawn by mules in each section of the tunnel, brought to either shaft the earth as it was excavated, when the car, with its contents, was hoisted out by a winlass connected with an engine. Two members in each section

of the tunnel were left at work, each drawing two trains of cars to the shaft, taking out the earth, and bringing back brick, cement, and other material. Chambers and turn-tables, constructed at convenient distances, allowed the trains to pass on their way going and coming.

"In the tunnel two classes of workmen were employed, namely, miners and bricklayers, each of whom worked separately in gangs of five each. In tunnelling, one of the miners went ahead and ran a regular drift in the centre of the tunnel, being an excavation of about two and a half feet wide. Another followed and broke down the sides of the drift. Another following trimmed up the work to the proper shape and size, while the other two loaded the car. Each car going to the shaft with a load of earth brought back a load of brick and cement, and the masons followed only a few feet behind the miners.

"The contractor employed about one hundred and twenty-five men in the work upon the tunnel. These men were divided in three watches, or reliefs, changed every eight hours. The work was pushed forward night and day, the only cessation being from 12 o'clock each Saturday night until 12 o'clock on the Sunday night following, except on a few occasions when the miners unearthed a jet of inflammable gas or a fissure filled with water, whose irruption was certain at once to spread dismay among the miners, and induce a precipitate retreat to the foot of the shaft. But, very fortunately for the success of the great enterprise, none of these irruptions let in any considerable body of water.

"An ingenious mode of ventilation was adopted to secure to the miners a steady current of fresh air and carry off all foul vapors.

"The crib already described is a temporary structure, which will soon give place to a massive pile of masonry, which will at once protect the cylindrical shaft and inclose the inlet gates by which the supply of water will be regulated. The stone placed in the water-tight compartments of the crib will be removed from one compartment at a time, and spread over the top of the others to prevent the crib from rising. The stone will then be laid back in hydraulic cement, the masonry rising several feet above the water in a series of massive blocks of granite, bolted and cramp together with iron bars, and huge stone cut and morticed in such a manner as to prevent the displacement of one without the displacement of all. In this manner the stone in each of the compartments will be replaced by the most enduring masonry, which, when entirely completed, with its numerous bolts and bars, running in every direction and firmly binding the whole together, it is not unreasonable to suppose, will resist the fiercest gales of Lake Michigan. The top of the structure will be surmounted with a permanent lighthouse, constructed and maintained at the expense of the city, in conformity to a recent act of Congress.

"There are three openings or gates through the cylinder of the lake shaft, which will connect with flumes or passages through the surrounding masonry, when they will be covered by double iron gratings, and capable of being closed by gates, easily operated by an ingenious combination of iron rods, levers and wheels. Gates will also be placed upon the openings through the cylinder, so that each of these passages for the ingress of the water will be opened and closed at both ends. Each of these inlet gates cover an opening five feet long and four feet wide. One of the openings is five feet from the bottom of the lake, another ten, and the third fifteen feet. Each is on a different side. This arrangement will afford

the purest of water at all seasons, despite storms and regardless of the direction of the wind."

For "The Friend."  
Extract of a letter from our late friend James Emilen,  
on the subject of the Ministry.

I have often had reason to think that the baptisms that are needful for almost any important station in the church of Christ, but especially for those of minister and elder, must be very similar; and therefore I am not surprised that we should all be prepared for our proper places under the discipline of many doubts and fears and of much carefulness. The effect of these must be, if we do not yield to improper discouragement and distrust, to deepen our foundation, as it is said, "dig deep, and by the foundation upon the rock" for "we are made partakers of Christ if we hold fast the beginning of our confidence steadfast unto the end;" and although it is permitted and ordained that our salvation should be wrought out "with fear and trembling," yet in the end "the work of righteousness will be peace, and the effect of righteousness quietness and assurance forever;" that I hope thou wilt not be unduly discouraged by the doubts and fears and misgivings that have assailed and possibly may continue to assail. Of one thing I have little doubt, that all who are rightly called into the ministry, will first be instructed to see and to feel that of themselves, they can know and do nothing. This warns from all dependence upon ourselves, and prepares the humble mind to have "faith in Christ"—that although with the poor centurion we can adopt the language, "I am not worthy that thou shouldst come under my roof, neither thought I myself worthy to come unto thee, yet speak the word only and my servant shall be healed." A very humble view of himself, but such confidence in Christ, as to gain for him the encouraging language, "I have not found so great faith, no not in Israel." Therefore, however thou mayest be brought to distrust thyself, suffer not this to weaken thy confidence in Him, who, I trust, in His own time will make thy way plain before thee. In reference to the opportunity at J. N.'s the language I used was that addressed by Paul to the elders and teachers in his day, "It is more blessed to give than to receive," and he quotes it as "the words of the Lord Jesus."—Acts xv. 35 I thought at the time I was permitted to partake with thee in a feeling of that sweet peace which is the reward of dedication to apprehended duty—the blessed effects of giving even "the widow's mite." The reading of thy letter had a similar effect—it seemed as though the little offering savored of the precious life, which is more to be prized, with but few words, than much expression without this. Indeed I can say from my heart, I have a very friendly feeling for a brief and lively ministry; and in this view of the subject, no one has any occasion to plead their lack of eloquence and their stammering tongue, for it is not so much the words, how good or how many, but how lively,—feeding the hungry with the true bread, and not with pictures and descriptions and dry doctrines. Nay, it is not true, that even "a word fitly spoken is like apples of gold in pictures of silver." I have not any doubt but the time will come when a very few words, with right weight and authority, will be more valued than much eloquence without this. The rehearsal of a text with right authority, may have the effect to gather an assembly unto Christ, the invisible Teacher, and to settle them upon Him and upon his teaching, which is all any minister should desire. So that the calling, if rightly understood, is a very simple one, if we are only careful to

suppress every desire either to exceed or fall short of what is given us in the life. My impression has long been (though without reference to thy appearances in public) that thou hast more to contend with from undue discouragement than from over confidence; and if this is a weak point with thee, no doubt the enemy will avail himself of it, and it requires a double watch.

It is the altar that sanctifies the gift, and if the heart is really changed, and humility and love felt to abound there, thy offerings, whatever they may be, will no doubt be accepted, and thou wilt be sensible of it by the incomes of peace. If scattering is followed by an increase of solid religious experience, it must be supposed to be of the right kind. If thy religious exercises obtain relief in some other way, thou wilt feel sensible of this also, and will no doubt be content and thankful.

Communicated for "The Friend."

The Superintendent writes from Yorktown, Va., under date 12th mo. 15th.

I enclose for publication the substance of a speech made by Bayley Wyatt. It was delivered at a mass meeting of coloured men held in our large school-house. The meeting was called at the close of one held the preceding evening by General Armstrong on the subject of removing the camps. The former meeting was addressed by General Armstrong, Lieut. Massey, and myself, advising them to seek homes in the adjoining counties, and elsewhere; the latter meeting was held to consider and reply to our advice. I was present by invitation, heard their deliberations, and felt that their arguments were unanswerable. \* \* \* \* \*

I saw in this speech so much naked, simple truth and natural pathos and oratory, that I sent to the speaker and got him to come to my place and repeat to me the substance of his speech, while I wrote it down. It comes far short of doing justice to the speaker, but there are facts and forces in it throughout which should command the respect and sympathy of all, and especially of legislators.

SPEECH OF BAYLEY WYAT.

Taking notice of the address the gentlemen gave us last night concerning leaving the camps, in which we are now settled in, and thrown back to the adjoining counties where we came from; it seems that it had been told the gentlemen that, if we would go taken care to the counties we came from, we should be taken care of as well as in the place where we are now located; but we have full satisfaction if we turn back to them counties or the lands we came from, under the present situation of the rebels, and the unsettled situation of the United States, we shall be forever made hewers of wood and drawers of water.

But when we look back and sees our former state, when education was kept from us, and though we was made like men, by God, as other men, we was kept in bondage, we made bricks without straw under old Pharo'; and you all 'members de home-house and de wife-house, how de wife-house was often eight or ten miles from de home-house, and we would go there Saturday night expectin' to see de wife we had left and she would be gone! sold down South, nebbler to come back, and de little cabin shut up and desolate. Den we would fold our arms abnd cry, "O Lord, how long," and dat was all we could say; and we was not able to own even our names, as men among other men.

For this cause we now looks on our present situation and we believe it is by the over-rulin' providence of God and not of men, that we en-

joyed our freedom, that we are placed in this most pleasant situation, and we first thanks God for de great blessing we now has; and second we thanks our friends from de North for the great sacrifice which dey have made for our benefication, and we feels so well satisfied that we has God on our side that we has some friends, that tho' God's assistance will intercede for us and assist us, yet we wishes to be all the aid we can be to the United States, as men.

And as to our dear friends, the Quakers of de North, we does consider them our best art friends, for de great sacrifice dey has made and i making for us, we does tank them most kindly and as to de great North for de sacrifice of treasures, of lives, and of blood, we now consider den our affectionate friends, and we heartily tank den.

We now, as a people, desires to be elevated and we desires to do all we can to be educated and we hope our friends will aid us all dey can.

As to our going back to the counties we came from, and to the rebels again, we knows for the truth by thousands of witnesses, the sight of the darkies who left the rebels in the time of war, and now as a dose of pizen in their eyes, because we left the rebels and went to the yankees.

We now feels unprotected against dem rebels and we feels unprotected wid dem, and though de rebels have and do scoff us for calling de North our friends, we hopes we shall nebbler lose our confidence in dem,—I mean our friends in the North.

O! most respectable friends of de North, please consider our interests; we feels sometimes as if our welfare in dis life depends on you.

Mr. Vining, the Superintendent of Schools held a mass meeting on Friday night, and he de parted to us some very pertinent instructions such as we believes are based on the very foundations of Truth, and immediately we agrees with him to take his counsel, believing it is for our benefit, and we has every reason to believe he is a friend of ours.

I may state to all our friends, and to all our enemies, that we has a right to the land where we are located. For why? I tell you. Our wives, our children, our husbands, has been sold over and over again to purchase the lands we now locates upon; for that reason we have a divin right to the land.

Den, again, de United States, by deir officers told us, if we would leave the rebs and come to de yankees and help de government, we should have de land where dey put us, as long as we live and dey told us dat we should be see'd after an cared for by de government, and placed in a position to become men among men. And de government further promised to protect us from de rebels as long as we lived; and we sacrificed a we had and left de rebels and came to the yankees.

Some of us had some money to buy our freedom, and some of us had a house, and some of us had cattle, with which we hoped sometime to buy ourselves, but we left all, depending on de promises of de yankees.

Dey told us dese lands was 'sented from the rebs, who was fightin' de United States to keep us in slavery, and to destroy the government. De yankee officers says to us, "Now, dear friend colored men, come and go with us, we will gain de victory, and by de proclamation of our President you have your freedom, and you shall have de 'sented lands."

And now we feels disappointed dat dey has kept deir promise. O educated men! men of principle! men of honor! as we once consider

was, now we dont seem to know what to conser, for de great confidence we had seems to be ken, for now we has orders to leave dese lands de Superintendent of de Bureau.

We was first ordered to pay rent and we paid rent; now we has orders to leave, or have our cabins torn down over our heads; dey say de lands has been stored to de old owners and must have it."

And now, where shall we go? Shall we go into streets, or into de woods, or into de ribber? We has nowhere to go! and now we wants to know what we can do? I is not here to ask de government to help me, nor my family. I has nekked any help from de government nor from friends, and I never has received any. I has got living by honest hard work since I came to yankees and I has saved something besides. I es no man anything, but my people cannot all this. Dey has been bought and sold like asses; dey has been kept in ignorance; dey has on sold for lands, for houses, for carriages and everything their old masters had. I want ne gentlemen to tell me of one ting that our people hasnt been sold to buy for de owners.

And den didn't we clear de land and raise de crops of corn, ob cotton, ob tobacco, ob rice, ob yam, ob ebery ting. And den didn't dem large ries in de North grow up on de cotton and de yam and de rice, dat we made. Yes! I speaks de South and to de North, if I hasnt't spoken de words ob truth.

I say dey has grown rich, and my people is poor. We lives in slab cabins, on ground for poor, and many of us has not food, and we goes ragged and most naked.

God heard our groans. He saw our afflictions and he came down and delivered us. But anudder ting is now risen, Andy Johnson! I will not tell him king or president, he is not our friend, has forgotten the afflictions of Joseph, if he ever knew them, and we are now turned back de old task masters; our cabins are threatened to be torn down over our heads if we do not go, and we must be drove about from place to place, and chased as hounds chase rabbits, and we must go, and I ask again, where shall we go, and who all we trust?

I tell you who we is to trust. We is to trust God, and He will bring us all out ob de wilderness, nehrow, and sometime somewhere.

I cannot tell how nor when He'll do it, but I am bound to believe He will do it. Gemmen, must not depend on de warlike nations around us to help us; dey have all decided us, we has combined against us to keep us out of de promised land.

Now we must be united, we must take care of ourselves, and protect ourselves, and must support ourselves. We must form societies to help each other who cannot help themselves, and we must show to de nations dat we can support ourselves, and dat we can protect ourselves wid de help of God, and dat He will do, He has done it and I love He will, help us one time more, if we looks Him.

I know de times looks hard and berry dark to de use of us who is hungry and cold, like all de children of Israel, our soul is dried away, and we members de flesh pots and de leeks and de onions of Egypt, and we is ready to say, "O, dat our eyes had been dare!" for we thinks dat our senses has left us, and we has lost our confidence in Him. But I stands here to-night to tell you dat God has not forgotten us and He is just, and He will bring us along bimely.

We deserves hard times, we deserves hunger and cold, and we deserves enemies, because we is

not all honest, and we doesn't do de best we can. We does't help ourselves, and I tell you dat God won't help those dat won't help themselves. You know when Joshua went to fight Ai, he was beat and his men got killed and was driven back and poor Joshua didn't know what was de matter; but God did know dat something was wrong with Joshua's men. Some of dem did steal a coat and some did steal money, and God knowed it and he told Joshua, and den Joshua find it so, and he punish and kill de thief and de liar, and den his enemies could not stand against him. Now we has liars, and we has thieves, and knows it, and we all suffer as a people as dare is sin wid us. God aint gwine to help de wicked and bless dem. No sir! God aint gwine to do any such ting. He is gwine to 'flict us some way, long as we is wicked, long as we dont speak de truth, long as we steals, long as we does't believe Him, long as we is lazy, long as we doesn't help ourselves. He wont help us.

## THE FRIEND.

TWELFTH MONTH 29, 1866.

Every age has its characteristic attendants, and each generation its own peculiar work to do, and its prevalent temptations to guard against. In the present day of discovery, of emancipation from authority, as well as many long cherished errors, and of attempts at great moral reforms, there are accompanying dangers arising out of the unsettled and overstrained state of the public mind, to which those entering on the duties of active life are more than usually exposed. Mingled with exaggerated and erroneous ideas of the progressiveness and perfectibility of mankind, there is an assumed wisdom that affects to esteem much of the intellectual and religious acquirements of past and homelier days, as of little worth; or at least so much out of date, as not to be fitted to guide or influence the men and measures of the present time. Deference to the experience of the aged is necessarily diminished by the opinion, not seldom expressed, that such is the fresh outpouring of light and liberty, and the consequent advance in education, that the intellectual powers and moral feelings are developed and matured at a much earlier period of life than was once thought possible; so that those who are at an age, when, in years gone by, they would have been supposed to be just passing the threshold into the temple of knowledge, are now prepared to sit in judgment, not only on systems and theories, but on all that may affect the course and object of life, and to decide the value of things which can be rightly weighed only in the balance of the sanctuary.

While there is no need to dispute that mankind as a whole are gradually but certainly improving, so that the purposes of man's creation, and the revealed design of his Creator shall be finally accomplished, and that the unfolding of all the faculties of his intellectual and moral being may proceed with increased rapidity as he approaches the consummation of that glorious design, whether as an individual or as a race; yet it must ever be the case that in every thing pertaining to human knowledge, each successive generation can advance only as it makes proper use of the store that has been accumulated by those which have gone before; and in the knowledge of things divine, the great truths pertaining to them, belonging to this last dispensation, having been revealed at its outset, can never be altered or improved. It requires, therefore, no little watchful-

ness on the part of the young, and of those who have their training, to guard them against those floating notions which gender an overweening self-esteem, or fill their minds with presumptuous thoughts of powers or attainments that will cause them to overlook the little heaven which now, as in the days when the parable was first enunciated, may be said to be hidden "in three measures of meal," and which alone can renew man in the image in which he was originally created, and thus prepare him to perform the duties that pertain to the sphere from which he has fallen.

Another source of danger to the young and inexperienced, perhaps peculiarly hurtful in our own country at the present time, arises from the repeated occurrence within the last two years of extraordinary ways for the accumulation of wealth; by which many have acquired inordinate gains; often lavished by them in unwonted luxury and show, exciting envy and rivalry as well as giving rise to still more inordinate desires among most classes to reap a like harvest, by embarking in the many schemes that promise the "golden stream shall be quick and violent." Dazzled with the brilliant success of a few, and disregarding the failure of the many, there has been a disposition fostered to look with disfavor on the ordinary slower, and less promising courses of business, and a vicious taste for bold speculation, and making haste to be rich, has spread over the community, into which the young are easily betrayed.

These reflections have occurred when sitting down to make a few observations on a subject which may at first seem little calculated to call them forth, but with which it would not be difficult to trace the association of ideas.

In several of the newspapers it has been recently stated that the large cities are at the present time overpowered with men, young and middle aged, seeking employment which they cannot obtain. These are represented to be persons who have heretofore occupied places as clerks, salesmen or other stations in stores or offices, as well as operatives dismissed from factories. There is at the same time a scarcity of mechanics, not only those who work as journeymen, but of master workmen also.

The community has been suffering for many years, from the want of a sufficient supply of well instructed, and capable mechanics, who were masters of the several branches of the mechanical arts constantly called into requisition to supply its wants and minister to its comforts. There has long been an indisposition on the part of parents to put their sons apprentices to learn any of the "trades" as they are termed, and a still stronger dislike on the part of boys, to submit to the application and restrictions necessary in order to be rightly instructed in any mechanical business, and to perform the duties of apprenticeship. This has arisen mainly from two commonly received opinions, both unfounded and untrue. One, that the business of a mechanic is "vulgar" and not likely to yield as much wealth as other employments. The other, that professional or mercantile pursuits are more "genteel," and promise speedier and larger remuneration. We are persuaded that these opinions—like all other products of ignorance of the teachings of experience and of what constitutes true worth—have been of no little detriment to the community; and we apprehend the members of our own religious Society have not escaped without some injury from them. There was a time when a large portion of the most prominent and gifted members among Friends in the city of Philadelphia were mechanics: carpenters, bricklayers, blacksmiths, tanners, shoemakers, silversmiths, &c., and none,

then or now, commanded more respect, nor wielded more wholesome influence in both civil and religious society; and we cannot but think there has been a loss sustained since, under the influence of some such notions as those we have alluded to, so many lads and young men, sons of Friends, have declined learning some of the mechanic arts, and helped to crowd the classes of store and shop-keepers.

There are no more useful or more honorable members of the community than mechanics, nor is there any business in which the mental endowments may be brought to bear with more credit or emolument to the possessor, or contribute more effectually to the welfare of the community in which he lives. Manufacturers, commerce, and mercantile business are all necessary to the full development of the profitable industry of a country, but if they occupy the attention and time of an undue portion of the citizens, they destroy the equilibrium essential to national prosperity, and instead of increasing its wealth, impoverish it so far as there is misdirected intellect, labor, or enterprise, always attended by individual embarrassment and suffering. This appears to be the case in our country at the present time. It would therefore be far better were many more of the children of Friends, who live in cities, brought up to mechanical employments, and pursue them as the means for obtaining a livelihood. Honestly and industriously conducted, almost any one of them would insure a speedy competence, while they are much more free from hazardous risk, and the temptation to speculate, which so generally infest the different branches of mercantile life. They are also, we apprehend, freer from other temptations connected with vain show and expense in the mode of living, though not more safe if those following them refuse to be controlled by the religion of Christ, which, practically embraced, is the only sure safeguard for any, and as it is allowed to transform the heart, secures the Divine blessing here, and the joys of heaven hereafter.

#### SUMMARY OF EVENTS.

FOREIGN.—A London dispatch of the 22d says, that the Fenian troubles in Ireland have entirely abated, and the island is tranquil. Confidence has returned to the people. Large seizures of arms and ammunition for the use of the Fenians, has been made in various parts of Ireland. About 30,000 British troops are now stationed in Ireland, chiefly in the southern counties. The message of President Johnson had been received in full by mail, and was the general topic of discussion by the British press. It is agreed that the message will weaken the strength of the Alabama claims by the manner in which he treats the Fenian question, but that portion of the message which refers to finances is highly commended. The delegation from British North America have agreed upon the basis of a bill for the continuation of the tariff in North America, and as soon as it is perfected the bill will be sent to the British Parliament for confirmation. The stock of cotton on hand in the manufacturing districts is being rapidly reduced, and cotton goods have an upward tendency. The Bank rate of interest has been reduced to  $\frac{3}{4}$  per cent. The Liverpool quotation for middling up-cotton, on the 22d, was 14 $\frac{1}{2}$ d. Consols, 90. U. S. five-twelves, 72 $\frac{1}{2}$ .

Napoleon's plan for reorganizing and increasing the French army, is not well received by the people. The measure appears to be so unpopular that it is supposed it will be either modified or withdrawn altogether. The revenues and expenditures of France are in a state of equilibrium, and declares that the proposed reorganization of the army will involve no increase of taxes. It is reported that France has loaned 90,000,000 francs to the government of Spain.

The Prussian House of Deputies has passed a bill to incorporate Schleswig-Holstein with the kingdom of Prussia.

It is said that the Pope is satisfied with the tone of the speech made by the King of Italy at the opening of the Italian Parliament. The first conference for the

arrangement of the relations between the kingdom of Italy and the Pope has been held. Advice from Rome report that the Pope is little disposed to make an arrangement with Italy, although he is counselled by France and other parties to do so. The National Committee of Rome have issued a proclamation advising the Pope to renounce the temporalities.

Advices from Candia state the fighting still continued there, and that the Turks had strengthened the blockading fleet around the island.

The *St. Petersburg Journal* denies that any unfriendly feelings exist between the governments of Russia and Austria, but on the contrary both are earnestly endeavoring to foster the best mutual understanding.

On the 30th of Tenth month the Paraguayans attacked the position of the allied army, but were repulsed with severe losses.

Campbell and Sherman, the United States Commissioners to Mexico, have returned to New Orleans. They did not land at Vera Cruz, so it would have been a recognition of Maximilian's government, but proceeded to Tampico, where they met the accredited emissaries of Juarez, and afterward went to Matamoros, where they held a short counsel with other confidential agents of the republic. General Sherman has gone to St. Louis to attend the General Assembly of the Small States at New Orleans for the present. Maximilian left Orizaba on the 14th, for Mexico. It is said that a rupture has taken place between him and the French authorities in Mexico, and that the latter have seized the baggage of Maximilian, which had been carried to Vera Cruz.

The House of Representatives on the 20th inst. both Houses adjourned until 1st mo. 3d, 1867. The Senate has debated the bill for the admission of Nebraska, without reaching a decision. Among the bills and resolutions introduced were one to prevent illegal voting in the District of Columbia, one to permit the organization of National Land banks, and one for the punishment of persons who induce free colored people to emigrate under false promises or pretences. A resolution was also introduced by Senator Wilson, and referred to the Committee on the Judiciary, which authorizes and directs the President of the United States to instruct the officers of the army and navy and the Freedmen's Bureau to arrest and punish the 20th inst. for punishment for crimes or misdemeanors, by any pretended civil authority in any State lately in rebellion, until the civil government of such State shall have been reorganized and ratified by the Congress of the United States.

A House of Representatives passed a resolution making it unlawful for any officer of the United States to pay any claim accruing prior to the 13th of 4th mo. 1861, in favor of any person who aided the rebellion; also one for the appointment of a committee of seven to report a bill to establish a system of free common schools for the District of Columbia. The House has considered some of the appropriation bills. The Committee of Ways and Means has been instructed to enquire into the expediency of modifying the Internal Revenue law.

*Philadelphia*.—Mortality last week, 258.

*Worcestershire*.—The land which has been pre-empted at the French Exhibition in Kansas this year, amounts to 1,178,128 acres.

It is estimated that from 3500 to 4000 houses have been built in Cleveland, Ohio, this year, and yet there are no houses to rent.

An enormous scurvy, weighing nearly 1800 pounds, was discovered by Messrs. Baring, in the Bay of Biscay, shown at the French exhibition of 1867. It will afterwards be presented to the Paris Museum of Natural History.

Application is to be made to the British Parliament for leave to lay down railways in the principal streets of Liverpool, on which it is intended to run cars similar to those in use in American cities.

The artesian wells of Grenelle and Passy, France, now emit volumes of steam; the temperature of the water, which now rises from the depth of 2300 feet, reaching 85° of Fahrenheit, while that of the air at the surface is only 35°.

John King, the African explorer, at the last conference, (5th mo. 18th) was moving up the river Ravina, on the east coast of Africa, intending to visit the unknown northern extremity of Lake Nyanza.

The *United States Mint*.—The total coinage of gold, silver and copper, from 1793 to 1866 inclusive, is stated by the Superintendent of the Mint to have been \$987,500,000. The gold coinage was about \$845,500,000, the silver \$136,333,333, and the copper \$5,500,000.

The *Post-Office*.—The estimates of the Post-Master General for the service of the department for the fiscal year, ending 6th mo. 30th, 1868, amount to \$17,500,000.

The items required for inland transportation, \$8,600,000, for foreign mail transportation, \$820,000, for overland mail transportation, and for marine mail transportation between New York and San Francisco, \$900,000, &c.

*The Weather*.—The 21st inst. was a cold day. At Franconia, N. H., the thermometer stood at 27° below zero; at Bangor, Maine, 12° below; at St. John, N. B., 5° below; at Portland, 10° below; Quebec, 6° below; New Haven, Conn., 4° below; Norwich, N. Y., 3° below; Ottawa, Canada, 15° below; at Boston, 2° above; Philadelphia and vicinity, from zero to 4 deg. above.

*The South and the Freedmen*.—The Georgia Legislature, prior to its adjournment, repealed a law forbidding alien residents to hold real estate.

The amount of taxable property owned by the freedmen in Kentucky, is assessed at \$985,566.

General Kiddoo, of the Bureau, in Texas, has announced his willingness to furnish transportation to negroes from States where there is a superfluity of labor, to those where there is a demand, and to assist planters in obtaining labourers. Capt. Craig, Bureau agent of Guadalupe county, who was thrown into prison by the civil authorities, was released by United States cavalry, who surrounded the prison and demanded his release. He has resumed the discharge of his duties.

The parents of pupils in certain of the freedmen's schools in Richmond, supported by one of the northern associations, lately voted to pay fifty cents for each of their children in order to supply fuel during the winter. The assessment amounted to \$200.

A man named Avery appears in Georgia, in the arrest of a vagrant and attendant to the chain gang, of a coloured missionary, William Fincher, who was preaching to the freedmen in Pike county; in Maryland, in the announcement of a public sale at Annapolis, "at the court house door," of a negro convicted of larceny, and sentenced by the court to be sold into slavery for life.

A Mississippi judge has decided that a slave's rights were not annihilated, or non-existent, but in abeyance simply. A white man was accordingly held to his contract with a slave who is now a freedman.

*The Markets*, &c.—The following were the quotations on the 22d inst. *New York*.—American gold, from 132 to 133. U. S. sizes, 5-20, 105 $\frac{1}{2}$ ; 108; ditto, 100 to 102 90 $\frac{1}{2}$ . Superfine U. S. flour, \$8.15 a \$10.10. Shipping Ohio, \$10.75 a \$12. Baltimore flour, common to fair extra \$11.20 a \$13.50; trade and family, \$13.70 a \$16.50 (Chicago oats, 63 a 65 cts. Rye, \$1.25 a \$1.30. Jersey yellow corn, \$1.95 a \$1.07; western mixed, \$1.02 to \$1.11. Middling upland cotton, 34 cts. *Philadelphia*.—Superfine flour, \$8 a \$8.50; extra, \$9 a \$10.50 higher grades, \$11 a \$16. Penna. red wheat, \$2.63 to \$3.10; southern do. \$2.90 a \$3.20; white, \$3.20 a \$3.40. Flour, \$1.32 a \$1.38. New yellow corn, \$1; old, \$1.10 a \$1.18. Oats, 57 a 58 cts. Cloverseed, \$8.25 a \$9.50 Timothy, \$3.25 a \$3.75. Flaxseed, \$2.90 a \$3.

#### RECEIPTS.

Received from Thos. Crozer, 10, per Abm. Cowgill Agt., \$3, vol. 40; from Wm. Cope, Pa., \$2, to No. 23 vol. 40; from Amy C. Hoopes, Pa., \$2, vol. 40; from Milha Hollingsworth, K. O., for B. Street, W. Masters, and J. Burgess, \$2 each, vol. 40, for W. Mill house, \$2, to No. 16, vol. 41, and for M. Gifford, \$2, vol. 41.

Received from Sarah Cope and grand-son, Red Stone Pa., \$15; from Jos. Cope, West Chester, Pa., \$5, and per l. W. Smith, \$105.20 from "a portion of the members of Harrisville Preparative Meeting," for the relief of the Freedmen.

#### WANTED

By a young man of some experience, a situation in some light active business, (wholesale preferred.) Apply at Friends' Book Store, No. 304 Arch St.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, in the office of Board Managers, K. O., for B. Street, Philadelphia, or to any other Member of the Board.

DIED, at his residence near Rahway, N. J., on Second day the 10th inst., BENJAMIN F. VAIL, in the 64th year of his age, a member of Rahway and Plainfield Month Meeting of Friends.

WM. H. PILE, PRINTER,  
No. 214 Pear street, between Dock and Third.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XL.

SEVENTH-DAY, FIRST MONTH 5, 1867.

NO. 19.

PUBLISHED WEEKLY.

Price Two Dollars per annum, payable in advance.

Subscriptions and Payments received

at No. 115 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

John Dunston.

For "The Friend."

(Concluded from page 140)

Now it was, to use his own terms, "as though the foundations of the great deed were broken up, and former buildings shaken;" yet was he strengthened to go forward on his way, watching and praying, eating little, and sleeping less, until one night, after the family had retired to rest, sitting in his usual corner, he said in his heart: "Be the result what it may—be it so that I am now stripped naked, and turned a poor solitary into the world's wide wilderness—yet will I confess to the Truth, take up my daily cross, and cheerfully bear it after the example of my suffering Lord."

While thus exercised, these emphatic words came into upon his mind: "For other foundation can no man lay than that is laid, which is Jesus Christ. If any man build upon this foundation, of gold, silver, precious stones, wood, hay, stubble, every man's work shall be made manifest; for the fire shall declare it, because it shall be revealed fire; and the fire shall try every man's work, what sort it is. If any man's work abide which he hath built thereupon, he shall receive a reward. If any man's work shall be burned, he shall suffer loss; but he himself shall be saved, and so as by fire." Here he was permitted to see that it was for "the fire," "the hammer," "the sword," and to yield up all to the divine disposal.

Having applied to Friends to be received into membership; and appearing to be fully convinced the principles and testimonies of our religious society, he was, in 1838, admitted a member, though some difficulty was felt with respect to his endurance of meetings.

It has been observed, in a preceding paragraph, that his former building was shaken; and should any reader query what part was thus shaken, his answer was: "All that which was made up of forms and ceremonies, of types and figures, and mere shadows of good things to come; in a word, all that was merely of the fleshly birth;" and that scripture fell with weight on his mind: "Cease ye from man, whose breath is in his nostrils, for wherein is he to be accounted of?" He now clearly saw that it was his duty to cease from these things, while at the same time he perceived that that part which could not be shaken, and which was to abide forever, consisted in an entire subjugation of the soul "to the law of the spirit of life in Christ Jesus."

Likening himself to Jerusalem that lay broken and in ruins, his earnest cries ascended to the "Repairer of breaches," that He would be pleased to remove all obstacles out of the way, and to raise up to himself a holy spiritual temple in which He might delight. His prayer was granted, and great was the flow of peace which prevailed in his soul. In this season of searching of heart and extremity, these Scriptures greatly sustained him, and were, as he expressed himself, "as a staff in his hand"—"All that will live godly in Christ Jesus shall suffer persecution." And again: "Beloved, think it not strange concerning the fiery trial which is to try you, as though some strange thing happened unto you; but rejoice, inasmuch as ye are made partakers of Christ's sufferings, that when his glory shall be revealed, ye may be glad also with exceeding joy."

He spent much of his time in meditating on Holy Scripture, in prayer, and in waiting upon God. Thus engaged, and his bodily weakness being very great, the enemy suggested that the course he had adopted had driven his friends from him; that he would be deprived of religious meetings, and of religious society. Many conflicts and great darkness succeeded, producing cries to the Lord for support and preservation.

Under these feelings, he one night retired to rest, greatly exhausted both in body and mind, watering his couch with his tears, and earnestly seeking divine direction and counsel. While thus engaged, it was as though it had been audibly said to him: "Thou need not be concerned about thy meetings;" and this Scripture was, to his comfort and admiration, instantly opened to his mind: "And Jesus, when he was baptized, went up straightway out of the water, and lo! the heavens were opened unto him, and he saw the Spirit of God descending, like a dove, and lighting upon him; and lo! a voice from heaven, saying: This is my beloved Son, in whom I am well pleased!" Here he saw the evangelist as in the divine presence, and apprehended how a solitary worshipper might sit alone, and yet be in glorious company. It was given him further to see, that for the present his meeting was to be in his own house, and that it would not be his allotment to sit there alone.

The account of the transfiguration of our Lord now occurred to him, with the concluding declaration: "And behold a voice out of the cloud, which said: This is my beloved Son, in whom I am well pleased; hear ye him!" This deeply affected him; and in it he apprehended a depth of meaning, together with a universality of application, which he had not understood before; and here, if I may so speak, he seemed to contemplate, in holy convocation, not only the Lord Jesus and his great prototypes, Moses and Elias, but also, in ineffable condescension, "the Ancient of days," with the Spirit, which, in the form of a dove, lighted on the Saviour on the banks of the Jordan. This gracious display of love and mercy scattered his doubts, filling his heart with thanksgiving and his tongue with praise.

He now felt that as far as his fellow-creatures were concerned, he was reconciled to sit alone,

even to the latest hour of his earthly pilgrimage, should such be the divine will concerning him. Afterward he apprehended it his duty to fix on a period for public worship (if the word public may be so applied,) and invited those of his relatives, friends and neighbours, who had a desire to serve the Lord, to unite with him in this service. Several came, from time to time, and bore a willing testimony to the grace and power, of which they had been made sensible on many of those occasions.

It was at length proposed to him to leave his little cottage on the common, and occupy a house in Camborne, where a meeting of Friends, on First-day evening, had been recently established; to which, after a severe struggle, he consented. As Jacob of old, on the occasion of the anticipated meeting with his brother Esau, sent his household over the brook Jabbok before him, that in the solitariness of the night, and in the depths of his own spirit, he might wrestle for the blessing; so did our dear friend, when the day came for his removal, send his wife and children before him, that, unobserved and uninterrupted, he might earnestly seek, and be favored experimentally to know the divine presence and blessing to go with him. And such was the cheering evidence imparted, that, "with a glad heart and cheerful countenance," to use his own words, he left his old, humble dwelling, and entered his new and more commodious abode. "And here," said he, "my wonted corner was restored."

From this period to the end of his pilgrimage, he was strengthened to walk humbly and watchfully before the Lord, bearing, with meekness and patience, the afflictions inseparable from his condition. He attended his religious meetings with regularity, and often under circumstances of great difficulty; highly valuing these opportunities, which were frequently made seasons of comfort and of strength to his mind. The company of his friends too he much enjoyed; and, when favored with it, his communications, mostly in the language of Scripture, were often very interesting and instructive.

This year after year passed away, with but little change, till 1855, when he was attacked with paralysis, which gradually reduced his already feeble frame. He was favored, however, to retain his serenity of mind; was cheerful and comfortable, and wholly resigned to the divine will; so that, in patience unwearied, and in great submission of spirit, his language was: "It is all right, just as it should be. Were I at liberty to choose, I would not have it otherwise;" and to his son he said: "It is all right, both within and without." Quickly his power of utterance failed, so that for the last few days of his life, although he often attempted to speak, he was unable to do so, and the only mode of conveying to those about him his gratitude to them, and his love and devotion to God, was by an affectionate pressure of the hand in the one case, and the lifting of it heavenward in the other.

He sank peacefully and sweetly away, on the 9th of First month, 1856, in his sixty-ninth year, leaving on the minds of his surviving friends the

comforting conviction, that, through redeeming mercy, the released spirit was permitted to enter into "the rest which remaineth for the people of God."

For "The Friend."

Extracts from Letters received by Friends' Freedmen's Association.

In response to an appeal on behalf of the Freedmen, a Friend in Montreal writes, under date 12th mo. 19th, 1866:

"My wife has endeavored to gain the sympathy of others, and the result is a case of old clothing, which I have this day forwarded, and a draft on New York for one hundred and twenty-nine dollars twenty-five cents.

"I am very sorry the amount is not more, but it has been hard work to get up this little sum, and it is a truly sad fact that 'Christians,' can raise hundreds of millions of dollars to destroy men's lives and property, but to save these poor coloured brethren from starvation they seem to grudge the hundreds only.

"The accounts of suffering and death among the freedmen is perfectly appalling, and reflects great blame on the government who ought to give them, at least, food, clothing and citizenship, as some little compensation for the wrongs they have allowed them to suffer for many years past."

Geo. Dixon writes from Danville, under date 12th mo. 20th:

"We are having winter weather here, quite a cover of snow. Notwithstanding the cold, there were 247 in attendance in the day school, and 140 in the night school. There is great anxiety on the part of the freedmen for instruction, and we feel encouraged by the rapid progress they are making in their studies, both juveniles and adults."

Nearly every letter from the Southern Missions brings accounts of destitution and need. Shoes are particularly called for.

Letters, subjoined to the Monthly Reports of the coloured teachers in Maryland, indicate a good degree of intelligence,—one of them, after speaking of the general good order prevailing among his pupils, writes:

"I think it presages well, when a people who have known nothing save the sting of the lash, have had the dignity of their manhood crushed, and all their finer and more delicate sensibilities blunted for over two hundred years, grasp with such eagerness the crumbs of learning given to them."

In reference to these schools in Maryland, F. T. K. writes, under date 12th mo. 26th:

"I am truly sorry to say that the condition of our association (Baltimore) is such, that the withdrawal of your teachers would close the schools which they have charge of.

"We closed our school year ten thousand dollars in debt, we had to do this or wind up our whole concern. We are carrying this debt still, with the prospect of aid from our city government during the session of the council a month hence. The coloured people themselves will contribute about eleven thousand dollars this year towards the support of the schools. We are nearly as badly off as the cotton States, as regards kind feeling and pecuniary aid from the white people—we think, however, that if we can work over this year we shall be able to transfer our city schools to the Board of Education—we now have the matter before them, and have some encouragement from them.

"It is a critical time with us, we are just at the point when we can present our system of education in such a complete condition as to claim

its acceptance by the city as far as the eighteen city schools are concerned—the counties we must carry for a few years longer, as the feeling in the State is not educated yet to the right point. It must come however in time.

I do hope you can keep your teachers in the field—we have twenty-eight applications for schools which we cannot fill—the houses in many cases are idle. We have seventy-eight schools in active operation, besides four Industrial Schools.

"We have built with the aid of the government, using materials from barracks, hospitals, &c., thirty-five school-houses, for which the coloured people supplied the requisite cash and labour.

"To show how limited our friends are in number, and under what disadvantages we work, I may add that last year and this, one fourth of our home contributions came from one small meeting of Friends. Our home collections last year were about \$4500, this year over \$6000—many of our contributors had suffered pecuniarily by the war."

Some Observations on Christ's Sermon on the Mount.

(Continued from page 138.)

"And when thou prayest, thou shalt not be as the hypocrites are, for they love to pray standing in the synagogues, and in the corners of the streets, that they may be seen of men. Verily I say unto you, they have their reward.

"But thou, when thou prayest, enter into thy closet, and when thou hast shut thy door, pray to thy Father which is in secret; and thy Father which seeth in secret, shall reward thee openly.

"But when ye pray, use not vain repetitions, as the heathen do: for they think they shall be heard for their much speaking.

"Be not ye therefore like unto them: for your Father knoweth what things ye have need of before you ask him."

Prayer is absolutely necessary for the being and well-being of a christian; an outside formal christian may use the form, though unreformed; but it availeth little without reformation. Private prayer, according to Christ's rule, is effectual and rewardable, agreeable to his doctrine. He also speaks against hypocrisy and loving to be seen of men, with a command not to be like unto those who do so. "But thou, when thou prayest, enter into thy closet." When we feel and are sensible of a divine call,—his must of course be the right and best time, for Christ has not set us a distinct hour,—then we are to enter into the closet of an humble heart or mind, or some secret place in private. This is Christ's order for particular persons in a general way; but is not intended to prevent such who are rightly concerned to pray in the public assemblies or gatherings of the church; for we have Christ for our example, who prayed openly and publicly with his disciples.

"But when ye pray, use not vain repetitions, as the heathen do; for they think to be heard for their much speaking." Formal repetitions of prayer, repeated day by day, when they are not according, but contrary to the states of those by whom they are read or repeated, must needs be vain; and people may vainly make use of the Lord's own form in that case, though it is the best in the world, and to think to be heard for much speaking, is to run into the error of the heathen. "Be not ye," says Christ, "therefore like unto them; for your Father knoweth what things ye have need of, before ye ask him." Prayer is a gift from God and from Christ; and as we wait on God in Christ's name and power, he will give us that gift, when he sees we stand

in need of it, or that it will be for our edification. For he has promised to pour out the spirit of prayer and of supplication upon his people. "great apostle said, 'If he prayed, he would pray with the Spirit.'" In another place he says, "We know not what we should pray for, as we ought; but the Spirit itself maketh intercession for us with groanings that cannot be uttered." Likewise, "The Spirit also helpeth our infirmities. Since there is no form like that of Christ's it here set down, that people might take diligence to learn it, and to teach it to their children. But if they learn it rightly, they must also learn to live in it: that is, live according to it; otherwise they will mock, instead of serving Him, who made both it and them for his own honor and glory of his name.

"After this manner therefore pray ye: Our Father who art in heaven, hallowed be thy name.

"Thy kingdom come: thy will be done in earth as it is in heaven.

"Give us this day our daily bread.

"And forgive us our debts, as we forgive our debtors.

"And lead us not into temptation, but deliver us from evil; for thine is the kingdom, and the power, and the glory, forever. Amen.

"For if ye forgive men their trespasses, your heavenly Father will also forgive you.

"But if ye forgive not men their trespasses, neither will your Father forgive your trespasses.

A short form and but few words, but of excellent composition. And truly happy are they who live so in their conversation that they may when they use them, do it without falsehood and deceit; enjoying the answer of peace in the practice of it, and the sense of grace influencing the soul.

First; "Our Father who art in heaven." The great Creator, our universal Father, hath many us and all nations, of one blood; but there is another, and a nearer relation to him than this, be a child of God by regeneration. If we live an unregenerate state, in our sins and lusts, which are of Satan, then Christ says, "Ye are your father the devil; and the lusts of your father ye will do; and in another place he says, "Whoever shall do the will of my Father who is in heaven, the same is my brother, and sister, and mother." It is into this relation that the soul ought to come, who can truly and religiously say "Our Father," &c.

Second; "Hallowed be thy name." Do sanctify the holy name of the God of the whole earth? Do we religiously observe to fear a serve him? Do we profane his awful name, taking it in vain, and living in sin and vanity. This, instead of hallowing and sanctifying his name, is to dishonor and reproach it on our part though He will hallow and honor his own us in justice and judgment, on profane and ungodly lives, at the last day, when he shall come judge the quick and the dead by Jesus Christ. God will not be mocked; such as every one so such shall they reap, whether sin unto death, righteousness unto life.

Third; "Thy kingdom come." His kingdom is a kingdom of righteousness. Happy souls! we seek the righteousness of it betimes and continue it to the end. If this kingdom come, Satan which is a kingdom of sin and unrighteousness must needs fall.

Oh! that the rising generation might be striven to overcome the wicked one, and to be instrumental to pull down his kingdom, and promote the kingdom of God and his Christ. If we do not believe that Satan's power and kingdom may and ought to be destroyed in us, how can we pray with

poorly for the coming of God's holy kingdom? Weaving we must live and die in sin, is a great portal to Satan's kingdom, and a great hinderance of the coming of the kingdom of the dear Lord of God.

Fourth; "Thy will be done in earth as it is in heaven." Most certainly the will of God is actually and perfectly done in heaven; and whosoever who make use of this blessed form but believe it is so; but it is the misery of many souls believe it not possible for them to do God's will here on earth, as it is done in heaven. So such pray in unbelief, or without a true faith; the apostle says, "What is not of faith is not of God." Is it not also charging Christ with pretending that which cannot be done? It is thy our sedate consideration. He hath sown seed, and ought in justice to reap it from all soils. The great sower, Christ, sows in all soils of men or grounds: the grace of God appears in all men, and teaches them to deny ungodliness, worldly lusts, to live soberly, and righteously, godly, in the present world. But antichrist teaches that it cannot be done here on earth as it is in heaven.

Fifth; "Give us this day our daily bread." We are not being capable, without his blessing, of earning bread for our bodies or souls, either natural or supernatural; and because our souls do not live without the last, no more than our bodies without the first, therefore we ought to turn to our heavenly and most holy Father for it, without doubting: and this should be done by prayer, either in words, holy sighing, or spiritual gifts, the Almighty knowing the language of soul in the one, as well as in the other.

Sixth; "Forgive us our debts, as we forgive our debtors." Or, as one of the evangelists hath it, "Our trespasses, as we forgive them who trespass against us;" which is to the same end and purpose. If a debtor is indebted to us, and happens, through some accident or other, to be indebted, and hath not wherewith to pay, we are to forgive him, else how can we expect God to forgive us. For we are all his debtors, and having that debt which we owe to Him, our mighty Saviour, who might lawfully cast us into an eternal jail. But, oh! his infinite mercy and love to poor mortals: He would have us to imitate Him, and forgive one another, as we expect He will forgive us. And since offences and trespasses will come, we must forgive, and the more so, when the person offending sues for it, by humble petition, to the offended. If we forgive neither will our heavenly Father forgive us our trespasses.

Seventh; "And lead us not into temptation, deliver us from evil; for thine is the kingdom, the power, and the glory, forever. Amen." That is, lead us into truth and righteousness, which is the same with leading us out of sin and out of temptation: for we pray to be led out of it, praying not to be led into it; seeing we are to understand that the Almighty will tempt man to evil. "If," says the apostle, "any one is tempted, let him not say that he is tempted of God, for God tempteth no man, but he is tempted when he is drawn away of his own lust." Though He doth sometimes permit and suffer us to be tempted, and when we fall into divers temptations, and escape them, we have cause to be thankful that we are delivered out of them, and give the glory to God, who is the great deliverer of men: whose "is the kingdom, and the power, and the glory, forever. Amen."

Moreover, when ye fast, be not as the hypocrites, of a sad countenance, for they disguise

their faces, that they may appear unto men to fast. Verily I say unto you, they have their reward.

"But thou, when thou fastest, anoint thine head and wash thy face;

"That thou appear not unto men to fast, but unto thy Father which is in secret, and thy Father which seeth in secret shall reward thee openly."

Christ would have all our works of piety, virtue, and charity, all our religious duties done in the divine love and filial fear of God, and not for railing or ostentation. And truly, without we expect our reward from men, there is no need of an outward, hypocritical show, in such duties as that is of fasting, when truly called to it, and truly performed. This the Jews were much in the practice of; but many of them being formal hypocrites in it, our Lord reprehends them, and warns his hearers to shun the like deceit; and tells them, if they fast secretly, their heavenly Father will reward them openly: yet we must not be open sinners, or private ones either: for open or public sin is damning, if not repented of and forsaken, as well as private deceit.

(To be continued.)

*The late War.*—According to the report of the Provost Marshal General, when the war closed the number of men in the military service of the United States was 1,000,516; and there was an enrollment of 2,245,063 men subject to draft. During the progress of the war 284,420 of the Federal troops were killed in battle, or died of wounds and diseases contracted in the service. During the same period the army lost 199,045 men by desertion, and 224,306 were discharged for disability; being generally maimed and crippled. The average mortality among the colored troops is said to have been far greater than that of the whites. The desertions in the regular army were much greater than in the volunteer force. In the former they averaged two hundred and forty-four out of every thousand, among the volunteers only sixty-two, and of these again, a great proportion of the deserters were among the troops furnished by large cities. During the war the United States government paid over three hundred millions of dollars for bounty money, and the States paid two hundred and eighty-five millions more, making five hundred and eighty-five millions of dollars paid to the troops in addition to their regular pay.

#### Sarah Cresson. For "The Friend."

Extracts from her Letters and Diary.

(Continued from page 140.)

"1st mo. 16th, 1791. First-day afternoon meeting, a wonderful session of heavenly regard. Mary Ridgway was led earnestly and with a great deal of love, to invite the youth to enlist under the banner of Christ."

"2d mo. 3d. Mary Ridgway, Jane Watson, and Sarah Harrison, I believe in the appointment of best Wisdom, came to visit our family. O Lord, may I not get from under the impressions then made on my mind, and which, I doubt not, Thou in wonderful condescension intended for my durable good. Lord, be thou pleased to bumble me as in the dust and ashes before thee, lest I again become unmindful, and Thou should determine to visit me no more: for indeed Thou art a long-suffering God, slow to anger, and abundant in kindness, else where should I, ere this day, have been.

"The conclusion of dear Mary's testimony was, 'Be thou faithful unto death, and I will give thee a crown of life.'"

"2d mo. 8th. Our youths' meeting; dear Mary Ridgway much favoured in testimony. Oh how did she encourage the young people to labour for stillness, and to love retirement: having to set forth in a wonderful manner how they would be led: that the Lord would carry the labors in his arms, and lead, so as to ascend the mountain of Zion, there to celebrate His great and adorable name.

"'A Saviour or I die, a Redeemer or I perish.' Oh dearest Jesus! be thou pleased to lead me by thy holy and heavenly power, lest my feet slip, and I fall into the mire and thick clay. Oh that I may stand firm; be able to rejoice in thy testimonies which I love."

"2d mo. 18th. Our dear aunt Armit had departed this life after a painful illness of more than three weeks: left this world in hopes of a glorious mansion in the kingdom of peace. Some of her last words were, 'All joy and peace forevermore.'"

"20th. First-day evening, many of aunt Armit's relatives being at her late dwelling the evening before the corpse was interred, Jane Watson had a solemn opportunity with us, particularly with the youth, desiring they might be faithful, that so they might be established, though they might have to pass through tribulations; wished them to trust in the Lord, and not lean to their own understandings."

"21st. Her remains were carried to Market Street Meeting-house, where was held a large meeting on the occasion. It was a very solemn time; Mary Ridgway appeared in testimony, pressing those present to attend to the most important of all concerns, the working out of our soul's salvation. In order thereto we must steadily attend to the grace of God which has appeared unto all men, so that we may be prepared to meet that God who gave us being, and the spirits of just men made perfect, and join with angels and archangels in praising and celebrating his great and glorious Name. Nicholas Wain appeared in testimony, and William Savery in supplication, after which she was decently interred in Friends' burial ground."

"3d mo. 27th. The time of our Spring meeting. First-day afternoon Mary Ridgway was led to speak to some of a libertine spirit, warning them to repent; though very encouraging to a few exercised ones."

"29th. Peter Yarnall, at the North Meeting, was led in a wonderful manner to speak to the people, more particularly addressing himself to the youth. He closed his testimony with these words, 'Give not sleep to your eyes, nor slumber to your eyelids; till you have found a place for the Lord, &c.'"

"3d mo. 30th. Our dear friend Peter Yarnall, attended Pine Street Meeting, and was much favoured in testimony and supplication: after which he came and dined with us. Oh that I may be favoured to bring forth fruits meet for the great and good Husbandman, who is in so merciful a manner showering down heavenly dew upon my soul!"

"10th mo. 1st. Our Yearly Meeting concluded, impressing my mind with much solemnity, and the prayer is to the Father of infinite mercies, the everlasting Fountain of all good, that He may be pleased to prepare me for that glorious kingdom into which "nothing that is unclean, or unholy, will ever be able to enter."

"10th mo. 14th. Our dear friends George Dillwyn and wife, and Samuel Smith, arrived in the Pigou from London. George having been from his native country seven years and a half, Samuel two and almost five months. Magnified and adored be that gracious Power that preserves

His devoted children in heights and in depths, both by sea and by land, and restores them to their dear relatives and friends."

"11th mo. 18th. Oh that my soul may be once more favoured as with a morning without clouds, that I may be animated with the prospect of a blessed and happy eternity."

"12th mo. 14th. Our blessed Saviour Jesus Christ, said, 'I thank thee, O Father, Lord of heaven and earth, that thou hast hid these things from the wise and prudent, and hast revealed them unto babes.' Oh may I become a babe, capable of receiving Divine consolation."

"16th. Mary Ridgway and Jane Watson returned to the city from the arduous task of visiting New England and some other parts, and performed a family visit to Friends of New York."

"12th mo. 18th. First-day evening Mary Ridgway appeared eminent in testimony, particularly and in a very moving manner addressing the youth, having a prospect of a glorious work begun among even the youth of this city, earnestly desiring that nothing might mar it on the wheel; recommending strict watchfulness and attention to the great Master, the universal Father, and that they might place no dependence on their fellow mortals, and then they would be made valiant in the Lord's cause, and would find Him near in times of engagement in the holy warfare."

"12th mo. 30th, 1791. Our Monthly Meeting this day. We were favoured with the company of our dear friends from Europe, who were favoured to impart weighty counsel. O that the labours of the Lord's servants may not be lost.

"Our dear friend Sarah Harrison, in a weighty and solemn manner, laid before Friends a concern she had had on her mind for some years, to pay a religious visit to Friends in Europe, in which weighty exercise, it appeared, she had the concurrence and deep sympathy of both men and women Friends.

"Oh that I may dwell under a sense of the preserving power of Truth, and not by inattention lose sight of that which leadeth and guideth into all truth."

*Awakening a Sleeper by Telegraph.*—The *Leeds Mercury* publishes the following singular story as an instance of the many singular applications of telegraphy. A gentleman, whom we will call M., resident in London, is employed there to "manage the wire" for a Glasgow Journal, that is to say, he arranges the news to be sent down each evening by the wire which that newspaper employs by special arrangement with one of the companies. The principal office of that company is at the top of several flights of stairs in one of those immense buildings, erected to furnish office accommodation, which abound in some quarters of the city. After a certain hour in the evening, the telegraph clerk who sends off the "copy" by wire, is the sole occupant of this mansion, with the exception of the porter who attends the door, which after the hour referred to, is generally shut. This functionary, who is not often found nodding, got into this abnormal Homeric state, a night or two ago, and so profound was his slumber that not all the fantasies which M. performed on the door—loud enough to have awakened the Seven Sleepers, and even louder than the works of some of our modern composers—could arouse him. It was, of course, out of the question to attract the attention of the clerk, at the roof of the establishment. M. fortunately, however, hit upon the following expedient for letting the porter know that he was waiting for admission. He went to an adjoining telegraph station and sent a message

to the company's office in Glasgow, requesting the clerk there to telegraph to the clerk in the London house, and instruct him to go down stairs to rouse the porter. This was done with perfect success in about twenty minutes. In that time, therefore, persons at a distance of over 400 miles succeeded in awakening one who was only separated from the employer by a door, and who, even at that short distance, was deaf to all persuasion. —*Late Paper.*

For "The Friend."

#### Thoughts for the Times.—No. 55.

The question asked at the beginning of these essays, whether the change of times had in any wise impaired the force of the testimonies borne by our predecessors, so as to call for change in our belief and practice, has been sufficiently answered during their progress. On no other than on the original foundation, has any person become and continued a useful member, or been raised up to be a father, or judge, or apostle in the church, living until death in the unity of the brethren. In every case, their path has been the straight and narrow way; their beginning has been in the day of small things; they have taken up the cross daily; the food which has sustained their spiritual life, has been the daily bread from heaven. One and all have felt the necessity of constant watchfulness unto prayer; have been kept in the fear of the Lord from an eager pursuit of the things of time; have humbly acknowledged that it was through the mercy of God in Christ Jesus, and through faith in him, that they were enabled to be what they were, to think any good thought or to perform any good deed. And these are the characteristics, not of a sect, but of the true disciples in every age of the church.

Yet when they seemed, to the professors around them, to forsake the broad platform of acknowledged christian doctrine, and to waste their strength in protesting against some trivial point of language or manners, held by others to be of no account, the earnestness and tenacity with which they held to their purpose, rendered them an object of scorn and contempt. When we scrutinize the practices against which George Fox set his foot and lifted up his voice, at the testimonies, which so separated our early Friends from other christian professors, we must confess them to have been guided by true wisdom. Trivial as some of these testimonies seemed to the world, was it nothing to a tender awakened conscience, that the proceedings of a christian assembly should be recorded as having taken place in a month named after one pagan idol, on a day dedicated to another false god? Was it of no account—this attempt to restore a pure language to christendom—to cleanse her robes from its stains of heathen idolatry and servile deference? Was it nothing in that age that they refused to give false or flattering titles to their fellow men? There are minds which do not take in the significance of such a refusal; but few can read of the insults and cruelties heaped upon our Friends by Judges and magistrates for this cause, and the unequalled courage with which they were met and sometimes overcome, without feeling that these despised Quakers were vindicating the dignity of manhood and the common rights of all; and that their firmness formed, as has been said of the celebrated trial of Penn and Mead, a great landmark in the progress of the popular and constitutional liberties of Englishmen.

The serious self-denying character of these apostolic men, was seen in their behaviour, their speech and their garb; and in this last—adopting the fashion of clothes in use among the plain and

serious people of the day, they adhered to it, no slavishly but as seeing no sufficient reason to change it. The consequence was that a near uniform dress prevailed in the Society, and was only altered with the slow changes that convenience and the change in manufactures and in the vocations rendered suitable. And as all our members who have been brought under the convicting power of the Holy Spirit, have been led into simplicity and gravity in dress and manner, the garb of their serious Friends was adopted by them, and continued to be, not through any substitution, nor by settled design, but spontaneously and with such gradual changes as have been added to the garb of the Society down to our own time. And we, who now wear it, find it to be a hedge around us, which preserves many from foolish and inconsistent conduct. "With regard to my present dress and outward appearance," said John Barclay, "it is evident there is much to alter. That dress from which my forefathers have, without good reason and from improper motives departed, to that dress I must return that simple appearance now become singular, which occasioned and still continues to occasion the professor suffering and contempt, the same must also take up, and submit to the consequences thereof. Some may object to this as if it were improperly taking thought; but I differ from them not in the rule itself about the anxiety I stowed on clothing, but about the application that rule. It is right, if the vain customs, fashions and fashion of this world have industed the selves into any branch of our daily conduct, eradicate them, with every one of their useful innovations, whatever trouble, anxiety or persecution it may cost us. But after we have broken our bonds, we shall find a freedom from anxiety, trouble, or thought about our apparel surpassing the unconcern or forgetfulness which seems to deaden the spiritual eye and apprehension of the slave of custom." It is sufficient here to add, that where the baptising power of the Spirit of Christ is fully submitted to, our doctrines and testimonies fall at once in rank—not one missing—and the disposition cavil at our plain speech and our plain apparel no longer felt.

It was promised that the Comforter—the Spirit of Truth, should lead us into all truth, and it is clear that no false doctrine can proceed from it. It will never lead us astray from the revelation contained in Holy Writ—from humble faith in the atoning sacrifice, the divine attributes, the redeeming mercy of the Son of God. The Spirit permeates the whole belief of the true disciple, and whether expressed at every turn or controls and animates his conduct. And through temperance, training, or other cause, he may be led to dwell more on one part of the plan of redemption than on another—he who is reconciled to God and a holy life are object and end in view, must, in dwelling chiefly on the practical part of the Gospel message, guard obedience to the Divine speaking Word the great duty of man—that by and through which he is enabled to attain so great a salvation. There are those, who, beginning in the right and walking for a season in the path of the companions of Christ, have in moments of unweariness, indulged a disposition to explore beyond the legitimate province of the human mind, and have even called in question such portions of the Divine revelation, as do not square with their own notions of the fitness of the Such persons, who have, in times past, enjoyed the consolations of the Spirit, may have so their spiritual discernment, as not to know

reverts from the teachings of the Divine Guide. There is a pleasure in thus soaring into the regions of the unknown and the unknowable, that renders the brain giddy and fills the mind with self-confidence, unlike (how unlike!) the humility and self-distrust of the devout seeker of Truth. They differ from the son in the stable, inasmuch as *he knew* that he was feeding husks, which would not sustain his life; but, with him, there is no recovery for them, but returning to their father's house with the penitent acknowledgment, "I have sinned against heaven and in thy sight!" The prayer for divine aid, the return to the place of true waiting, the light which they will here see to be shed upon their condition, and the strength which will be purchased of the sincere seeker, to change his life—these are the helps to be resorted to by such restoring them to the state which they once knew, and in which a truer and holier peace was enjoyed than all their wanderings have yielded.

It is not so much the particular theories of religion which these may adopt, as their forsaking the path of obedience to manifold duty, that is their greatest error; for this is the evil root from which the others grow. This same error of forsaking the straight and narrow way and expatiating on the barren wastes of theoretical reasoning, may be either a left hand or a right hand deviation from the path; and the former naturally begets the latter. Thoughtful, religious men, detecting the false theories which prevailed, have endeavoured to confute them, often in the very spirit of the error itself—by framing their own theories which, though more conformable to the truths revealed in scripture, are still not that knowledge which is the growth of experience, but excursions of the reasoning powers, whose conclusions, though they may nearly approach the truth, are not the fruit of the Spirit; but being aimed to confute certain errors—err through the imperfection of our faculties and the infirmity of our nature—on the opposite side.

The grave had not closed over the last of the postles, before the speculations of the pagan philosophy, began to infect the doctrines of the Church, showing how imperfect had been the conversion of many whose learning and abilities raised them reputation and authority among the believers. It was attempted to confute these errors by arming christianity with the weapons of its same philosophy, and by appealing to its axioms, to reconcile with human reason, the awful mysteries of our faith. It was thus that the christian divinity became loaded with the scholastic jargon, in the vain endeavour to comprehend with our puny faculties the infinite and the eternal God, and the awful mysteries of redemption. The theology of the schools is still encumbered with this false philosophy which attempts to explain what Divine revelation has sealed as a mystery, to be known only to the pure, the humble, and the obedient.

We have felt in our own Society, in our own day, this unhappy reaction. The Socinian theories, which were the primary cause of the separation of 1827, found eager and ardent opposers. Many of these, seeing that the seceders held the doctrine of the influence and inspiration of the Holy Spirit, while they denied the divinity and the atoning sacrifice of Christ, seemed to look upon the belief in being led and guided by the Spirit, as something dangerous, as containing a striking error; forgetting that the error of the seceders consisted in not referring this influence of the Spirit to its Divine Giver, the Lord Jesus Christ, who promised—his last and best gift to man—that he would send the Comforter, even

the Spirit of Truth, which should lead and guide into all Truth. A consequence of this reaction has been the almost exclusive dwelling upon the necessity of belief and faith in the outward coming and sacrifice of Christ and his glorious offices, as if that alone were sufficient—as if the obedience of true discipleship to the Divine inspiring Word, did not imply that faith, and lead through the aid of the Spirit of Christ, to a knowledge of the essential truths of salvation.

This unhappy reaction has, in certain places, prompted a resort to plans and contrivances for reviving a decaying faith, which being devised in the will of man, want the sanction of the Holy Spirit, and must therefore fail of their object.

For these, as for the opposite errors, there is but one remedy—a return to the place of true waiting, and prayer for Divine aid, to restore the paths to dwell in. Were all to do this—then would our Society, reunited and pressing onward, come up from the wilderness as the church was beheld in the visions of old—leaning on her beloved, "fair as the moon, clear as the sun, and terrible as an army with banners."

*Evils of Gossip.*—I have known a country society which withered away all to nothing under the dry rot of gossip only. Friendship once as firm as granite, dissolved to jelly, and then ran away to water, only because of this; love that promised a future as enduring as heaven, and as stable as truth, evaporated into a morning mist that turned to a day's long tears, only because of this; a father and son were set foot to foot with the fiery breath of anger, that would never cool again between them, only because of this; and a husband and his young wife, each straining at the golden leash, which in the beginning had been the golden bondage of a God-blessed love, sat mournfully by the side of the grave where all their love and joy lay buried, and only because of this. I have seen faith transformed to mean doubt, hope give place to grim despair, and charity take on itself the features of black malevolence, all because of the spell-words of scandal and the magic mutterings of gossip.

Great crimes work great wrongs, and the deeper tragedies of human life spring from its larger passions; but woful and most melancholy are the uncatagued tragedies that issue from gossip and detraction; most mournful the shipwreck often made of noble natures and lovely lives by the bitter winds and dead salt-waters of slander. So easy to say, yet so hard to disprove—throwing on the innocent, and punishing them as guilty or unable to pluck out the stings they never see, and silence the words they never hear. Gossip and slander are the deadliest and the cruellest weapons man has for his brother's hurt.—*All the Year Round.*

*A Sensible View.*—A better reply could hardly be made to the wild theories of the London Anthropological Society than the following from a simple-minded Englishman. The leaders of this Society reject scornfully the Bible doctrine of the creation of man, and hold that he was developed from a lower order of beings by natural law.—"An English paper relates that a Yorkshireman who had attended a meeting of the London Anthropological Society, was asked by a friend what the learned gentleman had been saying. 'Well, I don't exactly know,' he replied; 'there are many things I could not understand; but there was one thing I thought I made out—they believe that we have come from monkeys, and I thought as how they were fast getting back again to where they came from.'—*Late Paper.*

For "The Friend."

"Judge not according to the appearance, but judge righteous judgment." John vii. 24.

"But with me it is a very small thing that I should be judged of you, or of man's judgment; yea, I judge not mine ownself."

"For I know nothing by myself; yet am I not hereby justified: but he that judgeth me is the Lord." 1 Cor. iv. 3, 4.

The following extract from a late writer, containing some valuable hints presented in rather a new form, and appearing also to be a sort of commentary on the above passages of Scripture, is offered for insertion in "The Friend," with the hope that it may prove a reasonable caution, and tend to repress a habit of judging which is too prevalent.

"In entering the narrow channel of the Bermudas, the pilot stands not at the helm, but at the bows, looking down into the deep water, clear as crystal, to see the coral reef above which, or rather through which, he is threading his dangerous way. Sometimes there is scarcely twice the ship's own breadth between point and point; yet between those he must go, cannot pause, and yet feel divergence on either side would be shipwreck. He may do his work very awkwardly, and even be conscious of great mistakes; but with the most perfect humility he may utterly disclaim the power of any one standing on the shore to judge his seamanship, who is looking along a smooth level surface, instead of looking down upon a bed of rocks that lie beneath the surface. No wonder that his tacks, and turns, and zigzag eccentricities of course, are perfectly unintelligible. 'I would have steered direct to that point.' 'Yes, my good friend, but did you see the rock? and if not, what can you know about the matter? Come up here, and then give me an opinion if you can.' Now, the pilot who is up there, is not a wiser man than the other, but he has got a different point of view, and from that point he defies all human judgment, until you go and sit beside him."

*Victoria Regia.*—The Victoria Regia has ever been a most fascinating plant, to all floral lovers. Found upon some a little lake in the South American forests, brought from its quiet, solitary retreats, to receive not only the name, but the rank and honors of a queen, it has become a flower of marvellous interest. The following graphic description of it, as seen in its native waters, is taken from "Brazil and the Brazilians," a volume of historical and descriptive sketches, by J. C. Fletcher and Rev. D. P. Kidder.

Near their margin is found the giant of Flora's kingdom, whose discovery a few years since is as notable a fact to the naturalist world as the regular opening of steam-navigation upon the Amazon is to the commercial world.

Of all the Nymphæaceæ, the largest, the richest, and the most beautiful, is the marvellous plant which has been dedicated to the queen of England, and which bears the name of Victoria Regia. It inhabits the tranquil waters of the shallow lakes formed by the widening of the Amazon and its affluents. Its leaves measure from fifteen to eighteen feet in circumference. Their upper part is of a dark, glossy green; the under portion is of a crimson red, furnished with large, salient veins, which are cellular and full of air, and have the stem covered with elastic prickles. The flowers lift themselves about six inches above the water, and when full blown have a circumference of from three to four feet. The petals unfold toward evening; their colour, at first of purest white, passes, in twenty-four hours, through successive hues, from a tender rose-tinge to a bright red. During the first day of their bloom

they exhale a delightful fragrance, and at the end of the third day the flower fades away and replunges beneath the waters, there to ripen its seeds. When matured, these fruit-seeds, rich in fecula, are gathered by the natives, who roast them, and relish them thus prepared.

The description of this magnificent plant explains the admiration experienced by naturalists when beholding it for the first time. The celebrated Haenke was travelling in a *pirouge* on the Rio Manore, in company with Father Lescueva, a Spanish missionary, when he discovered in the still waters close to the shore, this gigantic Nymphaea. At the sight the botanist fell upon his knees, and—as a not very pious French writer very Frenchly records—expressed his religious and scientific enthusiasm by impassioned exclamations and outbursts of adoration to the Creator,—“an improvised *Te Deum* which must have deeply impressed the old missionary.”

In 1845, an English traveller, M. Bridges, as he was following the wooded banks of the Yaouma, one of the tributaries of the Manore, came to a lake hidden in the forest, and found upon it a colony of *Victoria Regias*. Carried away by his admiration, he was about to plunge into the water for the purpose of gathering some of the flowers, when the Indians who accompanied him pointed to the savage alligators lazily reposing upon the surface. This information made him cautious; but, without abating his ardor, he ran to the city of Santa Anna, and soon obtained a canoe, which was launched upon the lake which contained the objects of his ambition. The leaves were so enormous that he could place but two of them on the canoe, and he was obliged to make several trips to complete his harvest.

M. Bridges soon arrived in England with the seeds, which he had sown in moist clay. Two of these germinated in the *aquarium* of the hot-houses at Kew. One was sent to the large hot-houses of Chatsworth; a basin was prepared to receive it, the temperature was raised, and the plant was placed in its new resting-place on the 10th of August, 1849. Toward the end of September it was necessary to enlarge the basin and to double its size, in order to give space to the leaves, which developed with great rapidity. So large did they become that one of them supported the weight of a little girl in an upright position.

The first bud opened in the beginning of November. The flower in bloom was offered by M. Paxton, (the celebrated designer of the London Crystal Palace,) to his monarch, and the great passages of England hastened to Windsor Castle to admire the beautiful homonym of their gracious sovereign.

The name given to this marvellous plant by Lindley was happily chosen, but the natives of the Amazon call it “Uape Jacana,”—the Jacana’s oven,—from the fact that the Jacana is often seen upon it. The Jacana is a singular spurd-winged bird, twice the size of a woodcock, provided with exceedingly long and slender toes (from which the French term it the surgeon-bird, which enables it to glide over various water-plants. It inhabits the marshes and woods near the water, and many a time in the interior I have seen it stealing over the lily-leaves on the margin of rivers.—*Late Paper.*

In this city [Bristol,] I remained several weeks, and duly attended meetings; there being three on First-day, and three on other days of the week; and I think I only appeared twice in testimony, and three or four times in supplication; yet having done all that was *required*, my soul had peace. But the deep travail I passed through no tongue

can express. Oh! the deep baptisms and many bitter cups that are handed to the living children—and doubtless they are good for them.

If we do not suffer with Christ, we shall never rejoice with him. And as He, who, indeed, was and is, the Son of God, was made a gazing-stock and called by some Beelzebub, why should any of His servants be unwilling to bear reproach or to sit like fools, in silence; Oh, how I do beg to be preserved from ever moving in my own will; I had rather bear the name of a dumb prophet. I am sensible that those stripping seasons have been very teaching to me; and when we look like fools to those who are foolish indeed, we learn true wisdom; for in *true silence* we have the best teaching, even the Lord himself is our instructor. Oh, that we, as a people, beloved of God, were but truly obedient to His law, then we should be far from being weary of true silence, but, should rejoice to be favoured with it; for, when our minds are thus gathered to God, in *pure stillness* and nothingness of self, the tempter hath no place; *he hates quietude*, and I am glad that I have been helped to starve that restless spirit, and been made an example of silence. I was engaged to sit silent in eleven or twelve meetings, one after another, in and near Bristol, and can look back with satisfaction.—*Ruth Falloos.*

*Statistics of Wrecks.*—The statistical committee of Lloyd’s in London, have just published an analysis of shipping casualties reported in Lloyd’s list for the six months ending June 30th last. The committee believe that this statement, embracing as it does the casualties reported from all parts of the world, is the most comprehensive ever published, and they trust it may prove interesting as an effort to obtain and tabulate information which will, they cannot but think, be ultimately found of great utility. The return gives the number lost both of ships and steamers in each month. The general result is a total of 5,455 vessels which have been wrecked or injured, 4,959 being ships and 503 steamers. The total number of casualties is in excess of the number of vessels, being 6,138. As to the nature of the accidents, we learn that 67 vessels are missing; 186 have been abandoned, (40 being afterwards recovered); 974 in collision, and of which 92 were sunk; 259 sank from causes other than collision; 1676 stranded, of which 893 got off, 512 not got off, and the subsequent fate of 271 not reported; 31 were captured; 10 taken by pirates; 85 destroyed by fire; 120 dismantled or disabled; 86 where there was jettison of cargo under deck; 101 jettison of deckload or washing overboard; 591 leaky; 468 loss of anchors or chains; 106 machinery damaged or short of coals; 193 mutiny and casualty to crew; 1163 ships damaged, and 22 waterlogged. The total losses were 10377; constructive losses 148; great damage 644; minor damage 2459; raised after sinking 28; not damaged or results unknown 1139. The results to the cargo were: All lost 894; part lost 845; all saved 41; forwarded 45; heated 15; shifted 79; otherwise damaged 132. The cases of salvage service were 759. The total lives lost, as reported, were 1400, but the committee remark that the returns on this head are most imperfect, and the actual number would be greatly in excess of the number given.—*Late Paper.*

On Third-day I attended their meeting in Bristol, but sat in silence, and was very heavy hearted under a sense of a forward spirit, which would prompt to answer the expectations of the people, and is apt to prevail on some who seem to be called to the work of the ministry; but Truth

only blesseth its own motion.—*Extract from John Churchman’s Journal.*

We commend the following to the attention and action of our readers. The object aimed at is to supply a pressing need, which has been long felt; and never before, we believe, so likely to be satisfactorily accomplished, as by carrying out the plan here proposed.—*Ed.*

“THE TEXT BOOK ASSOCIATION OF PHILADELPHIA wish to procure a History of the UNITED STATES, which shall be a record not merely of political progress, but also of its industrial, intellectual, and moral development.

The foundation and progress of the several Colonies, their original bond of union as descendants of the same ancestors, speaking the same language, governed in essential things by the same laws, and subjects of the same crown—the early attempts at united action—the revolution—the adoption of the constitution—the subsequent political history—the progress of agriculture and the mechanic arts—of invention and discovery—of literary and benevolent institutions—the history of slavery—should all be given in rapid outline, some of them, perhaps, in distinct threads of narrative.

Designed for the use of children of from ten to fifteen years of age, the history should be written in plain, simple, and concise language. It should in all things recognize the overruling power of Providence, the benignant character of Christianity, and the essentially pacific nature of our own institutions, designed to secure a more perfect Union.

The false maxim ‘our country right or wrong’ must in no case be upheld, but the wrongs done by her, especially to the Indian and African races, must be fearlessly but calmly condemned.

The true method of rendering such a work conducive to the spread of sound principles and correct feelings, is shadowed forth in the remarks of Dr. Arnold on the publications of the Society for the Diffusion of Useful Knowledge. ‘The slightest touches of Christian principle and Christian hope in the Society’s biographical and historical articles, would be a sort of living salt to the whole, and would exhibit that union, which I never will consent to think unattainable between goodness and wisdom; between everything that is manly, sensible and free, and everything that is pure and self-denying, and humble and heavenly.’

A History written in this spirit, will, it is believed, tend greatly to strengthen in the minds of the American youth, just and liberal sentiments a hatred of war and factions tyranny, sympathy with suffering humanity, and a sincere and enlightened love for our common country.

The size of the work should be such as to render it suitable for use as a text book in schools.

The sum of \$1000 will be given to the writer of the book selected by the Association. To facilitate such selection, it is suggested that applicants furnish a specimen chapter; addressed to—

JOS. WALTON, Secy.,  
No. 413 Walnut St.”

*Some Observations to the Leaders of this People who may be termed Overseers of the Flock.*—The work we have to do is a great work, and call for our closest attention, with our whole heart and soul, and all our strength. The whole of our time, which can be spared from our vocations and the necessities of life, will be found little enough to do it in. Those who are sober and vigilant, and truly watch unto prayer, and labour night and day to have their accounts ready, an

be seasoned with the salt of the kingdom, have you to do. Now, if such watchful, diligent care be scarcely saved, where will the lukewarm, indifferent, careless ones, appear?

Our time which is thus spent, and wasted away on things of no consequence, should be improved in retirement and examination, and waiting for wisdom to know, and ability to do the will of our God, who justly expects we should look to him, and diligently attend to his instructions, and depend upon him alone for all we stand in need of. It appears to me, that if we who were known the Truth, and are leaders of the people, are not roused up out of this easy, stupid, and to condition, and loosened from the world, and brought to be more diligent in our attention to the things which concern our eternal peace, shall dwindle away, wither and die, so as to set aside; and others who will be more faithful in the discharge of their trust, will be set in places, and take our crown from us.—*David rris.*

**The Ministerial Gift.**—When a good gift is accompanied with prudent conduct in the receiver, the instrument is likely to be of lasting service. It is the gift ever so excellent, if that wisdom which dwells with prudence does not attend, though the gift may be continued for a while in agreement for the edification of others, yet its effectual use is much curtailed, and there is great danger of the instrument being entirely laid aside. We have heard it said,

"When words and deeds, doctrine and life agree, we then preach well; and not till then preach we."

Remember how Samuel Fothergill in his last meeting of ministers, called out for 'Practice, practice, practice!'—*Richard Shackleton.*

## THE FRIEND.

FIRST MONTH 5, 1867.

It is at all times an unwelcome task to call the attention of our readers to acts or decisions that inhibit, as we apprehend, departures from the principles or testimonies which have distinguished Friends, or to violations of the principles of church government accepted by the Society at large. In the present day of change and latitudinarian views, it is a duty we owe to them to note one of the innovations taking place, in order that they may be aware how and whither the Society is drifting.

It has long been known that in several of the so-called "Mission Schools" recently established in the several Western Yearly Meetings, and so much lauded as a means for "teaching the gospel" members of our religious Society are united with professors of other religious denominations generally Methodists—in teaching, and in conducting the religious exercises. The natural tendency of this, especially when operating on the young and inexperienced, is to compromise or less some of the important testimonies which Friends are bound to maintain; a result, not at a few scattered among them there, think mournfully apparent in those thus engaged.

We highly esteem all those in other religious societies who are rightly engaged to promote the extension of Christ's Kingdom on earth; and we earnestly desire their encouragement therein, fully believing that as they keep under the direction of his Spirit they will receive a blessed reward. But under the openings of this Spirit and in accordance with the teachings of the Holy Scriptures, Friends have been introduced into

what they believe to be clearer and more spiritual views of the gospel dispensation than others, and growing out of the doctrines they hold are certain christian testimonies which strike at some of the opinions, practices and ceremonies common among other professors.

While this, far from obstructing the flow of christian charity towards our brethren who do not see these things in the same light that we do, should have the effect of humbling us and making us more watchful unto prayer, it must nevertheless, if Friends are faithful to their professed belief, prevent any union with other professors, involving even an implied or tacit approval of those things in their principles or practices which are opposed to, or inconsistent with the christian testimonies Friends are called on to maintain before the world.

It has been the experience of the past, and we believe it will continue to be the effect now and hereafter, that whenever our members have allowed themselves to be drawn into an amalgamation with others, for the professed purpose of carrying on any work or association, the conducting of which would at times trench on some one or more of those testimonies as held by the Society, the temptation to ignore or disregard those testimonies under circumstances that would expose their maintenance to public observation, has been too powerful for many; they have been balked, and weakness and defection have been increased thereby. This might be exemplified by circumstances in the Society which have become matters of history.

We apprehend it would not be difficult to trace out this as one of the causes that led Indiana Yearly Meeting to open an epistolary correspondence with a Methodist Conference, as set forth in its printed Minutes. Having thus set the example as a superior meeting, we may look for further fruits of this kind of "fraternizing" in its subordinate branches and members, until we fear there will be little more than nominal differences between the two Societies, though the doctrines and testimonies of Friends may be no more widely spread thereby.

In the printed minutes of "The Executive Committee of Indiana Yearly Meeting for the Relief of Freedmen, held 9th mo. 18th, 1866," the report from which committee was "accepted" by the Yearly Meeting, and the Friends "encouraged to persevere in their labours," there is a letter addressed by said committee to two Friends, who, in the report are said to be Superintendents of the Asylum for Coloured Children at Helena, Ark., "built by the 56th coloured regiment, and together with thirty acres of land presented by them to Indiana Yearly Meeting." From this letter we take the following extracts, retaining the italicising as we find it.

"At the last meeting of the committee the subject of your meetings was brought before it. They felt a deep interest, and entered fully into sympathy with you. The sentiment was again expressed that it is your *indispensable duty* to read the scriptures to the freedmen and others, *teach and otherwise inculcate* those invaluable truths contained therein; for this object and for worship you have meetings; and that those who believe in the Lord Jesus Christ and will confess him before men, should be invited to come into fellowship with the church, and that the *necessary fostering or nursing care* be extended to all such, both old and young." \* \* \*

In reference "to any further mode of organization and connection with us in the North," the two Friends are recommended to consult a copy of the minutes of London Yearly Meeting sent to

them, in which will be found "a report of the committee appointed to correspond with Friends abroad." They then go on to say, "We are a committee of Indiana Yearly Meeting to relieve and christianize the freedmen, and we propose that such meetings as are set up in the South by our labours, should correspond as such with us; that those meetings can be *officially recognized* through us as well as they could be by some Monthly Meetings, and it is probably more within our province than within that of a Monthly Meeting. We do not, and you must not expect too much from new-born babes in Christ, whether amongst children or adults." \* \* \* "The committee thought that you had the fullest authority to organize a church, if it be composed of only those believing children, and they earnestly desire your encouragement, and are ready to extend the right hand of fellowship to all who love the Lord Jesus Christ. I would suggest that you at once go to work, and we will forward you a suitable book wherein you can record the names of all those who desire, and who in your judgment are in a proper state of mind to become members, both adults and children. Then appoint a Clerk, and record in the book the time when the meeting was set up, how organized, and its name. Have your regular meetings for conducting the affairs of the church, for receiving or dismissing members; but above all have a very *tender conscience* to cultivate, to foster, and feed the flock of God, and avoid discarding as long as possible, enduring with long-suffering and patience—let us hear from your meeting, through your Clerk, of the progress of the Truth, once a month or two months. I would suggest that you answer the Queries prepared by this committee, and add such statements as are adapted to your circumstances."

Reference is then made to the manner in which Paul formed churches among the Gentiles, as being instructive and encouraging to them, &c.; adding, \* \* \* "Do not delay any longer, nor allow discouragement to impede your progress in fully accomplishing the work of Evangelization or Missionary labour, in the highest sense of the term."

After reading this letter attentively, we think our readers will agree with us that this Conclusion to be fairly drawn from it is, that this Standing Committee of Indiana Yearly Meeting, appointed "to relieve and christianize the freedmen," exercises the right—either granted or assumed—to clothe its agents with authority to set up meetings, which it, in the place of Monthly Meetings, will *officially recognize*. Of course we must suppose the members of such meetings are to be considered as Friends; for so far as we know, no meetings have heretofore been officially recognized by a Yearly Meeting or its standing committees, as existing by its authority, corresponding with it, and replying to Queries put by it, unless it was composed of those who were considered to be Friends; and the report of the committee in England, appointed to correspond with Friends abroad, is referred to as an example. The whole course marked out exhibits an extraordinary way of setting up meetings and increasing numbers. If the committee have many under its direction, who, like the Friends addressed, have "the fullest authority to organize a church," and who will go to work at once, it can hardly be very long before the numbers will be too great for one Yearly Meeting to manage.

Should it be inferred that the "churches" thus summarily organized by these labourers are not to be considered meetings of Friends, the anomaly appears in no wise diminished. It is to have "churches" made up of those not in membership with Friends, and probably recognizing few, if

Some Observations on Christ's Sermon on the Mount.

(Continued from page 147.)

"Lay not up for yourselves treasure upon earth, where moth and rust doth corrupt, and where eyes break through and steal:

"But lay up for yourselves treasure in heaven, where neither moth nor rust doth corrupt, and where thieves do not break through nor steal:

"For where your treasure is, there will your heart be also."

Earthly treasures are very apt to take up the mind and draw it from heaven; and because Christ would have his children to be in heaven with him, in tender love he adviseth them not to lay up for themselves riches or treasure on earth. It be said we lay it up for our children, it may be said also, it is the same sure for them as to parents, and sometimes a greater; and when it is gotten, it is liable to many casualties, and creates a great deal of care and trouble. Where Christ tenderly adviseth to seek after, and lay up treasure of another nature, in a safer and better place, which will not be liable to the like casualties, and urgeth us to it, with this great reason: "For where your treasure is, there will your hearts be also." Oh! may every true Christian's treasure and heart be there forever.

"The light of the body is the eye: if therefore thine eye be single, thy whole body shall be full of light.

"But if thine eye be evil, thy whole body shall be full of darkness: if therefore the light which is in thee be darkness, how great is that darkness."

It is not good to look on men or things with an evil eye; but singly to look on one's self and others, in the fear of God, having a single eye to his glory; and then being enlightened by his true light, we shall discern between good and evil. Whereas if there be any double-dealings, looking, or thinking, or if ungodly self be in the bottom, and not the glory of God, then our heart will be darkness, and that darkness will be very great; as it is said in the holy Scriptures, a double-minded man is unstable in all his ways: that our Saviour's doctrine is good; to have a single eye, and to avoid all double-dealing.

"No man can serve two masters; for he will either hate the one and love the other; or else will hold to the one, and despise the other; ye cannot serve God and mammon."

We cannot give our hearts to God and to this world, and the things of it also, so as to set our

affections on both, for the apostle saith, "If any man love the world, the love of the Father is not in him." And again, "The love of money is the root of all evil;" *i. e.*, the inordinate love of it, and seeking after it, more than for our Maker and Saviour. Then let us despise the world and the things of it, in comparison of our God and our Saviour. We do not understand by those words of Christ, that he intended to debar us from seeking a comfortable accommodation for ourselves and families in this world; but that we should not set our hearts and affections upon it; for we cannot equally affect both heaven and earth.

"Therefore I say unto you, Take no thought for your life, what ye shall eat, or what ye shall drink; nor yet for your body, what ye shall put on: is not the life more than meat, and the body than raiment?"

"Behold the fowls of the air: for they sow not, neither do they reap, nor gather into barns; yet your heavenly Father feedeth them. Are ye not much better than they?"

Christ would have us without anxious thoughts about our living in this world, *i. e.*, about our eating, drinking, and clothing, and tells us, "That the life is more than meat, and the body more than raiment;" by which he shows us, that He who gave the life, will, by his providence, support it: and as he hath formed the body, he will form that which must feed it; and that we might the more depend upon God's providence, he teaches us by the fowls of the air, which neither sow nor reap, nor gather into barns, and yet their great Creator feedeth them; and asks, "If we are not much better than they?" So that we being more noble creatures, need not doubt of the care and providence of God, and his blessing on the labour of our hands; though our hearts are not concerned unnecessarily about it, but we have freely given them to God, and his Christ, our Saviour.

"Which of you, by taking thought, can add one cubit to his stature?"

The farmers or planters cannot by their thoughtfulness, cause their corn, fruits, or cattle to multiply or grow; nor the tradesman his custom, goods, or business, without a proper application, which our Saviour is not against, only he would have us without an encumbered and over-caring mind. The merchant likewise, by all his thoughtfulness, cannot bring home his ship from afar, nor carry her safe to her desired port. All things on this wise are in the hands of Almighty God, and it is our duty to trust in him, and to depend upon his divine providence for meat, drink, and clothing, for happiness here, and hereafter, forever.

"And why take ye thought for raiment? Consider the lilies of the field how they grow; they toil not, neither do they spin:

"And yet I say unto you, that even Solomon, in all his glory, was not arrayed like one of these.

"Wherefore, if God so clothe the grass of the field, which to-day is, and to-morrow is cast into the oven, shall he not much more clothe you, oh! ye of little faith?"

"Therefore take no thought, saying, what shall

we eat, or what shall we drink, or wherewithal shall we be clothed?"

"For after all these things do the gentiles seek; for your heavenly Father knoweth that ye have need of all these things."

Many people now, as well as then, are very fond of their clothing, and love to be gay and fashionable therein; and some are not a little proud of their clothes, and are thoughtful how they may deck themselves to be admired. Our Lord, who was meek and lowly of heart, sends us to the lily to consider her beauty and glory and innocent thoughtlessness, declaring that Solomon, in all his grandeur and splendor, was not arrayed like one of these: for this is a natural sweetness, and gayety the lily is clad with; but Solomon's, as also most men's and women's, is generally but artificial. If God so clothe the grass of the earth, will he not clothe us; if we believe not, we must have but very little true faith. So that it would be much better for us to consult how we shall please God and honour him, and his holy Son and divine name, than to consult what we shall eat or drink, or how, or wherewith we shall be clothed, which things the gentiles sought after, more than after God. But we, knowing that our heavenly Father seeth that we have need of all these things, should chiefly leave it to him, and first seek his kingdom and righteousness.

"But seek ye first the kingdom of God and his righteousness, and all these things shall be added unto you.

"Take therefore no thought for the morrow: for the morrow shall take thought for the things of itself. Sufficient unto the day is the evil thereof."

Here is a glorious gospel promise; upon seeking first the kingdom of God and his righteousness, all these things shall be added to us, *viz.*, meat, drink, and raiment, the necessary things that we want to support us while we are in this world. But let us remember, it must be our first work, it must be the chief desire of our souls. It must be first in several senses: first as to our young and tender years; first, in the morning of every day; first, in respect of all other things. First, as it hath pleased God to give us a being in this world, and being in the prime and flower of our years, we should then devote our souls to God and his work and service, and enter into covenant with him, with full purpose of heart to keep the same truly and inviolably; for it would be better not to make a covenant, than to make it and break it. Neither should we slight or put off the work of God till we are in our declining years, as though we would give him only the refuse and broken end of our days, and conclude it will better become us when we are old, to serve him. Oh, no! learn the fear of God truly, and practise it when thou art young, and thou wilt not easily depart from it when thou art old. Thou wilt find it hard to get into a holy life and conversation, when thou hast been spending thy youth in vanity and folly; therefore, "Remember now thy Creator in the days of thy youth, before the evil day come." The autumn of man's years is in divers respects called the evil day. Oh! it

is exceedingly sweet and precious to see an innocent life, and modest, sober conversation in youth, when they are in their blooming years, seasoned with grace and truth. When youth is laden with the fruits of grace, and of the holy Spirit, how pleasant is the taste of it; it relishes well with all men, and naturally brings praise to God, as well as peace to the soul. May the youth of this present generation, as also generations to come, be such holy plants, that God's right hand may be seen in planting them: when after being fruitful, and doing the work and service of their day, and answering the noble end of God in making and planting them in this world, they may be transplanted into the eternal kingdom of heaven: which, doubtless, they will, who first seek his kingdom and the righteousness of it.

Second; If we consider that our life and being are daily granted to us, and we are supported by the goodness and providence of Almighty God every day, it is but just that he should have the first of our thoughts, in the morning of the day, as well as the last in the evening. The royal psalmist saith, "If I prefer not Jerusalem before my chiefest joy, then let my right hand forget its cunning, and my tongue cleave to the roof of my mouth;" much more ought we to prefer our Creator to all things, and to have our thoughts on him, first in all things, and every day.

Third; What are the things of this world in comparison to those that are to come; all these are fading and transitory; but the things of that which is to come are durable and permanent; and therefore ought to be first and chief in our minds. That which is chief in our hearts, may be said to have the first place there. "One thing," says a servant of God, "have I desired, and that will I seek after, that I might dwell in the house of God all the days of my life." This is the first thing we are to seek for. As for the morrow, we need not be too thoughtful or anxious concerning it, for we know not whether we shall live to enjoy it, so that as Christ says, "Sufficient unto the day is the evil thereof."

(To be continued.)

#### A Generous Act.

How refreshing it is amidst the almost universal tide of selfishness and cold indifference to another's woe which sweeps over the world, to see now and then instances of true benevolence! We were witness to one of these the other day. It was an act of kindness cheering to the heart, and lifting up humanity in our thought from the low passion for money-getting and keeping.

An old lady on a ferry boat was the victim of a pickpocket. Just as she was leaving the boat she discovered her misfortune. Her purse containing, it is true, but a few dollars, yet *her* all, hard earned and already appropriated, was gone! Her vain screechings and pitiful exclamations soon attracted a crowd around her, each one ready to offer a *word* of sympathy,—but of what avail was that? She was alone and penniless, just entering a great city, where money was needed at every step. Tears ran down her furrowed cheeks as she realized her situation, and she wrung her hands in helpless grief. A young man hurrying on to the boat paused to inquire the cause of her distress. Hearing the story, his heart was touched; and quietly taking out his pocket-book he placed in the poor woman's hand bank bills enough to more than replace her loss, then passing on quickly, was soon beyond thanks or recognition. The woman was speechless. The crowd in hushed surprise waited a moment, then silently dispersed. But blessings and thanks from more hearts than one rested on the head of that unknown young

man. We did not see him again; probably never shall in this world; but the remembrance of that noble act will not soon be lost by any that witnessed it. Perhaps it cost him little self-denial. What he gave may have been as "a drop in the bucket" to what he had left. But that does not alter the fact, nor would it lessen the joy imparted to the distressed one.

We know not the motive of this young man. We hope he is a christian, and that he acted from a true impulse to be like his Master. Be this as it may, how far-reaching in its influence is such an act. Besides cheering and relieving the recipient, and its reflex power blessing the giver, it awakens in many another bosom an emulation of the same spirit, a desire to go on and do likewise. Even the cold heart of a selfish worldling is stirred for the moment with something akin to generosity, by the mere witnessing of such a deed, and the next applicant for bounty will be less likely to be turned rudely away. In the breast of the child of toil, whom necessity has made selfish, and cruel scorn hard-hearted, such an example opens the fount of sympathy, which will find its outlet in humble acts of charity to fellow-sufferers. Many a bill of human kindness is thus started to flow on cheerfully through the desert of life, increasing as it flows until it becomes a mighty current of usefulness and blessing.

"Whoso hath this world's goods and seeth his brother have need and shutteth up his bowels of compassion from him, how dwelleth the love of God in him?" We condemn the absence of sympathy and liberality in the man of the world, how much more is it to be condemned in the disciple of Christ, one who professes to have consecrated his all to the service of his Saviour. God from his fulness supplies our need. Jesus gave us his all—himself. Shall we then refuse freely to share what we have freely received, with our suffering brother?

Blessed is that man who has the ability and the disposition to walk through this world with open heart and hand, scattering benefactions on every side, and leaving behind him as he passes to eternity a multitude of hearts and homes made happy by his Christ-like charity.

"Oh let us for the world's good give  
As God is ever giving."

—Sunday School Times.

#### Sarah Cresson.

Extracts from her Letters and Diary.

(Continued from page 148.)

"1st mo. 15th, 1792. Holy Father, who art omnipresent, a God of mercy and love, but a God all just, be pleased to continue Thy holy hand upon me; dip me deeper in Jordan; let not thine hand spare, nor thine eye pity; make of me what Thou wouldst have me to be; baptize me, and rebaptize me. Oh that I may witness a thorough change, being regenerated and born again by the power of Thy everlasting word."

"1st mo.—George Dillwyn spoke at our fifth-day meeting, setting forth the necessity of experiencing a passive disposition in order to witness a progress in the way and work of righteousness, that our wills may be subject to the Divine will in all things, that so we may in truth say, 'Lord, I am the clay,' I humbly pray Thee to be the Potter; forsake not the work of thine own hands. Samuel Emlen also spoke, favoured much in the same line of advice, of depending entirely upon the Lord, being weaned from outward help."

"1st mo. 27th. I have this day entered my twenty-second year; I desire to spend the time which the Lord may yet grant me, in His holy

fear, which can only be by His gracious assistance.

"A divine impression made me sensible that I must steadily attend to that gift I have received so that I may witness peace, which is to be experienced in that kingdom in which He reigns altogether wise and wonderful in counsel and with whom all things are possible."

"8d mo. 26th. I am made clearly to see, the nothing short of an acquaintance with the living God can satisfy an immortal soul. Oh! that I may wait to have patience granted me, in a right manner, for His return, when He is pleased to withdraw the light of His glorious countenance from my poor soul; that so in His absence I may not be diverted by any thing outward, to seek for comfort there."

"8d mo. 30th. 'The heaven of heavens cannot contain Thee, how much less this house which I have built.' Lord he thou pleased to prepare my heart to receive thee, the great Minister of the Sanctuary, that so feeling thy good presence near, I may be enabled to steer my course there; and my desire is that I may witness my own slain and become conformable to the Divine will experiencing self to be laid as in the dust, and then though I may be deprived of some outward comforts, I shall find a source of comfort in The fountain of all good, and Well-spring of eternal life."

"5th mo. 21st. My soul aspires after durable righteousness, even of having my life hid with Christ in God. Oh that the aspirations of my soul may not be too great, as I desire to die daily to all that is earthly or sensual."

"7th mo. 5th. An appointed meeting was held for the instruction of the youth and others, I reading some parts of our discipline, and giving an opportunity for those under deep concern on account of the great declension amongst us, labouring deeply together in their minds."

"11th. My dear mother and I went on board the Grange, Captain Roberts, bound for Liverpool, in company with dear Sarah Harrison, who had taken her passage therein. Many other Friends also went to see the accommodations."

"12th. Dear Sarah Harrison came to take leave of our family, in which visit we were favoured with renewed love and mercy from the hand of Him who is long suffering and gracious, slow to anger, and abundant in clemency."

"7th mo. 13th, 1792. I went to John Perberton's to take leave of dear Mary Ridgway at Jane Watson, which was to me an affecting parting, under a sense of the comfort I had enjoyed at seasons during their visit on this continent through the influence of their dear Lord a Master, whereby they were enabled to divide a word in demonstration of the Spirit, and wisdom, being fraught with true consolation to the humble, and warning those who were stout-hearted and revulging, and tenderly inviting those who were looking forward to an establishment in the Truth, to an early and perfect surrender to the Divine will."

"14th. Mary Ridgway and Jane Watson embarked in the Grange, bound for Liverpool."

"15th. Dear cousin Samuel Emlen and Sarah Harrison went to Chester and from there on board the Grange. My dear father saw them embark."

"10th mo. 1st. How can a mortal, or w should a mortal repine at affliction, when He took upon him our nature, condescended to be pierced to the utmost extremity for our sake. When he cried, 'My God, my God, why hast thou forsaken me?'"

"10th mo. 2d. Oh most holy, incomprehensible, and eternal Being, whose dwelling-places

the light; graciously condescend to protect by thy good Providence, and continue Thy arm of invincible strength around my habitation; for there is none so holy as the Lord, nor thy rock like unto our God."

"6th. Our youth's meeting. Dear David Sands opened largely in testimony: William Savery in application. Our Quarterly Meeting, held yesterday, was a season of instruction; much weighty advice, and very important matters were conveyed in our Yearly Meeting, by a committee appointed from thence; many of them attended. David Sands visited our women's meeting, exhorting us to faithfulness, and taking a farewell us in a very affecting manner.

"Oh faithless soul, why dost thou doubt  
And reason without end;  
Lift up thy head, rejoice in hope,  
For Jesus is thy friend."

"11th mo. 11th. It was secretly manifested me this day, that the time of life to which I am arrived, is a time which I must prize; a time natural, holy, and heavenly strength; a season which the great Author and Completer of our creation is near; graciously making himself known by the breaking of bread, even that bread which can only be dispensed from heaven, as its origin is there, and which nourishes up the soul to eternal life; blessed be the Lord, he breaks and sometimes it is handed through His disciples to the multitude.

"O Lord, suffer not any defiling thing to have access within me, but thoroughly purge away all dross, and take away all my reprobate silver, that thou may be all in all, and Thy light shine early to the coming of the perfect day of Thy righteousness, when Thy kingdom may come, and Thy will be done on earth, as it is done in heaven."

"11th mo. 26th, 1792. The Lord is my strength and my song, my joy, and my chief delight, my deliverer and my fortress; in Him I put my confidence; Oh that He may become my salvation, and my exceeding great reward. O Lord, I shall go on from strength to strength till I may ascend thy Holy Mountain, and join saints in singing hallelujahs to Thee, the King of kings. Self, be thou laid low, cast down every way at the feet of Jesus, and strew thy garments in the way; that as thou art stripped of all worldly things, He may clothe thee upon with blessed robes of his own righteousness. Oh, pardon mercy and love, that this may be done poor fallen and degenerate man.

(To be continued.)

*A Paris Miser.*—The commissary of police of the quarter of the Place Vendome, accompanied a doctor, recently visited the apartment of the poor X—, in order to certify, at the request of the inmates of the house, the death of a lady, who was seventy-five years of age. The entrance of the apartment indicated extraordinary neglect. There was scarcely any furniture; dust of years obscured the window panes, and paper on the wall was spotted and rotten. A place appears to be uninhabited from time immemorial, and yet the Baroness X— had lived there for twenty-five years, paying an annual rent of 1500 francs. In the bedroom, stretched on a trundle bed, and partly covered with filthy s, lay the body of the baroness. An examination showed that death arose from weakness caused want of food. It further appeared that she starved herself wilfully; and, indeed, in point of variance the defunct baroness would have borne up the palm from Harpagon, Gosbeck, and other heroes. Notwithstanding her considerable

fortune, estimated at 50,000 francs a year, she always went clothed like a beggar, and often solicited charity in the street. She lived on crusts of bread, the refuse of cabbages and other vegetables, and such like garbage that she picked up from dirt heaps. Last week she fell down from weakness, while passing the door of the concierge, from want of food, but she refused to take some refreshments proposed to her, no doubt fearing that she would have to pay for it. She succeeded in gaining her apartment, and was not afterwards seen alive.—*Galignani's Messenger.*

For "The Friend."

### The Gathering Love of the Gospel.

"Brethren, if a man be overtaken in a fault, ye which are spiritual, restore such one to him in the spirit of meekness; considering thyself, lest thou also be tempted."

We think the following record of a labour of love, bestowed by Thomas Shillitoe, in Ireland, worth reviving.

"Third-day attended Monthly Meeting at Ennisceahilly, which was small. My kind friend Samuel Ely, and myself, had proposed leaving early on Fourth-day morning for Ross, but after the close of the Monthly Meeting my attention was arrested by the revival of a fear that had some hold of my mind when engaged in visiting families at this meeting, that a breach of love existed, yet I did not at that time feel a sufficient warrant to search into it; but now it appeared unsafe for me to leave this place without opening my mind upon the subject to my companion and some of the Friends of Cooladine Meeting. I found I was correct; that the breach had spread very wide, and the labour bestowed had proved unavailing; but Friends encouraging me, and manifesting a willingness to be helpful to me in it, after seeking Divine direction how to move, the pointings of duty I thought were clear to have all the parties concerned collected next morning, which took place. My companion, a Friend of Cooladine, and myself, joined them, and from our first sitting down, the contriving influence of the Father's love was felt to overshadow us. The hearts of some were so broken and tendered that tears were abundantly shed, and everything that was hateful and hating one another, evidently became subdued; and so far from reflecting on one another, which I much feared before we came together, all was submission and concession. We thought we had good ground for believing they were sincere in their desires that all the animosity that had prevailed amongst them, might be buried in oblivion, giving each other the hand with expressions of earnest desires to be preserved loving as brethren. Feeling my mind released from any further service heretofore, after taking some refreshment, my companion and myself returned to Ross."

The universal prevalence of gospel fellowship and unity among the members of our religious Society would harmonize and bind us together, and prepare us more extensively to receive the gifts bestowed by the Head of the Church, and to exercise them in His fear and under His direction to the edification one of another, and to the glory of His great name.

From "Macmillan's Review" for December, 1866.

### The November Star-Shower.

BY J. NORMAN LOCKYER, F.R.S., &c., &c.

"In the year 599, on the last day of Muharram, stars shot hither and thither, and flew one against another, like a swarm of locusts; this phenomenon lasted until daybreak; people were thrown into consternation, and made importunate supplications to God the most High; there was never like seen except on the coming out of the

Messenger of God—on whom be benediction and peace." In these words did the Arab historian, Abu-l-Abbas ad-Dimashki, chronicle the November star-shower of the year 1202 of our era, the while Chinese astronomers carefully watched the constellations in which the meteors appeared and vanished from the sight. Different ways of looking at things may be distributed in space as well as in time, and the modern Arab manner culminates in the following:—"We know not whether any simile was more suggested by their silence, their flight chiefly in one direction, and their steady sweep, than that of winged creatures. They looked like no earthly fireworks, but rather resembled silver birds weaving their way one after another to some mysterious sea-herony in the firmament—or if not birds, then the forehead-panels of angels and archangels, summoned in splendid cohorts and regiments to vast service of God, and hastening with the lamp of their world lighted to the Divine rendezvous. \* \* \* A baby-star, cold to the heart with the silence and frost of the empyrean, suddenly heated into frenzy of fire by the coarse air of earth, till the chilly heart and the glowing skin split, asunder, and the baby-star perishes in dust and glory—perishes of his *feeling*." But, independently of manner, the fact remains that we possess records, dating from A. D. 902, showing that about every thirty-three years since that time the heavens have been hung with gold, as they were on the 14th of last month. The shower of 902 indeed was not the least important among the data on which the prediction of the recent appearance was based.

The exquisitely beautiful display, almost awful as well as rare, had, thanks to our scientific men, been so well heralded that few among us interested in such matters failed to witness it; and, for those who did not, the accounts in the daily press have been so full that I do not think it necessary to give anything like a *résumé* of what was seen: the more so, as the time has not yet arrived for giving a rigorous analysis of the results. I prefer rather to connect some of the more salient of the appearances which are now being discussed with the received theories by which it has been attempted to account for them.

It is not so very many years ago since the planetary spaces were supposed to be untenanted by anything more tangible than that mysterious fluid called ether. This notion is exactly represented by the French equivalent for those spaces, *le vide planétaire*. Hence, not to mention imagined supernatural causes—such as that, for instance, embodied in the tradition that St. Lawrence on the anniversary of his martyrdom (the 10th of August) shed burning tears—the cause of the phenomenon was ascribed to atmospheric perturbations, exhalations of sulphur, and so forth. An account of the August shower of 1857 even, published in the *Bulletin de l'Académie Royale de Belgique*, is accompanied by a minute record of rain, temperature, atmospheric electricity, &c.

When, however, Olmsted witnessed the shower—that of 1833—which immediately preceded the recent one (a shower heralded and followed by less brilliant displays in 1831–2, and 1834–5–6), and when, moreover, he had compared the phenomena with those recorded by Humboldt and Bonpland in 1799, (also seen in 1766,) the theory which has been so recently and brilliantly confirmed—namely, that the appearances are due to the passage of the earth through a storm, so to speak, of asteroids—was given to the world.

This was the first blow given to *le vide planétaire*. And nowadays it is held that the bodies which, when they enter our atmosphere, give rise to the beautiful sight we have so recently wit-

nessed, are so numerous that there are 13,000 of them in each part of space as large as our earth; and that, could all which enter our atmosphere in a period of twenty-four hours—including those visible in a powerful telescope—be counted, they would number not less than four hundred millions. Still, however, there is ground for supposing that in the main these little bodies are congregated into rings, each particle composing the ring revolving like a planet round the sun; and, as far back as 1844, M. Houzeau gave the elements of the August rings as one would give those of the orbit of a planet. In fact, these rings may be compared to *tangible orbits*, indeed they almost realize the schoolboy's idea of an orbit, as each point of the path is occupied by a little planet; while in the case of our earth, for instance, each point of the path is occupied in succession only.

Let us now pass to a consideration of the November ring. For this purpose, let us suppose the plane in which our earth revolves round the sun, called by astronomers the plane of the ecliptic, to be represented by an ocean in which both earth and sun are half immersed; let us, moreover, suppose the earth's path, or orbit, to be marked by buoys—remembering that astronomers define the place of a heavenly body in the plane by stating its *longitude*, that is, its angular distance, reckoning from right to left, from a particular start-point, as seen from the sun; and its *latitude*, that is, its angular height above the plane, as seen from the same body. Now, if it were possible to buoy space in this convenient manner, we should see this meteoric ring rising out of the waves of our hypothetical ocean, at a slight angle (17°) at the point of the earth's orbit occupied by our planet on the 14th of November, the point where the ring emerges being called the *node*. Where the other node lies, where the ring plunges down again, we do not exactly know; we only know that it does not cut our orbit; if it did, another star-shower would occur in May. It has, however, been surmised that we have another proof of the existence of the node, not far within our orbit, in the almost constant retrogression of the temperature about the 12th of May, which has been ascribed to the bodies composing the ring cutting off the sun's heat from us.

Similarly, we might observe the August ring rising from one of its nodes, situated in the point of the earth's orbit occupied by our planet on the 10th of August, not at a slight angle like the November ring, but at an angle of 79°, or so.

Bearing what has now been stated in mind, the cosical nature of the ring comes out in its full force. In the early records to which we have before referred, the shower is stated to have occurred in *October*. This shows that the meteors are independent of the *precession of the equinoxes*.

It is evident if this ring crosses our orbit in a certain definite point in space, our earth will always traverse it when it occupies the same definite point of its orbit with regard to the stars. But our ordinary year, called the tropical year, is affected by the precession of the equinoxes, so that we do not measure it by the stars, but by an empirical point called the first point of the sign *Aries*, which is actually at the present moment in the constellation *Pisces*. If we refer to the recorded star-showers to the sidereal year, we find an almost absolute identity in the dates of their appearance.

It is to an American astronomer, Professor Newton, that we owe the most profound investi-

gation into the constitution of the November-ring. He has first considered the question whether the ring is of uniform density, and whether it lies merely near our orbit; the variation in the brilliancy of the showers being caused by the action of the planets and moon on the earth and ring—the greatest perturbation of the earth being 9,000 miles each way—sometimes throwing us into the ring, sometimes causing us to pass it without meeting it. He has shown, however, that the ring cannot be of uniform density throughout, but that, on the other hand, in one part of it there is a clustering together of the little bodies of which it is composed—a few stragglers being scattered along the rest of the circuit.

From other considerations he has shown that the meteors revolve round the sun in a direction opposed to the earth's motion; the most probable time of revolution being 354.621 days—our own being accomplished in 365.256 days. This is the same as saying that the annual motion of the group is  $1 + \frac{1}{354.621}$  revolutions. Consequently the centre of the group is brought into contact with the earth once in 133 years, but the earth passes very near the centre four times in this interval. Here then is the *raison d'être* of the display we have so recently witnessed.

We have, then, the earth, the velocity of which in its orbit, to speak roughly, is 1,000 miles a minute, plunging into a mass of bodies which are advancing to meet it with a velocity equal at first to its own, but which is increased to 1,200 miles a minute when they come within the region of its attraction. Was it possible, by observing the recent display, to prove that this was the real state of the case? It was. One of the most salient facts, noticed by those who even did not see the significance of it, was that all the meteors seemed to come from the same part of the sky. Among all those seen by the present writer from 11 P. M. on Tuesday till 2 A. M. on Wednesday morning, *two only* were exceptions to the general direction. In fact, there was a region in which the meteors appeared trailless, and shone out for a moment like so many stars, because they were directly approaching us. Near this spot they were so numerous, and all so foreshortened, and for the most part faint, that the sky at times put on almost a phosphorescent appearance. As the eye travelled from this region, the trails became longer, those being longest as a rule which first made their appearance over head, or which trended westward. Now, if the paths of all had been projected backwards, they would have all intersected in one region, and that region the one in which the most foreshortened ones were seen. So decidedly did this fact come out, that there were moments in which the meteors belted the sky like the meridians on a terrestrial globe, the pole of the globe being represented by a point in the constellation *Leo*, (between  $\delta$  pi z Leonis.) In fact, they all seemed to radiate from that point, and *radiant point* is precisely the name given to it by astronomers. *Vanishing point*, if the bull were permissible, is a term which would represent the fact rather than the appearance.

This apparent radiation, then, is an effect of perspective, and hence we gather that the paths of the meteors are parallel, or nearly so, and that the meteors therefore come from one point of the sky; the point from which they proceed lies in the constellation *Leo*, situated in long. 142° and lat. 8° 30' N. according to Professor Newton—which agrees fairly with the observations made last year and this.

Now let us see what this means. Let us in imagination connect the earth and sun by a

straight line: at any moment the direction of the earth's motion will be at right angles to that line (or a tangent to its orbit); therefore, as longitudes are reckoned, as we have seen, from right to left, the motion will be directed to a point 90° of longitude behind the sun. The sun's longitude at noon on the 14th November was 232° within a few minutes; 90° from this gives us 142°, which, as we have seen, is precisely the longitude of the radiant point. This then is proof positive enough that the meteoric hail was fairly directed against, and as fairly met by, the earth.

But it will be asked, "If the radiant point is situated in latitude 8° 30', how comes it that the inclination of the ring is stated to be 17°—should it not rather be 8° 30'?" To this question I will reply by another.—How comes it that, when we are hurrying through a shower, we always incline an umbrella at a less angle with the ground than that formed by the falling rain? The answer is the same in both cases. In the case of the meteors, as our motion in one direction is equal to that of the meteors in the opposite one, they appear to us to fall at an angle precisely half of their real one.

(To be continued.)

For "The Friend."

The observations of our late beloved Friend James Emlen, published in No. 18 of "The Friend," were truly interesting and instructive. It is to be hoped that his blameless and watchful walk amongst us may commend them to the serious consideration of all, but more particularly to that of those who, from time to time, feel it right for them to appear in public testimony. Will him I can say that I "have a very friendly feeling for a *brief and lively ministry*," and perhaps more of this sort may yet be known amongst us than has been the case lately; so that the declaration of the inspired prophet Zoolahiah may be more manifest, that it is "not by might, nor by power, but by *my Spirit*, saith the Lord of hosts." And this lively preaching is of the character that the apostle Paul said that his was: "a preaching, *not with enticing words of man's wisdom*, but in demonstration of the Spirit and power; that *your faith should not stand in the wisdom of men, but in the power of God*." A rightly authorized ministry must indeed tend to draw the auditors to the great invisible Shepherd and Feeder of his flock; and dwelling under sense of his utter dependence on Christ for the very smallest crumbs, the poor servant is kept the blessing of preservation be continued, as with his mouth in the dust, until it please Him to open his lips, and thus show forth His praise.

Twelfth month, 1866.

*The Roman Sentinel*.—When Pompeii was destroyed, there were very many buried in the ruins of it, who were afterwards found in different situations. There were some found in deep vaults; if they had gone thither for security. There were some found who were in the streets as if they had been attempting to make their escape. There were some found in lofty chambers. But who did they find the Roman sentinel? They found him standing at the city gate with his hand grasping the war weapon, where he had been placed by his captain; and there where he had been threatened him: there where the ear shook beneath him: there while the lava stream rolled he had stood at his post; and there after thousand years had passed away, was he found so let Christians learn to stand to their duty, willing to stand at the post on which their Captains had placed them, and they will find that God will support and sustain them.—S. Corley.

## TRUST IN THE SAVIOUR.

Not seldom, clad in radiant vest,  
Deceitfully goes forth the more;  
Not seldom evening in the west  
Sinks smilingly forsworn.

The smoothest sea will sometimes prove,  
To the confiding bark untrue;  
And, if she trust the stars above,  
They can be treacherous too.

The umbrageous oak in pomp outspread,  
Full oft, when storms the welkin rear,  
Draws lightning down upon the head  
It promised to defend.

But Thou art true, incarnate Lord,  
Who didst vouchsafe for man to die,  
Thy smile is sure, Thy plighted word  
No change can falsify.

I bent before Thy gracious throne,  
And asked for peace on suppliant knee;  
And peace was given, nor peace alone,  
But faith sublimed to ecstasy!

—Wordsworth.

## WORK AWAY.

Work away!

For the Master's eye is on us,  
Never off us, still upon us,  
Night and day!

Work away!

Keep the busy fingers plying;  
Keep the ceaseless shuttles flying;  
See that never thread lie wrong;  
Let not clasp or clatter rone us;  
Sound of whirring wheels, confound us;  
Steady hand! let woof be strong  
And firm, that has to last so long!

Work away!

Bring your axes, woodmen true;  
Smite the forest till the blue  
Of Heaven's sunny eye looks through  
Every wide and tangled glade;  
Gaugle swamp and thicket shade  
Give us way!

O'er the torrents fling your bridges,  
Pioneers! Upon the ridges  
Wide, smooth the rocky stair—  
They that follow, far behind,  
Coming after us will find  
Surer, easier, footing there:

Hearst to hearst, and hand with hand,  
From the dawn to dusk of day.

Work away!

Scouts upon the mountain peak—  
Ye that see the Promised Land,  
Hear us! for ye can speak  
Of the country ye have seen'd,

Far away!

Work away!

For the Father's eye is on us,  
Never off us, still upon us,  
Night and day!

Work away!

Pray! and Work will be completer;  
Work! and Prayer will be the sweeter;  
Love! and Prayer and Work the fleetest  
Will ascend upon their way!

Live in Future as in Present;  
Work for both while yet the day  
Is our own! for Lord and Pegasus,  
Long and bright as summer's day,  
Cometh, yet more sure, more pleasant,  
Cometh soon our Holiday;

Work away!

*Geological Research in New Zealand.*—The *son Colonist* states: "We have been indemnified by a good authority that some weeks ago party of miners engaged in sinking for gold up Kaniero, Hokitika, made the very interesting discovery of the fossil skeleton of a whale, perfectly entire, and measuring as much as 150 feet length. It was covered by alluvial soil, and

only a few feet below the surface. The fact that the locality is ten or twelve miles from the present sea-shore, and about 100 feet above its present level, renders the fact a very remarkable one, and goes to prove the assertion of geologists that a great part of New Zealand has been raised from the bed of the sea.—*Late Paper.*

For "The Friend."

I am settled in the conviction, that however wise of this world may lightly esteem the christian testimony to plainness and simplicity, it had its origin in the Truth; and the due observance of it, tends to preserve from many snares of the deceiver, and to prepare the mind for the discharge of other religious obligations.

Let us remember this world is not the place of our rest; we must press forward with undiminished ardor, if we would reach the promised land, the heavenly Canaan.

1st mo. 1st. The close of the past, and opening of the new year, have produced many serious reflections. During the past how many have been taken from time to give an account of the deeds done in the body. We that remain have great need, oftener than the morning and evening, to examine our accounts and see how they stand. We have no lease of our life; the present moment only is ours; the next we may hear the solemn sound, "Steward, give an account of thy stewardship, for thou shalt be no longer steward."

When the ministers of the Gospel of Christ wait in their gifts for the immediate influences of his Spirit, the word will not return void, whether it be in a few expressions or greater enlargement, so that all is kept in the pure gift. J. B.

## Does Lying Pay?

A Philadelphia merchant was discussing some business affairs with his head salesman, the conversation turning principally on what he considered the inefficiency of some of the junior salesmen in the concern. Business was not as lively, and sales not as rapid as could be desired, and both the principal and the salesman thought something ought to be done to stimulate trade. After a few moments' meditation, the merchant remarked, "Well, the fact is, after all, Harry Jones was the best salesman I ever had; *he didn't mind lying a little, when it was necessary.*"

This was twenty years ago. Jones, the young man, having served his former employer well, as salesman, had attained to the dignity of partner in a first rate young house, whose energy and popularity told on the customers of the old establishment. The gilt letters on the sign board looked well, and the sign painter had not added to the name of the firm, the inscription "LYING DONE HERE." Jones, the affable and accomplished seller of goods, was the life of the house, and permanent prosperity seemed to be the portion of all the partners.

The last we saw of the original employer of Jones, was on Chestnut Street, a few weeks ago, when he was unsuccessfully engaged in the effort to borrow fifty cents, that he might get his dinner at an eating house. Some years ago, his business, once profitable and powerful, came to an end. His name, once the synonym for "A No. 1" credit, and "gilt-edged" paper, was taken down from the sign it had once adorned, and figured conspicuously on a poster announcing certain effects for sale, and signed by the sheriff. The enterprising firm of which Jones was a member, tumbled from the lofty eminence of credit and prosperity on which it stood, and its remains are not now to be found in the city, unless in the persons of one or two broken down old men, officiating as clerks.

The sprightly Jones will tell no more lies, for he has, for several years, been in a dishonored grave. Over all such ruins let the inscription be emblazoned, "Lying done here!"

A few years ago an honest country gentleman, resident in Bucks County, being about to make a move, advertised his farm and its appurtenances for sale at auction. Among his effects were his family horses and carriage, which had been faithfully used for a good many years, and had rendered useful service. The auctioneer, having received no special instructions, began praising the vehicle and the "splendid pair of elegant bays" in the manner in which such things are generally praised, when people are expected to purchase. The old gentleman interrupted him, and said, "Don't tell anything but the truth about them. Say the horses are old; one of them has lost an eye, and the other is a little spavined; the carriage is a good deal worn, but may last for some time, if it is used carefully; the harness is very much broken." The by-standers looked at the old gentleman with amazement, wondering why he should depreciate his own goods, and probably thinking what a fool he was to throw away the difference between what they brought and what they would have brought, if he had held his tongue. But he, good man that he was, felt that he could not enjoy the possession of a single penny which others had placed in his hands by reason of misrepresentations on his part. And he felt, furthermore, what every merchant should feel, that if he suffered the man whom he employed as salesman, to deceive customers, the sin was as great as if he actually deceived them himself.

Lying is bad business, both for merchant and clerk. The man who trains a young man to tell lies for him, will some day find that the young man can tell lies for himself when it is necessary, and advance his own interest at the expense of his employer. Employer, clerk, and customer are alike demoralized by the practice, and the very foundations of honest trade are undermined.

Young man, strict truthfulness is your only safe course. If you are in the employ of any body who values your services in proportion to your willingness to "stretch," leave him. Drive a dray, wheel a barrow, sell newspapers, black boots, cry oysters, or do anything that is honest, rather than consent for a moment to take the wages of unrighteousness. The Lord will provide for you, if you "—*Late Paper.*

For "The Friend."

As Christ came to destroy the works of the devil in the heart of man, so Satan resorts to all subtleties to ward off his overturning, transforming power, and if possible keep his own choice goods from being spoiled. He is willing that men should make a profession of Christ's religion, and of laying the whole burden of their sins on Him, provided they do not allow Christ, by his Spirit, thoroughly to purge the floor of their hearts, and burn up whatever is subservient to the deceivableness of unrighteousness, and ministers to the continuance of their souls under his subtle government. Having been struck with the great effort now making, through the circulation of a monthly periodical and the wide distribution of small tracts, to impress upon the minds of their readers, that all men have to do, in order to secure their salvation, is to believe on the authority or testimony of the Holy Scriptures that Christ has paid the forfeit due for their sins, and effected a perfect salvation for them through the offering once for all of his body on the tree, and

fearing lest this delusive, sin-pleasing notion, has been, to some extent, imbibed by some in membership among Friends, I would be glad to see introduced into "The Friend," the doctrine of the gospel on this point, as held by our religious Society. I therefore send the following extract from William Penn's Key :

"*Pervers.* 12. The Quakers expect to be justified and saved by the Light within them, and not by the death and sufferings of Christ.

"*Princ.* This is both unfairly and untruly stated and charged upon us. But the various senses of the word justification, oblige me here to distinguish the use of it; for in the natural and proper sense, it plainly implies, making men just, who were unjust; godly, that were ungodly; upright, that were depraved; as the Apostle expresseth himself, 1 Cor. vi. 11. 'And such are some of you, but ye are washed, but ye are sanctified, but ye are justified in the name of our Lord Jesus, and by the Spirit of our God.' In the other use of the word, which some call a law-sense, it refers to Christ, as a sacrifice and propitiation for sin, as in Rom. v. 9. 'Much more then, being now justified by his blood, we shall be saved from wrath through him.' and 1 John ii. 1, 2. 'If any man sin, we have an advocate with the Father, Jesus Christ the righteous; and he is the propitiation for our sins; and not for ours only, but also for the sins of the whole world.' Which, though a great truth and most firmly believed by us, yet no man can be entitled to the benefit thereof, but as he comes to believe and repent of the evil of his ways; and then it may be truly said, that God justifieth even the ungodly, and looks upon them through Christ, as if they had never sinned; because their sins are forgiven them for his beloved Son's sake.

"Not that God looks on people to be in Christ, who are not in Christ; that is, who are not in the faith, obedience and self-denial of Christ; nor sanctified, nor led by his Spirit, but rebel against it; and instead of dying to sin, through a true and unfeigned repentance, live and indulge themselves daily in it; for they that are in Christ, become new creatures; old things are passed away, and all things, with them, become new. Wherefore we say, that whatever Christ then did, both living and dying, was of great benefit to the salvation of all who have believed, and now do, and who hereafter shall believe in him unto justification and acceptance with God; but the way to come to that faith, is to receive and obey the manifestation of his Divine light and grace in their consciences, which leads men to believe and value, and not to disown or undervalue Christ, as the common sacrifice and mediator. For we do affirm, that to follow this holy Light in the conscience, and to turn our minds, and bring all our deeds and thoughts to it, is the readiest, nay, the only right way to have true living and sanctifying faith in Christ, as he appeared in the flesh, and to discern the Lord's body, coming and sufferings aright, and to receive any real benefit by him, as his only sacrifice and mediator: according to the beloved disciple's emphatical passages, 'If we walk in the light, as (God) is in the light, we have fellowship one with another, and the blood of Jesus Christ his Son cleanseth us from all sin.' And because this people say, that Christ's outward coming and sufferings profit not to their salvation who live in sin and rebel against this Divine light, some have untruly and uncharitably concluded, that they deny the virtue and benefit of Christ's coming and sufferings in the flesh, as a sacrifice for sin. Whereas we only deny and oppose a false and dangerous application of them in and to a disobedient state.

For we believe Christ came not to save men in their sins, but from their sins; and that those that open the door of their hearts at his inward and spiritual knocks [to wit, the reproofs and convictions of his light and grace,] have their consciences sprinkled with his blood [that is, discharged from the guilt of them] from dead works, to serve the living God. And so far only men come by faith, repentance and amendment, to be Christ's, Christ is theirs, and as he has an interest in their hearts, they have an interest in his love and salvation: that is, so far as they are obedient to his grace, and take up his cross, and follow him in the ways of meekness, holiness, and self-denial, so far they have an interest in Christ, and no farther. And here there is no condemnation to them that are in Christ Jesus, because such walk not after the flesh, but after the Spirit: for we have seen a school or sand here, upon which we fear many thousands have slipped, and which we desire to avoid; viz., that because Christ died a sacrifice for the sins of the whole world, by which he put us into a capacity of salvation, and has given every one a talent of grace to work it out by; they presume upon that sacrifice, and sin on; without a thorough repentance, reformation and conversion to God, not dying with Christ to the world, but living in it, according to the lusts and spirit of it. Such as these may be assured, that where Christ is gone they sent his Son to bless us, by turning every one of us from the evil of our way. So that the contrite, humble, meek and self-denying people, are those that have the true and full benefit of Christ's coming, suffering, and mediation, and of all those holy ends for which God his Father anointed and gave Him to the world; viz., to be the Way, Truth, and Life, Light, Leader, and Saviour, to be a King, Priest, Prophet, Sacrifice, Sanctifier, and Mediator; being sensibly felt of all such to reign over their hearts, to teach them God's royal law, to give them saving knowledge, and to mediate, atone for, sanctify and justify them in the sight of God his Father, for ever.

"By all which it is evident to any moderate inquirer, that we acknowledge Christ in his double appearance; as in the flesh, of the seed of Abraham, so in the Spirit, as he is God over all, blessed for ever. Wherein is a full confession to him, both as a blessed person, and as a Divine Spirit of light and life in the soul; and the want of which necessary and evident distinction occasions our adversaries frequent mistakes about our belief and application of the Scriptures of Truth concerning Christ, in the two-fold capacity.

For it is not another than the eternal Word, Light, Power, Wisdom and Righteousness, which they took flesh, and appeared in that holy Body, by whom they have received, or can receive, any true spiritual benefit. They holding, that Light is only from him, forgiveness only through him, and sanctification only by him. So that their a-cribing salvation from sin and death eternal to him, who now appears by his holy Spirit to their souls, as before expressed, cannot render him no Saviour in that age, or make void the end and benefit of his blessed appearance in the flesh on earth, or his mediation now in glory, for those that believe in him in this age. Whose doctrine, pierced, whose life preached, whose miracles astonished, whose blood atoned, and whose death, resurrection, and ascension, confirmed that blessed manifestation to be no less than the Word God, (the life and light of men,) manifested in the flesh, according to the Apostle Paul, for the sal-

vation of the world; and therefore properly and truly He was the Son of Man on earth, and is now as truly the Son of Man in Glory, as the head of our manhood, which shall also be glorified, if we now receive him into our hearts, as the true Light, that leads in the way of life eternal, and continues well doing to the end."

*The General Shaking.*—Terrible war in South America—Revolution pressing vigorously in Mexico—Candia in successful rebellion against the Sublime Porte—The Empire of China dismembered—Russia pressing her conquests rapidly into the heart of Asia—the old European Alliance broken, and Germany in process of disturbed and revolutionary reconstruction—Italy reorganizing with vastly enlarged borders, and ready to vibrate from her the infirm and denuded Pope—France augmenting her army one third, and astir with arrangements for an Exposition such as has no been since the world was—The overthrow of the last of the reigning Bourbons in Spain foreshadowed—Another and more general war of all Europe imminent—Painful ravages and dreadful fatality in India—Earthquakes and upheaval from the disturbed sea in both hemispheres—A sad failure of crops in Great Britain and on the Continent, and in portions of America—Multiplying and fearful disasters by inundations on land—Dreadful conflagrations of towns, and cities—Terrible losses of life and property on sea.—*La Paper.*

### Why am I not a Christian?

1. Is it because I am afraid of ridicule, and of what others may say of me?  
"Whoever shall be ashamed of Me, and of my words, of him shall the Son of man be ashamed."
2. Is it because of the inconsistencies of professing Christians?  
"Every man shall give an account of himself to God."
3. Is it because I am not willing to give up to Christ?  
"What shall it profit a man if he shall gain the whole world and lose his own self?"
4. Is it because I am afraid that I shall not be accepted?  
"Him that cometh unto Me I will in no wise cast out."
5. Is it because I fear I am too great a sinner?  
"The blood of Jesus Christ cleanseth from all sin."
6. Is it because I am afraid I will not be happy?  
"He that hath begun a good work in you will perform it, unto the day of Christ Jesus."
7. Is it because I am thinking that I will as well as I can, and that God ought to be satisfied with that?  
"Whoever shall keep the whole law, and offend in one point, he is guilty of all."
8. Is it because I am postponing the matter without any definite reason?  
"Boast not thyself of to-morrow, for thou knowest not what a day may bring forth."

*Large sums for Fruit.*—The New York figures up the amount spent for fruit in that every year as follows:—Apples, \$2,500,000; pears, \$100,000; grapes, \$23,500; peaches, 900,000; berries, \$335,000; and melons, nuts, and nuts, \$1,200,000, making the total expenditure annually for fruit in New York, 157,500.

Selected for "The Friend."

Anthony Benezet seeing one of his friends in the street, who was remarkable for a hurrying gait he had acquired, Benezet called to him and said, "I am now in haste," said the gentleman, "and will speak with you when we next see each other;" but resolved on his purpose, he declined him an instant, with this impressive question, "dost' thou think thou wilt ever find time to die?" They then parted, and the person who received this laconic interrogation was afterwards ready to say that he felt infinitely indebted to R. Benezet for his kind admonition to him.

Anthony Benezet's last hours, like his long and excellent life, were full of the most important instruction. At that awful crisis, when the character displays no false glare, and all fictitious supports sink into nothing, he taught what he had always inculcated, that humanity had nothing to boast of; that the efforts of man could shed no fading glory on himself. He had not much to communicate, and the few expressions which escaped his lips, were such as could only have proceeded from a mind abased by a sense of its own unworthiness, and reverently depending on the mercy of Heaven. At one time he said, "I am going, and feel ashamed to meet the face of my Maker, I have done so little in his cause."

He was also heard to utter, "Alack! alack! I am poor creatures; I can take no merit for anything I have done; there is mostly something unthought that is selfish, which will not bear sifting," and took an affectionate farewell of his wife, and said, "We have lived long together in love and peace."

He disapproved of the often overrated testimonies, which were recorded of the dead, and requested a friend of his, if he should survive him, use his exertions to prevent any posthumous memorial concerning him, should his friends manifest a disposition to offer such a tribute of affection to his memory; thus adding to the injunction, "but if they will not regard my desire, I may say—Anthony Benezet was a poor creature, and through Divine favor, was enabled to overcome it."

**Unprofitable Rebuking.**—Some persons pride themselves on being blunt, or, as they call it, honest; and yet very blunt people do little good to others, and get little love to themselves. The scriptures recommend gentleness and kindness. There is nothing in all this world of ours half so unbecoming and malignant disposition as many Christians gratify this spirit, and declare themselves with the idea that they are rebuking sin. Christians should take heed of getting fond of the work of "rebuking." Such spiritual constables do a great deal of mischief without intending it. They are in the church at a very witty and sarcastic person is in a society, or what a tall tale is in school; and approximate very closely to that class which the apostle says "busybodies in other men's matters." Such Christians come in time to be regarded as nuisances in society, constantly to be avoided, and the good they may do is thrown away. Our number must be tender and winning. The nail proof, says an old writer, must be well oiled kindness, before it is driven home.—*Nationalist.*

In the sixteenth year of my age, I was very sick and awakened to my lost and undone condition, fervently besought the Lord to look down on me, and help me; and in this distress of mind I promised to obey Him in all his requirements, however in the cross; and was soon made

sensible it was my duty to use the plain scripture language, and to have my clothes made plain; expecting to be derided on these accounts, it greatly humbled me; but He who made me sensible of my duty, strengthened me to perform the same, in which I found great inward peace, and He enabled me to bless His holy name.

About the nineteenth year of my age I requested to be received into membership with Friends; which, after the usual proceeding in such cases, was granted, and I felt favoured that my lot was cast among a people whom the Lord had raised up to show forth His praise, and found a necessity laid upon me to become a diligent attendant of meetings, both for worship and discipline.—*Christopher Healy.*

## THE FRIEND.

FIRST MONTH 12, 1867.

We find the truth of the supposition expressed in the editorial of last week, that the members and meetings to be enrolled and organized by the agents of the "Executive Committee of Indiana Yearly Meeting for the Relief of Freedmen," were to be officially recognized as Friends, confirmed by a letter given in the first number of a periodical just published in Richmond, Indiana, under the title of "The American Friend." The letter is dated at the Orphan Asylum near Helena, Arkansas, to the Superintendent of which the letter referred to last week was addressed. In it is the following: "In order to give these babes of Christ the aid of religious fellowship, it seemed necessary for our Society either to turn them over to other denominations, or to take them under its own care, and after prayerfully considering the subject, Friends here gave notice a week ago that at the close of the meeting on the 25th inst. [11th month, 1866] they would take the names of such as desired to become members of our Society." \* \* \*

"When the way was opened for them to come forward and have their names registered, twenty-eight of the orphan children presented themselves, and forty-three others; making altogether seventy-one." The committee in its minutes state they have "received details of this interesting meeting and religious organization, from C. and A. Clark, who are cheered with the prospect before them, but feel as if the work was too great."

We are not surprised at their feeling; for, we apprehend, no two Friends, under similar circumstances, ever before made as many members of the Society at one time.

It must, we think, strike an old-fashioned Friend with surprise and sadness, to see in this same paper, an account of the marriage, "At Friends' Meeting, Newport, Indiana, of ————, late a captain of the 56th Regiment U. S. Coloured Infantry." There is a brief notice of him and his regiment, also of the woman Friend he married, concluding thus: "Having learned their [Friends] manner of solemnizing marriages, and that the Discipline of Indiana Yearly Meeting permits the marriage of members according to its order with persons who are not members, he was pleased that their marriage should take place in Friends' manner, and it was accordingly accomplished as above mentioned."

In our editorial of last week we stated that the Asylum for Coloured Children at Helena, Ark., had been built by the above mentioned 56th Regiment, and, together with thirty acres of land, presented by them to Indiana Yearly Meeting. In the notice of the marriage of the captain, just

mentioned, it is stated "The funds for purchasing the land were raised by a voluntary contribution of two days' pay from every officer and soldier;" the regiment—some gave more, as they felt inclined." The soldiers, under the encouragement of their officers, also erected the buildings.

If we are not mistaken, the Discipline of Ohio and Indiana Yearly Meetings formerly forbid—if it does not now forbid—the members of those meetings, to buy or deal in lands appropriated by government as pay or bounty to soldiers; and we think the question will arise, how a Yearly Meeting supporting a testimony against all military transactions, and the whole system of war, can consistently accept as a gift from soldiers, property which it knows was paid for by the wages received by them while actually engaged in service, and for the performance of that military service.

There are startling statements in relation to the deficiency of Friends in the West, in the knowledge and practice of our testimony against war, made by some of the speakers in the Peace Conference held in Baltimore in the Eleventh month last, as disclosed in the published debates of that body, found in the periodical before us. One delegate from the West, who said he had mingled "with Friends considerably in various localities," "was inclined to believe, from his own observations, that there are nearly or quite one half of our own members not thoroughly established in the principles of peace." Another from the same quarter remarked, "That the distinguished Governor of Indiana had stated to the Secretary of War, when requesting relief for Friends from the operation of the draft-law, that more Friends had volunteered from that State than any other denomination, in proportion to their numbers." Another who hoped Friends would "not be too much discouraged," said, "he supposed Governor Morton's statement, if he made it at all, was a strong one, perhaps an over-estimate. Numbers of Friends in the West had joined the army it is true, but many of them had come forward with offerings to their Monthly Meetings, and are now more attached to our principles than ever before."

Still another from the West observed, "he was not ready to believe that one half of the members of our Society in the West are not well-established in peace principles; nor yet the statement ascribed to Governor Morton. It was only in the excitement of the earlier period of the war that considerable numbers of our Friends enlisted."

In making an estimate, from these published proceedings of this Conference, of the condition of our religious Society in the West, in regard to the maintenance of the christian testimony against war, allowance must be made for the natural wariness of a debate evidently designed to show strong ground for doing something towards effecting the objects for which the Conference had convened. We have no idea that "nearly or quite one half" of the members of those Yearly Meetings "are not thoroughly established in the principles of peace." But there must be a very noticeable misunderstanding of those principles, or disregard of their obligation on our members, or such statements would not be made by men deemed suitable to represent those Yearly Meetings in such a body, under such circumstances.

We notice them now, in order to stir up our readers to renewed feeling of the importance to themselves and to the Society, of adhering strictly to this, our well known testimony, without compromise or commutation; steadily resisting every temptation to believe that their duty to the government under any circumstances, can justify their paying it a price, either in money or service, for liberty of conscience. Such an opinion must

always increase weakness, and expose the young and inexperienced to constant danger of betraying our noble testimony against war.

#### SUMMARY OF EVENTS.

**FORNIGS.**—London dispatches of the 7th, state that the governments of Great Britain and France have come to a mutual agreement not to interfere in the differences between Turkey and Greece, unless Russia should undertake to intervene.

The war between the Turks and the insurgents in Candia continues. The United States consul on the island refuses to recognize the Turkish blockade of Candia, because of its alleged ineffectiveness.

The London Times declares that the Polish nationality has ceased to exist under circumstances which have just been reported by the Russian government.

Reports from Miramar represent that the health of the empress Carlotta has improved.

The Liverpool cotton market was steady at 15d. Consols, 90½. U. S. 5-20's 73.

Reports from Madrid state that the Spanish government is taking up military preparations against the threatened outbreaks in Spain.

A large part of the city of Yokohama, Japan, was destroyed by fire on the 26th of 11th mo. last. Property of the estimated value of \$3,000,000 to \$4,000,000 was lost by this calamity.

Algeria has been visited by a terrible earthquake. Many villages have been destroyed, and a large number of lives lost.

The Duke of Angensteinburg has given in his allegiance to the King of Prussia, and relieved the people of Holstein from their oaths of allegiance.

Advices from Rome state that the envoy of the Italian government has so far progressed in his negotiations with the Papal government, that he has already been enabled to make a verbal agreement on some points.

A Paris dispatch says, that the relations of France with all the Powers are most satisfactory, and that Mexico will be evacuated by the French troops as soon as the 1st next, without regard to any thing the Emperor Maximilian may choose to do.

The latest Mexican advices say that Maximilian is at Puebla, and would probably remain there until the departure of the French. The Liberals were prepared to take possession of the place as soon as this occurred.

**UNION STATES.**—The bill to repeal the President's amnesty power has passed the Senate by a vote of 27 to 7. This bill repeals the section of the Confiscation bill which empowers the President to issue a proclamation of general amnesty, when, in his judgment, it shall be expedient. It originated in the House, and passed the Senate without amendment. The Senate amended to inquire if legislation on the constitutional amendment is necessary to prevent the sale of persons into slavery for a term of years as a punishment for crime. The Military Committee has been instructed to inquire if any further legislation is needed to prevent the enslavement of fugitives, or any system of peonage in the territory of New Mexico. Memorials on various subjects have been laid before Congress, including several protests against any curtailment of the currency.

The House of Representatives has had under consideration a bill reported by the Committee on Reconstruction, to provide for the States lately in rebellion, and their full political rights. A resolution that the people ought not for the present to be further taxed to raise money for the reduction of the public debt, was introduced into the House, and referred to the Committee on Ways and Means. The President has received the District of Columbia, and it then passed the Senate, notwithstanding the veto, by a vote of 29 to 10. The Judiciary Committee of the House of Representatives has been instructed to inquire into the expediency of repealing all laws allowing compensation to loyal owners of coloured volunteers. On the 7th inst. Andrew Johnson, Acting President of the United States, delivered a message to the House of Representatives by Ashby, of Ohio, who also offered a resolution instructing the Judiciary Committee to inquire into the official conduct of the accused, with a view to his impeachment. The resolution was adopted by a vote of yeas 107; nays 33.

**The Public Debt.**—The United States Secretary of the Treasury reports the total amount of the funded and unfunded debt of the United States to be \$2,675,062,505, from which may be deducted the balance in the Treasury, consisting of \$97,841,567 in coin, and \$32,895,650 in currency. The debt bearing no interest, consisting

of United States notes, fractional currency, and certificates of deposit, amounts to \$425,673,334.

**The National Bank Currency** in actual circulation, is reported to be \$206,609,416 to secure which United States bonds to the amount of \$340,363,150, are held by the Treasurer of the United States.

**Philadelphia.**—Mortality last week, 262. During the year 1866, the number of permits issued for the new buildings was 2752; there were also 1151 permits for alterations and alterations. The mean temperature for the Twelfth month, 1866, according to the record kept at the Penna. Hospital, was 33.61 deg. The highest during the month was 61.50 deg., and the lowest 5.2 deg. The amount of rain was 3.46 inches. The average of the mean temperature of the Twelfth month, for the past several years, is stated to be 33.61 deg. The highest during that entire period (1848) was 45°. The lowest (1832) 2°.

**The Freedmen.**—General Howard's report to the Secretary of War, gives the following statistics. In South Carolina the number of freedmen has decreased, being estimated at 375,709. Georgia is estimated at 400,000. Florida, 42,000. In Mississippi there has been a slight decrease, the present number being 320,000. In Louisiana the number is 350,000. In Texas, 200,000. In Missouri the coloured population has decreased to about 100,000. In Tennessee, the Assistant Commissioner estimates an increase from 200,000 in 1865, to about 225,000 in 1866. In Virginia the freedmen have decreased in number. The estimated number at present is 500,000, and in North Carolina about 300,000. In Louisiana, Florida and Arkansas, there is a growing disposition on the part of the freedmen to take advantage of the homestead act, and many of them are preparing to settle on the public lands. He states, that the Civil Rights bill is only partially enforced in the South. The assistant commissioners generally favor the present contract system. The freedmen are reported as having in most cases faithfully performed their obligations, and as a general thing the employers have settled with the freedmen in accordance with the terms of their contracts. Many have not in all cases afforded to the freedmen the proper remedies and protection. The vagrant laws of Maryland, Georgia, Mississippi, Louisiana and Texas, appear oppressively and unjustly on the freed people in many instances.

**Minnesota.**—Between nine and ten millions of bushels of wheat were shipped from Minnesota during the past year. The crop of 1866 was about eight millions of bushels, the balance being wheat held over from the previous year.

Four inches of snow fell at New Orleans on the 2d inst., the first since 1853.

Frederick Fletcher, of Missouri, in his annual message, refers to the prosperity and rapid growth of the State. The receipts of the Treasury for the year were \$4,108,407, and the disbursements \$1,954,402.

The State superintendent of common schools, of Kansas, reports \$4,728 children in the State between five and one year of age.

During the past year there were 501 fires in the United States, each involving a loss of over \$20,000. Total loss by these fires, \$66,410,000, against \$43,139,000 for the previous year, when there were only 354 of such fires.

Though no definite action has yet been taken in the case of Dr. Mudd, Spangler, Arnold and O'Laughlin, the assassination conspirators, it is not improvable, according to a report in legal circles, that they will, in consequence of the late decision of the Supreme Court against the State for a determination of the case.

**The Constitutional Amendment.**—The amendment has been ratified by the Ohio Senate and House of Representatives. The New York Senate, and Missouri Senate have also ratified it. The Governors of Maryland and Delaware, in the message of the 4th of Dec. of the year, had done so longly upon the amendment.

**Pennsylvania.**—The total amount of the State debt, 12th mo. 1st, 1866, was \$35,622,052, a reduction of \$2,854,200 since 12th mo. 1st, 1865. The Governor estimates that the entire debt of the State can be paid within fifteen years. The amount of the Treasury at the close of the fiscal year was \$1,741,033.

**Massachusetts.**—The debt of the State amounts to \$27,350,000. In regard to national affairs the Governor eulogizes the constitutional amendment, and recommends its adoption by the Legislature. He expresses an earnest hope that Congress, and the President, will give the case of the District of Columbia, will complete the work so auspiciously begun, by establishing universal suffrage as the irreversible law of the land.

**New York.**—The number of deaths in New York last week was 464, and in Brooklyn 164.

**The Markets.**—*New York.*—American gold 133 134. U. S. sixes, 1881, 108½; ditto, 5-20, 106 a 106 ditto, 10-40, 5 per cents, 99½. Superfine State Flour \$10.10 a 11. Shipping Oil, \$12.05 a \$12.70. Cotton to go to extra Baltimore, \$12.35 a \$14.50; and family, \$14.00 a \$17. Pennsylvania spring wheat, \$2.75 a \$3.12. State oats, 70 to 72 cts. western, 66 a 68 cts. Western mixed corn, \$1.21 a \$1.22. Cotton, middling uplands, 25½ cts. Cuba sugars 9 a 10½ cts.; New Orleans, 13½ cts.; hard refined sugar 15 a 13½. *Philadelphia.*—Superfine flour, \$8 a \$9.75. Flour brands, from \$9 to \$17. Pennsylvania spring wheat, \$2.75 a \$3.10. Southern do. \$3.10 a \$3.20; with \$3.20 a \$3.35. California wheat, \$3.35. A vessel arrived lately with a cargo of 66,000 bushels of California wheat. Rye, \$13.35. New yellow corn, 95 a 96 old, \$1.18. Oats, 57 a 58 cts. Cloverseed, \$8 a \$9 Timothy, \$3.25 a \$3.75. Flaxseed, \$2.90. Beef cut in better demand and prices advanced fully a cent per lb. About 1800 were sold at 16½ a 17 cts. for extra few choice brought 18 cts.; fair to good 15 a 16 ct and common, 10 a 14 cts. About 5000 sheep sold at a 7 cts., per lb. gross; and 3500 hogs at \$8.50 a \$9 per 100 lbs. net.

#### RECEIPTS.

Received from S. R. Kirk, Pa., \$2, vol. 40; from Elizabeth S. Dean, O., from P. Dean, \$2, to No. 18, vol. 40; from G. Gilbert, Agt., Pa., from A. Gilbert, and E. Cope, \$2 each, vol. 40, and for Elizabeth W. Cope, No. 21, vol. 41; from G. M. Eddy and S. Liscoe, Mass., \$2 each, vol. 40.

Received from Friends of Stillwater Monthly Meeting, Ohio, through Asa Garrettson, \$100; from Friends Upper Springfield Meeting, Ohio, \$40.40, also from Friends of Quersney neighborhood, \$30.50, for Freedmen.

#### GRISCOM ST. SOUP HOUSE.

Between Fourth and Fifth and Spruce and Pine is now open for the delivery of Soup, every day except First-days, between the hours of 11 and 1 o'clock. Bread and meal are also occasionally distributed, great care being taken to see that the means of employment, and the suffering is consequently severe. Society respectfully solicit liberal contributions, to enable them to meet the pressing demands upon them. Money may be sent to THOMAS EVANS, 817 Arch or WILLIAM EVANS, JAC., Treasurer, 613 Market St. First month 3d, 1867.

#### WANTED.

By a young man of some experience, a situation some light active business, (wholesale preferred.) Apply at Friends' Book Store, No. 304 Arch St.

#### NOTICE.

A suitable Friend and his wife are wanted to attend and manage the farm and family under the care of the Committee for the gradual Civilization and improvement of the Indian natives at Tunassassa, Orange Co., New York. Friends who may feel winds drawn to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., Philadelphia, or to the Secretary, Committee, of Aaron Sharpless, West Chester, Pa. Richard B. Baily, Marshallton, Chester Co., Joseph Scattergood, 413 Spruce Street, Phila.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (WEST-VA.)—WANTED, PHARMACEUTICAL ASSISTANT AND SUPERINTENDENT.—JOSEPH H. WOODS, M. D.

Application for the Admission of Patients is made to the Superintendent, to CHARLES ELLIS, of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

DIED, on the 4th of Eleventh month, 1866, a widow of the late Stephen Webster, in the 88th year of age, a beloved member of Frankford Monthly ing. She was of a meek and quiet spirit, and her divine influence extended to all who enjoyed her so. Without guile, her purified spirit was released to short illness, and no doubt, through mercy, will enter that rest which is blessed. Her memory will be long remembered. The memory of the just is blessed. AMEN.

Observations on Christ's Sermon on the Mount.

(Continued from page 154.)

Judge not, that ye be not judged: For with what judgment ye judge, ye shall be judged; and with what measure ye mete, it shall be measured to you again."

A great and wise expression from a righteous just Judge; the Judge of heaven and of earth, to whom all power in both is given; by which we may easily perceive we are to be very full in our judgment and censure of others, that we be not rash and censorious therein; considering that with what judgment we judge our fellow-mortals, with such shall we also be judged ourselves, and that measure which we mete out to others, shall be filled to us again. And when it comes to our turn to be judged, or censured by others, for anything which we have done, we are ready then to cry out for charity; and so careful to be charitable in judging and bringing others!

It is better to suspend personal judgment, and to let us see the hearts of men; and if we think we do, then to imitate God and Christ, and mix mercy and love with judgment; rash and extremes in judgment being commonly full.

And why beholdest thou the mote that is in thy brother's eye, but considerest not the beam which is in thine own eye?

Or how wilt thou say to thy brother, let him come out of the mote that is in thine eye, and behold the beam which is in thine own eye.

Thou hypocrite, first cast out the beam out of thine own eye, and then shalt thou see clearly out of the mote out of thy brother's eye."

It is, that the transgressions of others are afflicting to those who fear God; and this affliction is not intended to hinder the good from living the evil; but shows us that we must be free of evil in ourselves when we reprove others, the guilt of hypocrisy will be laid at our door. We are to look more at our own failings than at the failings of others, and to take special care we are clear of that for which we reprove others; and is it not decent, to set up for reformers ourselves, when there are great defects in ourselves? It is too general a fault in poor mortals, who are quick-sighted to see the faults of others, their own. Our Saviour's words to the Jews, brought the woman to him, and told him, "I saw she ought to die, are worthy of notice; and answers, "He that is without sin, let him cast

the first stone at her." They being guilty, and convicted of sin in their own consciences, left her to Christ, and went their way: and when we have done what we can to convince others of sin, we must leave them to Christ at last; whether we are in sin or without it; but we shall be the better able to help to reform others, if we are clear from guilt in our own hearts.

"Give not that which is holy to dogs, neither cast ye your pearls before swine, lest they trample them under their feet, and turn again and rend you."

When we see the biting and persecuting nature, and dirty, selfish spirit of men, it is to little purpose, generally, to east before them the precious pearl of truth, or to show unto them the deep mysteries of the kingdom of God, or the light of life, they being in a brutish spirit; but when people are sober, and show forth humanity and moderation, then are holy things valuable to them, and the things of Christ's kingdom and his doctrine precious in their eyes. Wherefore it greatly behooveth Christ's ministers to minister that to the people which is suitable for them, and rightly to divide between the precious and the vile, and to give to every one their portion, according to their deeds; mercy to whom mercy, and judgment to whom judgment belongs; without partiality, and without hypocrisy or deceit; and not to flatter and daub those who are in the doggish and swinish nature.

"Ask, and it shall be given you; seek, and ye shall find; knock, and it shall be opened unto you."

"For every one that asketh, receiveth; and he that seeketh, findeth; and to him that knocketh, it shall be opened."

"Or what man is there of you, whom if his son ask bread, will he give him a stone?"

"Or if he ask a fish, will he give him a serpent?"

"If ye then, being evil, know how to give good gifts to your children, how much more shall your Father who is in heaven give good things to them that ask him?"

Our kind and tender Redeemer would stir up and provoke souls to prayer and supplication; he has been liberal in his holy advice; and to stir us up to it, here are moving expressions, if thy heart be open to receive them. Could we have easier terms if we were to make them ourselves with the Lord, than to ask, and have; seek, and find; knock, and the gates are opened; provided we ask in faith, tenderly, and seek in humility, and knock with divine wisdom and submission? Our Lord's own practice shows that we should be tender, submissive, and fervent in prayer; and then the fervent prayer of the righteous availeth much with the Lord. Christ urgeth us to it, and brings ourselves for example. "What man is there among you, who, if his son ask bread, or a fish, will he give him a stone, or a serpent?" Surely no: no father would deal thus with his child; but when his child is hungry, and asks bread, he gives it to him: so when the Almighty sees our hunger, and we tenderly seek divine assistance and refreshment from him, he, in his own time,

satisfies such souls with bread from above, and the thirsty with living water out of the wells of salvation. Oh! blessed be his holy name for evermore. Evil men know how to give good things to their children, therefore we may well conclude that our heavenly Father knows how to give with much more discretion and understanding the good things of his kingdom, to true asking, seeking, knocking, or praying souls.

"Therefore all things whatsoever ye would that men should do unto you, do ye even so to them; for this is the law and the prophets."

Well may this be called the golden rule; for if we square our lives and actions by it, it will certainly mete us out the true way to happiness and glory. We are generally apt to say, when any one doth ill to another, "Would he be willing to be served so himself?" And if we will this rule in all our concerns, it will be well; whether in relation to public or private business; whether in trade or religion, or in our domestic affairs: the law and the prophets point at it, and our Saviour plainly lays it down as a rule for us to walk by.

"Enter ye in at the strait gate; for wide is the gate, and broad is the way that leadeth to destruction, and many there be who go in therat."

"Because strait is the gate, and narrow is the way that leadeth unto life, and few there be who find it."

It is afflicting to consider how natural it is for people to walk in this broad way, and they who walk in it are many; for here is room for people to walk if they are proud, thieves, swearers, liars, drunkards, covetous, or in any other evil course of life; but let them know, it leadeth to destruction, and the end is eternal misery, and their many companions will administer no consolation to them, when they lift up their eyes in hell. And whereas the way that leads to life is called strait, it is only strait to flesh and blood, or the will of unregenerate men. Oh! it is a pleasant way, exceedingly pleasant, when brethren walk together in love and unity. The enemy of mankind would persuade souls, that it is narrower than it really is, when they have some faint inclinations to make trial of it. It may truly be said, "Blessed are the undefiled in this way, who walk in the law of the Lord:" for, "His ways are ways of pleasantness, and all his paths are peace." And although the way to the kingdom is strait and narrow, yet there are hills and valleys therein as well as plains, until we get through the gate to glory: there shall we know no more sorrow nor pain, but shall praise and glorify God and the Lamb forever.

"Beware of false prophets, who come to you in sheep's clothing; but inwardly they are ravening wolves."

"Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles?"

"Even so every good tree bringeth forth good fruit; but a corrupt tree bringeth forth evil fruit."

"A good tree cannot bring forth evil fruit, neither can a corrupt tree bring forth good fruit."

"Every tree that bringeth not forth good fruit, is hewn down and cast into the fire."

"Wherefore by their fruits ye shall know them."

The great Shepherd and Bishop of souls, shows the care which he takes of his sheep, and forewarns them to be careful of false prophets and deceivers; who, though they may clothe themselves with words like the true ones, yet inwardly they would destroy all who do not join with them, or receive them; and they are for biting the poor harmless sheep of Christ, and if they could, or it were in their power, would devour them, their minds being in the ravening nature. But our holy and all-wise Bishop, that we might be preserved from them, tells us how we may infallibly know them; saying, "Ye shall know them by their fruits. Do men gather grapes of thorns, or figs of thistles?" says Christ: Surely no. That is altogether unnatural, as well as unreasonable and impossible. In the grape there is a sweet and pleasant nourishment, those fruits being cordial and wholesome; but it is bad meddling with thistles and thorns, they being generally very unprofitable to mankind, and hurt the good seed wherever they grow among it. Well, there must we go for the grapes and the figs? To be sure we must go to the vine, and the fig-tree: Christ is this vine, and his people are the branches, who bring forth such fruit, according to the divine life or sap which they receive, as he taught, and teaches to his followers. So that if men's words be like the words of angels, if they have never so great parts and endowments, yet if their fruit be evil, if they live in sin and do iniquity, and bring forth the fruits of malice and rage, or devouring persecution, they then are none of Christ's sheep, though they may have their clothing: "For every good tree bringeth forth good fruit; and a corrupt tree bringeth forth evil fruit." So if the fruit be evil, the tree is certainly corrupt.

Our Lord elsewhere said, "Make the tree good, and the fruit will be good also:" and to be made truly good, since we are all corrupt by nature, and in the fall, we must be cut off from that nature, and grafted into Christ, who said, "I am the vine, and ye are the branches;" and then our lives and fruits will be changed. "A good tree cannot bring forth evil fruit, nor can a corrupt tree bring forth good fruit: and every tree that bringeth not forth good fruit, is hewn down and cast into the fire." That axe which John speaks of, will be laid to the roots of the corrupt trees, and will hew them down, and they will be cast into the fire, as Christ speaks. It is not destroying the bodies of men that Christ speaks of, but an inward work in the soul, showing the powerful nature of the dispensation of the gospel of Christ, which is not material cutting, or burning with material fire, or sword: but Christ's word is a fire and sword to cut down and burn up the evil nature in man. The apostle confirms this doctrine of his Master thus, "He that doth righteousness is righteous, but he that sinneth is of the devil." The apostle is plain and full, as is Christ, who repeats his doctrine over again, with, "Wherefore by their fruits ye shall know them."

(To be continued.)

*Nothing to Hold on by*—An infidel on his death-bed felt himself adrift in the terrible surges of doubt and uncertainty. Some of his friends urged him to hold on to the end.

"I have no objection to holding on," was the poor man's answer; "but will you tell me what I am to hold on by?"

There is the fatal want. Infidelity furnishes neither anchor nor rope to the sinking soul. It gives nothing to hold on by.—*The Family Christian Almanac.*

From "Macmillan's Review" for December, 1866.

### The November Star-Shower.

By J. NORMAN LOCKYER, F.R.S., & R.S.A.

(Concluded from page 161.)

Now a word as to the number of shooting stars which fell. As recorded at Greenwich, the numbers were as follows:—

	h.	h.	No. of Meteors.
Tuesday night, between	9	10	10
Nov. 13.	9	11	15
	11	12	168
Wednesday morning,	12	1	2032
Nov. 14.	1	2	4860
	2	3	832
	3	4	528
	4	5	40

In other words, from 9 to 10.30 the rate of fall was one per minute; at 12 the numbers increased, and rose at 12.10 to 20 a minute; twenty minutes afterwards the number was 37; then, after thirty minutes, 70; then 47 a minute for the next ten minutes; and then as many as 90 a minute. The total number recorded was 8,485, and the time of maximum was between 1 and 2. Here another set of considerations come in. Suppose, for instance, we were situated in the radiant point, and could see exactly the countries which occupied the hemisphere of our planet facing the meteors, at the moments our planet entered the shower, when it was in its midst, and when it emerged again. In consequence of the earth's rotation,

as with the shower can of course only fall on the hemisphere of the earth most forward at the time, the places at which the shower is central, rising, and setting, so to speak, will be constantly varying. In fact, each spectator is carried round by the earth's rotation, and enters about midnight the hemisphere of the earth exposed to the meteoric hail. We know, therefore, as the shower did not last long into the morning, that the time of maximum for the whole earth was certainly not later than that observed at Greenwich; but we do not know that it was not considerably earlier. As M. Boumas has pointed out, had the actual number of meteors encountered by the earth remained constant, the apparent number would have increased from midnight to 6 A. M. (i. e. probably as the radiant rises more over head.) We shall probably find, therefore, that in countries lying to the eastward, the spectacle commenced earlier and lasted longer than with us. I have since been informed that the meteors fell at Malta at the rate of 36,000 an hour. Accordingly, before we receive information, from the East, we cannot state the exact moment at which the earth passed through the densest portion of the ring, nor can we fairly compare the brilliancy of the present shower with former ones. It may, indeed, so happen that the display was limited to Western Europe: for the showers of 1799 and 1833 were limited to America, while those of 1831 and 1832 were visible only in Europe. Brilliant as it was with us, however, it was scarcely comparable with those of 1799 and 1833, in which latter year 240,000 meteors were computed by Arago to have been visible above the horizon of Boston on the morning of November 13; while M. Baxendell, who observed the shower from the west coast of Mexico, states that "the number of meteors seen at once often equalled the apparent number of the fixed stars seen at a glance." Humboldt, in his long account of the shower of 1799, in his "Personal Narrative," states that, from the beginning of the phenomenon, there was not a space in the firmament equal in extent to three diameters of the moon that was not filled at every instant with bolides and falling

stars; while in 1766 the inhabitants of Cuman had beheld the neighbouring volcano, Cayambivelled for an hour by falling stars!

Thanks to the existence of such a body as the Luminous Meteor Committee of the British Association—a body which includes such men as Glaisher, Herschel, and Greg—who have arranged and distributed maps and spectroscopes among competent observers, themselves setting a noble example of quiet, unflinching work, we may hope however, that the crop of facts reaped from this recent display will far exceed any previous one. It is highly probable that the average height of appearance and disappearance, namely seven thousand four and fifty-four miles respectively, and the average velocity—forty miles a second—will not be much disturbed; but let us hope that some new facts may be gathered by the spectroscopic so that we shall no longer be in the curious condition of knowing everything about these little bodies except what they are. The *everything* includes even their weight; which, in the case of some of the August group estimated by Herschel is sometimes as low as *two grains*—not one of twenty observed and calculated by him exceeding a pound. It may appear impossible that such atoms should produce the brilliant effects observed; but, as Herschel has stated, a single grain moving at the rate of thirty miles a second represents a dynamical energy of 55,075 foot-pounds. This energy is converted by the resistance of our grosser air into heat, as the motion of a projectile is converted into heat by its impact on the target; and hence the combustion of the matter of the meteorite, and perhaps even of the air through which it rushes with such lightning velocity. As this combustion commences at a height of eighty miles, and sometimes even higher, in regions where the atmosphere must be excessively rare, some scientific men have supposed that some other agent besides air (ether) is influential in generating the heat. It may indeed be that the meteors do not partake of the ether of space, but are already heated before they enter our atmosphere.

Could these little bodies pierce our envelope readily as do their larger cousins, the meteoric stones and meteoric irons, or, as they have been christened by Professor Maskelyne, the *aérols* and *aérolisrites*, we should certainly have the advantage of placing them in our museums; but on the other hand, the bombardment—the *jeu de-cièl*—of that wondrous Wednesday morning might have been one to which the *feu-d'enfer* of all possible terrestrial artillery would have been in the gross total of results, as mere child play.

That they are solid, although probably in a state of fine division, we may fairly presume. That meteors and *bolides* are representative of the same phenomenon, the difference lying only in their size, has recently been somewhat called in question by Alexander Herschel, who, in England, is the great authority in these matters. It has shown that the larger masses, like the showers, affect particular dates, and are independent of geographical position. Thus, for instance, two stonefalls took place on the 25th August, 1865—one in Algeria, the other in Italy. Two meteors of the largest class were seen December, 1865—one in France, the other in Charleston, U.S. Three detonating meteors were observed on the east coast of England along the years 1861–5 between the 19th and 21st November. In short, "out of seventy-two stones whose hour of fall is certainly known, by the greater number (fifty-eight) occurred on *midday*, during the hours from noon to 9 p.

shooting stars, on the contrary" (as we have seen) reach their maximum at an opposite hour of the year, being found to be most abundant after midnight, or twelve hours later. An astronomical inference, therefore, exists between aerolites and shooting stars, to which it is not impossible a physical difference of a kind not yet established could correspond. It is noticed, for example, at on the 10th of August and on the 13th of November—dates on which shooting stars and balls" (which, we may parenthetically remark, exist in space, according to Haidinger, as a crowd of bodies revolving one about another) "are more abundant than on any other nights of the year—*One stone alone has fallen* on each date. The average height of seventy-eight meteors observed in America on the 13th of November, 1863, exceeded the usual height of meteors by fifteen or twenty fathoms. On these grounds Professor Newton supposes that the November-shower meteors are composed of more easily destructible or of more inflammable materials than aerolitic bodies."

Although, however, our atmosphere so effectually silences these winged messengers, the traveller's tales" brought to us by the larger stercorites contain the most interesting information respecting the celestial countries occupied by both, and traversed by our planet. M. Sorby has endeavored to suggest a possible physical history of stercorites; and his results, although obtained by microscopic study, tally marvellously with what the recent telescopic and spectroscopic discoveries could lead us to think may be the true state of the case. Indeed, M. Sorby's paper may almost be looked upon as an independent confirmation of the main ideas shadowed forth by Laplace. He marks, "A most careful study of their microscopic structure leads me to conclude that their constituents were originally at such a high temperature that they were in a state of vapour, like that in which many now occur in the atmosphere of the sun, as proved by the black lines in the solar spectrum." We may, in fact, look upon water as being to planets what the minute drops in the clouds are to an ocean. He has shown that possibly, after the condensation of the vapour, they collected into larger masses, which were then subsequently changed by metamorphosis, broken up by mutual impact, and again collected and solidified, the meteoric iron possibly being those portions of the metallic constituents which were separated from the rest by fusion in the metamorphosis was carried to the extreme point.

We see thus how interesting are the inquiries opened up to us on all sides by a consideration of a subject which has recently forced itself upon our attention. After all—for what becomes of the ether in infinity?—the "ultimate essential particles," which we now know are so thickly strewn over the regions of space near the earth, may be considered to be the suns of our firmament, which, like these essential particles, are ever in ceaseless motion. Will then our sun, attended by his planets, which at present may be held to represent Haidinger's conception of a fire-ball before its fall, constitute in safety revolutions enough round *Alcyon* to allow of the dissipation of all his energy, before which time each planet, by its meteoric fall, will have contributed its mite towards sustaining a brief space longer the life of the light-giver, or rather which time that same light-giver will roll a black, planetless ball in space? Or will our sun die in his system, before such dissipation occurs, and, met with another "cosmical particle," and, by mutual impact, form another world and evolve other planetary systems, the inhabitants of which, in far distant stercorites, will, in their turn,

be given to sun-worship at first, and science afterwards, and witness other meteoric showers?

Sarah Cresson.

Extracts from her Letters and Diary.

(Continued from page 156.)

"12th mo. 23d. 'Oh that my head were waters, and mine eyes a fountain of tears, that I might weep day and night for the slain of the daughters of my people.' Oh, the deep exercise of the prophet for the people in his day. Lord be thou pleased to raise up more that may intercede with thee for the sons and daughters of our Society, who have so widely estranged themselves from thy holy commandments."

"1st mo. 1st, 1793. I went to the burial of Catherine Hopkins, wife of Johns. Oh, that I may be prepared for my final and awful change, which most certainly will come sooner or later. 'Thanks be unto God for his unspeakable gift, through Jesus Christ, our Lord.' Oh, unmerited love and unspeakable mercy, that there is a means appointed for our salvation."

"1st mo. 27th.—My birth-day. My gracious and most merciful Creator hath favored me with twenty-two years, which are now elapsed, and what have I done for his name's sake! an humbling reflection! very little if anything at all: shall I thus continue? Oh that thou, the God of my life, may be pleased to 'create in me a clean heart, and renew a right spirit within me,' that I may serve thee with a perfect heart and a willing mind, who in adorable love has done much, yea, very much for my soul, as well as my body; whose hand is full of blessings; and Thou hast not failed to shower them down plentifully around my habitation."

"4th mo. 7th. I was favored to experience this day the fulfilment of the words of our blessed Saviour, 'Your heavenly Father knoweth what ye stand in need of before ye ask Him.' He needeth not the medium of words, but he seeth the most secret, fervent desire, and when He sees convenient He will graciously indulge with that which we have desired, provided we exercise patience and resignation, and if we ask, to ask in faith. Oh, that I may become more and more weaned from an improper dependence on man, and cast all my care upon the Lord, who hath in mercy unmeritedly encouraged me so to do; and dwell deep with Him, fully believing in His promises to those who wait upon Him, that 'they shall renew their strength.' Oh, my soul, press forward towards the mark, for the prize of the high calling of God in Jesus Christ our Lord."

"Dear G. Dillwyn dined with us—a humble believer in Jesus."

"4th mo. 18th. I went to take leave of George Dillwyn and wife, and dear Elizabeth Drinker, and was there comforted, having to thank God and take a little courage to step forward in the line of holy appointment; to leave the things that are behind and press forward, trusting and leaning upon the Divine arm of power, not seeking with too much anxiety the help of man, however skilled in heavenly warfare; but if it please the Lord to afford me a little help by any of His instruments, I trust I shall receive it with gratitude, and endeavor to return Him the praise who is worthy now and forevermore. Amen."

"4th mo. 19th. Through some mistakes which I made this day, had to recur to the Fountain set open for sin, and humbly beg that I might be washed therein, and made clean. How repeatedly is the need found to repair here. Blessed be the Lord in that He doth condescend and bear long with sinners."

"I see clearly nothing short of a steady atten-

tion to the Divine Guide will keep me in the road to peace."

"5th mo. 2d, 1793. Fifth-day meeting at Haddonfield. My mind during the first part of it extremely impoverished, but as I was enabled to breathe secretly and fervently to the Lord, he in great mercy and tender compassion afforded a draught of the refreshing stream of consolation, so that my soul was satisfied therewith; a very small portion of refreshment often proves (with the blessing which maketh truly rich) as a brook by the way."

"6th. A language passed through my mind soon after I took my seat in meeting this day, 'Dost thou love the company of any more than my company? He that loveth anything more than me is not worthy of me.' The humbling conclusion of my heart was, 'Lord I am not able to resolve this question, I am exceedingly fearful and doubtful of myself.'

"At our evening meeting dear George Dillwyn was led in a very instructive manner in testimony; bade us affectionately farewell, desiring we might 'be as epistles writtun in one another's hearts.'"

"5th mo. 28th. George Dillwyn and wife, and Elizabeth Drinker, went to Chester, attended by some Friends of this city, from whence they embarked in the *Pigou*, bound for London."

"29th. Oh the frequent occasions which occur to my mind for this prayer to be raised, 'Not my will, but thine be done, O Lord:' because Thy will alone is my sanctification, and by the power thereof I am redeemed."

"6th mo. 1st. I have had to take a view of the excellency of that faith which is the gift of God; Oh, the blessed effects thereof, how doth it stay the mind in a humble dependence on, and confidence in the Lord, inasmuch that in the renewals thereof, we can leave the things which so easily beget us, and by the power of redeeming love, lay hold in living desire on eternal life."

"10th. Blessed and Holy Father, may it please Thee to preserve me from the evils of the world; even from taking too much delight in the lawful things of it, lest I lose the communion with Thee, which is better than life."

"15th. The words of our dear Saviour to one unto whom he condescended to impart the mysteries of His blessed kingdom, and to prepare and send forth, 'Except I wash thee thou can have no part in me,' made, in the revival of them on my mind, deep impressions, and a desire prevailed that I might say in sincerity and submission, not my feet only, but my head and my hands, that so I may be sanctified and made capable of serving Thee, my Creator and Redeemer, whose service is perfect freedom. Oh, this freedom of the soul of God, how do I long for myself and others that we may become acquainted with it."

"8th mo. 12th. I set off for Burlington under an apprehension of my own weakness and entire inability for any good word or work. In the evening we arrived at the residence of John Hoskins, where the pleasing department of those dear girls, his daughters, together with the kindness of their parents, endeared the family, and I felt secret breathings of heart to the Shepherd of Israel for preservation, that I may so walk in my proposed journey to Shrewsbury, as not to give offence to any of the household of faith, much desiring to have an eye to the glory of God."

"8th mo. 13th and 14th. This morning left Burlington, and proceeded for E. C.'s where we arrived about sunset. My mind has been dipped into a state of much poverty and weakness, but my trust and dependence are on the Lord. I find I must endeavor to walk by faith."

(To be continued.)

## ABIDING IN CHRIST.

Christian, wouldst thou *fruitful* be?  
Jesus says, "Abide in me;"  
From him all thy fruit is found;  
May it to his praise abound!

Christian, wouldst thou *holy* be?  
Jesus says, "Abide in me;"  
Sanctified in him thou art;  
Sanctify him in thy heart.

Christian, wouldst thou *happy* be?  
Jesus says, "Abide in me;"  
He is thine exceeding joy—  
Bliss divine! without alloy.

Christian, this thy motto be—  
Jesus says, "Abide in me;"  
Grace and strength from him receive—  
As a branch in Jesus live.

Christian, Him thou soon shalt see;  
Then he'll say, "Abide with me—  
In my Father's house above—  
In the bosom of His love."

## CHRISTIAN LOVE.

Though Cowper's zeal, though Milton's fire  
Inspired my glowing tongue;  
Though holier raptures woke my lyre,  
Than ever seraph sung;  
Though faith, though knowledge from above  
Mine ardent labours crown'd;  
Did I not glow with christian love,  
'T were all but empty sound.

Love suffers long; is just, sincere,  
Forgiving, slow to blame;  
Friend of the good, she grieves to hear  
An erring brother's shame.  
Meek, holy, free from selfish zeal,  
To generous pity prone,  
She envies not another's weal,  
Nor triumphs in her own.

No evil, no suspicious thought  
She harbors in her breast;  
She tries us by the deeds we've wrought,  
And still believes the best.  
Love never fails; though knowledge cease,  
Though prophecies decay,  
Love, Christian love, shall still increase,  
Small shall extend her sway.

William Peter.

For "The Friend."

## Spiritual Worship.

The following narration is given by Thomas Shillitoe in his journal.

"On Seventh-day we walked to Wigan, where some of those who met at West Houghton, we understood, resided, to obtain information where their place of meeting was, and one whom we met with engaged to conduct us to it next morning. I cautioned them against informing any of our intention of sitting with them except those who were their usual attenders. From the feelings which accompanied our minds in this family, we thought it might be said, peace was within their walls. The next morning the man conducted us to their meeting-place in a very secluded spot, remote from the public road. At the hour appointed the meeting gathered very punctually, in all about thirty-four, many of whom, to my feelings, seemed to bring good along with them into the house. In a short time a profound silence spread over us, and not a few of our company, under the influence of it, were humbled and bathed in tears. Such were my feelings on the occasion, I could not but secretly acknowledge these as worshipping God in Spirit, and having no confidence in the flesh. This silence was of long continuance, and feelings of tenderness towards this contrite company were so excited in my breast, that it was difficult for me to express amongst them what was on my mind, without manifesting

such a degree of abasement as rendered my words I feared at times unintelligible. The Friend who accompanied me, after speaking a very few words sat down; telling me after the meeting his mind was so wrought upon through the contrition generally apparent in the meeting, that after uttering a few words he was obliged to desist. When the meeting broke up the floor in every direction was strewn with their tears. As there was a cottage adjoining their meeting place, occupied by one of the families, we concluded to invite ourselves to dine with them, in order to have more of the company of such as inclined to give it to us. We found those who lived remote from the meeting-place had brought their diners with them to eat in the cottage, which was both clean and comfortable; hearing of our intention of coming to sit with them, they had made provision for us at the cottage. Although our fare was homely, our minds having been previously refreshed and still continuing to feel the precious effects of it, we were abundantly satisfied with our repast, uniting in the acknowledgment we never enjoyed a meal more.

"On inquiry, they informed us this was the first visit they had received from Friends at times some of them attended Friends' meeting, which they would prefer, rather than meeting as they now do, but the nearest Friends' meeting some of them would be able to get to was eight miles distant. We were as much refreshed by some of the remarks made by our company, as by the comfortable meal we made. I felt the need of cautioning them to be on the watch lest they should be weary of sitting in silence, and that should stop some of them to preaching. Desirous of information respecting their rise and progress, so far removed as they are from any meeting of Friends, the following relation was given us. 'An old man, who lived at West Houghton, much attached to the principles of Friends, on Seventh-day evening went to a barber's shop to be shaved, at which shop some of those who now meet at West Houghton, attended also. The old man at times introduced conversation on religious subjects, and especially on the principles professed by Friends, whereby a desire was excited in them to become further acquainted with our religious principles, in which he took great pains to satisfy them, furnishing them with such Friends' books as were in his possession. He died before they met as they now do, and his removal was like the loss of a father; from the veneration they still manifest for his memory. It was evident he had been an instrument in the Divine hand, of great good to them. Since the visit we made them, several of this company have been received into membership with the Society, and a meeting of Friends is now settled there.'

Did all the members of our religious Society in the present day fully estimate the value of spiritual worship, and seek to be exercised therein, would they not more frequently experience in their assemblies the outpouring of the Holy Spirit humbling and contriting their hearts as on the occasion noticed above, and they be made increasingly instrumental in spreading the kingdom of our Lord and Saviour Jesus Christ.

On the subject of human infirmities, I once heard, and I thought it did me good, a truly living, humble minister of the gospel, say, that though he could not say he loved the Lord his God with *all* his heart, and his neighbour *as himself*, he could or *durst* say this, that he had not left off *striving* to arrive at that attainment—*John Thorp*.

For "The Friend."

## Emancipation in Maryland—Through what Instrumentality was it Accomplished?

The ready answer will likely be, it was by the voluntary choice of a majority of its voters. This leads to another inquiry, why a majority of anti-slavery voters should be found in that State while in the adjoining State of Virginia, the pro-slavery feeling was so prevalent that probably nine-tenths would have cast their suffrages against a similar proposition. In answer to this query, I propose to show, that the favorable condition of Maryland in this respect, is mainly traceable to the early anti-slavery labours of Friends.

At the outbreak of the rebellion, Maryland contained about one hundred and sixty-five thousand colored people; and of that number, nearly seventy-five thousand were free. If these free colored persons had been slaves at the time the vote was taken, nearly all their masters would have voted against emancipation; and as a consequence, the small majority of only about eight hundred, by which the measure was carried, would have been more than counterbalanced; and the effort to make Maryland a free State by its own vote, would have been defeated by an overwhelming majority.

Political considerations doubtless induced some slaveholders to vote in favour of freedom; but is nevertheless true, that as a class, they voted against it. We therefore arrive at the conclusion that the fact of these seventy-five thousand colored persons, having passed from a state of slavery to that of freedom, and the number of slaveholders being thereby correspondingly reduced, did in reality, cause the success of the emancipation ticket.

I have heretofore stated that the ameliorated condition of the blacks in that State, was primarily owing to the benevolent exertions of Friends. This sentiment is supported by the historical incidents herein recited; and also by the biographer of Elisha Tyson, who says that in 1780, which was about the time when he commenced his anti-slavery labours, a free colored man was a novelty in Baltimore.

A few remarks from the biography alluded to may be useful for a clearer understanding of what is to follow. Previous to the year 1753 it was no unusual thing for persons holding slaves endeavour to manumit them by will; but as the were none to interfere on behalf of persons unmanumitted, very little regard was paid to the benevolent intentions of the testators, by their executors; and those thus entitled to liberty, remained in slavery still. But as instances do sometimes occur of conscientious heirs comply with the directions of the testator, whereby some slaves came into the enjoyment of their freedom the pro-slavery element became alarmed, and the year 1753 had sufficient influence with the legislature to procure the enactment of a law, a solely prohibiting manumissions by will; and as this was the most usual mode of giving freedom to the slave, the passage of this law accounts for the fact that in 1780 a free colored person was novelty in Baltimore.

In the year 1789, an abolition society was formed in Baltimore, composed of Friends, and number of other prominent and respectable citizens. "The plan for the formation of this society was started by Joseph Townsend, a Friend whom Baltimore is indebted for the birth of several public institutions of great and growing usefulness." When this society began to operate with considerable success upon the humane feelings of slaveholders, it was discovered that this prohibitory law was a strong impediment in the pro-

of human liberty; the efforts of the society were therefore directed towards the repeal of that; and the point to which I especially desire the attention of the reader is, the persevering and successful efforts of Elisha Tyson in the accomplishment of this important purpose.

The abolition society had a brief existence of only about seven years, nearly all the other members having lost their interest in the concern, or sunk into apathy. Elisha, however, persisted in his efforts to influence the legislature, and, after seven years exertions on behalf of the oppressed, the law which prohibited emancipation will be repealed.

Friends at that time had ceased to be slaveholders, and their example doubtless exercised a favorable influence upon the hearts of others; and in that time onwards, manumissions rapidly increased. The author before quoted says, "Be the repeal of that prohibitory law, manumissions dealt in units; one by one; and at intervals, slaves were liberated; now manumissions dealt in hundreds; it has become a wholesale business." Let us contrast this favourable condition of Maryland with the unfavourable condition of the adjoining State of Virginia at the same time. It would appear that nations, as well as individuals, receive their day of Divine merciful visitations. If these visitations are disregarded, there may arrive a time when there is no longer a place for repentance nationally; and when the solemn language the Master is applicable: "The things which bring you to peace are hid from thine eyes."

Virginia, like Maryland, had her day of merciful visitation. She also had her laws throwing punishments in the way of voluntary emancipation, amounting almost to a legal prohibition. A few faithful Friends, religiously devoted to the cause of humanity, assisted by some of her most enlightened statesmen, succeeded in removing for a few years the obstructions imposed by previous legislation. During the brief period that facilities of emancipation were permitted, it was estimated at not less than ten thousand slaves were manumitted; but the tide of pro-slavery feeling returned with increased vehemence; the obstructing laws were re-enacted, the portals to freedom were early closed, and her day of visitation appeared to pass away.

We accordingly find that a little previous to the rebellion, Virginia contained four hundred and twenty-two thousand slaves, and only about fifty thousand free colored persons; and the tendencies are that the disloyalty of her citizens is in proportion to the prevalence of the pro-slavery element, and to the dominancy of the withholding population. I therefore perceive no reason to doubt that the terrible self-imposed affliction experienced by Virginia, would also have been realized by Maryland, were it not that a portion of the inhabitants of the latter State, in other times, had yielded to the merciful visitations vouchsafed, and to the truthful views disseminated through the instrumentality of faithful friends; and that like Virginia, she would have tended the chains of slavery until broken by national legislation and the sword of human carnage. The foregoing exposition appears to establish historical truths:

1st. That the existence in Maryland of nearly twenty-five thousand free colored people, when the emancipation vote was taken, was mainly effected by the early anti-slavery labour of Friends."

2nd. That to this extensive prevalence of colored freedmen, and a consequent reduced number of slaveholders, is mainly traceable the late successful vote in favour of State emancipation.

Elisha Tyson, whose name frequently occurs in this essay, appears to have been a Friend of deep religious feeling. Near forty years have elapsed since this faithful servant passed from works to rewards. The Friends who sympathized with him in his benevolent concerns, and the generation which witnessed his labours and his exercises, are rapidly disappearing from this stage of being. Although he was the principal actor in the accomplishment of the important purposes herein recited, it is not intended hereby to glorify the creature, but rather as an exemplification of the doctrine, that they most effectually serve their country, who most faithfully obey and serve their Creator.

Long Island, First mo., 1867.

G. F.

"Be not conformed to this world, but be ye transformed by the renewing of your mind, that ye may prove what is that good and acceptable and perfect will of God."

I believe as the hearts of the children of men are brought under the transforming power of Christ's spirit, they will be brought more and more to see in that light which never deceives, that if ever they become his true disciples, they must "deny themselves, take up their daily cross, and follow him;" and as there is a sincere desire begotten in the soul to come truly and fully in possession of that life which "is hid with Christ in God," I believe there will be a willingness wrought in the soul to be searched by the Searcher of hearts, that all that he might find there that doth hinder the arising and growth of this, might be removed. I feel a great desire that in this day of treading down, there may be an increase of concern to rally to the pure standard of Truth, which I fully believe Friends in the rise of this highly favoured Society were led unto. I believe the Head of the church hath yet preserved faithful watchmen in this our day, who are pained to witness the many departures from those precious doctrines and testimonies which those dedicated servants of the Lord so deeply suffered for, many of them even unto death. What a disposition there is manifest with many who still claim the name of Friends, to lower the standard, and to try to get to the kingdom some easier way than by the way of the cross. "Let him that thinketh he standeth, take heed lest he fall." Is it not highly necessary for every individual of us, to be most earnestly engaged to humble ourselves, even as at the feet of the Master, and cry unto him to search us, and remove every evil and every hindering thing from our hearts, so that we might be favoured through his adorable mercy, "by the washing of regeneration," to stand with acceptance in His sight? Have we not, from time to time, been favoured with an undoubted evidence that the Lord is still extending the crook of his love towards this people, to gather us nearer to himself? I believe a better day will be known if there is but enough of a living heartfelt concern entered into individually to cast away all our abominations and our detestable things; those things which the Lord does by his pure spirit show unto us to be evil, and contrary to his holy will. May each one of us be willing to enter into a close examination of our own houses, and see whether there may not yet be found remaining some things about us which the pure witness for Truth is against.

I have been much interested with some recent communications in "The Friend," concerning the "taking of likenesses," and I much desire that all who feel themselves called upon to bear testimony against this, as well as every other departure, may be preserved under a feeling of tenderness and love, and in a due sense of the

weakness of human nature; and I am not about to assert that it may not be allowable in the Divine sight under any circumstances, to have the likeness of a dear relative taken; but I believe it is a matter that every one had need to look very narrowly to. We all know, that at best, the likeness of the dearest friend or relative we have on earth, however correctly taken it may be, is but a lifeless form, and if we might only be favoured to feel the precious and comforting evidence that their memorial is with the righteous, and that they have, through mercy and redeeming love, been prepared to enter into their everlasting rest; is it not enough? and ought we not to be satisfied with this? seeing that these frail bodies are destined to moulder in the dust. And let us be concerned to deny ourselves, and to take up our daily cross and follow Him who was meek and lowly; who will, without doubt, (as we are thus concerned,) "prepare a place for us," also, in his kingdom. Let us all look abroad throughout the land, and take a view of the sufferings that many of our fellow-beings are at this time undergoing from want of sufficient food and clothing; and I think it would be well for every one of us to query within our own breasts, whether the money we are about to expend for getting a likeness taken had not better be applied for the relief of these; and peradventure by so doing, we might be the means under the Divine hand, of saving the life of a fellow-being "for whom Christ died." I think this is a matter that ought to claim our most serious consideration, seeing that we are only as stewards of the manifold gifts and blessings of an all-bountiful Creator. And the apostle enjoins that "whether ye eat or drink, or whatsoever ye do, do all to the glory of God;" and I would ask whether those who are employed in the art above alluded to, are glorifying and serving the Lord in that way he requires of them. My mind is impressed with a belief that the answer to these would be that His will is they should be employed at something more substantially useful to mankind than this. We are each one of us accountable to our Creator for the manner in which we employ our time, and the talents and means which he hath committed to our trust, and I believe it is contrary to his holy will, for us to trifle them away upon those things which are only calculated to please the eye and gratify a vain mind.

Our time, at the longest, is but short, and every day of our life that passes is bringing us nearer unto the place appointed for all living. Oh then, that we might all be concerned "so to number our days that we may apply our hearts unto wisdom," so that when done with time, we may, through mercy and redeeming love, be admitted at last into that rest which is prepared for the people of God. It is a fearful thing to be found trifling with the tender visitations of his love, and to turn a deaf ear to his calls to repentance, for none of us know how long the day of his mercy may be extended unto us; for although "his mercy is very great," yet the Lord himself hath declared that "my Spirit shall not always strive with man, for that he also is flesh." I have often been pained at seeing in the houses of Friends, the pictures of those who have been engaged as prominent officers in the late bloody struggle that our beloved country has been engaged in, and although I am willing to admit that most of them have been acting from a love for their government, and as believing it to be their duty to stand for the support of the Union; yet I believe as any are brought under the peaceable spirit of the Prince of peace, they will see that all wars and fightings proceed from an evil

root, and therefore, those cannot feel like giving encouragement in any way to war; and I believe we are not bearing a *faithful* testimony in this matter, when we place them in prominent places in our houses, and before our beloved children. Ought not every Friend to take these subjects into consideration?

Ohio, First month, 1867.

**Occupation for Children.**—The habits of children prove that occupation is of necessity with most of them. They live to be busy, even about nothing—still more so to be usefully employed. With some children it is a strongly-developed physical necessity, and, if not turned to good account, will be productive of positive evil, thus verifying the old adage that "Idleness is the mother of mischief." Children should be encouraged, or, if indolently disinclined to it, should be disciplined into performing for themselves every little office relative to the toilet which they are capable of performing. They should also keep their own clothes and other possessions in neat order, and fetch for themselves whatever they want; in short, they should learn to be as independent of the services of others as possible, fitting them alike to make a good use of prosperity, and to meet with fortitude any reverse of fortune that may befall them. I know of no rank, however exalted, in which such a system would not prove beneficial.—*Hints on the Formation of Character.*

For "The Friend."

#### Jacob's Vision—Christ the Ladder.

It is not often that we find the truths of the Gospel so evenly balanced, as in the following beautiful illustration from the pen of Henry Melville. His subject is Jacob's vision and vow; and he has previously compared the ladder of the vision to the work of the Mediator, through which the lost communion may be renewed, and man again "have access to the Father," and has shown how the union of the divine and human nature in Christ, found an accurate emblem in this ladder—both resting on the ground and reaching unto the sky—and he then proceeds to unfold the practical lesson which it teaches:

"However we would avoid the straining a type, we own that the representation of Christ under the figure of a ladder, appears to us to include the most exact references to the appointed mode of salvation. How do I look to be saved? By clinging to Christ. How do I expect to ascend up to heaven? By mounting step by step, the whole height of Christ's work, so that He is made unto me of God, 'wisdom, and righteousness, and sanctification, and redemption.' It is no easy thing, the gaining eternal life through the finished work of the Mediator. It is a vast deal more than the sitting with the prophet in his ear, or the being borne aloft without effort to an incorruptible inheritance. 'The kingdom of heaven suffereth violence, and the violent take it by force.' There must be, if we may thus express it, a holding fast to Christ, and a climbing up by Christ; to look back is to grow dizzy, to let go is to perish. And that we are to mount by the Mediator, and, all the while, to keep hold on the Mediator; that we are, in short, to ascend by successive stages, stretching the hand to one line after another in the work of the Redeemer, and planting the foot on one step after another in the covenant made with us and Christ—what can more aptly exhibit this, than the exhibiting Christ as a ladder set upon the earth, that men may scale the heavens? The necessity of our own striving, and yet the uselessness of that striving, if not exerted in the right manner; the impos-

bility of our entering heaven except through Christ, and the equal impossibility of our entering it without effort and toil; the fearful peril of our relaxing for an instant our spiritual vigilance and earnestness, seeing that we hang, as it were, between earth and heaven, and may be thrown by a moment's carelessness headlong to the ground; the completeness and singleness of the salvation which is in Jesus, so that, if we adhere to it, it is sufficient, but there are no roads that meet in it or branch off from it—were a single inch, and you have no footing, but must be hopelessly precipitated—all these particulars seem indicated under the image of a ladder, and could not perhaps have been equally marked, had some other emblem been given of the connecting of earth and heaven by the Mediator, Christ. And now, as I stand upon earth, the child of a fallen, and yet redeemed race, and examine how I may escape the heritage of shame which is naturally my portion, and soar to that sky which woos me by its brightness; oh, I read of 'entering into the holiest by the blood of Jesus,' and of 'laying hold upon the hope set before us,' and of following on to know the Lord, and of being 'raised up and being made to sit together in heavenly places in Christ,' expressions which prove to me, that if I would reach heaven, it must be through fastening myself to the Mediator, and yet straining every nerve to leave the world behind; leaning incessantly upon Christ, and yet labouring to diminish

by successive steps, my distance from God; being always 'found in Christ,' and yet 'led by the Spirit,' so as to be always on the advance. But when I consider these scriptural combinations of believing and working, trusting in another and labouring for one's self, always having hold on Christ, and always mounting to greater nearness to God, always supported by the same suretyship, and always pressing upward to the same point, I seem to have before me the exact picture of a man, who, with a steady eye, and a firm foot, and a staunch hand, climbs by a ladder some mighty precipice; he could make no way, whatever his strivings, without the ladder, and the ladder is utterly useless without his own strivings. May we not, therefore, contend that, through the vision vouchsafed to the patriarch Jacob, God not only revealed the person and work of the Mediator, but gave information, and that too, in no very equivocal shape, how the 'working out salvation will be combined with the being saved,' 'freely through the redemption that is in Christ,' whenever any of the children of men are raised from earth and elevated to heaven."

In sending the above I would respectfully ask for it favorable attention lest it be laid aside. It has very many times felt to me full of settling wisdom—and so deeply satisfactory are these vital points, that I could but desire it to be generally read; especially as I feel how important it is just now, as it ever is, that the holy standard be not "lowered by leaning" any way.

For "The Friend."

#### Extracts from Letters received by the Friends' Freedmen Association.

E. P. H., one who was convinced of the truth of Friends' principles, and joined our Society during the late war, writing from Salisbury, North Carolina, under date 12th mo. 24th, says, in reference to the Freedmen:

"Oh! how pressing is the need for missionaries and teachers,—for friends, guardians and counsellors, among the poor freedmen of this section, at the present juncture, to instil into their minds the beauty and usefulness of habits of providence for the future, economy and care!"

"The corn crop has just been gathered, and they have been put in possession of their share, the result of the whole year's hard toil—the little all—their sole dependence for support through the long cold winter. But what are they doing with it? Most of them are literally squandering it away at the village and way-side stores for red-top boots, fancy shawls, bonnets and head-dresses, candy and confectionaries by the dollar worth, and a hundred other trinkets and notions and many a one carries in his pockets huge feet of ardent spirits! On the other hand it is few articles of prime necessity and comfort for they seem disposed to purchase; so completely carried away are their simple, enthusiastic natures by the tempting display of frieries with which the shelves of the different shops are, this season, more than usually crowded.

"I have seen them come into these places with ten, fifteen or twenty dollars in greenbacks in their hands; they would begin trading by paying for some little notion their eager eyes had just espied; then in response to the clerk's commendations 'Any thing else?' they would buy one article after another, mainly as a precious fancy might happen to dictate, until the money was all gone; and perhaps, before they were half-way home, they sorely regretted to greater part of their bargains.

"How sorrowfully have I beheld, time after time, such scenes as these—how have I looked on and pitied, yet, almost wept, and whenever could, offered the gentle word of remonstrance. Opportunity has been graciously afforded me, two or three instances, of duly warning them, for they made their sales to be very in expenditure, and of making out lists of their actual need and of assisting them in the selection of the goods.

"Now all this is very naturally to be expected under the circumstances; and it is in no spirit of censure towards the poor colored people, that I have made mention of these, their failings, their duties to themselves. The fault does not at their door, of course; but it is simply attributable to the influence of that system of perversity and iniquity under which they were born a breed—that monstrous wrong which deprived the generation after generation, of intellectual and moral culture—that mould of besotted ignorance in which their former masters cast and held them—that disgrace of America—*Slavery!*

"What wonder if they are deficient in prudence, or in the knowledge 'how to lay up for rainy day?' Have they ever before known their responsibilities of life? Have they had an existence for which they could love to care, deprived as they were of all liberty, light, and pride of social position. Is it possible for them to know, who have never been instructed?

"My dear friend, our duty is plain. We must educate them. We must throw aside all prejudices, and put our hands to the work; or else accountability for neglect and remissness may be awful! Each succeeding day's experience at a mountain's weight to my conviction that thousands should enlist in this work, where now there are only tens or twenties. Stand upon the work of Zion, thou minister esteemed, and cry with loud voice to thy brethren in Christ, of whatever name or nation, who are at all fitted for the task for the sake of mercy, justice and humanity come among us, without further delay!"

In a letter from Danville, (1st mo. 3d, 1867) E. C. D. thus describes the Freedmen's celebration of the anniversary of their Emancipation New Year's Day:

"This, of all days, is to be remembered by

bedmen here, and should forever be celebrated there every where.

‘About nine in the morning, the children, nearly two hundred and fifty in number, gathered, mindful of the snow on the ground and their clothing. They were seated at one end of a school-room leaving the body of the house for societies, ‘True Friends of Charity,’ ‘Benevolent’ and ‘Mechanics,’ who arrived about twelve o’clock, looking beautifully and in good order, with many others, filled the house to overflowing. We had the loan of a large flag from Major Johnson—this we had festooned so that the societies had to pass through under it in going their seats. As they came in with their ferret banners and badges, it was a pretty and interesting sight. On one banner was inscribed, ‘In earth peace, good will towards men,’ on another, ‘Do unto others as ye would have them to do to you,’ on a third, ‘Obedience to the laws,’ Exercises opened with a prayer by a colored man, the children bowing their heads in an orderly manner.

‘The only whites present beside ourselves were Major J. and wife, and Col. C. The latter delivered an admirable speech—assured the coloured people that he was their friend and would see and aid in all his power to give them justice—he engaged them to come to him if they needed counsel or help in any way, promising to sustain them to the best of his ability in what was right, and that they must not expect him to justify them when doing wrong. He spoke of the importance of getting ‘honesty’ and ‘industry,’ two words on of the scholars’ banners.

‘Three of our girls spoke pieces selected for the occasion, two of them did honour to themselves. The children sang several pieces, one of them Whittier’s little poem for the ‘Free children,’ another, ‘Be true to the flag,’ which was well encouraged—after this three cheers for the Stars and Stripes were given, and many speeches were made by colored men. Scott, their colored sister, spoke well.

‘About three o’clock in the afternoon, after the children were quite tired out, the procession moved. Col. C. assisted us in getting the children in line, two by two. They marched between ‘societies,’ through Main street and back to the school house, where they disbanded about 4 o’clock.

‘One tall, fine looking, real black boy, bore a name with ‘Freedmen’s School, organized October 10th, 1865,’ inscribed upon it. Another was ‘The Mind the Master,’ another ‘Liberty,’ beneath a beautiful star in ‘red, white and blue.’ One of the boys carried a small flag, was the first time one had been carried through the streets of Danville since the sixth corps came on the surrender of Lee, so I trembled a little, fearing some of the rowdy whites might pelt the black boys with snow balls or something harder and colder, but they were not unduly at all, only red at, as they passed soberly along. The whites indeed are afraid of stirring up the blacks, and were careful to do nothing to provoke any feeling, and all passed off well, the children giving themselves credit.’

From Yorktown, J. H. Vining writes, 1st mo., 1867:

‘We have had severe weather here for the last two weeks. Thermometer ranging about 20° at night, and 25° during the day. The snow is from ten to twelve inches deep. There is much suffering in the camps. I have spent two days in adding and distributing wood among the poor and destitute. I found some, at noon, on grounds covered with snow, without fires, the mother

in bed with her children, to keep from freezing. R. W. S. placed \$30, sent here for the purpose, in my hands, to supply wood to the suffering. Every where I found destitution. They generally exclaimed, ‘I knowed God would send me some wood before I froze.’ ‘He hears de widows when dey cry to Him,’ &c. A great number of children we found barefoot, on floors covered with snow, their cabins being so open as to admit it freely. The three cases of shoes now on the way to Yorktown, will find two or three bare feet to one shoe.’

### Obedience of Faith.

Before the little child can fully understand the love and kindness of its parents,—before it can walk alone, or serve them in any way, it must be taught obedience: first, what it must not do, and then gradually, as its strength and reason unfold, what it must do to please them. Very often it must be taught obedience by the things which it suffers; and sometimes, in the loving wisdom of its parents, by the sweetness of rewards. At all events, obedience must be taught and must be learned, or authority and submission will not meet each other, nor true harmony pervade the household; and even love, through lack of training, would often fail in doing the parent’s will, mistaking time, or place, or way.

When we look at these considerations as natural, how great is the parent’s responsibility as teacher: when we regard them spiritually, knowing ‘our Father’ is all wise, and kind and faithful, how solemn and yet how favored is our position as learners. ‘Learning obedience.’ Learning of Him who teacheth as never man taught, and who said, ‘I will guide thee with mine eye!’ How unwervingly must our eye be fixed upon His, to see that guiding! How must our spirits yield to His Spirit, to be ready to obey its signs!

How we have to learn by what we suffer,—grieving that in our weakness we have grieved Him; wounding, that we have wounded Him,—that any opening of His grace closed before we entered. ‘Learning’ indeed it is! in patience, through watchfulness, and suffering, and the great discouragement of seeming to make no progress. And one of our greatest hindrances is, questioning the methods our Heavenly Father takes to teach us.—His manifest providences and His inward spiritual discipline; instead of accepting both in childlike simplicity, as from His will direct, and working together for good. The child that doubts his parent, will hesitate in doing his bidding; stopping first to reason and contrive; and any suffering is a blessing which lays low and kills out this propensity, and brings us to feel habitually, ‘Thy will, not mine, be done.’

Oh the freeness of the love of God in Jesus Christ our Lord! We need not shrink at the thought ‘we have nothing to draw with and the will is deep,’—for the water that He giveth shall be in him that drinketh ‘a well of water springing up to everlasting life.’ He saith, indeed, unto us still, ‘Give me to drink,’ but if we do know Him, who He is, we will ask of Him what He asks of us, and though our own power may utterly fail, His power is present and knows no limit.

It is written, ‘Thy God hath commanded thy strength;’ and while, through obedience, our strength is yielded unto Him, may it not be said, His strength is made ours by faith! These two great powers of the gospel day, faith and obedience, live and grow together; neither can live or die alone. Obedience, to avail anything, must be the ‘obedience of faith.’ When Peter cried,

‘Lord, if it be thou, bid me come unto thee on the water,’ he received the answer, ‘Come.’ But even while he obeyed, his faith failed when he saw the boisterous waves, and he began to sink. Obedience without faith could not uphold him; but the faith which was so weak to trust, could still pray, and his cry, ‘Lord, save me!’ was heard, and immediately Jesus stretched forth his hand and caught him, and said unto him, ‘Oh thou of little faith, wherefore didst thou doubt?’ And while we may understand that the Lord Jesus was about to show forth His power, through Peter, enabling him by faith to walk upon the waves, yet in quick compassion he displayed instead, His mercy and forgiveness, and ‘saving strength.’ Oh how often the poor disciples, who would go unto their Lord upon the sea, even when it seems tossed with waves, sink in fear, when they should walk in faith; but the same tender compassion reacheth forth in their extremity, at ‘the voice of their cry.’ Well may they who were in the ships, have come and worshiped Him, saying, ‘Of a truth thou art the Son of God.’

First mo. 1st, 1867.

Putting off.—It was my lot, said a shipmaster, to fall in with that ill-fated steamer the Central America. Night was closing in, the sea rolling high, but I hailed the crippled steamer, and asked if they needed help.

‘I am in a sinking condition,’ said Captain Herndon.

‘Had you not better send your passengers on board directly?’ I asked.

‘Will you not lay by me till morning?’ asked the captain.

‘I will try,’ I said; ‘but had you not better send your passengers on board now?’

‘Lay by me till morning,’ was the answer.

I tried to; but in one hour and a half after, the steamer and its living freight went down, and almost every one found a grave in the great deep. But for this putting off, all might have been saved.

Another wreck and another warning on the shifting and bottomless sands of Delay. As there are times and seasons in life when safety or success all depend upon a prompt recognition of ‘now or never;’ so in the soul’s history, now is the accepted time, now is the day of salvation, when Christ is distinctly offered to us for our acceptance or rejection. Every thing is imperilled by delay. There is not a moment to spare. Adverse currents and bewildering judgments may bear us away, and the opportunity be for ever lost of laying hold on the great anchor of hope for a lost and dying world.—*The Family Christian Almanac.*

Cæsar in warlike matters, minded more what was to conquer than what was conquered; what was to gain than what was gained; so does a humble soul mind more what he should be, than what he is; what is to be done, than what is already accomplished.

## THE FRIEND.

FIRST MONTH 19, 1867.

*A Brief Sketch of the Schools for Black People and their Descendants, established by the Religious Society of Friends [in Philadelphia,] in 1770.*

Under the above title the committee having charge of these schools—now located upon Raspberry street, in this city—have authorized the

publication of a concise account of their origin and history, with a view of spreading information among, and maintaining the interest of Friends in relation to them. Founded nearly a century ago, at a time when the Society was labouring to clear itself of the iniquitous practice of slave-holding; and since sustained by the bequests and contributions of our members, these schools exist as a record of the obligation which was at that time felt by Friends of this city to improve the condition of the coloured people around them, under the oppressive disabilities to which they were then subjected, and as an evidence of the continued concern for the welfare of this portion of the community.

The information which it contains will no doubt be new to many of our younger members, and interesting to Friends generally.

Copies have been left at Friends' Book Store, No. 304 Arch street, where they may be had upon application.

We have received the first number of the "Practical Farmer of the middle States, and Rural Advertiser," published monthly by Paschall Morris, 1120 Market street, Philadelphia; price, one dollar per annum, payable in advance.

This periodical is sixteen pages, large quarto, and contains many articles, both original and selected, conveying much practical and interesting information, especially valuable to Farmers and Horticulturists. The Editor, in his introductory remarks, says: "Having had for many years practical experience in rearing live stock, in cultivating the soil, in the nursery business, in market-gardening, seed-growing, and in the manufacture and sale of agricultural and horticultural implements, it is hoped that all these several departments will receive, from time to time, their due share of attention."

We wish our friend and fellow townsman may meet with success in this enterprise.

#### SUMMARY OF EVENTS.

**FOREIGN.**—The London *Times* of the 12th, has a long argumentative article in relation to the proposed impeachment of the President of the United States, and says that the scheme looks like a fatal blow at the constitution. A Madrid dispatch of the 12th says, the proffered mediation of the United States in the difference between Spain and Chili, is regarded as almost a certain forerunner of an honorable and permanent peace.

The government of Turkey has called 150,000 men into service to quell the Greek insurrection in the Mediterranean. The London *Globe* says, the Eastern question has become so pressing, that it demands the immediate attention of the European Powers. It is the opinion of the *Globe* that a general conference of the leading Powers will be proposed on the subject. Advice from the East report that an insurrection is on the point of breaking out in Bosnia. It is reported that a large number of reinforcements for the insurgents have been landed in Candia from Greek ships, and that the Cretans are receiving fresh supplies of arms, &c. A ministerial crisis has taken place at Constantinople, and the Turkish ambassador has been recalled from Athens. The reported improvement of the Empress Carlotta, both physically and mentally, is fully confirmed.

It is stated that the Council of State has determined to oppose the bill proposed for re-organizing the French army.

The London *Times* says, upon good authority, that the British Minister at Washington has been instructed to ascertain whether the United States government will submit the Alabama claims to arbitration, provided that certain points for the arbitration are agreed upon previously.

The election for members of the new German Parliament has been about to take place on the 12th of next month.

Reports from Hong Kong state that the French fleet in the area is about to leave those waters for the winter, without being able to obtain adequate redress from Cochin China.

The Russian government has ordered a general am-

nesty for all offences committed by the newspaper press of the empire.

The Swiss government has under consideration a proposition to prohibit the people of Switzerland from joining the Pope's army. A Madrid dispatch of the 14th states that a revolutionary junta, having its head quarters at the capital, has just issued a strong and stirring address to the people. The difficulty between Italy and Turkey is now being amicably settled.

The Liverpool cotton market was steady at 14½d. for middling uplands. Consols, 90. U. S. 5-20's 76½.

**UNITED STATES.—Congress.**—The House of Representatives has passed the bill regulating suffrage in the District of Columbia, notwithstanding the veto, by a vote of 113 to 38. It is therefore now the law. A bill for an amendment to the constitution abolishing slavery, has also passed the House. It provides that any person who shall sell or participate in the sale of any person, or who shall hold in servitude any person so sold, shall be punishable by an imprisonment not exceeding ten years, and a fine not exceeding \$10,000. This enactment is intended to prevent the sale, under State laws, of negroes who have been convicted of larceny and other offences. The Senate has passed bills for the admission of Nebraska and Colorado, with a proviso that there shall be no denial, in those States, of the elective franchise on account of colour. In both Houses various resolutions have been received and referred to committees. The bill to fix the time for the regular meetings of Congress, has passed both Houses. The act prohibiting the denial of civil and political rights in any of the United States territories on account of colour, passed the Senate with only nine negative votes, pending a resolution suspending the operation of the 24th section of the act of Congress which authorizes the payment of loyal owners of colored volunteers, passed the House by a vote of 107 to 35. The Senate has passed a bill for the erection of penitentiaries in the territories.

**The Constitutional Amendment.**—The Virginia Legislature has passed a resolution by a vote of 100 to 10; New York and Kansas have ratified it, and it has received the sanction of the House of Representatives in Maine and Nevada. Kentucky rejects the amendment.

**Philadelphia.**—Mortality last week, 266. **Immigration.**—A communication from the Bureau of Immigration states that in three-fourths of the past year 286,496 persons arrived in the United States from foreign countries.

**The Supreme Court.**—In the test oath cases before the United States Supreme Court, a majority of the judges are decided that the test oath in Missouri is unconstitutional. It has also decided that Congress has no constitutional power to limit or abridge the pardoning power of the President.

**Miscellaneous.**—Senator Cowan has been appointed Minister to Austria.

The Idaho Legislature has appropriated \$30,000 for the support of the Catholic schools in that territory.

The Georgia Legislature has agreed to continue the suspension of specie payments until April 16th, 1868.

Governor Patton, of Alabama, has returned to Alabama, from a visit to the North. He is still in favor of the adoption of the constitutional amendment.

Complaints from the woods that a portion complain of a lack of snow, and fears are entertained of much injury to the winter wheat, and the operations of the lumbermen, who have been calculating to bring out more logs than ever, are greatly interfered with.

In some instances the lumbermen have withdrawn their workmen from the woods.

The official report shows that in the years 1864-65, \$30,500,000 were expended for the suppression of Indian hostilities.

**Minnesota.**—The Governor, in his message to the Legislature, estimates the present population of the State at 340,000. There are 52,000 children attending school, and he recommends an amendment to the State constitution so as to confer the right of suffrage upon colored persons, and advises the ratification of the amendment to the Federal constitution.

**Internal Revenue.**—The government income from internal revenue sources exclusively, between 7th mo. 187, and 7th mo. 1877, was \$1,187,000,000, or \$11,870,000,000, or \$184. It now seems probable that the actual receipts for the year ending 6th mo. 30th next will considerably exceed the estimates.

**The Freedmen.**—Letters of administration were granted, at Wilmington, N. C., on the 14th inst., to Richard Reid, a white man, for the administration of the estate of a coloured man deceased. This is said to be probably the first instance of the kind which has yet occurred in the South.

The National Equal Rights Convention of coloured men, in session in Washington, has adopted a series of resolutions claiming the right to vote on various occasions.

General Howard and suite are visiting the coloured people of South Carolina.

The coloured people of Delaware are taxed to support schools to which they are not admitted. An attempt is making to organize an association in Wilmington, Delaware, in Baltimore, which has accomplished so much for the education of the coloured people of Maryland.

The old Emigrant Aid Company, of Boston, has sent a trustworthy agent to Florida to report upon the attractions offered by that State to emigrants.

**The Markets, &c.**—The following were the quotations on the 14th inst. in Baltimore, which has accomplished so much for the education of the coloured people of Maryland. The old Emigrant Aid Company, of Boston, has sent a trustworthy agent to Florida to report upon the attractions offered by that State to emigrants.

**The Markets, &c.**—The following were the quotations on the 14th inst. in Baltimore, which has accomplished so much for the education of the coloured people of Maryland. The old Emigrant Aid Company, of Boston, has sent a trustworthy agent to Florida to report upon the attractions offered by that State to emigrants.

**RECEIPTS.**

Received from Jos. Evans, Pa., per Dr. C. E., \$2, Vol. 40; from Anne Pin, Pa., \$2, Vol. 39.

Received from a Friend of Ledyard, N. Y., per Alfred King, \$15, and from Friends of Hoin Monthly Meeting, Eng., £23 15s. for the relief of the Freedmen.

#### GRISCOM ST. SOUP HOUSE,

Between Fourth and Fifth and Spruce and Pine Streets is now open for the delivery of Soup, every day except First-days, between the hours of 11 and 1 o'clock. Bread and meal are also occasionally distributed.

A great number of poor are destitute of means and of employment, and the suffering is consequently severe. We trust respectfully solicit liberal contributions, to enable them to meet the pressing demands upon them.

Money may be sent to THOMAS EVANS, 817 Arch St. or WILLIAM EVANS, Jr., Treasurer, 613 Market St. First month 3d, 1867.

#### NOTICE.

A suitable Friend and his wife are wanted to superintend and manage the farm and family under the care of the Committee for the gradual Civilization and Improvement of the Indian natives at Tusnessassa, Cattaraugus Co., New York. Friends who may feel the merits drawn to the service, will please apply to the following: N. P. Clifton, No. 217 of Second St., Philadelphia; John M. Kaighn, Camden, N. J.

Aaron Sharpless, West Chester, Pa. Richard B. Bailly, Marshalltown, Chester Co., Pa. Joseph Scattergood, 413 Spruce Street, Philadelphia.

#### FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSHUA H. WORTHINGTON, M. D.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

MARRIED, on the 19th of Twelfth month, 1866, Friends' Meeting-house, RANCOCS, RICHARD BRZDY, DEBORAH W., daughter of Joseph Borton, all of Radcocks, N. J.

#### WM. H. PILE, PRINTER,

No. 214 Park street, between Dock and Third.

# THE FRIEND.

A RELIGIOUS AND LITERARY JOURNAL.

VOL. XL.

SEVENTH-DAY, FIRST MONTH 26, 1867.

PUBLISHED WEEKLY.

Two Dollars per annum, payable in advance.

Subscriptions and Payments received

NO. 116 NORTH FOURTH STREET, UP STAIRS,

PHILADELPHIA.

Single Copies, when paid quarterly in advance, five cents.

From the "People's Magazine."

## Natural Sounds.

We sometimes speak of "perfect silence," "profound silence," and we liken the suddenation of noise and clamor to the "stillness of death"—without reflecting on what these terms signify, or whether the thing, or the nothing they represent be at all known to us, familiarly as we such expressions. In truth, silence utter and complete is a very rare thing indeed, and it is cult to say where it is to be found, unless it be in the brain of the deaf mute who has his world side of the "realm of sound." We do not get into the deep gloom of the forest, though it may be the repose of utter solitude; that is a change from one region of sound to another: in summer the leaves lift up their voices, insect millions fill the air with a chorus so during the livelong day, as to be hardly recognizable save by its absence when the night comes—to say nothing of the songs of birds which in time to time burst on the stillness; and in evening, though "horror wide extends her late domain," it is not a horror of utter silence: dead leaves are heard to rustle, the bare bushes to moan and gnash their teeth, while the thousand minute crepitations tell of the ages going on upon the surfaces of things ad through the contraction of bark and fibre consequence of the cold. We do not get it out into the midnight solitudes of heath or prairie, or the lonely churchyard. The poet's idea, "stars silent above us—graves silent beneath," is applied to the stars and the graves, but not to pool that reflects the stars or the grass that covers the lips of the grave, both of which will respond to the whisper of the night-wind in whisper of their own—"making night vocal to an ear." For our own part we are free to confess that notwithstanding some attempts in that direction, we have never been able to get into actual presence of silence perfect and absolute.

Being that such is the case, what a wonderfully and beneficent arrangement of Providence it is that the sounds we hear are what they are, so perfectly fitted to our perceptions as to impart satisfaction and pleasure to us, and that of an engaging kind which for the most part never pall on our senses. This provision is one of the wonders of creation. All the sounds of Nature are made, so to speak, that *we* hear well. When the winds lift up their voices, do they not strike upon our ear like the greetings of old friends, and is

not every note they breathe full of the associations of things foregone and past which it is worth while to have thus recalled? Think of the voice of waters, the leaping of the ocean waves when "the floods clap their hands"—the seaward swirl of the running river as it sings along between the green banks—the glad ripple of wind-ruffled lake or mountain tarn—the shout of the torrent as it leaps along among the lichen-clad boulders—the grand roar of the cataract as it thunders from the steep. How thoroughly do all these sounds tell each its peculiar tale! how freshly do they appeal to the senses every time we hear them, with feelings and suggestions that are ever new and refuse to grow old! Who would wish to change them for sounds, however exquisite, produced by art or man's device? For, please to note, no sounds of voice or instrument, artificially produced, will wear half as well, or a hundredth part as well as do the accompaniments to which Nature has set her own melodies. The poet tells us of the brook "which all night long singeth a quiet tune," and the figure is pretty and touching enough. But how happy for us that it is only a figure! Just imagine it to be a fact! Suppose yourself living in a cottage on the banks of a brook that all night long was singing, for instance, "We're all a-noddin';" that's a quiet tune—or "The Last Rose of Summer;" that's a tune quite still. How long do you think you could stand it? You know very well that you could not sit out a twelve-hour concert at St. James's Hall, even were all the talent of Europe assembled to charm you: what would you do with a single tune grinding eternally in your ears?

No; with all due regard to poets and musicians, Nature never plays tunes; if she did she would only worry and weary us, whereas her gentle design is to soothe us to rest or to invigorate us for work. As already stated, her sounds are everywhere; everything animate or inanimate has a voice, and things we call dead speak to one another. "The cataracts blow their trumpets from the steep;" the sedges in the pool talk and gossip together in the quiet evening hours; deep cello, unto deep, and amidst the mad and yeasty waves "we hear old Triton wail his wretched horn." Her organ extends through a tremendous scale, from the topmost treble of the shrilly gnat to the deep diapason of the bellowing thunder; and she has the wonderful knack of making sweet harmonies out of the sourest materials, softening them by distance or modifying them by artful combinations. Then she arranges her concerts with the kindest regard for her auditors, putting the roughest performers in the background, and the sweetest and best in the front. Thus the boom of the bitter, the plaint of the stork, the hoarse cry of the carrion crow, and the caw of the ruck, reach us from afar, shorn by distance of their harshness; while the thrush and the blackbird pipe joyously in our orchards, the linnet and goldfinch build in our gardens, the nightgale sends his song into our open windows as we lie and listen to him by starlight, and the merry cricket chirps in our chimney-corners till the whole house rings with his jollity.

It is no great cause for wonder that all the sounds of Nature have not yet been traced to their source. If any one by way of experiment will betake himself to some lonely spot far from any human dwelling—say in the afternoon of a summer's day—and try to account for all the sounds he hears, even in a spot where he can hear the fewest, he may chance to find himself puzzled beyond his utmost skill. Travellers have been thus puzzled in a most inexplicable manner, and have tried in vain, with all their science and all their knowledge of natural phenomena, to solve the difficulty the strange sounds presented. There is a sound familiar to dwellers on the sea-coast, which is occasionally heard towards nightfall and for an hour after sunset, and which fishermen call the "sough." It is neither the noise of the wind nor of the waves, nor of the breakers on the shore—at least it seems conclusively not to be either of these, because all three of these can be heard and distinctly recognized simultaneously with the meaning of the "sough." We have ourselves heard it several times on certain parts of the coast, and have also listened for it at the same season of the year on other parts, and failed to detect it. Seafaring men seem to care nothing about it, and it is vain to ask them for any explanation. It does not seem to come from the offing, but rather from the windings of the shore, and from the quarter from which the wind is blowing. What can it be? Perhaps the following story, upon which we chanced the other day in a volume of extracts, may throw some light on the subject. One fine Sunday morning an American clipper was making all sail for port, running with a side wind on a track parallel with a part of the coast then a hundred miles distant. The men were assembled on deck enjoying the beautiful weather, when suddenly they all started and looked at each other with amazement as the sound of church-going bells burst upon the ear. For several minutes the familiar peal continued, louder or fainter as the vessel rose or fell on the bounding billows, while the crew stood motionless as if spell-bound. The skipper, a thoughtful man, after listening for a time with the rest, went to the helm and slowly altered the vessel's course. As she rounded a little seaward, the sweet sounds stopped as suddenly as they had come: he then put her back on the old tack, when the bells began to peal again, he repeating the experiment several times to satisfy himself of the facts of the case. The reader has probably guessed what the facts were. Although the village where the bells were ringing was a hundred miles off, and under ordinary circumstances such sounds would never travel so great a distance, yet under the circumstances then existing the fact was clear enough that they did so travel. The wind which bore the sounds blew in a stiff breeze off the land; the large concavity of the broad beelling mainsail caught the musical vibrations, and, by reflecting them back as it were in a focus upon the deck, rendered them audible. This was the skipper's explanation of the phenomenon, the truth of which he had tested by altering the vessel's course. Now here, it appears to us, is a key to the mys-

terious sounds of the "sough" as it moans along the autumnal shore at nightfall. We have only to imagine, in place of the village church bells, a storm or gale of wind raging at the distance of some hundred or more miles, much too far off to be heard under ordinary circumstances, and, in place of the belling mainsail, such a conformation of the coast and circling cliffs as shall serve the same purpose, by catching and concentrating the exhausted undulations of sound, and thus rendering them audible. We believe that this may be the right solution of the mystery; for at any rate it points to a reason why the "sough" is frequently heard on some parts of our coast and never on other parts.

Concerning the strange and inexplicable sounds heard by travellers in various parts of the world, there have been from time to time many interesting reports. Among the most curious of these are perhaps the accounts met with in the narratives of Australian explorers. M. Wood is not the only witness. Stuart mentions that one morning, when in the interior, among the red sandhills of the inhospitable desert, he was startled by hearing a loud, clear, reverberating explosion, like the booming of artillery. These noises, which have been frequently observed in sandy districts, seem to come with an explosive echo from the sandhills, and reverberate for a considerable time amongst the surrounding mountains. Sounds of a like kind have alarmed most of the Australian explorers. Captain Stuart, who followed the course of the Darling River, in 1828, describes an extraordinary sound which about three in the afternoon, on a day in the month of February of that year, astonished himself and party. "The day," he says, "had been remarkably fine, not a cloud was there in the heavens, nor a breath of air to be felt. On a sudden we heard what seemed to be the report of a gun fired at the distance of between five and six miles. It was not the hollow sound of an earthly explosion, or the sharp, cracking noise of falling timber, but in every way resembled a discharge of a heavy piece of ordnance. On this all the men agreed, but no one was certain whence the sound proceeded. Both M. Hume and myself, however, thought it came from the north-west. I immediately sent one of the men up a tree, but he could observe nothing unusual. The country around him appeared to be equally flat on all sides, and to be thickly wooded. Whatever occasioned the report, it made a strong impression on all of us, and to this day the singularity of such a sound in such a situation is a matter of mystery to me."

If travellers are alarmed abroad by sounds they cannot explain, dwellers at home are no less alarmed at times by sounds perfectly natural in themselves, but which are often made formidable by fear and superstitious dread. We have known a series of rueful groans which made a whole family miserable for a month to proceed from the vibration of a strip of leather and baize nailed on a door to keep the draught away. Wailing and sobbing noises are often heard in old houses from defects which a few nails and a glue pot would remedy. New houses, fresh from the hands of the builder, will indulge in the strangest noises for months together; and if they happen to be full of new furniture there is no telling when one could reckon on domestic quiet. As you lie in bed you hear a crack here, a bang there, creaking above, and a groaning below; and if you choose you may shiver with apprehension at each fresh demonstration; but you may be wiser if you call to mind that all woodwork when new is liable to shrink, and that the shrinking will often announce itself by a detonating noise. You don't hear such

noises in the day because they are slight by their noises, but the silence of night gives them a startling effect. It is far otherwise with sounds to which we are accustomed, but of these we do not here speak.

### Some Observations on Christ's Sermon on the Mount.

(Concluded from page 162.)

"Not every one that saith unto me, Lord! Lord! shall enter into the kingdom of heaven; but he that doeth the will of my Father who is in heaven."

It is not our profession that will give us admittance into heaven, or a name of religion, or religious performances, if we love sin and unrighteousness; nor is it our praying, preaching, hearing, reading, or discoursing of, or arguing for Christ, if we do the works of Satan; for there are many who may go further than this, and yet not have admittance into the kingdom of God and our blessed Lord Jesus, as is plainly manifest in the next verse.

"Many will say unto me in that day, Lord, Lord, have we not prophesied in thy name, and in thy name cast out devils, and in thy name have done many wonderful works."

"And then I will profess to them, I know ye not; depart from me, ye workers of iniquity."

So that professing Christ's own name, and professing therein, without working the works of God, will not do. Nay, though they may cast out devils, which indeed is a great work.

Christ speaks about the strong man armed, who kept the house till a stronger than he came; who, when he came, spoiled his goods and dispossessed him, but coming again, found the house, or heart, swept and garnished: swept from many immoralities, and garnished with self-righteousness and carnal security; and the man off his watch and cast out at home with Christ, who is stronger than Satan: he then re-enters, and seven worse spirits with him. So that we had need to be on our watch, and keep near to Christ, lest after all our experience and wondrous works, our last state be worse than our beginning, and we be shut out of the kingdom in the end. For these say, that they have done many wonderful works in Christ's name: so that we may work miraculous things, and be sensible of wonderful power and strength from Christ; and yet, without persevering in the way of holiness and self-denial, may fall short of heaven. Wherefore it is of dangerous consequence to live in sin and iniquity; or to lean towards it, so as to plead for it, or believe we can live without it while in this world. For if we live and die in it, we may justly, according to the above doctrine of Christ, expect that he will say unto us in the great day, 'Depart from me, ye that work iniquity.'

"Therefore, whosoever heareth these sayings of mine, and doeth them, I will liken him unto a wise man who built his house upon a rock."

"And the rains descended, and the floods came, and the winds blew, and beat upon that house, and it fell not; for it was founded upon a rock."

Oh! what excellent sayings and doctrine, what holy precepts has Christ here recommended to the professors of his name, and to them who believe in him and the Almighty Father and Maker of heaven and earth. Surely we are greatly beholden to our Lord Jesus Christ for those divine sayings. But to commend them or to read them, or hear them only, is doing but little; the keeping and the doing of them is the main thing, the thing that is needful, and to press the practice of them, Jesus has made this apt comparison.

First; "He who hears them, and doeth them,

I will liken him unto a wise man." And indeed it is great wisdom to keep them, that is, to practise them, and as great folly to live contrary to them and plead against them.

Second; "Who built his house upon a rock." This rock is Christ, the Rock of ages, and his Holy Spirit, or the Holy Ghost, as Christ said to Peter when Christ was revealed to him: "Flesh and blood hath not revealed this unto thee, but my Father who is in heaven;" "Thou art Peter," of a stone or rock: thou art a man, though thy name signifies a rock, and as thy name signifies a rock, so "On this rock I will build my church; the gates of hell cannot prevail against it." Peter was one who had received the Holy Ghost, or Spirit, for which every true believer ought to pray continually, until he receive it; through the help of which he may, without doubt, keep those holy sayings. For of ourselves, without it, we cannot do any real good, either in speaking, thinking, or acting.

Third; "And the rain descended, and the floods came, and the winds blew, and beat upon that house, and it fell not; because it was founded upon a rock."

If rain from above be poured out in wrath on man, for sin and iniquity, and floods of persecution, or the windy words of men come upon that house, it will stand; if sickness and death visit and many other storms, that we may meet with in this world, should beat against our building, we being built upon the Father, Son, and Holy Spirit, shall surely stand them all, and live through all, if we hear or read Christ's sayings, and practise the same; we are on the rock, and shall not fall for that reason.

"And every one who heareth these sayings of mine, and doeth them not, shall be likened unto a foolish man, who built his house upon the sand."

"And the rains descended, and the floods came, and the winds blew, and beat upon that house, and it fell; and great was the fall of it."

If we read or hear these sayings, or doctrine of Christ, and do not dwell in the life of it, nor practise the same, it were better we knew it not. For our Saviour saith, "He who knoweth his master's will, and doeth it not, shall be beaten with many stripes." It is great folly to be sensible of Christ's holy will and doctrine, and not to do it: if we profess christianity, and build our profession on Christ, and yet do not observe keep his sayings, the foundation of our building will be very loose and sandy: and when the rains, and floods, and winds, which Christ speaks of, shall descend and beat against this building, it must needs fall, and the higher the building the greater will be the fall of it.

Thus ended the best sermon that ever was preached; in which is set forth the great truth of God and our Lord Jesus Christ, with blessing and rewards to the righteous, and holy believe in him, who put in practice his precepts; a reproof to the disobedient and unfaithful; warnings of the kingdom of heaven to one, and the other, a being shut out of it.

"And it came to pass, when Jesus had said these sayings, that the people were astonished in his doctrine."

"For he taught them as one having authority, and not as the scribes."

They were astonished at his doctrine, and what they might be, for it excelled even the law, it went beyond it, as when he tells them, it was of old time, or in the law, "Thou shalt not kill he taught that we must not be angry without cause. And whereas the law gives liberty to our enemies, he charges us to love them, and p

them, and do good to them; again the law prohibits adultery; Christ prohibits lusts, both in eye and in the heart. And whereas the law commanded to perform their oaths to the Lord, Christ commands not to swear at all. Now those who are not angry, it is not likely should kill; those who love their enemies cannot hate or destroy them; those who have not lusts in their hearts or eyes, cannot commit adultery; and those who never swear, cannot forswear themselves; all which he taught with divine power and authority in above. He was not dry and formal like the rabbis: so likewise his ministers, and the preachers of his gospel, should wait on him, to be endowed with a measure of his divine spirit and holiness, that the hearers might be edified, and the Father, Son, and Spirit, might have the glory, to over all it is worthily forever.

#### Anglar Discovery—A Colony of Jews in the heart of China.

Pekin, China, June, 1868.

The City of Kai-fung-fee, the capital of Honan, famous as an ancient capital of the empire, and a scene of stirring events in the history of China. To the Christian world, however, it poses a deeper interest as the residence of a Jewish colony.

They were discovered by the celebrated Father de Maigret; and early in the seventeenth century full inquiries concerning their usages and manuscripts were made by Jesuit missionaries, who resided in the city. In 1850 a deputation of native Christians was sent among them by the Bishop of Vicenza and the late Dr. Medhurst. Two of the Jews were induced to go to Shanghai, and some of their Hebrew manuscripts obtained; but up to the date of my journey, for more than a century and a half, they had not, so far as we are informed, been visited by any European. It became, therefore, a matter of interest to ascertain their present condition; and, as I remarked in my last number, this was the chief consideration that induced me to make Kai-fung-fee a point in the course of my inland travels. What others may have published I shall not repeat, but concisely possible lay before you a review of own observations.

Arriving in this city on the 17th of February, inquired for the Jewish Synagogue, but getting a satisfactory answer, I went for information to the Mohammedan mosque, of which there are three or thereabouts. I was well received by the *Mufti*, and the advent of the stranger from the West was believed to be a worshipper of the "true God," soon attracted a large concourse of the faithful. At the request of the *Mufti*, holding a New Testament in my hand, I addressed them in relation to the contents of the Holy Book of Moses, whose name he pronounced with great respect as that of the most illustrious of their prophets, Mahomet, of course, excepted.

The Jews he denounced as *Kafirs*, and evinced a very poignant sorrow when he informed me that their synagogue had come to desolation. "It," he assured me, "utterly demolished, and the people who had worshipped there scattered abroad." "Then," said I, "I will go and see spots on which it stood," and directing the drivers of my sedan to proceed to the place indicated by the *Mufti*, I passed through streets crowded with curious spectators until I came to an open square, in the centre of which there stood a lofty stone. On one side was an inscription commemorating the erection of the synagogue in the reign of the Sung dynasty, A. D. 1183; and referring the first arrival of the Jews in China to the dynasty of Hon, B. C. 200—A. D. 200.

On the other side was a record of its rebuilding in the dynasty of Ming, about 800 years ago, but in addition to these inscriptions; it bore an unwritten record of decay and ruin; it was inscribed with *Ishabod*, "The glory is departed."

Standing on the pedestal, and resting my right hand on the head of that stone which was to be a silent witness of the truth I was about to utter, I explained to the congregated multitude my reasons for "taking pleasure in the stones of Israel, and favouring the dust thereof." I then inquired if there were any of the Jews among my hearers. "I am one," responded a young man, whose face corroborated his assertion, and then another and another stepped forward, until I saw before me representatives of six of the seven families into which the colony is now divided.

There, on this melancholy spot, where the very foundations of the synagogue had been torn from the ground, and there no longer remained one stone upon another, they confessed to me with shame and grief that their "holy and beautiful house" had been demolished by their own hands. It had long been in a ruinous condition—they had no money to repair the breaches of the sanctuary. They had lost all knowledge of the sacred tongue, the traditions of the fathers were no longer handed down, and their ritual worship had ceased to be observed. In this state of things they had yielded to the pressure of necessity, and disposed of the timbers and stones of that venerable edifice to obtain relief for their bodily wants.

In the evening some of them came to my lodgings, bringing for my inspection a roll of the law; and the next day, the Christian Sabbath, they repeated their visit, listening attentively to all I had to say concerning the relations of the Law of Moses to the Gospel of Christ. They were very ignorant, but answered, as far as they were able, my inquiries in regard to their past history and present state. Two of them appeared in official costume, one wearing a gilt, and the other a crystal ball on the top of his cap; but far from sustaining the general character of their people for thrift, their number among them none that are rich, and few who are not pinched by poverty. Some, indeed, true to their hereditary instincts, are employed in a small way in banking establishments—the first man I saw was a money-changer, others keep fruit-stores and cake-shops, drive a business in old clothes, or pursue various handicrafts, while a few find employment in military service.

The prevalence of rebellion in the Central Provinces for the last thirteen years has told sadly on the prosperity of Kai-fung-fee; and the Jews have not unlikely, owing to the nature of their occupations, been the greatest sufferers. Their number, they estimate, though not very exactly, at from two to four hundred. They are unable to trace their tribal pedigree, keep no registers, and never, on any occasion, assemble together as one congregation.

Until recently they had a common centre in this venerated synagogue, though their liturgical service had long been discontinued. Now, however, the congregation seems to be following the fate of their building. No bond of union remains, and they are in danger of being speedily absorbed by Mohammedanism or heathenism. One of them, to my knowledge, has become a priest of Buddha, taking, not very consistently, for his sacerdotal name, the characters *Pea tan*, which signify "One who is rooted and grounded in the Truth." The large tablet that once adorned the entrance of the synagogue, bearing on it the name of Israel, has been appropriated by a Mohammedan mosque, and some efforts have been made to draw the

people over to the faith of Mahomet, from which their practices differ so little that their heathen neighbours have never been able to distinguish them from Moslems.

One of my visitors was a son of the last of their rabbis, who, some thirty or forty years ago, died in the province of Kansuh. With him perished the knowledge of the sacred tongue; and though they still preserve several copies of the Jewish Scriptures, there is not a man among them who can read a word of Hebrew. Not long ago it was seriously proposed to expose their parchments to public view in the market-place, in hopes they might attract the attention of some wandering Jew, who would be able to restore to them the language of their fathers. Since the cessation of their ritual worship their children all grow up without the seal of the covenant. The young generation are uncircumcised, and, as might be expected, they no longer take pains to keep their blood pure from intermixture with Gentiles. One of them confessed to me that his wife was a heathen. They remember the names of the Feast of Tabernacles, the Feast of Unleavened Bread, and a few other ceremonial rites which were practised by a former generation, but all such usages are now neglected, and the next half century is not unlikely to put a period to their existence as a distinct people.

On the margin of the Poyang Lake stands a lofty rock, so peculiar and so solitary that it is known by the name of the Little Orphan. Its kindred rocks are all on the other side of the lake, whence it seems to have been torn away by some violent convulsion, and planted immovably in the bosom of the waters. Such, to me, appeared that fragment of the Israelitish nation. A rock rent from the sides of Mount Zion by some great national catastrophe, and projected into this central plain of China, it stands there an "orphan" colony, sublime in its antiquity and solitude. But it is now on the verge of being swallowed up by the surrounding flood, and the spectacle is a mournful one. The Jews themselves are deeply conscious of their sad situation, and the shadow of an inevitable destiny seems to be resting upon them.

Poor, unhappy people! As they inquired about the destruction of the Holy City, and the dispersion of the tribes, and referred to their own decaying condition, what could I do to comfort them but point to Him who is the consolation of Israel? True, I told them, the city of their fathers was broken down, and their people scattered and peeled, but the straw was not trodden under foot until it had yielded precious seed for disseminating in other fields. The dykes had not been broken down until the time had come for pouring their fertilizing waters over the face of the earth. Christian civilization, with all its grand results, had sprung from a Jewish root, and the promise to Abraham been already fulfilled, that "in his seed all the nations of the earth should be blessed."—N. Y. Times.

3d mo. 1775. Submit we must; our lives, the lives of all we hold dear to us, and every comfort we extract from every thing, are in the hands of Omnipotence and under His control; how awfully should we then walk before Him who is the source of every blessing to His depending children, and who on the other hand (as a certain author most beautifully remarks) can disquiet the soul and vex it in all its faculties. I have been led very lately to ponder a good deal on the uncertainty of our tranquillity, and the necessity of the interposition of that great power, to preserve us alive in every respect. Doubtless, whatever may be our

trials, or from whatever quarter they may come, if we watch steadily unto prayer, if we keep a conscience void of offence, if we look to the Lord for succor, we shall be helped through one difficulty, and one exercise after another, till our measure of suffering is filled up, and our weary spirits are admitted into that holy rest prepared for those who through faith have overcome in this dangerous warfare.—*Richard Shackleton.*

LIGHT OUT OF DARKNESS.

Selected.

Children of God, who pacing slow,  
Your pilgrim path pursue,  
In strength and weakness, joy and woe,  
To God's high calling true—

Why move you thus with lingering tread,  
A doubtful, mournful band,  
Why faintly hangs the drooping head?  
Why fails the feeble hand?

Oh, weak to know a Saviour's power,  
To feel a Father's care;  
A moment's toil, a passing shower,  
Is all the grief ye share.

The Lord of Light, though veiled awhile,  
He hides his noontide ray,  
Shall soon in lovelier beauty smile,  
To gild the closing day;

And, bursting through the dusky shroud,  
That dared his power invest,  
Rise throned in light o'er every cloud,  
And guide you to his rest.

Booster.

Nothing but perfect trust  
And love of Thy perfect will,  
Can raise me out of the dust  
And bid my fears be still.

Even as now my hands,  
So doth my folded will,  
Lie waiting Thy commands,  
Without one anxious thrill.

But as with sudden pain  
My hands unfold and clasp,  
So doth my will start up again,  
And taketh its old firm grasp.

Lord, fix mine eyes upon Thee,  
And fill my heart with Thy love;  
And keep my soul till the shadows flee,  
And the light breaks forth above.

Selected for "The Friend."

Extract from a letter from Anthony Benezet to John Pemberton.

"Philadelphia, 6th mo. 29th, 1793.

"An instance which not long since occurred, caused me to make some painful reflections upon this most weighty subject of accumulating wealth—which I find my mind inclined to communicate to thee, my dear friend; perhaps thou mayest make a profitable use of it, in some places where thy lot may be cast (then in England.) A Friend died reported to have left sixty or seventy thousand pounds to a number of children and grandchildren, already so elevated by the fortunes they were possessed of, as to be ready to take wing and fly above Truth, in conformity to the world, its friendships, fashions, &c. This happened in the depth of winter, one of those intense cold days, which we all have felt to be very trying even to those who are best provided with fuel, suitable clothing, &c. As I passed along I observed aged people, and other weakly persons, tottering about the streets or standing in the cold, in pursuit of a few pence towards a scanty subsistence. Many of these, doubtless, poorly provided with fuel or bedding, both of which articles were then exceedingly scarce and dear.

"I compared the situation and necessity of

these aged people with the superfluous wealth and delicate living of the children of the rich man lately deceased, and could not but be astonished at the selfishness and caprice of the human heart. I queried with myself, are both of these children of the same Father, equally under His notice? Are they enjoyed (and do they profess) to love each other as they love themselves? Why is not at least three quarters of the wealth of a number of the rich Quakers laid out in procuring a place of refuge, comfort, and moderate provision for such weak and aged people, that they may, in the decline of life, be put into the most suitable situations to think and prepare for their latter end, and enjoy a moderate state of comfort? Is it honest to God or man? Is it doing justly as stewards of the wealth committed to our care? Is it loving our neighbour as ourselves? If mankind are indeed brethren, can it be agreeable to the good Father of the family of mankind, that one should engross so much, and employ it to feed the corruptions of his offspring, whilst others are under such manifest disadvantages for want of the necessities of life? Many such strange inconsistencies thou wilt meet with, in which I trust thou wilt be led to act in truth without partiality, and to enforce the doctrine of the rich man and Lazarus."

Sarah Cresson.

Extracts from her Letters and Diary.

(Continued from page 163.)

"8th mo. 15th, 1793. Rose this morning seeking my Beloved, the chiefest among ten thousand, but found him not. Oh! may a right degree of patience, watchfulness and perseverance prevail in my heart till He who is the Restorer or Raiser of life may please to appear, that I may be refreshed by the streams that flow from His living presence.

"Went to meeting in Shrewsbury; the forepart somewhat tendering to me, but the latter part a suffering time. Oh, may the Lord hasten the day of His coming, that the mountains of opposition may flow down at His presence. This afternoon took a view of the ocean, which drew my mind into considerations on the greatness and glory of the Creator, whose power supports all nature."

"16th. Attended Rahway Quarterly Meeting; an earnest desire arose that I might be preserved in a consistent walking."

"17th. This morning I arose much depressed in spirit, partly from some outward circumstances. Oh my soul, persevere on in every opening of heavenly counsel, that so in the end peace and tranquility may be thy portion.

"We went to Henry Shotwell's; here we met with Ann Dobson, from New York, James Thornton and Wm. Jackson. In the evening we had a solid opportunity, and I felt sweet union with some of my dear friends, which proved "as a brook by the way." Went to the concluding meeting. James Thornton appeared in testimony, and several valuable Friends. For the favors of this day I desire to be thankful, and if the Lord sees meet to introduce me again into a low state, I much desire by a steadfast looking towards Him I may be preserved."

"21st. Set off for Stony Brook; a fine cool morn; had a pleasant ride to New Brunswick, crossing Baritan river. Left for B. Clark's this afternoon."

"24th. Set off for Haddonfield, but rain coming on we had to put up at Moorestown."

"25th. Rose pretty early, set off for Haddonfield, where we arrived a little after 9 o'clock."

"26th. Set off home soon afterwards, some-

what affected in mind on account of sickness and mortality in the city, but not entirely without some hope and trust in the Lord Almighty."

"9th mo. 25th. Our Women's Yearly Meeting ended under a sense of the Lord's goodness and mercy in preserving us in this awful season of mortality. Oh may I bow in greater, far greater degrees of reverence and humble thankfulness before the Almighty Creator and Preserver of men, in that it hath pleased Him to preserve my life and the lives of my dear parents and brethren to attend all the sittings thereof, at a time when very many of the city Friends were absent, and but few from the country, compared with former numbers; with some of these few my mind is nearly united; but how do I desire to witness more purity, that I may more largely partake of the precious cementing love of the one heavenly Father, who is worthy to be sought unto. Gracious Lord, may it please Thee to replenish my heart with Thy holy love, and daily renew my faith in Thee, that so, O Lord! the great deliverer may with all his force, be driven back, and a way continually east up for me to walk in, even a way of holiness."

"10th mo. 24th, 1793. My dear father was taken poorly—he did not appear very ill for several days, but a great languor gradually prevailed until it pleased the Almighty to put an end to his continuance in this state of mutability, in the 50th year of his age. He departed this life the 21st of 10th mo. He was a tender father, watching over his children for good, a lover of them that love the Lord, a tender affectionate husband, a diligent attender of meetings, carefully examining his offspring therein. His removal is to our unspeakable loss, but in the lively hope of having received a far better inheritance, I believe none of us dare say to Him that ruleth in Heaven and also in the earth, What doest Thou humbly trusting that the widow and the fatherless are objects of His paternal care and heavenly regard.

"The number of burials was considerably large, but on the 25th reduced exceedingly, (so that) the interposition of a merciful God was evident, as so continued, I think, decreasing. Oh that the minds of the people of Philadelphia may continue humbled under a sense of the gracious dealing of the Almighty to His creature man."

"11th mo. 6th. Oh how hath sickness and mortality prevailed, by the permission of Him who holdeth the wind in his fists, and who bindeth the floods that they shall not overflow their destined course; and now there appears some abatement in its prevalence. Oh that the inhabitants of Philadelphia may bow to Him in reverence, and acknowledge, 'Great art Thou, Lord, and worthy to be praised; for Thine is the kingdom, the power, and the glory forever A-m-e-u.' Oh how I desire that we may become people to His praise, and not sing His praises a-foret His marvellous works."

"1st mo. 1794. The beginning of another year; may it be devoted to the Lord. Give us the Lord his due, Oh my soul; He hath done much for thee; be not an ungrateful receiver His mercies, but remember day by day to offer sacrifice, an inward sacrifice, even that of a heart resigned to His disposal, according to the ability given. I cannot accomplish any good thing, but the Lord is sufficient for His own work."

"24th. Oh that I may be so favored as to have my soul replenished with the wine of the kingdom, that I may be strengthened to travel on the right way, even the way of holiness, which the best of prey treadeth not.

"3d mo. 2d. Oh how good is the Shepherd

el, may I not say, how doth He in a marvelous manner make a way, where a little before appeared no way; which plainly showeth of ourselves we can do nothing. May I be endowed in faith and patience still to trust, and wait in quiet for the arising of Him who hath His in the thick darkness, and before whom the mountains vanish, the mountains flee away, and Jordan riven back. Cast down thy crown at His feet, my soul, and acknowledge, not of myself, but Thee; not unto me, but unto Thee beyond glory. My dear and valued friend, T. Scattergood, visited us this evening in gospel love, having to divide the word, and in a remarkable manner to speak to the dear little children; may it fastened as a nail in a sure place."

"4th mo. 18th. I desire humbly to bow in gratitude to the Author of my life, in that He hath pleased to cause me to feel something of the eteness of His Kingdom, I humbly trust, after long season of darkness and dismay. But Oh soul, rejoice with trembling; thou knowest not how long this season may be continued; therefore have for a renewal of faith, that thou may be able to bear the necessary conflicts and baptisms, thy furtherance in the work of sanctification redemption."

"5th mo. 10th. I went with my dear mother and our endeared T. Scattergood, who is about to set off for New York, to take shipping for England. We had a truly comfortable opportunity myself however, though a very close trial it is apart from so beloved a friend, yet a father in Truth, felt so by me in many close proving seasons. Oh that the God of all consolation may with him, and sweeten every cup of bitterness which he may have to partake in the work assigned, and the glory of the Lord be his reward. I parted in a feeling sense, I trust, of best love real sympathy."

"12th. Our beloved T. Scattergood took shipping from New York in a vessel with John Jay, who was on a particular embassy to England, and went on board on the evening of the 2d day of the week. Henry Drinker, Thomas Fisher, Peter Hoskins, Thomas Stewardson, Joseph Scattergood and John Cresson, accompanied him in this city."

"7th mo. 1st. Rose this morning with more a sense that the Lord's care was near, than it been for some time, and thankfulness sprang my heart to 'Him who sleepeth not by day, slumbereth by night.' Oh the need I feel of deliverance—the danger is great with me of being veined into the spirit of forgetting or denying of who made me, and the Rock that all my life sustained me. I think myself unworthy, but am most ready to believe I have been dipped into suffering with the suffering Lord. Oh how are the minds of the people in too general a way soaring above the witness, feeding upon that which yields no refreshment suited to the immortal soul, which must be sustained by immortal life."

(To be continued.)

*My Mother.*—Some gentlemen passing through a beautiful village of Renton, in the Vale of Ayr, Dumbartonshire, about nine o'clock at night, some time ago, had their attention directed to a dark object in the churchyard. On going to ascertain what it was, they found a boy of tender years lying flat on his face, and apparently dead and asleep over a recently-made grave. Thinking this not a very safe bed for him, they shook him up, and asked how he came to be there. He said he was afraid to go home, as his sister, with whom he resided, had threatened to beat him. And where does your sister live?" asked one

of the party. "In Dumbarton," was the answer. "In Dumbarton—nearly four miles off! and how came you to wander so far away from home?" "I just cam'" sobbed the poor little fellow, "because my mither's grave was here." His mother had been buried there a short time before, and his seeking a refuge at her grave in his sorrow was a beautiful touch of nature in a child who could scarcely have yet learned to realize the true character of that separation which knows of no reunion on earth. Thither had he instinctively wandered to sob out his sorrows, and to moisten with tears the grave of one who had hitherto been his natural protector, for he had evidently cried himself asleep.—*North British Mail.*

For "The Friend."

#### Fur Trapping in the North.

In the year 1862 and 1863, two English travellers, Viscount Milton and Dr. Cheadle, crossed the North American continent to the Pacific, their route lying through the British possessions, and generally some degrees north of the northern boundary of the United States.

The published narrative of the journey is quite an interesting one, abounding with stirring incidents, and giving a graphic description of the strange region traversed by them. Their first winter was passed at a place named La Belle Prairie, not far from the North Saskatchewan River, and between latitudes 53° and 54° North. They here built a hut for the winter, and occupied a portion of their time in hunting and trapping. Some of their experience is given in the following passages.

"The supply of meat which we had obtained, being sufficient for some time, we stored it up on the platform out of doors, to be preserved by the frost, and turned our attention to trapping in the woods. Our attempts had hitherto been confined to setting a few small steel traps round the lake, and placing poisoned baits for the wolves. But we were now desirous to fly at higher game, and far into the depths of the vast pine forests, seek trophies sure to be gratefully received when presented to dear friends of the fair sex at home. The animals which furnish the valuable furs from this region, are the silver and cross foxes, the fisher, marten, otter, mink, and lynx; whilst amongst those of less worth are the wolverine, beaver, ermine, and muskrats. The beaver was formerly found in great numbers, and its pelt highly prized, but from the assiduity with which it was hunted it has now become comparatively scarce; and from the substitution of silk for beaver in the manufacture of hats, the latter has become almost worthless. Of all furs, with the single exception of the sea otter, which is found only on the Pacific coast, the silver fox commands the highest price. The fur of the silver fox is of a beautiful gray; the white hairs, which predominate, being tipped with black, and mixed with others of pure black. A well-matched pair of silver fox skins are worth from £80 to £100. The cross foxes, so called from the dark stripe down the back, with a cross over the shoulders like that on a donkey, vary in every degree between the silver and the common red fox; and the value of their skins varies in the same rates. After the cross foxes come the fisher, the marten and the mink. These three are all animals of the pole-cat tribe, and both in size and value may be classed in the order in which they have been mentioned. The skin of a fisher fetches from sixteen to thirty shillings; a marten fifteen shillings to twenty-three shillings, and a mink from ten shillings to fifteen shillings. The otter, which is less common than the two last named, commands a price of one

shilling an inch, measured from the head to the tip of the tail. The ermine is exceedingly common in the forests of the North-west, and is a nuisance to the trapper, destroying the baits set for the marten and fisher. It is generally considered of too little value to be the object of the trapper's pursuit. The black bear is also occasionally discovered in his winter's hole, and his skin is worth about forty shillings. The lynx is by no means uncommon, and is generally taken by snares of hide. When caught, he remains passive and helpless, and is easily knocked on the head by the hunter. The other denizens of the forest are the moose, and smaller game, such as the common wood partridge, or willow-grouse, the pine partridge, the rabbit, and the squirrel. By far the most numerous of the more valuable fur animals in this region are the marten and the mink, and to the capture of the former of these two—the sable of English furriers—the exertions of the trapper are principally directed. At the beginning of November, when the animals have got on their winter coats, and fur is 'in season,' the trapper prepares his pack, which he makes in the following manner: Folding his blanket double, he places in it a lump of pemmican, sufficient for five or six days consumption, a tin kettle and cup, and, if he is rich, some steel traps, and a little tea and salt. The blanket is then tied at the four corners, and slung on the back by a band across the chest. A gun and ammunition, axe, knife, and fire bag, complete his equipment. Tying on a pair of snow shoes, he starts alone into the gloomy woods—trudging silently forward—for the hunter or trapper can never lighten the solitude of his journey by whistling or a song. His keen eye scans every mark upon the snow for the tracks he seeks. When he observes the foot print of marten or fisher, he unslings his pack, and sets to work to construct a 'dead fall,' or wooden trap, after the following manner. Having cut down a number of saplings, these are divided into stakes of about a yard in length, which are driven into the ground so as to form a palisade in the shape of half an oval, cut transversely. Across the entrance to this little enclosure, which is of a length to admit two-thirds of the animal's body, and too narrow to admit of its fairly entering in and turning round, a short log is laid. A tree of considerable size is next felled, divested of its branches, and so laid that it rests upon the log at the entrance, in a parallel direction. The bait, which is generally a bit of tough dried meat, or a piece of partridge or squirrel, is plucked on the point of a short stick. This is projected horizontally into the enclosure, and on the external end of it rests another short stick, placed perpendicularly, which supports the large tree laid across the entrance. The top of the trap is then covered in with bark and branches, so that the only means of access to the bait is by the opening between the propped up tree and the log beneath. When the bait is seized, the tree falls down upon the animal and crushes him to death. An expert trapper will make forty or fifty traps in a single day.

"The steel traps resemble our ordinary rat-traps, but have no teeth, and the springs are double. In the large traps used for beavers, foxes, and wolves, these have to be made so powerful that it requires all the force of a strong man to set them. They are placed in the snow, and carefully covered over; fragments of meat are scattered about, and the place smoothed down, so as to leave no trace. To the trap is attached a chain, with a ring at the free extremity, through which a stout stake is passed, and left otherwise unattached. When an animal is caught—gene-

rally by the leg, as he digs in the snow for the hidden morsels—he carries off the trap for a short distance, but is soon brought up by the stake getting entangled across the trees and fallen timber, and is rarely able to travel any great distance before being discovered by the trapper.

“The fur hunter’s greatest enemy is the North American lion, or as he is commonly called, the wolverine or carcajon. This curious animal is rather larger than an English fox, with a long body, stoutly and compactly made, mounted on exceedingly short legs of great strength. His broad feet are armed with powerful claws, and his track in the snow is as large as the print of a man’s foot. The shape of his head, and his hairy coat, give him very much the appearance of a sledge brown dog.

“During the winter months he obtains a livelihood by availing himself of the labours of the trapper, and such serious injury does he inflict that he has received from the Indians the name of Kekwaharok or ‘The Evil One.’ With untiring perseverance he hunts day and night for the trail of man, and when it is found, follows it unerringly. When he comes to a lake, where the track is generally drifted over, he continues his untiring gallop round its borders, to discover the point at which it again enters the woods, and again follows it until he arrives at one of the wooden traps. Avoiding the door, he speedily opens an entrance at the back, and seizes the bait with impunity; or if the trap contains an animal, he drags it out, and, with wanton malevolence, mauls it and hides it at some distance in the underwood, or at the top of some lofty pine. Occasionally, when hard pressed by hunger, he devours it. In this manner he demolishes the whole series of traps, and when once a wolverine has established himself on a trapping walk, the hunter’s only chance for success is to change ground, and build a fresh lot of traps, trusting to secure a few furs before the new path is found out by his industrious enemy.

“Strange stories are related by the trappers of the extraordinary cunning of this animal, which they believe to possess a wisdom almost human. He is never caught by the ordinary dead fall. Occasionally one is poisoned or caught in a steel trap; but his strength is so great, that many traps strong enough to hold securely a large wolf, will not retain the wolverine. When caught in this way, he does not, like the fox and the mink, proceed to amputate the limb, but, assisting to carry the trap with his mouth, makes all haste to reach a lake or river, where he can hasten forward at speed, unobstructed by trees and fallen wood. After travelling far enough to be tolerably safe from pursuit for a time, he devotes himself to the extrication of the imprisoned limb, in which he not infrequently succeeds. The wolverine is also sometimes killed by a gun, placed bearing on a bait, to which is attached a string communicating with the trigger. La Ronde assured us most solemnly that on several occasions the carcajon had been far too cunning for him, first approaching the gun and gnawing in two the cord communicating with the trigger, and then securely devouring the bait.”

(To be continued.)

daily, as a cloud of witnesses. It is a terrible winter for the destitute. They have seen nothing like it, neither since nor before their freedom.

For “The Friend.”

I have read attentively the article in the last number of “The Friend,” under the caption of “Jacob’s Vision—Christ, the Ladder,” and fully unite with the views expressed, so far as they relate to the necessity of faith in Christ being manifested by works, and that salvation is to be experienced only by a continued struggle and watching unto prayer, so as to abide in Him. I am fearful, however, lest from the confusion of ideas presented in the extract, and the failure of analogy in many important respects between the figure and the reality, wrong inferences may be drawn, obscuring the truth as it is in Jesus. This vision granted to Jacob, assured him of the overruling providence of the Almighty, the ministration on earth of his celestial host, who were descending and ascending on the ladder, and of his inheriting the blessing promised to Abraham and his seed; but there appears no intimation of the person or offices of Christ being prefigured by any part of it.

In the article of last week, the ladder is supposed to represent the “work of the Mediator,” the “union of the Divine and human nature in Christ,” “Christ” himself, and the “covenant made with us and Christ.” Thus we are told man is to “mount step by step the whole height of Christ’s work”—an expression which appears to me either meaningless, or may be construed to place man on an equality with Christ—he is to hold “fast to Christ” and climb “up by Christ.” He is to stretch “the hand to one line after another in the work of the Redeemer,” and “plant his foot on one step after another in the covenant made with us and Christ.”

The two last expressions are evidently formed to suit the metaphor, and are not very intelligible. The whole appears to me to be confounding things, which, though having a relation to each other, are entirely distinct. And is there not danger that in the confusion of ideas we may lose sight of the simplicity of the Truth as set forth in the language of holy Scripture? There is a wide difference between Christ, both in his Divine and human character, and his work for the salvation of the soul; and though there may be some analogy between the christian’s struggle to rise from earth to heaven, and the care and labour of a man to mount a precipice on a ladder, it fails in so many respects when we attempt to apply the figure to either Christ or his work, that I cannot think it safe to adopt it. A ladder imparts no strength to him who climbs it, nor does it give ability to take one step on it. The climber ascends by his own innate power. Christ’s disciples cannot take one step but by the strength He gives. Can those disciples be said to climb up their Master? When once in Him their progress in righteousness is from faith to faith, and *He* is made unto them wisdom and righteousness and sanctification and redemption. But I wish not to do more than indicate the ground of fear respecting the adoption of this simile to set forth either Christ or his work in the soul of man. We cannot “seize the heavens” by Christ as a mere ladder, nor can we fasten ourselves to the Mediator, nor make one step in the straight and narrow way by our own strivings. The most beautiful figure illustrating the connection between Christ and his disciples, is that which He himself made use of: “I am the Vine, ye are the branches. As the branch cannot bear fruit except it abide in the vine, no more can ye, except ye abide in

me. He that abideth in me and I in him, the same bringeth forth much fruit; for without me ye can do nothing.”

I may add, I do not suppose that either the contributor of the article to “The Friend,” or the editors, had a thought of conveying any wrong view on the important subject treated on, and may be my fears are groundless, but I feel best satisfied to bring them before the readers of the valued journal.

S. P.

For “The Friend.”

“Shut the Door.”

As “straws show the direction of the wind,” the characteristic traits of different persons can often be inferred by their manner of performing comparatively unimportant actions. The evidence of a thoughtful and considerate mind may often be seen in all parts of the deportment, and may also the reverse. A writer in the *Scientific American* communicates the following curious observations which he has made upon a particularly needful at this season of the year—of “shutting the door,” as noticed among a particular class of the community, and the correspondence between the care observed in this particular, and in the general habits of those observed. He says:

“During the last ten years, in the winter season, according to our daily records, we have noticed the manner in which one thousand persons who called for work, have opened, shut or not shut our store door: this, you may say, is a futile and a useless undertaking; but we entertain a very different opinion. What are the facts, and what the deduction?

“First, out of the 1,000 persons recorded, 33 opened the door and shut it after them carefully, when they came in and when they went out without much noise.

“Secondly, 226 opened it in a hurry, and made an attempt to shut it but did not, and merely pulled it to when they went out.

“Thirdly, 202 did not attempt to shut it at all either on coming in or going out.

“Fourthly, 96 left it open when they came in but when reminded of the fact, made ample apology, and shut it when they went out.

“Fifthly, 102 opened it in a great hurry, and then slammed it to violently, but left it open when they went out.

“Sixthly, 20 came in with ‘how do you do sir,’ or ‘good morning,’ or ‘good evening,’ and all these went through the operation of wiping their feet on the mat, but did not shut the door when they came in, nor when they went out.

“REMARKS.—We have employed men out of all the above classes, and during that time had had an opportunity of judging of their merit, &c.

“The first class, of 355, were those who knew their trade, and commenced and finished their work in a methodical manner, were quiet, but little to say in their working hours, and were well approved of by those for whom we did the work. They were punctual to time, and nothing undone which they had been ordered to do. They did not complain about trifles, and all respects they were reliable men, and were kind and obliging in their general conduct.

“Class the second, 225.—These were very methodical in their work, had much to talk about were generally late, but were willing to quit work early. They were always in a hurry when overlooked them, but they did not do as much work in the same time as class the first, and often left little things unfinished, and if they were told of it, would make many trifling excuses, and highly extol their own abilities.

Class the third, 202.—These were negligent personal appearance and in their work. They cared much about their own good qualities, and were better acquainted with the business and domestic habits of their neighbors than with their own. These men were not steady at their work, were always short of money, and could not be relied on in regard to truth and honesty.

Class the fourth, 96.—These were careless in their manner of work, committed many errors, when they were pointed out to them, would forgive most willingly: soon forgot particular details; were tenacious of their own rights, not very nice about the rights of others; still, there was something pleasant in their manners at first sight, but they did not improve on further acquaintance. They required much watching, often talked about what they had done and what they had been, what they could do and what they intended to do, but they seldom did anything properly.

Class the fifth, 202.—These were of a strong, warm temperament—always in a hurry—little order and method in their work, often met with accidents, and often got themselves into difficulties by their hasty proceedings; otherwise, they were kind and willing to oblige, but the pros they so hastily made were soon forgotten.

Class the sixth, 20.—These were better than the others, but were not good workers, as they had tried many things, but had not entered any one in particular. Their politeness was artificial, and one day was often sufficient to expose their deception. They were too ignorant of their own faults, and too proud to acknowledge their own faults. They were vain in extreme, and unreliable.

REMARKS.—Whether these rules are applicable to all trades, professions, and classes of men, I do not know, but I am thoroughly acquainted with the facts above stated, and also with the nature of the character I have there described: therefore I leave the reader to make his own deductions.

For "The Friend."

Look unto the Rock whence ye are hewn; and to the hole of the Pit, whence ye are digged." Isaiah li. 1. Religiously concerned parents cannot but feel trained to make their beloved children acquainted with the trials, sufferings, imprisonment, unutterable hardships that our steadfast and cheering predecessors endured in establishing principles and testimonies we enjoy, which I fear are not enough appreciated by the present youth; for when I observe our young men turning their hats on entering a meeting house, I but conclude how little they are acquainted with the mockings and imprisonment their forefathers underwent in testifying against their honor, to man or house, or if acquainted, think it little consequence to support this costly testimony.

When I observe rich and expensive clothing near my midst, I mentally query how can they arise in these things, when they bring to rob us of the four years of incarceration and bring that Catharine Evans and Sarah Cheever endured in the inquiry at Malta; denied the air, the necessaries of life, threatened death, taunted, jeered, and scoffed at, and what? For nothing but standing firm and faithful to Him who had bought them with a price, feeling they were not their own, but His, enabled them to bear such unheard of privations.

When I see our young women with their fashionable coverings for the head, frizzling their hair,

and festooning their dresses, I am reminded of the prophecy of Isaiah, when he said, "Instead of well set hair, there should be baldness."

When I hear of large parties among our young people, sumptuous entertainments, and all the business of the present day, I bring to mind the privations and difficulties of James Parnel, endeavored in obtaining the food that would hardly support life, while confined in a hole in the wall, to gain which, he was obliged to climb six feet by a ladder, and six feet by a rope. We are not subjected to any such treatment in the present day from the world, or other denunciations, but as the "Friend in his family" remarks, "The carrying out of these principles would exert a salutary influence in all our actions, our words, and even our thoughts. Friends have no testimony to peculiarity or singularity; but to their plainness and simplicity they have. The avoidance of that outward adorning and costly array, so indicative of a vain and worldly mind, discountenancing the fashions of a world given to change, and the wearing of modest apparel as becometh those professing godliness, are not less christian virtues and a christian duty in the present day, than when they were first enjoined by Peter and Paul. And so they should remain to be estimated by our successors, by supporting them in their purity and brightness." Evidencing that we are "walking by the same rule, and abiding the same thing," and that we are as firm believers in the light of Christ, which convinceth the world of sin, proving the fulfilment of the prophetic vision of Edward Burroughs, viz., "That spirit which both lived and acted and ruled in me, shall yet break forth in thousands."

Oh that this might be the case, is the fervent petition of the fathers and mothers in Israel; that it might be evident, a son here is bowing his neck to the yoke of Christ, and a daughter there carrying the cross, sitting at the feet of Jesus, to hear the gracious words which proceed from His mouth; then we might hope that Zion would awake and put on her beautiful garments.

#### Needs for the Freedmen.

We hope that our friends in the country will recollect, that although the weather is now inclement, the season is near at hand when planting commences at the South. Any contributions of seeds or roots will be gratefully received at Caleb Wood's, No. 524 South Second St., Philadelphia, and carefully forwarded to the colored Freedmen of Virginia and North Carolina, who are in much need of such assistance.

Perhaps this notice may be read by some of our friends who may have seeds to spare, even if inconvenient for them to contribute money for this good cause.

1st mo. 21st, 1867.

**Ice Boating.**—Three vessels of the Ice Boat Association of Poughkeepsie, lately made a run of two miles on the frozen surface of the Hudson in one and a half minutes,—at the rate of 80 miles an hour. Last winter a run of nine miles was made in eight minutes, or 67½ miles an hour. Of course clothing like that of Arctic explorers is needed on an open deck rushing through a winter atmosphere at such breathless speed as this. The construction of the ice boat is peculiar but simple. It is V shaped, the point astern and resting on a single pivoted runner, by which the craft is steered. The broad front rests on a pair of runners. The deck is but a few inches from the ice; mast, rigging, and sails are similar to

those of water boats. These yachts can sail two points nearer to the wind than water craft. Attempts have already been made on the Hudson to apply this mode of conveyance to the purposes of business, as also on the upper Mississippi, and should steam be employed as the motive power, ice boating may become in some neighborhoods a competitor with the railroads for winter freight and passengers.—*Late Paper.*

## THE FRIEND.

FIRST MONTH 26, 1867.

We have been requested to call attention to the claims of "The Camden Home for Friendless Children," on the liberality of the benevolent in aid of its means for securing the destitute little ones who are brought under its care. The Home is at 522 Federal street, Camden, and "the objects and design" of the institution "are to afford a home, food, clothing and schooling for destitute or friendless children, and at a suitable age to place them with respectable families to learn some useful trade or occupation."

The management is confined to no particular religious denomination, and though from its name it might be supposed to confine its labour of love to the destitute children found in a contracted district, it is designed to embrace suitable cases brought out of any of the six counties in West Jersey.

We have no doubt, from the information given to us, that donations of any kind, whether money, clothing, food, or whatever would aid in defraying the expenses incurred in carrying out the objects of this Home, would be well bestowed.

#### SUMMARY OF EVENTS.

FORGOTTEN.—The Italian Minister of Finance has announced the intention of the government to tax the church property. Tonelle's mission to Rome, has, it is stated, resulted satisfactorily. The American minister at Rome has been invited by the Papal government to remove the American church, outside the walls of that city. The budget of Italy shows a deficit of 185,000,000 lire.

The Hungarian Diet, with great unanimity, design to break their negotiations with Austria, if that government still opposes the wishes of Hungary in insisting on the arm organization scheme and other obnoxious measures. A Vienna dispatch says, that the official morning newspaper commences an agitation against the measures of the government, and asserts that the opposition have no other alternative than to consult the will of the people. The patent for the re-organization of the Austrian armies will not be carried out.

The British government has sent a note to Greece, advising her to preserve a strict neutrality in the affairs of Candia. Another hostile is reported in Candia, in which 5000 Turks were defeated. The Cretan assembly has issued a call to all the Powers of Europe to send agents to Candia to witness and report the condition of the country.

The Emperor Napoleon has issued an important decree. It orders that the address of the Chambers in reply to the speech from the Throne, shall be discontinued, grants to the Legislature the right of questioning the government, and proposes that offences of the press shall be tried in the Correctional Courts; that the stamp duties shall be reduced, and that the right of the people to meet in public shall be limited only by those regulations necessary for the public safety. The decree concludes by declaring that these reforms will now crown to the Legislature has been founded on the national will. The members of the French Cabinet have tendered their resignation to the emperor.

The Empress Carlotta has entirely recovered. Insurance has been made at Hamburg on the personal effects of Maximilian, to be shipped by steamer to Ragusa. The last transport for Vera Cruz, to bring home the French troops from Mexico, has been ordered. The ice on the lake in the Regent's Park, London,

broke through on the 15th, while crowded with skaters. More than two hundred persons were precipitated into the water, and of these forty-one were drowned, and others were still missing. The losses by the cattle disease in England, are summed up at \$17,865,900 in gold. The advices from Manchester are unfavorable, the market for goods and yarns being dull. A Liverpool dispatch of the 19th says, the unusually intense cold of the season has so increased the distress of the poor of this city, that to-day it resulted in a bread riot in the streets, and the disturbance was not of a serious character.

The official statement shows that 351 lives were lost at the Oaks Colliery explosion. Of the seventy-five persons brought out of the pit, only five survived their injuries. Breadstuffs advancing and active. Consols, 90 $\frac{1}{2}$ . U. S. 5-20's 72 $\frac{1}{2}$ .

Mexican advices report the capture of Guadalupe by the Liberal forces. The Liberals are in quiet possession of Mazatlan, Guaymas and La Paz. President Juarez is now at Durango.

A Paris dispatch of the 21st says: All the members of the Cabinet tendered their resignation, but six of them were not accepted. There is much excitement in Paris on account of the change in the ministry, and it is thought that they will resign in a few days, in the name of the emperor. The French press applauds the reforms made by Napoleon.

It is said that Lord Derby has concluded not to present the government Reform bill to Parliament.

On the 21st, the Liverpool cotton market was declining. Sales of middling uplands at 14 $\frac{1}{2}$ .

Various States.—The President has approved the bill suspending the payment of money to persons claiming the service or labour of coloured volunteers or drafted men. The House Committee on Indian affairs has been instructed to inquire diligently and promptly into the peonage slavery existing in New Mexico and Colorado. Both Houses have passed bills for the admission of Florida and Utah into the Union. The bill regulating the tenure of office, has passed both Houses by large majorities. The House of Representatives has passed a bill, reported by the Committee of Ways and Means, providing for the sale of gold. It directs the sale of gold from the United States Treasury to the highest bidder, after being advertised for six days. The resolution providing for the independence of the President in the late election of Maryland.

**Philadelphia.**—Mortality last week, 292. On the first instant the total debt of the city amounted to \$36,370,463. It increased \$1,827,827 in the year 1866. The whole number of fires in the city during the year 1866, was 1,341, the loss by fire estimated to have been \$91, by which property valued at \$3,192,000 was destroyed. In 1865, the loss by fire was estimated at \$1,269,500.

**Reconstruction.**—John M. Langston, of Oberlin, Ohio, a coloured man, has been admitted to practice at the bar of the Supreme Court of the United States. This is the second case in which a coloured man has been admitted about two years ago. Bradley Johnson, of Richmond, Va., formerly a general in the rebel army, has been admitted to the bar of the U. S. Supreme Court, under the decision rescinding the test oath.

**African Colonization.**—The fiftieth annual meeting of the American Colonization Society, was held at Washington, on the 19th inst. The receipts of the year amounted to \$38,153, the disbursements to \$38,342. Much of the funds were expended in the purchase and fitting out of the ship Golconda, which carried over six hundred emigrants to Liberia, in the Eleventh month last. Additional freedmen, to the number of six hundred and forty, are ready to sail for Liberia, and are waiting for the Legislature of Pennsylvania has elected Simon Cameron to the United States Senate, for the term of six years, commencing 30<sup>th</sup> mo. 4<sup>th</sup>, next. Charles D. Drake has been chosen to represent Missouri for a similar term, and Senator Trumbull has been re-elected from Illinois.

**The Constitutional Amendment** has been ratified by the legislatures of Maryland, Pennsylvania and Indiana.

**New York.**—The population of the State, by the recent census, is 3,827,818, an increase of 261,602 in ten years. The increase has been almost wholly in the commercial and manufacturing districts. The number of deaths in the city of New York during 1866, was 26,844.

**Very heavy snow storms** prevailed over a large part

of the United States on the 17th, and again on the night of the 20th inst. A few persons are reported to have perished in the snow, and to-day travel was seriously interfered with. In many places the snow drifts were from ten to twenty feet deep.

Governor Orr, of S. Carolina, was recently in Washington on business connected with the State. He is not in favor of the constitutional amendment being ratified by South Carolina, or by any other southern State, but favors a successful compromise of the congressional demand. He thinks that territorialization would be welcomed as an economical measure.

**The Freedmen.**—General Sewall has been ordered to North Carolina to investigate matters of complaint growing out of the action of the State courts in instituting coloured children to their former masters. The North Carolina State Board of Geographical Commission to examine the alleged abuse of the apprenticeship system. A considerable emigration of freed people is taking place from South Carolina to Texas, Florida and other regions. On the 5th, a well selected colony of six hundred freedmen sailed from Charleston for New Smyrna, Florida, in charge of General Ely, to settle on the abandoned lands of that State. The total number is to be swelled to three thousand. A similar exodus of labourers is reported from Columbia and Sumter. Transportation is afforded by government, with the promise of six month's rations after arrival. In Virginia it is said there is a wide spread unwillingness on the part of the freedmen to contract for the current year with North Carolina, and many are being rejected by them, and they are desirous of working on shares, by combinations amongst themselves. In the lower counties of Texas they try to stipulate for one third of the crop, which is generally denied them. In Texas, Gen. Kiddoo has ordered "The Labour Law," of the late legislature, to be disregarded, and contracts made on equal conditions with the whites. In Virginia, public sentiment has undergone a favorable change in relation to the education of the freedmen. Persons who formerly opposed the schools, are now disposed to assist them.

**North Carolina.**—Five thousand citizens of western North Carolina, have petitioned Congress for the formation of a new State, and for the reconstruction of North Carolina on a loyal basis.

**Louisiana.**—Gen. Kiddoo and staff, have just made an extensive tour through the State. They represent the negroes every where contracting and going to work, preparing for the year's crop, and that there are not enough labourers to till the land.

**Maryland.**—The Legislature of this State has passed a bill providing for the election of a Mayor and City Councils of Baltimore, in the early part of next month. The object of the bill is to displace the mayor and councils chosen at the election last fall.

**Texas.**—The Commissioner of Agriculture has received a letter from a farmer at San Austin, Texas, stating that a terrible snow storm took place on the 15th of New Year day, and the weather continued very cold. Over one thousand sheep perished from the cold on several farms in the neighbourhood. Fine heaves were selling at \$14 a \$15 each, for specie; sheep \$1.50 each.

**The Markets, &c.**—The following were the quotations on the 21st inst. New York.—American gold 130 $\frac{1}{2}$ . U. S. sixes, 183 $\frac{1}{2}$ , 107 $\frac{1}{2}$ ; ditto, 170, 185 $\frac{1}{2}$ , 106 $\frac{1}{2}$ ; ditto, 180, 104 $\frac{1}{2}$ , 104 $\frac{1}{2}$ , 99 $\frac{1}{2}$ . Superfine State flour, \$9.50 a \$10.45. Shipping Oil, \$11.75 a \$12.50. Baltimore flour, common to fair extra, \$11.65 a \$13.75; finer brands, \$14.20 a \$17. Wheat, no quotations; prices not much changed. Canada ry, \$1.35. Western oats, 64 a 67 cents; Jersey and State 70 cents. Western mixed corn, \$1.18; white, 185 $\frac{1}{2}$ , 106 $\frac{1}{2}$  a 115. **Philadelphia.**—Superfine flour, \$8 a \$8.75; finer brands from \$9 to \$17. Pennsylvania red wheat, \$2.75 a \$3.10; southern do. \$3.10 a \$3.20; white, \$3.20 a \$3.40. Rye, \$1.35 a \$1.40. New yellow corn, 96 a \$1. Oats, 58 a 59 cents. Cloverseed, \$7.75 a \$9. Timothy \$3.75. Flaxseed, \$2.50 a \$2.55. The market was dull, and prices lower. Extra sold at 16a 17 cts.; fair to good 14 a 15 cts., and common, 12 a 14 cts. Four thousand sheep sold at 67 cts. per lb. gross. Hogs, \$8.50 a \$9.25 per 100 lbs. net.

## NOTICE.

The Annual Meeting of the Auxiliary Bible Association of Friends of Philadelphia Quarterly Meeting, will be held at No. 109 North tenth street, on Second-day evening, 11th proximo, at 7 $\frac{1}{2}$  o'clock. Philada. 1st mo. 21st, 1867. A. M. KIMMER.

## RECEIPTS.

Received from E. Hollingsworth, Agt., O., for D. Smith, \$2, vol. 39; for J. Penrose, \$2, vol. 40, and for T. D. Yoken, \$2, No. 10, vol. 41; from W. P. Townsend, Pa., \$4, vols. 39 and 40, and for J. W. Townsend, \$3, to No. 22, vol. 40, and I. Kirk, \$3, to No. 9, vol. 40, and from H. Clark, O., \$4, vols. 29 and 40; from N. Warrington, Agt., Io., for G. W. Mott, \$2, vol. 39, and for J. Briggs, \$4, vols. 39 and 40; from I. Huestis, Agt., O., for Ann Smith, \$2, vol. 40; from W. A. Riker, N. J., for L. B. Stokes, \$2, vol. 40.

Received from Mt. Pleasant Boarding School, O., per Wilson Hall, \$15, and from Friends of Smithfield, Ohio, \$23, for the relief of the Freedmen.

## GRISCOM ST. SOUP HOUSE,

Between Fourth and Fifth and Spruce and Pine Streets is now open for the delivery of Soup, every day except First-days, between the hours of 11 and 1 o'clock. Bread and meal are also occasionally distributed. A great number of poor are destitute of means and of employment, and the suffering is consequently severe. The Society respectfully solicits liberal contributions, to enable them to meet the pressing demands upon them. Money may be sent to THOMAS EVANS, 817 Arch St. or WILLIAM EVANS, Jnr., Treasurer, 613 Market St. First month 3d, 1867.

## NOTICE.

A suitable Friend and his wife are desired to superintend and manage the farm and family under the care of the Committee for the gradual Civilization and Improvement of the Indian natives at Tanassassa, Cataraugus Co., New York. Friends who may feel the minds drawn to the service, will please apply to Joseph Elkinton, No. 783 So. Second St., Philadelphia, N. J., or Aaron S. West, Chester, Pa., or Richard B. Bailey, Marshallton, Chester Co., Pa. Joseph Scattergood, 413 Spruce Street, Phila.

## FRIENDS' ASYLUM FOR THE INSANE.

NEAR FRANKFORD, (TWENTY-THIRD WARD, PHILADELPHIA) Physician and Superintendent, —JOSEPH H. WORTHINGTON.

Application for the Admission of Patients may be made to the Superintendent, to CHARLES ELLIS, Clerk of the Board of Managers, No. 637 Market Street, Philadelphia, or to any other Member of the Board.

DIED, at his residence in Philadelphia, on the 4<sup>th</sup> inst., in the sixty-third year of his age, NATHAN KIRK, of the firm of Kirk, Kirk & Co., of the Monthly Meeting, Friends of Philadelphia.

—, on the 20<sup>th</sup> of Twelfth month, 1866, ERNEST D., daughter of Patience and the late Charles S. Woodman, in the 30<sup>th</sup> year of her age.

—, on the 27<sup>th</sup> of Eleventh month, 1866, in the 17<sup>th</sup> year of his age, EDWIN, son of Isaac and Mary W. Moore, of the Monthly Meeting, Friends of Philadelphia, of a long duration, attended with great suffering, which he bore with much patience and resignation. He was a dutiful son, and was in good measure preserved in simplicity and innocence, and we doubt not he has taken mercy from the trials and temptations of this life. A though his parents and relatives feel the loss; yet he leaves a comfort and blessing to his bereaved and deploring ones, their loss is his eternal gain.

—, at his residence near Harrisville, Ohio, on the 30<sup>th</sup> of Eleventh month last, after a painful illness which he bore with exemplary patience, JESSE HALL, the fortieth year of his age. This dear Friend was concerned and useful member of Harrisville Preparing School, and a devoted member of the Monthly Meeting, and an unassuming manner, and his correct and consistent deportment, endeared him to a large circle of relatives and friends. During his illness he could not remain long in a reclining position, and was unable to converse much, but appeared to be prepared, and sensible that his final change was approaching; frequent expressions of his gratitude, and sense, that he had been enabled to bear his sufferings with sufficient patience to advise to one of his children; and near his close on being asked how he felt, answered, "I feel comfortable every way except my breathing." His bereaved family and friends have a consoling hope, that through the mercy of God in Christ Jesus, his purified spirit peacefully gathered to the just of all generations, and will sit with the righteous, and let my last be like his.

(Concluded from page 174)

## Fur Trapping in the North.

Until nearly the end of December we employed ourselves by accompanying La Ronde on his trapping expeditions. We thus could distinguish the track of every animal found in the forest, and noted much of their habits and peculiarities. Cheadle was especially fascinated by this branch of the hunter's craft, and pursued it with such success and success, that he was very soon able to make a trap and set it almost as quickly and fully as his accomplished preceptor, La Ronde. There is something strangely attractive in the life, despite of the hardships and fatigues which attend it. The long, laborious march, loaded with heavy pack, and lumbered with a quantity of elk clothing, through snow and woods beset by fallen timber and underwood, is fatiguing enough. The only change is the work of making traps, or the rest at night in camp. Provisions usually fall short, and the trapper subsists, in great measure, upon the flesh of the animals trapped to obtain the fur. But on the other hand, the grand beauty of the forest, whose pines, some of which tower up above 200 feet in height, are decked and wreathed with snow, and where no sound is heard except the occasional chirrup of a squirrel, or the explosions of trees cracking in intense frost, excites admiration and stimulates curiosity. The intense stillness and solitude, travelling day after day through endless woods without meeting a sign of man, and rarely seeing a living creature, strikes very strangely upon the mind at first. The half-breed trapper delights in roving alone in the forest; but Cheadle, who had the experiment for two days, found the silence and loneliness so oppressive as to be quite insupportable.

The interest in the pursuit was constantly kept up by the observation of tracks, the interpretation of their varied stories, and the account of the different habits of the animals, as related by our opinion. There is also no small amount of excitement in visiting the traps previously made, to see whether they contain the looked-for prize, whether all the fruits of hard labour have been stored by the wolverine.

At night, lying on a soft, elastic conch of pine boughs, at his feet a roaring fire of great trees piled high, from which rises an enormous volume of smoke and steam from the melted snow, the trapper, rolled up in his blanket, sleeps in

peace. Sometimes, however, when the cold is very intense, or the wind blows strongly, a single blanket is but poor protection. The huge fire is inadequate to prevent the freezing of one extremity, while it scorches the other, and sleep is impossible, or, if obtained, quickly broken by an aching cold in every limb as the fire burns low. On these winter nights the Northern Lights were often very beautiful. Once or twice we observed them in the form of a complete arch, like a rainbow of roseate hues, from which the changing, fitful gleams streamed up to meet at the zenith.

After we had been out a day or two, our provisions generally came to an end, and we lived on partridges and the animals we trapped. As soon as the skins of the martens and fishers were removed, their bodies were stuck on the end of a stick, and put to roast before the fire, looking like so many skewered cats. These animals not only smell uncommonly like a ferret, but their flesh is of an intensely strong and disgusting flavor, exactly corresponding to the odor, so that a very strong stomach and good appetite are required to face such a meal. The trapper's camp in the woods is always attended by the little blue and white magpie, who, perched on a bough close by, waits for his portion of scraps from the meal. These birds invariably "turn up" immediately after camp is made, and are so tame and bold that they will even steal the meat out of the cooking pot standing by the fire.

The snow was at this time not more than eight inches deep, and we did not as yet use saw-shoes in the woods, where the brushwood and fallen timber rendered them somewhat awkward encumbrances. But the walking was consequently very fatiguing, and we reached home, after five or six days' absence, invariably very much wearied and jaded. On these excursions we were much struck, amongst other things, with the great difference between the walk of an Indian or half-breed and our own. We had before observed, that when apparently snuntering quietly along, they went past us with the greatest ease, even when we flattered ourselves we were going at a very respectable pace. This was now, in a great measure, explained. In walking in the snow, in Indian file, we observed La Ronde's great length of stride; and Cheadle in particular, who prided himself upon his walking powers, was much chagrined to find that he could not tread in La Ronde's footsteps, without springing from one to the next. Afterwards he discovered that his longest stride was only just equal to that of the little Misquapanayoo (an Indian boy who was spending the winter with them.)

The superiority of the Indian in this respect doubtless results from the habitual use of moccasins, which allow full play to the elastic bend of the foot. This is impeded by the stiff sole of an ordinary boot. The muscles of an Indian's foot are so developed, that it appears plump and chubby as that of a child. Misquapanayoo continually derided the scraggy appearance of our pedal extremities, and declared there must be something very faulty in their original construction.

The unerring fidelity with which our guide followed a straight course in one direction in the dense forest, where no landmarks could be seen, in days when the sun was not visible, nor a breath of air stirring, seemed to us almost incomprehensible. La Ronde was unable to explain the power which he possessed, and considered it as quite a natural faculty. Cheadle, on the other hand, found it quite impossible to preserve a straight course, and invariably began to describe a circle, by bearing continually towards the left; and this weakness was quite incomprehensible to La Ronde, who looked upon it as the most arrant stupidity.

Hitherto no wolverine had annoyed us, and we succeeded in accumulating a nice collection of furs. But at last, when starting to visit our walk, we observed the tracks of one of very large size, which had followed our trail, and La Ronde at once declared "This is the end of our trapping," and sure enough, as we came to each trap in succession, we found it broken open at the back, the bait taken, and where an animal had been caught, it was carried off. Throughout the whole line every one had been demolished, and we discovered the tails of no less than ten martens, the bodies of which had apparently been devoured by the hungry and successful carcajou.

We had, on a former occasion, suspended small poisoned baits, wrapped in old moccasins or other covering, on the bushes at different points. One of these the wolverine had pulled down, unwrapped it and bitten the bait in two. Terrified at the discovery that it was poisoned, he had rushed away at full speed from the dangerous temptation. It was useless to set the traps again, and we therefore returned home disconsolate, La Ronde cursing, with all his might, the hateful carcajou.

For "The Friend,"

"They that wait upon the Lord, shall renew their strength."

This promise applies to all, however situated; not only to those gathered for the express object of worshipping the Father of spirits, who must be worshipped in spirit and in truth, but equally to those who, in the retirement of their own homes,—some in the chamber of sickness and upon the bed of suffering, are still engaged to turn unto Him and to wait to feel His presence. These realize, as their dependence is weaned from man and placed upon their Heavenly Father, who is all in all to His depending children, that an hour in His presence is better than a thousand elsewhere; and that He is still mindful of them, though for purposes of His own, but all in wisdom and in mercy. He has seen meet thus to deprive them of the privilege of meeting with their friends for the solemn purpose of Divine worship. He knoweth all,—their sufferings of body, their trials of spirit, their conflicts and their baptisms, their short-comings and their weakness,—none are hid from Him, but "He also knoweth their frame," and mercifully "remembereth that they are dust;" and as they strive to draw near unto Him, He will give them of His strength, and will be their sure Helper, and their Comforter, satisfying their longing souls

with that which is far beyond any enjoyment that health alone can give, even with such a sense of His goodness and love as will enable them to look beyond the sufferings of this life and the trials that may attend them here, and to fix their eye upon that eternal weight of glory which it is His gracious design, that "these light afflictions, which are but for a moment" when compared with eternity, should work out for them.

Let, then, the afflicted in body, especially those who for months and years may have been unable to attend our religious meetings, be encouraged to wait on the Lord; and though to these may come and doubtless will come, as to all the children of the bride-chamber, seasons when the Bridegroom withdraws himself from them, yet as there is an engagement patiently to abide His time, and no effort is made, in the will of the creature, to stir up or awake the Beloved of souls until He please, He will return with a blessing, and they shall again rejoice in Him.

And may all those who are able to attend our religious meetings be sensible of their privileges and responsibilities; and when thus assembled, remember that they are gathered for the express purpose of worshipping Him who "knoweth our down-sitting and our up-rising, and who understandeth our thoughts afar off." The stripped condition of many of our meetings calls loudly upon survivors to dig deep, that there may still be experienced in our religious assemblies the arisings of life. He who declared "where two or three are gathered together in my name, there am I in the midst of them," doth still continue to manifest himself to those who thus meet, although they may be few in number and sensible of many weaknesses. Let all, then, of every class, be earnestly engaged in waiting upon the Lord, for the promise is sure to these—a renewal of strength; and unless this is renewed from season to season, we must faint by the way; but with this we shall be enabled to "mount up with wings as eagles, to run and not be weary, and to walk and not faint." E. A.

1st mo. 21st, 1867.

For "The Friend."

#### Remarks on the Ventilation and Warming of Dwellings.

When men live in too close proximity, and in buildings poorly ventilated, their vital systems become depressed, and low forms of disease are engendered; this results from the contamination of the air by the various exhalations of their bodies, and it becomes of serious importance to remove these and substitute pure atmosphere in their stead; but as a thorough and frequent change, during the winter season in a climate like ours, must necessarily remove a great deal of the heat of the room; it is often for the sake of economy, and still more frequently through ignorance, entirely disregarded. In rooms warmed by stoves, either coal or wood, or when grates are used; the air supplying combustion is taken from the room, which is a step in the right direction. But, as in these cases, no mode is provided for the introduction of more to supply the loss, it has to make its entrance around the windows, under the doors, and wherever else a crack may exist; thus making it dangerous to sit by these openings; and besides, being cold, it sinks at once to the floor, thereby producing cold feet; and, as the draft doors of the stoves are near the floor, but little circulation is created in the upper strata.

To secure free egress for the vitiated air from a building, there must be a full supply of fresh admitted; which should be done in such a manner as not to produce cold currents about the in-

mates. Many builders appear to think, that when they have constructed a flue from a room to the attic, they have done all that is necessary, while they make all other openings, by which air might enter, as tight as possible. In such a room the ventilation is almost as bad as where there is no flue. Again, most persons, who admit the necessity of free ventilation, insist upon taking the air out near the ceiling, supposing that by so doing they remove that which is the most impure, but in this they make another great mistake, when the room is artificially warmed. The respired air leaves the nostrils at a temperature of about 98°, and, as this is much higher than that of the room, it immediately ascends to the top, carrying with it the carbonic acid, vapor, &c., given off by the lungs. But all gases and vapors, that do not combine chemically, mix thoroughly with each other; or to express it in other words, any gas in an inclosure spreads all over it just as if there was no other there, with this exception, that it takes longer to do it. Therefore, in a room without much circulation of its atmosphere, there will be but little difference between the constitution of the upper and lower portions of it, and almost none at all where the ascending and descending currents, created by the heat, hasten the mixing process; this, however, will not be the case in regard to temperature, as I have noticed 11° difference between a thermometer at the floor and one placed at eight feet above it.

From the above facts it becomes apparent, that the opening into the ventilating flue should be at or near the floor, thereby saving fuel, and at the same time equalizing the temperature and preventing cold feet; for as the cooler air is removed from the floor the warm from above must descend to take its place, and, as has been shown, the impurities will be carried off quite as thoroughly as from above.

It is desirable to have high ceilings, or a large capacity in the rooms in proportion to their occupants, as it gives the atmosphere a more uniform composition by enabling the gases to distribute themselves better. The best plan of warming a house is by bringing fresh air from without, heating it in the basement, and then distributing it; as in this manner a full supply, at the proper temperature, can be had all over the building, and all danger from cold currents avoided; next to this, stoves in the rooms and entries are desirable, but it is very important to introduce the fresh air underneath them, that it may be warmed before coming in contact with the inhabitants.

Next in importance, to the proper heating and ventilating of an apartment, is the introduction of a sufficient amount of moisture. The ability of dry air to take up water is in proportion to its temperature, and therefore, the drying power of any given sample will depend upon the difference between the moisture it already contains, and what it would take up at its temperature. Now, in winter, with the thermometer at 20°, and the point of saturation or "dewpoint" at 15°, a very frequent condition, if we admit air into our rooms and heat it to 70°, we will have a difference of 55° to represent its capacity for moisture; while in summer this difference only averages about 10°. The effect of this is shown in the dry skins and lips of cold weather, and in the shrinking of the furniture and wood-work of the rooms.

*Romanism in Great Britain.*—The Romanists have nearly doubled their priests and chapels in England and Scotland since 1851; the convents which numbered 53 then, number now 211; and in England alone 1,300 accredited priests are at work.

To K. B.

Birmingham, 8th mo. 27th, 1834.

My much loved niece and relatives, shall meet you with this letter in the favored shades of a father's planting! as I have understood the your annual retreat is among trees cultivated by a parent's hand. Whether this may reach you there or not, something alive within me, better than naughtily self, seems as it were to unite with your contrived spirits. The Saviour's gentle, sweet, marvellously kind and feeling language of invitation to his faithful followers, presents, so beautifully applicable, encouraging and consoling, that I think I must refer to it, namely, "Come ye yourselves apart into a desert place and rest awhile!" I can hardly forbear to copy a few lines from a beautiful comment on the words:

"Gladly we catch the tender sound,  
Which bids us come and rest awhile;  
Come, breathe with me the desert air!  
Come, breathe to God the secret prayer!  
We come! we come! the harassed soul  
Longs to escape this war of words,  
The clouds of care which round us roll,  
And rest with thee, thou Lord of Lords!  
And once again, the bark retires,  
Ere we the quiet haven quit!"

My own "dear little home," as thou so justly termest it, is a prepared place of rest for me. No human contrivance or foresight could have provided for my ease and accommodation; anxious cares, no daily solitudes which press with even lawful weight in many situations; a what shall I say? reverence and humbling creation clothe my spirit. Language would fain to tell of the lowly calm, wherein my thoughts are fixed on the mercy which has followed me from my childhood to this day. In my lowly estate I have the anchor of hope, and dare not cherish unbelief, nor unprofitably dwell on thy too high for my present comprehension. Even my very weakness proves an exercise of faith and patience. These things I write, not so much for your instruction, as to signify that we are fellow-contenders for the end of our faith—the salvation of our souls.

I mark thy observation on the too frequent and familiar mention of the name of the blessed Saviour, both in public and private. Through faith in this name, my belief is that we shall be saved; but the solemn admonition sometimes rings before me, "Let every one that nameth the name of Christ depart from iniquity."

Oh! I long to depart from all iniquity; this a marvellous work of the Lord's beginning, casting out, and perfecting. MARY CAPPER,  
In her 80th year.

*The Five Cent Piece.*—Much may be learnt from our new five-cent pieces. They mark epoch in the history of weights and measures of the United States. They are on the Metric system. Each of them weighs exactly five grammes, and five of them laid along in order the flat surface, mark off a decimeter in length. Thus the weight and diameter of this coin constitutes the first official recognition, on the part of the United States, of the convenience and excellence of the decimal system of weights and measures. The basis of the scheme, and the arbitrary unit, is the meter. This was found by French mathematicians by measuring an arc of the earth's circumference, and then calculating the exact difference between the equator and pole. The distance was arbitrarily divided 10,000,000, and that gave the meter a unit length, which, if it is ever lost, could be recon-

again by a new measurement of the earth's circumference. The circumference of the earth, for all practical purposes, invariable. The earth has undergone no perceptible contraction since the memory of man, and will undergo none for a long time to come. Perhaps it will never contract farther. The meter, as thus found, is (most exactly 38.98 inches, the subdivisions of this, all decimal, are marked by the Latin prefixes, *deci*, *centi*, *milli*. The multiples of this, also all decimals, are marked by the Greek numerals, *deka*, *hecto*, *kilo*.—*Late Paper*.

For "The Friend."

In reading the "Memoirs of William Crouch," Friends' Library, recently, I was interested in some instructive remarks contained therein, respecting "Evil Speaking," of which Archbishop Tillotson is reported to be the author, (see Vol. II, page 293 of the Library.) I will transcribe them, as they may serve sometime to profitably use some vacant corner of "The Friend."

"1. Never say any evil of a man, but what you certainly know. He that easily credits an ill report, is almost as faulty as the first inventor of it; for though you do not make, you commonly propagate, a lie. Therefore never speak evil of any person common fame, for which the most part is also; but almost always uncertain whether it be true or not.

"2. Before you speak evil of any man, consider whether he has not obliged you by some real kindness, and then it is a bad return to speak ill of him who hath done us good.

"3. Let us accustom ourselves to pity the faults of men, and to be truly sorry for them, and then we shall take no pleasure in publishing them. His common humanity requires of us, considering the great infirmities of human nature, and that we ourselves are also liable to be tempted.

"4. Whenever we hear any man evilly spoken of, if we know any good of him let us say that; it is always the more humane, and the more honorable part, to stand up in the defence and vindication of others, than to accuse and bespatter them. They that will observe nothing in a wise man, at his oversights and follies; nothing in a good man, at his failings and infirmities; may make shift to render a very wise and good man very execrable. If one should heap together all the assionate speeches, all the forward and imprudent actions of the best man; all that he had said or done amiss in his whole life, and present it all to one view, concealing his wisdom and virtue; he man in this disguise would look like a madman or a fury; and yet, if his life was fairly reported, and just in the same manner as it was led, and his many and great virtues set over against his failings and infirmities, he would appear to all the world to be an admirable and excellent person.

"5. That you may not speak ill of any, do not delight to hear ill of them. Give no countenance to busy bodies, and those that love to talk of other men's faults.

"6. Let every man mind himself, and his own duty and concernment. Do not endeavor in good earnest to mend thyself, and it will be work enough for one man, and leave thee but little time to talk of others.

"7. And lastly, let us set a watch before the door of our lips, and not speak but upon consideration: I do not mean to speak finely but truly; especially where thou speakest of others, consider of whom, and what thou art going to speak; use great caution and circumspection in this matter; look well about thee before thy words

slip from thee; which, when they are once out of thy lips, are forever out of thy power."

These rules and directions which he hath here laid down, for the prevention of evil speaking, I do not remember before to have read, they certainly are very good.

D. H.

Bristol, Pa.

**Heggie and the Prisoners.**—Heggie was a celebrated Arabian warrior, but ferocious and cruel. Among a number of prisoners whom he had condemned to death, was one who, having obtained a moment's audience, said, "You ought, sir, to pardon me, because when Abdarrabman was cursing you, I represented to him that he was wrong; and ever since that time I have lost his friendship." Heggie asked him if he had any witness of his having done this; and the soldier mentioned another prisoner who was likewise about to suffer death. The prisoner was called and interrogated and having confirmed the fact, Heggie granted the first his pardon. He then asked the witness if he had likewise taken his part against Abdarrabman. But he, still respecting truth, answered, that he had not, because he believed it was not his duty to do so. Heggie notwithstanding his ferocity, was struck with the prisoner's greatness of spirit. "Well," said he, after a moment's pause, "suppose I were to grant you your life and liberty, should you be still my enemy?" "No," said the prisoner. "That's enough," said Heggie; "your bare word is sufficient; you have given undoubted proof of your love for truth. Go, preserve the life that is less dear to you than honor and sincerity; your liberty is the just reward of your virtue."

Here we see that truth serves us best at the very crisis when we are apt to be most afraid that it will injure us. Would it not have been supposed that the truth and integrity of the witness above mentioned would have redoubled the fury of a man so imperious and sanguinary? Yet the fact is, that instead of irritating, it softened and disarmed the tyrant.

For "The Friend."

Sarah Cresson.

Extracts from her Letters and Diary.

(Continued from page 173.)

"7th mo. 1st. 1794. Oh, holy Jesus, meek Lamb of God! tell me where Thou causest Thy flock to rest as at noonday? Thou, in mercy unmerited, hast been pleased to set before me the beauty of holiness; I desire the joys of which thou art the author, more than any other delight; Oh, blessed Father, Thine is the power to preserve me alive unto thyself; may it please Thee to stain all those things which may tempt to turn aside from being willing to suffer for Thy cause, which is so much neglected by the ungrateful part of mankind. I know that although I have tasted of heavenly joys, I am exceedingly frail and liable to delusions of various kinds, unless I am oftentimes renewed by the quickening influence of thy Holy Spirit. Thine is the power, Thine is the glory, forevermore."

"9th mo. 29th. Attending the opening of the Yearly Meeting has been under a sense of my own insufficiency for any good. Yesterday, in the afternoon meeting, dear Deborah Darby and Rebecca Young were much favored in testimony; this morning the former spoke in a very lively manner, pressing the attendance of religious meetings, especially urging those in the middle of the week; dear Rebecca had also very acceptable service, desiring parents' watchful regard over their children, and that they might not only be as Eli of old, but command them in the authority of

Truth. The meeting adjourned to 3 o'clock, in which many weighty remarks were made. A concern having arisen on account of the want of suitable teachers for Friends' children and others, Deborah Darby encouraged young women to undertake the care of not only their own connections, younger branches of their own families, but also poor children."

"9th mo. 30th. Meeting gathered about 10 o'clock. A good degree of weight accompanying us was comfortable."

"10th mo. 1st. Our meeting having been remarkably favored through the sittings, I felt my mind bowed with reverence to the Father of all our mercies, whose hand being full of blessings, He hath not failed to show them down copiously on His children and people in the sweet flowing of Gospel ministry we have had dispensed to us during the course of this meeting, in a manner truly solacing; yet under all these favors, my spirit hath not been a stranger to suffering; and if it please Infinite Wisdom to lead by the way of judgment, I do not desire to draw back; if His hand is only reached forth for my redemption, it is enough. All that is for me to do is to dwell deep under His purifying power, in holy resignation of my will to the Everlasting Father, and sure Friend. Ah! this is truly desirable, but to perform is what I am endeavoring to learn. Oh, my soul, do not faint by the way, but press through the clouds of dismay which oftentimes surround thy dwelling; remember that the Lord hath favored thee with a discovery of light and truth, at times when thou hast been ready to fear thou never should rejoice in the return of heavenly consolation."

"4th. We adjourned to meet at the usual time next year, if the Lord permit. A solemnity covering us some time after the minute was read, our endeared D. Darby was engaged in humble supplication to the Lord, on account of divers states, which nearly affected me, and I felt bowed in prostration, under a sense of the goodness and mercy of our Heavenly Father. Under a covering of holy good, I trust, meeting concluded."

"8th. Deborah Darby and Rebecca Young came to see us, which I looked upon as a great favor; renewed feeling of Heavenly love was my portion, I believe, for which I desire to return thanks. My poor troubled mind was afresh strengthened by what they had to impart. They left this city for Chester, on their way to the eastern shore of Maryland. A low exercising day this has been to me. Cousin Samuel Emien came to see us, having reached the city yesterday; he and several other Friends arrived at Boston last month, to wit, Martha Ruth, and John Wigham, on a religious visit: Martha from England, Jobb from Scotland. Cousin Samuel has been absent two years and rather more, in his service in Europe.

"12th mo. 11th. Our week day meeting; dear N. Wain appeared eminently in the ministry; a call to thankfulness it was that the great cause was espoused in so clear and powerful a manner, and I hope the Great Name in measure magnified."

"25th. This was to me a day of deep distress. 'Oh, for a Redeemer, or I perish; a Saviour, or I die.'

"26th. Oh, when will light arise, or shall I ever rejoice in the God of my salvation."

"1st mo. 3d, 1795. Our dear friends, D. Darby and R. Young, began to visit the families of Friends of the Southern District, accompanied by Nicholas Wain."

"1st mo. 27th. My birth day; twenty-four years have been granted me; and on humbling re-spectation, what have I done for the Lord's

honor. May every necessary exertion of mine be used, under Divine direction, for the advancement thereof. Lord, strengthen then, if it be thy blessed will, my faith and love, 'that neither heights nor depths, things present, nor things to come' may separate me from Thee, the God of all consolation."

"30th. Our Monthly Meeting was held; and never did I feel more desirous that Friends might settle down in their winds, and seek for right direction. Some matters of very great concern coming under consideration, Oh the necessity of deep waiting to know the mind of Truth; a superficial judgment, doubtless, is very hurtful to our Society; may we deepen in our minds. But thanks be unto the Lord, He hath not forsaken us, but to the reduced and sensible mind, is a spirit of judgment. I had to bow in abasement under a sense of His goodness, though in great poverty of spirit. May my abiding be more in true humility, and close attention to the Heavenly Instructor."

"1st mo. 31st. I attended select meeting to-day, the first I ever was at. A humbling season it was to me. Oh, that my feet may be preserved from falling. I stand on slippery ground,—the enemy is seeking to devour. May watchfulness be more my engagement, and a fervent seeking to the Omnipotent Helper."

"2d mo. 8th. First-day evening, a very large meeting; dear Deborah and Rebecca were there, and dear Ruth Anna Rutter with them. A favored season it was; the three Friends mentioned, appeared in testimony. But may I not, Oh, my soul, take up this language, 'From the uttermost parts of the earth, have I heard songs, even glory to the righteous, but I said, my leanness, my leanness, woe is me, my leanness.' For a length of time scarcity of heavenly consolation has been my portion: when deliverance will, or may be proclaimed within my borders, is out of my sight; I feel the need of dwelling in patient dependence, and holy confidence, with a single eye to the Lord's glory."

"10th. Oh, my poverty, and want of every virtue; yet the Lord be pleased afresh to visit my soul with the influence of the Sun of righteousness, without whose arising, languor doth overspread my mind."

(To be continued.)

*To Light a Dark Room.*—The London *Builder* recommends a plan for lighting a dark room in which the darkness is caused by its being situated on a narrow street or lane. The *Builder* says if the glass of a window in such a room is placed several inches within the outer face of the wall, as is the general custom in building houses, it will admit very little light, that which it gets being only the reflection from the walls of the opposite houses. If, however, for the window be substituted another in which all the panes of glass are roughly ground on the outside, and flush with the outer wall, the light from the whole of the visible sky and from the remotest parts of the opposite wall will be introduced into the apartment, reflected from the innumerable faces or facets which the rough grinding of the glass has produced. The whole window will appear as if the sky were beyond it, and from every point of this luminous surface light will radiate into all parts of the room.—*Late Paper.*

The fountain has not the less water for the vessel it fills, nor the sun the less light for that it gives forth to the stars; so the Lord Jesus Christ has never a whit the less for what he gives forth unto his saints.

### THY KINGDOM COME.

Isaiah lx.

Awake, arise! thy light is come!  
The nations that before outshone thee  
Now at thy feet lie dark and dumb;  
The glory of the Lord is on thee.

Arise! the Gentiles to thy rays  
From every nook of earth shall cluster,  
And kings and princes haste to pay  
Their homage to thy rising lustre.

Lift up these eyes around and see!  
O'er foreign fields, o'er farthest waters,  
Thy exiled sons return to thee,  
To thee return thy home-sick daughters.

And camels, rich from Midian's tents,  
Shall lay their treasures down before thee;  
And Saba bring her gold and scents,  
To fill the air and sparkle o'er thee.

See, who are these that like a cloud  
Are gathering from all earth's dominions,  
Like doves long absent, when allowed  
Homeward to shoot their trembling pinions.

Surely the isles shall wait for thee,  
The ships of Tarshish round thee shall hover,  
To bring thy sons across the sea,  
And wait their gold and silver o'er.

And Lebanon thy pomp shall grace—  
The fir, the pine, the palm victorious,  
Shall beautify thy holy place,  
And make the ground we tread on glorious.

No more shall discord haunt thy ways,  
Nor ruin waste thy cheerless nation;  
But thou shalt call thy portals "Praise,"  
And thou shalt name thy walls "Salvation."

The sun no more shall make thee bright,  
Nor moon shall lend her lustre to thee;  
But God himself shall be thy light,  
And flash eternal glory through thee.

Thy sun shall never more go down;  
A ray from Heaven itself descended,  
Shall light thy everlasting crown,  
Thy days of mourning all are ended.

My own elect and righteous land,  
Thy branch forever green and vernal,  
Which I have planted with this hand,  
Live thou shalt in life eternal.

Selected.

The old rags, after being reduced to the condition of wool by enormous toothed wheels, are mixed with a varying amount of fresh wool, and it whole is then worked up into the fabrics we have mentioned, which now have the run of fashion. It is estimated that shoddy and mungo supply the materials for a third of the woollen manufactures of this country. Here is a grand transformation. No man can say that the material of the coat he is wearing have not been altered on the back of some greasy beggar. In one corner of the "animal products department" in the South Kensington Museum, the visitor can see hundreds of specimens of this shoddy and mungo—a perfect resurrection of the old clothes from every country in Europe. The cast-off wardrobe of civilized man by a law of commerce are sucked into this country, and mainly into this metropolis, and in return we distribute it in perfect fabric destined to go once more the round of civilization; woollen fabrics are hard to die, and as we know, clothes are thus ground up over and over again. The final destination, however, of all old clothes is the soil; when art can do no more for much-veged woollen fibre it becomes land rag. We have pursued old clothes through so many shifting scenes, that, having run the earth at last, here perhaps, it would be as well to leave them; but no, they once more reappear in our beer. Hops, we are told, of a certain quality, cannot be grown without the manure of land rags. Thus, the final destination of old clothes after all is the human frame, and we on close sight of them when, instead of clothing the vile *corpus*, they are transmuted into the body itself, as we quaff the foaming tankard, or the more genteel bottled bitter of Bass and Allsop.—*London Times.*

*Glycerine and its Uses.*—This article is among the comparatively recent discoveries of science. Glycerine, in a pure state, is a clear, colourless, syrupy liquid, of a very sweet taste, being a sweet principle contained in oil and fatty bodies. Its first introduction into medical use was in the year 1844, in the London Hospital, for diseases of the skin; it keeps the same moist and so and excludes the air without evaporation. The Russians apply it to the face and ears as a protection against intense cold, as it does not contract at any temperature. In ophthalmic surgery frequent and extensive use is made of glycerin also in certain conditions of deafness. It may be used as an adjuvant to the bath, softening the skin pleasantly, and has a high reputation as lotion for the complexion; but for all these purposes it should be perfectly pure. It was first known in a pure state until the discovery of A. Tilghman, of Philadelphia, patented in 1846. There are two manufacturers who make the best and purest article—one in London, and the other of equal celebrity, in Philadelphia.

In the arts, the uses of glycerine are manifold in keeping the colours of organic bodies; in photography, to keep pictures in an unfinished state. At the museum of the Faculty of Medicine Paris, glycerine has been recently adopted as preservative fluid for flowers and fresh plants. M. Tiebhorne has thus kept flowers for two years and then made from them a water, with a perfume equal to that of the flowers of the season. M. Ward may be kept for any length of time by admixture. Manufacturers of chewing tobacco find it valuable in maintaining the softness of their products, while imparting sweetness to the taste. Frequent efforts have been made to use glycerine in the manufacture of toilet soaps, but without success, until quite a recent period, when

Unto the glory of thy Holy Name,  
Eternal God whom I both love and fear,  
Here bear I witness that I never came  
Before thy throne and found thee loth to hear,  
But, ever ready with an open ear,  
And though sometimes thou seem'st thy face to hide,  
As one that hath his love withdrawn from me,  
Tis that my faith may to the full be tried,  
And I thereby may only better see,  
How weak I am when not upheld by Thee.  
T. Ellwood.

*Old Clothes.*—Old clothes, after they have served the purposes of two or three classes of society, are yet far from closing their career; when they have seen their worst, they take altogether a new lease of existence. As old Jason was renewed, in ancient story, by being ground in a mill, so are our garments in the present day. When old clothes are too bad for anything else, they are still good enough for shoddy and mungo. It is not many years since M. Ferrand denounced the "devil's dust" of the Yorkshire woollen manufacturers; this devil's dust arises from the grand translation of old clothes into new. Batley, Dewsbury, and Leeds have been described as the grand centres of woollen rags—the tatter-demallion capitals, into which are drawn all the greasy, frowsy, cast-off clothes of Europe, and whence issue the pilot-cloths, the Petershams, the beavers, the Talmas, the Chesterfields, and the Molairs, in which our modern dandies disport themselves.

very beautiful article has been produced.—  
dger.

For "The Friend."  
Extracts from Letters received by the Friends'  
Freedmen Association.

E. S., writes from Greensboro', N. C., under the 1st mo. 21st, 1867: "Our school is not quite large as before Christmas, owing to the severe winter and the insufficient clothing of the children. Some of the larger ones 'hired out' at New Years—that is the time when they make all arrangements here. I just now think of three girls and a boy who walk six miles every morning to school; they are obliged to start as soon as the mornings rise. We have many who come three or four miles. There is a school near here where they charge each scholar \$1 per month, but very few are able to pay this, and prefer to walk a long distance.

"The coloured people here are very industrious and enterprising, they are all very anxious to buy mules, and have their children educated; they seem to feel that when that is accomplished they will be more independent. They have to pay enormous rents; \$5 and \$6 a month for one small room, is the usual price.

"We narrowly escaped losing our school-house by fire, last Sixth-day morning; but owing to the promptness with which the boys acted, it was extinguished with very little damage to the building. We were surprised at the self-possession shown by all of the scholars, they did not become excited, as might have been supposed, but obeyed our instructions implicitly. Those living at home also deserve much credit; several of the women ran with water, and one man always keeps a ladder near, to use in case of emergency. To ward against future danger, the people propose building a chimney, and will commence it to-morrow.

"We feel much encouraged in our work, and hope to meet with continued success. I have opened arithmetic and two geography classes—all much interested. I find it difficult to give them thorough knowledge of the earth without a globe—this is our next great want.

"I feel recompensed for all sacrifices of home comforts, by the gratitude and interest of the coloured people.

"We should be much pleased to receive a visit from some of the Association this winter, that they may witness for themselves how well their efforts to educate these people are appreciated—I am sure they would feel gratified."

C. B., of Deep River, writes in substance as follows: under date 1st mo. 15th, 1867.

"There is a great openness still for labour in this country, and I fear more than we can do; for the selling disposition still remains in some of the ruder slave-holders. I witness repeated instances of extortion and oppression: helpless widows and their children robbed, under one pretext or another, of their carefully husbanded little hoards of corn, by their old masters.

"I could write much of this import, but this enough, unless it will tend to the breaking down of the slave-holding spirit, which reigns in the hearts of so many of the citizens of this world. We can only pray to the all-powerful Father, that He will hasten the day when all the bonds of the oppressed may be broken."

The Superintendent writes from Yorktown, N. C., 21st, 1867:

"The fifty dollars just sent for the special purpose of supplying wood to the suffering, was a most timely and well directed donation, and has saved a large number of widows and children from

extreme suffering. With it I am now supplying twenty-two families with wood. Say to the generous donor, that 'the blessings of those who were ready to perish' have already fallen on his head. I have on my list forty-one families of widows and infirm, most of whom have children, either of their own or of some relative or friend, to provide for. It is remarkable to witness how much these poor people do for orphan children. We often find them with one, two, and three helpless children, not their own, but a deceased brother's, sister's, daughter's, son's, cousin's and not unfrequently a deceased friend's child. In vain I have tried to persuade such to go with the children to the hospital. They have a pride which forbids that they should be supported at a poor house. They say 'I'll live any way and suffer and die before they are 'tained at de hospital.'

For "The Friend."

#### The Late Meteoric Shower.

In addition to the article on this subject which has already appeared in "The Friend," it may not be amiss to give some further facts and observations respecting the late recurrence of this interesting phenomenon.

As is well known to our readers, the display in this country was quite inconsiderable. The reason of this will appear by consulting the report of the Greenwich observations given on page 162 of "The Friend." It will be seen that at Greenwich the exhibition was pretty much over by 4 o'clock on the morning of the 14th—that is, by 11 o'clock on the evening of the 13th in this longitude. But it must be borne in mind that it is only that hemisphere of the earth which is at the time the *foremost half* of our planet in its orbital motion around the sun, that receives the shower of meteoric hail, or, more properly, meteoric dust; and as only *one half*, or somewhat less\* than one half, of this hemisphere is in darkness, it is only on this *one fourth* of the globe that the meteoric shower will be visible at that time. Now we of this country were not, at the time of this late shower, in this favored *quarter* of our globe, not having reached the required position with respect to the sun and the earth's orbit, until the meteoric cloud had passed by, with the exception of a few straggling meteors that brought up the rear. In other words, that part of the heavens in which the *meteoric battery* was situated did not rise above our horizon until about midnight; for, on the 13th of the Eleventh month, the star *gamma Leonis* (the brightest star in the neck of the Lion), near to which the radiant point is situated, rises in this latitude about quarter before 12 o'clock.

Again, it will be seen from the Greenwich observations that the maximum display there was between 1 and 2 o'clock on the morning of the 14th—that is, between 8 and 9 o'clock of our time on the evening of the 13th, at which time we, of course, could not see the celestial visitants, because a part of the solid earth was interposed between us and them. Those meteors which were at the time passing over our heads had such an immense relative velocity—some 40 miles per second—that our earth's attraction could do but little comparatively towards drawing them from their regular onward course; and thus these would escape our atmosphere (and therefore be non-luminous), excepting the few which happened to enter it not far from our own meridian. Such would approach gradually nearer to the earth's surface, and might, before leaving us entirely, become luminous, either from enter-

ing denser strata of the atmosphere, or in consequence of their prolonged and rapid flight through the rarer regions.

It appears probable from the Greenwich observations that the time of maximum display for the whole earth was somewhat earlier than between 1 and 2 o'clock, Greenwich time. So far as those observations indicate, it may have been many hours earlier, or it may not have been any earlier. If we should receive *reliable* reports of good observations made in eastern Europe or in Asia, this time—the time of the passage of the earth through the densest part of the meteoric cloud—will probably be determined. We know that it was not so early as 6 o'clock of our time on the morning of the 13th, because it would then have been visible here, which it was not. And if there was no grand display near the Pacific coast of our continent—at San Francisco, for instance—on that morning, which we believe there was not, it follows (if the sky in that region was clear at the time) that the time of our encountering the dense part of the cloud was later than 6 o'clock, San Francisco time, on the morning of the 13th, which is equivalent to about 2 o'clock, P. M., Greenwich time of that day.

As we had not the pleasure of witnessing the phenomenon in this country, except to a very small extent, we append some additional accounts of the appearance presented to the observers in England and on the Continent.

The *London Times* of Eleventh month 15th, says, speaking of the night between the 13th and 14th. "They who chose to watch, and were not discouraged by the doubts of astronomers, were rewarded with a spectacle which cannot be imagined or forgotten. The sky was unusually clear, and, till about an hour before midnight, it made no sign, and the eye turned in vain to the east, as men look at a fortress that will not give the challenge. But when the irregular circle of stars that had been indicated by former observers had well cleared the horizon, and moved some points to the south, first one meteor then another shot across the sky in various regions and in various directions, but plainly from that one quarter. The spectator had soon counted half-a-dozen; then he felt sure he had seen thirty; then six or seven in a minute; then they appeared faster than he could count them. Then there came two or three together; then not less than a dozen of all kinds. Some shot across the heavens, leaving long, bright and lingering trains, the star itself seeming to explode and instantly disappear. Some darted as quickly and as bright, but without trains. Some struck the sight like sparks from a forge, everywhere at once. Some seemed to fall over trees or houses, bright to the last, but with the ruddy hues of a lower atmosphere. Look where we would it was the same; in the far west, and throughout the entire north, there was either the bright glancing speck of light or the long train, or what seemed an actual ball of light, that illuminated the country, and was slow to die away. As the night advanced, these meteors chased one another across the sky, following in one another's track, or running side by side. The heavens seemed alive with this unwatched host. There were times when it seemed as if a mighty wind had caught the old stars, loosed them from their holdings, and swept them across the firmament. The Olympian himself might have been supposed on his throne, launching his bolts against an off-nding or forgetful world. There he was all but visible, for at that one place there were meteors that appeared, only as spots to disappear, or to traverse only just as much space as would show motion. That, in fact, was

\* On account of the effect of twilight.

the very pathway of all this artillery, which was thus foreshortened like a column of soldiers, as seen by those that have to bear the brunt. In the course of two or three hours there must have been many thousands of these visitors, usually so rare. Even when the sky became partially overcast, they still showed themselves at every opening, and shone through the veil of clouds. Few, indeed, who saw it had ever seen the like, or could expect ever to see it."

A correspondent of the London Times, writing from Saragossa, Spain, speaking of the night of the 14th (it is probable, however, that he meant the night of the 13th), says: "I witnessed a very extraordinary display of 'falling stars,' and as I think I have understood that this particular night of the year is remarkable for the appearance of these meteors, a short account of their occurrence on the occasion may not be without interest to some of your readers. For several weeks past the sky in this part of Spain has been without a cloud, and consequently the display of last night was seen under circumstances which could only very rarely occur in England. My attention was first directed to the falling stars at about 12 o'clock at night, by observing groups of people in the narrow streets of Saragossa, conversing together with a certain degree of excitement. 'Mira, Usted es como si fue en el tiempo del sitio' (look, it is just as if it were in the time of the siege) was the reply to my question as to what was the matter, and on looking up the appearance certainly was as if the city was being shelled. Showers of meteors seemed to be pouring into the place, a score or more at a time, exploding with a brilliant flame at different points, and leaving long luminous trains behind them, some of which lasted as streaks in the sky several instants after the explosion of the meteor. I hastened to an open space, and I much regret that the sight I witnessed did not fall to the lot of a scientific observer. The meteors seemed to be most abundant towards the north and northwest, and I noticed a particular stream of them not far from the constellation of the Great Bear. The direction of flight was mostly from right to left downwards at various angles of inclination; but on arriving at my own room afterwards I observed from the window, which commanded a somewhat different view, a succession of meteors, which seemed to fall nearly in a vertical direction from about the same point in the sky. I may notice that the luminous tracks at this part were occasionally seen crossing at acute angles those which were projected from right to left, but I did not observe a single instance of the tracks crossing in other directions, or, in other words, of meteors projected from the opposite side. It was evident to me that the stars were being projected in one or more fixed lines of flight. Those which fell in a nearly vertical direction appeared to be usually more brilliant than the others; they all left a well-defined trail or track of sparks of a pale bluish color, and they finally exploded with a brilliant white or yellow flame; in some instances the flame appeared tinged on the edges with a vivid emerald green colour, and others exhibited tints of pink or crimson and blue. Some idea may be formed of their number and brilliancy from the fact that when I went to bed, though the field of sky visible through my window as I lay was very small, it was being continually crossed by the meteors, and a looking-glass which hung on the wall was every moment brilliantly lit up with the reflection of the explosions which occurred. During the short time I observed them many hundreds of meteors fell, and, as there was no perceptible diminution in their number, I

have no doubt during the night the number must have been tens of thousands."

From the *Intellectual Observer*, for the Twelfth month, 1866, published in London, we copy the following graphic description:

"Towards 1 o'clock the meteors came thicker, and from 1 to 1.30 it is scarcely an exaggeration to say that all the heavens were ablaze with fiery balls and long streaming tails of colored light. The long trains stretched from 40°, 50° to 60°, 90°, and probably greater lengths. In these cases a large proportion of the whole length of the trains was in a highly lustrous condition at the same moments of view. The effect was that of a continuous stream of burning particles left behind by the meteors in their course, and quite different from any luminous appearance that might arise from mere compression of the air in the fire-ball's flight.

"Looking towards Leo it seemed as if a celestial rocket battery had been established in that constellation. A few meteors went downwards from *gamma Leonis*, and many more upwards from the same star; but the majority had a more central radiant point. Upward they shot by dozens, scores and hundreds; now pelting past Procyon and through Orion, now bombarding Castor, then up to the zenith and down again; then through the Great Bear under and over the pointers. Occasionally a little to the south of *gamma Leonis*, meteors burst and disappeared immediately, showing no trains. Probably their tails were behind them and invisible from the foreshortening of the perspective. At the same time the meteoric shower went on in descending curves west of the zenith point, and by 2.15 (1 hour and 15 min.) we had counted 1400, excluding at least 100 more seen before our attempt to number them began."

"From the impossibility of two persons seeing and counting all the meteors, the total number must be set down as considerably in excess of our enumeration. We counted 1500 by about 3 A. M., and adding 100 or more seen earlier, this makes 1600—a portion only of the entire display."

"The great majority of the meteors was as bright as 1st magnitude stars, such as Vega and Sirius. Some as bright as Jupiter, others rivalled Venus, but few if any exceeded her."

"At the height of the shower the meteors came in batches and volleys. Sometimes two or more travelled close together, and at others sets of four or five flashed in diverging courses from various parts of the heavens."

"From Weybridge two meteors were seen revolving round each other and describing spirals of light."

(To be continued.)

On Evil Speaking.—One night—I remember it well—I received a severe lesson on the sin of evil speaking. Severe I thought it then, and my heart rose in childish anger against him who gave it; but I had not lived long enough in the world to know how much mischief a child's thoughtless talk may do, and how it often happens that great talkers run off the straight line of truth. I was talking very fast about some female relative, who did not stand very high in my esteem, and was about to speak further of her failings of temper. In a few moments my eyes caught a look of such calm and steady displeasure that I stopped short. There was no mistaking the meaning of that dark, speaking eye. It brought the color to my face, and confusion and shame to my heart. I sat silent for a few moments, when a friend asked very gravely, "Dost thou not know some good thing to tell us of her?"

I did not answer, and the question was more seriously asked. "Think; is there nothing good thou canst tell us of her?"

"O yes; I know some good things certain, but—"

"Would it not have been better, then, to relate those good things, than to have told us of which must lower her in our esteem. Since the good is good to relate, would it not be kinder to be silent on the evil. 'Charity rejoiceth not in iniquity,' thou knowest."

Lead Pencils.—It is estimated that 500,000,000 pencils are used annually. In the United States alone, more than 2,000,000 of these numbers are used, the most part of which are received from abroad. The Cumberland mines, in England, have heretofore furnished the best quality of the mineral, graphite or plumbago, from which the lead is had; but the supply has been nearly exhausted by constant working, and few of the genuine Cumberland pencils are now made. In Germany, where the pencil trade is most flourishing, there are several manufactories, the largest of which is at Stein, kept by the Faber Brothers. It is a family business with them, their father and grandfather having been engaged in it before them, and has been carried on until the name of Faber, as a pencil-maker, is renowned. A manufactory has existed for some time at Concord, Mass., and another extensive one has been established near Hoboken, New Jersey. In this establishment nearly all the work is done by machinery, which is constructed by machinists of the factory, while in Germany the pencils are made by hand. For the wood of the pencils Florida cedar is used, being cut up with saws. One set of the wooden slips are grooved and fitted to other pieces called "covers," and then left till the lead is inserted. The plumbago is not properly prepared until it has gone through a process of breaking, cleaning, mixing, pressing and baking. When it comes out of the grinding mill it goes into large tanks, where it is refined and separated from all ingredients, and it is then placed in a bowl-shaped machine, where it is rolled and mixed. It is next pressed, and this is the most interesting of the various degrees of preparation it undergoes. A cylinder with turn in the bottom is used, and through these runs the lead in hexagon, square, round, or any other shape wanted, and is received in coils underdone by a small boy, who manages the board on which it falls with great dexterity. Other boys take the lead afterward and put it in models, which are then sent to the heating-room for drying and hardening; for the lead, when it comes from the press, is soft and flexible, and wanting in tenacity. It is left in the heating-room one day when it is removed to a kiln, where it is put in crucibles and burned after the manner of burnt brick. When this is done, about twenty girls kept employed in putting the leads into grooves and gluing on the covers, and this work is performed in a very rapid and systematic style. The cutting of the strip is done by knives run by a machine, and after they are turned out are put into another machine, where they are smoothed. From there they go to the carpenter's shop, where the ends are neatly cut, and then pass through the polisher's hands, the printer's, and the counter's, and are finally in boxes ready for sale.—*Late Paper.*

The Wheat Trade of Milwaukee.—The Milwaukee News has an elaborate article on the wheat trade of that city, which, it seems, has been considerably larger during the last year than it

1865, although the wheat crop of Wisconsin partially a failure last season. The wheat crops of Milwaukee for 1866 amounted to 3,664,448 bushels, while those of Chicago during the same time were but 11,950,991 bushels, a difference in favor of Milwaukee of 713,457 shels. Milwaukee may, therefore, still continue to make her boast that she is the largest wheat depot in the world.—*Late Paper.*

Selected for "The Friend."

### An Epistle to all Serious Professors, &c.

FRIENDS—After it pleased the Lord to touch my heart with the sense of his truth, and to manifest unto me the principle of his life, in the manifestation and power of his own Spirit, inasmuch as I could reason, dispute, consider about no longer, but was fully satisfied concerning I say, after this, the love of God sprang in towards you, and pure desires and breathings to him, that ye also might have the way cast up before you, and might so walk therein, as to me to partake of the same mercy and salvation. Now I have mourned before the Lord for you, and desired that the stumbling-blocks might be moved from you, and that ye might so seek as obtain, (not in that wisdom and disputing and, which still is shut out, but in that meekness, humility and fear, which gives entrance,) as the Lord God knoweth. Yea, he desires in me that ye are still living; who knoweth, but the Lord may at length hear; and with his key so open your hearts, and so anoint your eyes with the eye-salve, that ye may see, acknowledge, believe in, and receive the Beloved of your souls, even as he now appears, (after the long night of darkness,) a Comforter of the drooping spirits of his people, with the pure light of life, wherein he redeemed him of Jacob, (who sat in darkness and in the valley of the shadow of death, mourning after him,) now in holy rejoicing and the joy of spirit, walk before him? Oh! the Lord God visit you, and break in upon you, and so bath done upon us, and cause you to set to your seals also, as we could not but do, that this He whom all our days we waited for, and longed after. And now there are two or three things in my heart to open to you, how it is with me in reference to them; for indeed I have not been taught to deny any testimony the Scriptures hold forth concerning the Lord Jesus, or any of his appearances, but am taught by the Lord more certainly and fully to own and acknowledge them. The first is concerning the Godhead, which we have as the Scriptures express it, and as we have the sensible, experimental knowledge of it. In which, there are three that bear record in heaven, the Father, the Word, and the Holy Spirit; and these three are one: 1 John, v. 7. This I believe from my heart, and have infallible demonstrations of; for I know three and feel three spirit, even an eternal Father, Son, and Holy Spirit, which are but one Eternal God. And I feel them also One, and have fellowship with them, (through the tender mercy of the Lord,) their life, and in their redeeming power. And therefore I lie low before the Lord in the sensible, not desiring to know and comprehend rationally, but to feel the thing inwardly, truly, and effectually; yea, indeed, this is to me far beyond what I formerly knew notionally concerning them, and I cannot but invite others thereto. Now consider seriously if a man from a heart believe thus concerning the eternal power and God-head; that the Father is God, the Word God, the Holy Spirit God, and that these are one eternal God, waiting so to know and, and to be subject to him accordingly; is

not this man in a right frame of heart towards the Lord in this respect? Indeed, friends, we do know God sensibly and experimentally to be a Father, Word, and Spirit, and we worship the Father in the Son by his own Spirit, and here meet with the seal of acceptance with him. Nor would we contend with you about your crimes in this respect, but that ye provoke us thereunto, in laying to our charge as if we denied the thing; whereas we do not, nor can deny the expressions which the Scripture useth, nor our own sense and experience concerning the thing. I pray let this suffice, and let all strive to know God, (and his Son Jesus Christ,) in his life, spirit, and power, wherein is unity and true demonstration; and not contend about such expressions concerning things, as are beside the Scriptures. For would not ye, yourselves, think it hard, (I mean such of you as read the Scriptures seriously, desiring to understand and observe what is written therein,) to have a belief of things imposed on you otherwise than is there written, and otherwise than ye have the sense, knowledge and experience of them from the Lord? The second is concerning the offering of our Lord Jesus Christ, without the gates of Jerusalem. I do exceedingly honour and esteem that offering, believing it had relation to the sins of the whole world, and was a propitiatory sacrifice to the Father therefor. And surely he that is redeemed out of the world up to God by Christ, cannot deny that Christ was his ransom, and that he was bought with a price, and therefore is to glorify God, with his body and spirit, which are God's: 1st Cor. i. 20. And, saith the apostle Peter, ye know that ye were not redeemed with corruptible things, as silver and gold, from your vain conversation, &c., but with the precious blood of Christ, as of a Lamb without blemish and without spot, 1st Peter, i. 18, 19: who so offered himself up to God through the eternal Spirit. Heb. ix. 14. This we do own singly and nakedly, as in the sight of the Lord; though I must confess we do not lay the whole stress upon that which is outward and visible, (though we truly and fully acknowledge it in its place,) but upon that which is inward and invisible, upon the inward life, the inward power, the spirit within; knowing and experiencing daily, that that is it which doth the work. The outward flesh is not the meat indeed, nor the outward blood the drink indeed; but it is the Spirit, the life, the substance, which the birth that is born of the Spirit feeds upon, and lives by. Oh! consider seriously, and wait on the Lord, rightly to understand that Scripture, John vi. 63: It is the Spirit that quickeneth, the flesh profiteth nothing; the words that I speak unto you, they are Spirit, and they are life. What doth this scripture lay the stress upon? Is it not upon the quickening Spirit, and the words which the quickening Spirit speaketh to the soul, which are living, and give life to those that hear them? Hear, and your souls shall live! Hear his voice who giveth life, and your souls shall live by him; but can any one live without hearing the voice of Him, who alone is able to quicken and raise the soul from death, and out of the grave of sin? The third thing is concerning the imputation of Christ's righteousness, to such as believe in his name and power, which we have felt, witnessed, and own to be thus. God visits men by the light and power of his Holy Spirit, in their dead and dark estate, even while they are ungodly. Now, that they feel life, and in the quickenings of life, by the faith which comes from life, turn to the light and power which visits them; by this faith in the power, they are in measure transplanted out of

the unholy root into the holy root, where they partake of the nature and virtue of the true olive-tree, and the mercy of the Lord in and through his son, Jesus Christ, is spread over them, and their iniquities are pardoned and their transgressions done away for his name's sake, and they are reckoned by God not as in the old root and unholy nature, but that whereon they lay hold by faith, and are in union with, they are reckoned by in the eye of the Lord; and they are accepted and beloved in Him in whom they are found, by Him who transplanted them there, and ingrafted them thereto. So that Christ is really theirs, and they his; and what he did for them in his body of flesh is become theirs, and they have the benefit and reap the sweet fruits of it. And if they sin afterwards, they have an Advocate who pleads their cause with the Father, and who breathes livingly upon them again, and quickens faith in them, and gives them to turn from that which ran after them, and overtook them, and defiled them. So that in this state of true faith in, and union with, the Son, the fountain is felt set open for sin, and for uncleanness, which daily washeth away the pollutions and stains of the mind, which it is liable to in the travelling state

(To be continued.)

## THE FRIEND.

SECOND MONTH 2, 1867.

Our attention has been recalled to the letter from Danville, Va., dated 1st month 3d, 1867, published in our 21st number, and containing some account of the Freedmen's celebration in that place, of their emancipation, in consequence of dissatisfaction expressed by several at its having found a place in "The Friend."

The letter came to us among others, relating to the Freedmen and their schools, and was sent to the printer without sufficient consideration.

We think it right to state, that neither the Executive Board of Friends' Association for the aid of the Freedmen nor any one under their sanction, had anything to do with the parade or other ceremonies described; and the letter was sent to the Committee on Instruction, in order to give information relative to the progress in liberty made by the coloured people, in a situation where they had been peculiarly ill-treated and depressed, and the change of feeling towards them that had taken place among the inhabitants of the town.

Our friend John S. Stokes, having succeeded our late friend J. Richardson, as Publisher of "The Friend," all communications relating to the journal should be addressed to him at the office.

### SUMMARY OF EVENTS.

FOREIGN.—The short-time movement among the Manchester manufacturers is extending. The market for yarns and goods is dull and drooping. Breadstuffs dull and declining. It is announced officially that the British government has accepted the plan submitted by the provincial delegates for the union of the Canadian procaranted by the British government, is soon to be put in the open market. Formidable bread riots have occurred at Greenwich. The Court of Admiralty has given a final judgment, in favor of the United States, in the Rappahannock case. This makes the third steamer recovered by the United States consul in the British courts.

Advice from Paris state that France is dissatisfied with the measures recently put forward by the Emperor Napoleon. Telegrams have been received in Paris from all departments of the empire, expressing dissatisfaction

## British Columbia.

The following extracts from Milton and Chendle's narrative, furnish some reliable information respecting a little known portion of our continent. British Columbia comprises, in general acceptation, that portion of the British territory in North America lying west of the Rocky Mountains, and bounded by the Russian possessions on the north and Washington territory on the south.

"We had now seen a great portion of British Columbia and Vancouver. We had travelled through the former from Tête Jaune Cache by Thompson to the mouth of the Fraser River, and again through the heart of the country to the coast. We had found the country abounding in mineral wealth. The extent and richness of the gold fields, added to every month by fresh discoveries, would alone be sufficient to render the colony one of our most valuable possessions. It is indicated that many other of the most valuable minerals will be found in British Columbia, as in the neighboring State of California. are long. At present, however, every other pursuit put aside for that of gold, and the real mineral wealth of the country is little known. Coal, however, crops out at Alexandria, Similkameen, and Burrard's Inlet. In the sister colony of Vancouver, are the magnificient beds of coal which we have already extensively and most successfully worked at Nanaimo for the last four or five years.

"The timber of British Columbia is, of its kind, unequalled. The Douglas pine, with its noble uniform trunk, exceedingly tough and durable, furnishes the finest masts and spars for the largest vessels. These trees often attain a height of upwards of 300 feet, with a diameter of 6 feet. The white pine and the gigantic cypress, the latter exceeding even the Douglas pine in size, grow together with it in vast forests, yielding an almost inexhaustible supply. But perhaps the most striking feature in the resources of British Columbia and Vancouver Island, is the extraordinary number and variety of the fish, which frequent the shores and swarm in all the rivers. In the spring two kinds of salmon ascend the Fraser, millions of 'hoolicans' crowd into the mouth, and shoals of herring enter every inlet. The hoolican is like a sprat, but a little larger, and is a very delicious fish, rich in oil. Flocks of gulls hovering over the shoals, announce the

arrival of these fish; and their extraordinary numbers may be imagined from the way in which the Indians take them. The river is literally alive with fish, and the native fisherman carries a long piece of wood, armed with sharp pointed wires on each side, like the teeth of a rake. This he sweeps through the water as he sits in his canoe, after the fashion of a paddle, and at each stroke brings up a row of hoolicans impaled upon the spikes. Three fresh species of salmon continue to ascend the river in succession during the summer and autumn, and in the winter another variety makes its appearance in the harbors and inlets along the coast. We saw some of fifteen to twenty pounds each, caught in the harbor of San Juan in the month of December. Salmon of some kind is thus in season all the year round. Trout abounds in the mountain streams and lakes, and the sturgeon frequents the deeps of the Fraser. In Burrard's Inlet oysters are found in great abundance; and in fact every thing good in the way of fish seems to be collected in this, so far, highly favored country.

"From the richness and extent of its pasturage, and the dryness of its soil and climate, British Columbia offers great advantages to the breeder of stock. But there are certain drawbacks, the principal of which is that an immense extent of country would be required by each stock farmer. The only grass is the 'bunch grass.' It covers the terraces of the Fraser, and the rolling swells and mountain-sides of the central region. Growing in the separate 'tufts' from which it has taken its name, it fixes but a slight hold upon the light, powdery soil with its slender roots. Horses and cattle pull much of it up in grazing, and sheep, which thrive equally upon it, crop the delicate plant so closely that it frequently does not recover.

In this way the Lilloet flats, which were once celebrated as rich feeding grounds, have now become bare, dusty plains, on which a few scattered plants of wild sage and absinth still remain, where the bunch grass has been destroyed. The facts, too, that the bunch-grass requires three years to come to perfection, and fully recovers after being eaten down, and that from its mode of growth in distinct tufts, the ground is really but scantily covered with herbage, confirm the belief that, for a stock farm to be successful, its range of pasturage must be very extensive. But there is room enough now, and any who may devote themselves to the raising of sheep and cattle will certainly reap a rich harvest of profit. Strange to say, from some cause—either want of capital, or the prospect of more rapid profit from other pursuits—it has been little followed hitherto, and the land lies open to the first comer.

"The extent of agricultural land in British Columbia is very limited indeed. With the exception of a small district between the south end of the Okanagan Lake and the Grand Prairie, on the road from thence to the Thompson river; a few other patches of good land in the interior; and the delta of the Fraser, which is covered almost entirely with dense forest, and exposed to the summer floods, it is a country of rocks, gravel, and shingle. The surface of the country east of

the coast range of mountains consists, principally, of a high table-land, from which rise up mountains and hills, and is indented by the valleys of the Thompson and Fraser, and their countless tributaries. These valleys are deep and narrow, and their sides generally steep. On the table-land the night frosts, prevalent throughout the summer, preclude the cultivation of almost every description of produce. In the valleys the land is generally very dry and sandy, or stony, and unless some very perfect system of irrigation and manuring is adopted, would yield a wretched return.

"In all the instances we saw where attempts had been made to raise crops of cereals on the terraces of the Thompson and Fraser, or, indeed, anywhere in the region of shingle and gravel, they had failed. Cabbages, and vegetables of similar kind, if watered, seemed to flourish very well; but the oats and barley were short in the ear, and the straw weak, stunted and miserable. Water is sufficiently abundant but the soil of the irrigated tracts is so extremely light, and in most parts underlaid by such a depth of gravel and shingle, that the water percolates through as through a sieve, and the streams disappear without spreading over the surface. The decay of the sparsely-growing bunch grass cannot have rendered the land rich in vegetable mould. Occasional fertile spots, of a few acres in extent, occur on the margin of the rivers, as along the north and south branches of the Thompson, above Kamloops. There are also patches of good land in the vicinity of William's Lake, Beaver Lake, and Alexandria, which have proved very productive. But these rich bottoms and alluvial lowlands, are striking exceptions to the general character of the country. British Columbia, rich beyond conception in many ways, is not an agricultural country. Vancouver Island, too, is merely a huge rock, in the hollows of which vegetable mould has collected. But this is often too shallow to be worked with the plough, and these fertile oases are generally of small extent—fit for gardens rather than farms.

"In consequence, therefore, of the deficiency of the two colonies in this respect, their population is still supplied with provisions from California, and their gold goes into the pockets of Americans. California is probably the richest country in the world. Possessing every valuable mineral in inexhaustible abundance—except coal, which has not yet been found in any quantity—she has also a soil of extraordinary fertility. Her mountains are of gold and silver, and her valleys as the land of Goshen. Wheat grows so luxuriantly that 'volunteer crops'—the produce of the second and even third year from the seed shaken out in the gathering of the previous harvest—spring up without the labour of man. Fruits of every kind, from the apples, pears and grapes of temperate climates, to those of the tropics, come to perfection within her limits. Oats grow wild on the slopes of the Sierra Nevada; and in the alluvial plains, besides the ordinary cereals, flourish maize, tobacco and cotton.

It is far otherwise with British Columbia. She

probably equals California in mineral wealth, but, being as it were a mere continuation of the Rocky Mountains to the Pacific, a sea of hills, a land of mountains and forests, or shingly swells and terraces covered with bunch-grass, the farmer looks in vain for rich alluvial valleys. No colony has been more misrepresented than this.

"In former times, when a preserve for furbearing animals, under the sway of the Hudson's Bay Company, it was reported to be 'little better than a waste and howling wilderness, wherein half-famished beasts of prey gazed eternal war with a sparse population of half-starved savages; where the cold was more than Arctic, and the drought more than Saharan;' and that—'to quote the words of the Chancellor of the Exchequer in the House of Commons a few years ago—' these territories were bound by frost and banked by fog, and woe betide any unfortunate individual who might be so far diverted from the path of prudence as to endeavour to settle in those parts.'

"But the accounts sent to this country soon after the first rush of emigrants to the land of gold, differed widely from the old story. It was now as much the interest of speculators and property holders to attract emigration by exaggerated praise of the colony, as it had formerly been that of the Hudson's Bay Company to repel it, and keep their possession intact by representing it as a barren wilderness. The most glowing reports were sent home, and were published in the leading newspapers. The new colony was represented as a very paradise for the farmer, and many men went out believing this, to find bitter disappointment in the reality. Neither of the two accounts is correct; the truth lies, as is usually the case in like matters, between the two extremes, and we have been induced to set forth the truth somewhat fully, from a desire to do away with the injurious misconception which has prevailed on this subject.

"Although there is little land fit for agricultural purposes within the boundary of British Columbia, the fertile belt of the Saskatchewan is separated from it only by the barrier of the Rocky Mountains. Of the beauties and resources of this pleasant land, we have already made mention in these pages. The rich prairies, with from three to five feet of alluvial soil, are ready for the plough, or offer the luxuriant grasses, which in the old time, fattened countless herds of buffalo, to domesticated herds. Woods, lakes and streams, diversify the scene, and offer timber, fish, and myriads of wild fowl. Yet this glorious country, estimated at 65,000 square miles, and forty millions of acres of the richest soil, capable of supporting twenty millions of people, is, from its isolated position, and the difficulties put in the way of settlement by the governing power, hitherto left utterly neglected and useless, except for the support of a few Indians and the employés of the Hudson Bay Company. And this rich agricultural country lies but a step as it were from the gold fields. It is the very supplement required to British Columbia. \* \* \*

"The time seems to have come when the Hudson's Bay Company, having done good service by a beneficent rule over the territories granted it, which contrasts strongly with that of the American Fur Companies, should share the fate of all the great monopolies which have fallen before it. Lord Wharfedale has lately brought this question before the House of Lords, proposing the formation of the North-West territory into a separate colony, and inquiring whether any steps had been taken in the matter. But of course the government had done nothing, and apparently has no intention of moving."

### An Epistle to all Serious Professors, &c.

(Concluded from page 185.)

But now to every faith this doth not belong, but to the faith only which flows from the power of the endless life, and which stands in the power. The faith which is from the power is precious, having a precious nature and virtue in it, and very precious effects flow from it. For it is the substance of things hoped for; it is of a pure nature, which hath dominion, and giveth dominion over the wicked one. There is no overcoming of the saints here; for as it came from the power, so it stands in the power, and engages the power of life against the enemy, and so is still too hard for him. For he that resisteth the enemy in the true faith, still overcomes him and makes him fly. James iv. 7. But that belief on Christ, and applying his righteousness, which is not of this faith, nor in the true light of life, but according to the creature's apprehensions concerning things, that is not of the same nature with this, nor hath the same virtue, nor produeth the same effects; but notwithstanding such a believing and hoping, men are still in their sins, and they are not washed away from them by the blood of Christ, nor remitted or covered by the Spirit of the Lord. And oh! that men were wary, and did take heed in this matter, that they might not miss of true pardon from the Lord, and so find their sins bound by him, in the days of his refreshing others! For there is a state, wherein there is an imputation of Christ's righteousness to persons reached to by the power of the Lord, and coming up into the ungodly state, and so a real bringing into the righteousness. For in the true growth the soul daily grows more and more out of its own righteousness, out of the dark, corrupt image, into the righteousness of Christ, and into his pure image. Thus Christ is formed in the hearts of them that truly believe, daily more and more; they receiving him as an heavenly leaven, and giving up to be leavened by him, are changed daily more and more into the newness of spirit, even until they become a new lump, even a lump wholly leavened, so that old things are passed away, and all things become new; that is, not of old Adam any more, but all of God in Christ, all of the new nature and Spirit, which is all of it, righteous in the sight of God. Now this is it all should labour for and seek after, even the kingdom of God and his righteousness, to find an entrance ministered to them into the everlasting kingdom, and the righteousness thereof, that they might really put off the old man with his affections and lusts, and put on the new man; the new man's nature, the new man's image, the new man's spirit, the new man's righteousness, the new man's holiness; that they might have the wedding garment on to be married to Christ, and might be as a bride prepared for the bridegroom. Oh! it is precious for any one to feel his soul in this state! And who would not travel and wrestle, and strive and watch, and pray and wait, that he might be thus fitted by the Spirit of the Lord for his Son Jesus Christ? For, friends, there is a coming under grace, under grace's wing, and out of shame and confusion because of sin, into the glory which is in the pure image; and there is a being changed from grace to grace, and from glory to glory, by the Spirit and power of the Lord. Oh! that such as take upon them the profession of christianity, might feel the power, and wait upon the power, and know what it is to believe in the power, and live in the power; for without this, the oppressed state of christianity is but dead, and dry, and cold, not having the true living sap and warmth in it. There are great

deceits in the world about these things, but that knoweth the truth as it is in Jesus, who is visited by the power, gathered to the power, abides in the power, he hath that with him which aboints his eye and heart, and strengthens the against the most subtle devices and deceits the transforming spirit. But whoever he be that professeth christianity, and is not here, he is safe, but the enemy hath ways of bewitching a deluding him, which he hath not wherewith effectually to withstand and avoid. Now have nakedly expressed these things unto you, as they are in my heart, there is a question lies before to propound to you, which deserves your serious consideration and ability to answer in the sight of the Lord, which is this. Question.—Do you rightly, truly, and fully (as the Lord requireth you) know, esteem, and honour the Son? Do you him as God hath revealed him in the spirit of his children, since the apostasy? Do ye Him as an horn of salvation lifted up there? Do ye find and experience Him revealed within the Father, as the seed of the woman, bruised the head of the serpent? Oh! this is precious knowledge, and the right way of truly knowing him as He came from the Father, lived in obedience to him, suffered for the sins of the world, ascended again to the Father, and now with him in glory! For, indeed, it is the thing, and that whereon the soul's rest dependeth to know and feel him near. Oh! that we were one here (I mean in the inward sense and knowledge of the Lord Jesus Christ.) We should soon be one in the other also! We, who are reproachfully by many called Quakers (for the most part) a people who have not and long sought after the Lord, and after the experimental knowledge of those truths, which testified of and related in the Holy Scriptures. We sought not after a new Christ, or a new Spirit, or new doctrines concerning Christ or his Spirit, but to know Christ, so as to receive life from him, and to live to him in the life and Spirit received from him; this hath been the single aim and sire of our souls. And if men could with patience consider what we hold forth, and wait till they open their understandings, they would not such blame upon us as they do in many respects; but find that we reverence the scriptures, being in holding concerning the things of God, according as is there expressed, from a true understanding received from the Lord, and in true light and guidance of his Spirit. The another question springs in my heart unto you, because you consider of it seriously, perhaps it may be a blessing to you in it. Do ye rightly and weightily consider and embrace that commandment of Christ, Matt. vi. 33. Seek ye first the kingdom of God, and his righteousness? Do ye truly know what Christ likens the kingdom to? Even a mustard seed, a pearl hid in a field, a leaven, a lost piece of silver, &c. Do ye know and are ye acquainted with that little thing which is like unto these? And do ye really and righteously seek after it? Do ye seek it where it is to be found? Do ye know the place where it is to be found? And do ye take the right way to buy and to purchase it? How is that? Why not by outward observation, saint Christ, but by inward sweetening the house; by keeping the eye upon it, and striving out the rubbish that covers it, this is the way to find it, purchase and possess it. Oh! that we could all learn thus, and be thus exercised by the Spirit of the Lord daily. Surely they that seek shall find, and they that thus ask shall have, and they that thus knock, to them the everlasting kingdom shall be opened. For mark the difference between the state of the law and god's

law was a shadow of good things to come. The gospel is a state of enjoyment of the good things shadowed out under the law. The law was of the kingdom, of the spiritual kingdom (Christ, which is set up under the gospel). In man's day the kingdom was at hand; but in the day of Christ's power the kingdom is come. Under the law there was a tabernacle pitched by man; under the gospel the true tabernacle and people is witnessed, which God pitcheth and not man; and the holy, spiritual, heavenly sacrifices, the living covenant, whereof God is the mentor, and the law written in the heart, and the spirit of the Lord put within, so that his presence is as really witnessed inwardly, in that which is truly his tabernacle and temple now, as it was witnessed outwardly, in his outward temple and temple under the law. Oh! that Christians might not have the name only, but might be in the life and in the power, wherein these things are felt and experienced; for indeed wonders of the Lord are seen in his temple, his name is praised there. There he breaks shield and the bow, the spear and the battle. There the enemy is overcome; the holy victory brought him under, issueth out thence. There the well is opened, and the Philistine nature is hewn down, and the power to stop it no more. There the treasury of life and wisdom, and the riches of God's goods, are made manifest forever.

Truly, friends, I have not lost any thing that I had, or acknowledged of God in the days of my former profession, by believing in the light which God hath now revealed in me, but have it still with me, and in greater clearness and plainness, and fuller demonstration than I then had; but that of the flesh which mixed with it, and rendered it from being rightly servicable to the Lord, and fully comfortable to me, that the Lord hath been removing by his searching light, and the demonstration of his Spirit and power. And if at length, after all my deep and long misery, the Lord hath given me to meet with, and enjoy that which is truly excellent (among those whom men despise) I could heartily wish for you, that ye also might meet with and enjoy the same, without passing through that misery and bitter anguish and distress of spirit through which the Lord led me thereto. The Lord preserve his people, by the arm of his mighty power, which hath stretched out for them, and whereby he hath gathered them to himself. And those which do not of this fold, Oh! that it would please him to seek them out, and bring them home also; that the Lord may be one, and his name one amongst men, and that that which divideth and scattereth men from the living truth, might be scattered and brought to naught every where, in all who would be one, and desire to serve God (with one consent) in that which is true and pure. Amen.

ISAAC PENNINGTON.

For "The Friend."

### The Late Meteoric Shower.

(Concluded from page 182.)

From the London *Chemical News*, of Twelfth month 21st, we copy the following account by Joseph Baxendell, F.R.A.S. It was read before the Manchester Literary and Philosophical Society; and we presume the observations were made in or near that city. It will be observed at the time is given astronomically, that is, the hours are reckoned from the preceding noon. He says:

"The early part of the night of November 13th was very equally and cloudy, with showers of rain and hail, and occasional flashes of lightning. At about 12 h. 15 min. a break occurred near the

zenith, and in a few minutes the clouds had almost entirely disappeared. My observations of the meteors commenced at 12 h. 16 min., Greenwich mean time, and were directed principally to the determination of the time of maximum frequency, and the position of the radiant point. The observations of frequency were as follows:—

#### METEORS OBSERVED.

From 12 h. 16 m. to 12 h. 32 m.	60
" " " 32 " " 48 "	153
" " " 48 " " 13 "	287
" " 13 " 4 " " 13 "	378
" " " 20 " " " 26 "	122
" " " 26 " " " 42 "	316
" " 14 " 19 " " 14 "	54
" " 15 " 20 " " 15 "	35
" " 6 " " " " " "	6

"From 13 h. 42 m. to 14 h. 19 m., and again from 14 h. 42 m. to 15 h. 20 m., the observations were interrupted by clouds and rain, and only 73 meteors were counted during the two intervals. At 15 h. 35 m., clouds came on again very suddenly, and the sky remained obscured at 16 h. 3 m., when I ceased to watch.

"During the whole time of observation the sky was rarely entirely free from clouds for more than two or three minutes; but the errors arising from this cause are probably pretty evenly distributed through the intervals above given, and cannot therefore materially affect the final determination of the time of maximum frequency. The results of the observations are as follows:

#### AVERAGE NUMBER OF METEORS PER MINUTE.

At 12 h. 24 m.	3.7
" " 40 "	9.5
" " 56 "	17.9
" 13 h. 12 "	23.6
" " 23 "	20.3
" " 34 "	19.7
" 14 h. 30 1/2 m.	2.3
" 15 " 27 1/2 "	0.4

The curve formed by a projection of these numbers gives 13 h. 12 m., as the time of maximum frequency. The probable error of this result can hardly exceed one minute.

"In order to determine the position of the radiant point, the positions of the intersecting points of the paths, continued backwards, of a great number of pairs of meteors, were noted. By far the greater number of these points fell on a space bounded by lines joining the stars *Gammaro*, *Zeta*, *Mu*, *Epsilon*, and *Eta* *Leonis*, [the five brightest stars in the neck and head of the Lion] and, allowing equal weights to all the observations, the mean position was found to be R. A. 9 h. 58 m. 12 s.—149° 33'; Dec. 22° 57' 57" North. Calculating the position referred to the ecliptic, we have *Longitude* 143° 41' *Lat.* 9° 54' 5" North.

"At the time of maximum frequency the earth was advancing in the direction of a point on the ecliptic, the longitude of which was 141° 28' 3" or 2° 12' 7" less than that of the radiant. It appears, therefore, that the meteors were crossing the earth's orbit from within outwards, and that their apellion distance is very sensibly greater than the earth's radius vector on November 13th.

"The velocity of the earth in its orbit on November 13th, is 18.38 miles per second, and the velocity of the November meteors, when they enter the earth's atmosphere, has been found to be forty miles per second. With these data, and the latitude of the radiant point as given above 9° 54' 5" N., we find that the inclination of the orbit of the mass of meteors to the plane of the ecliptic is 17° 59', and that their orbital velocity at the time they encounter the earth is 22.31 miles per second. The excess of this velocity

over that due to their distance from the sun arises in part at least, from the accelerating effect of the earth's attraction.

"An attempt was made to estimate roughly the relative numbers of meteors of different magnitudes, and it was found that they occurred in about the following proportions:

Out of every 100 meteors,

10 were above the 1st magnitude; the brightest of these were two or three times brighter than Sirius.

15 were between the 1st and 2d magnitudes.

25 " " 2d " 3d "

30 " " 3d " 4th "

15 " " 4th " 5th "

5 were below the 5th magnitude.

The average magnitude was 3.0.

"The trains left by many of the larger meteors had a beautiful emerald green color, others were of an ash grey, and the remainder white. The meteors themselves were mostly white or bluish white, but many were of a fine golden color.

"In order to give some idea of the great velocity with which the meteors enter the earth's atmosphere, it may be remarked that it would be sufficient to carry a body through the entire circuit of the earth in an interval of less than ten and a half minutes.

"As I had the good fortune to witness the great meteoric shower which occurred on the morning of November 13, 1833, I may state that the late display was far inferior to it, both in the number of the meteors seen and in the brilliancy of the larger ones, and I am therefore inclined to think that a much finer display may be expected to occur in November next. At the time of the 1833 great shower, I was at sea off the west coast of Central America, and although I then knew little about meteors, and the idea of a radiant point had not, so far as I am aware, ever occurred to any astronomer, or meteorologist, the tendency of the great majority of the meteors to diverge from a particular region of the heavens was so marked, that it at once engaged my attention, and I find on referring to my notes, that I fixed the central point of this region in the constellation Cancer, a few degrees east of the stars Delta and Gamma, and not in Leo, as observed by Professor Olmstead and others in the north-western portion of the North American continent. A great number of the meteors, however, had other radiant points, and some of the finest moved in long horizontal arcs, or in directions nearly perpendicular to that of the main stream. This fact seems to me to be strongly opposed to the cosulical theory of meteorites, except on the rather improbable supposition that the earth, on that occasion, encountered two or more groups, all, at the same time, crossing each other's orbits, as well as the orbit of the earth. It may, however, be urged that such a supposition is hardly more unlikely than that which ascribes the November meteors to a ring of small bodies moving round the sun on an orbit differing little in magnitude from the earth's orbit, but the motion being retrograde, or contrary to that of the earth, and therefore inconsistent with the general analogies of the solar system, and opposed to Laplace's almost universally received nebular hypothesis."

Of the display at Glasgow, Alex. Herschell says: "The shower increased in intensity until about ten minutes and twenty minutes past one o'clock, at which time 56 and 57 meteors [per minute] were counted by one observer, or almost double the number counted at one o'clock and half past one o'clock. The display then ceased almost as suddenly as it began." At 2 h. 30 min.

the number seen by one observer was only about one per minute."

The *Scientific American*, of First month 12th, publishes the following summary of an account given by a correspondent of the N. York Tribune, writing from Constantinople, of "a most beautiful display of meteors observed there on the morning of Nov. 13th and 14th." But unless there has been some confusion of dates made in condensing the statement, the account would not seem to be very reliable, as it does not correspond with observations made elsewhere. "On the first morning," says the condensed statement, "he noticed about 4000 per hour, the actual number that fell being, of course, much larger. On the 14th the sky was obscured with clouds, until nearly sunrise; but the display of meteors, between two and three o'clock, was undoubtedly some 10,000 an hour. On both occasions they were of all sizes and colors. Many of them lit up the heavens like a flash of lightning; and in several instances they left trails of light behind them from 5° to 20° in length, which remained some minutes. Not a few persons were alarmed at this rare and startling phenomenon, believing that the stars were falling from heaven.

"The grand shower in this country, of 1833, it may be remembered, was preceded by a display in Europe, of great beauty, the year before."

Selected for "The Friend."

12th mo. 15th, 1827. I am daily waiting my change, having only the mercies of God to trust to.

I am daily waiting in the temple, if I may be favored to hear this joyful summons, "Enter thou into the joy of thy Lord," where the wicked cease to trouble, and my weary spirit, I trust, will experience rest.

These appear to be the last words recorded in John Conran's journal, and in a hand almost illegible, he being nearly blind; but he continued to attend meetings—even sometimes at a distance of fourteen miles—as long as his bodily strength permitted it, so great was his desire to wait with his friends for the arising of the heavenly power of Christ therein, and to be found faithfully occupying with the gift mercifully bestowed upon him, often saying as an incentive to a more perfect dedication of mind and body: "I serve the best of Masters, who I can testify by long and precious experience, withhold no good thing from those who faithfully serve and follow Him."

The following extract from the testimony concerning him, drawn up by the Friends of Lurgan Monthly Meeting, will show how he was engaged with the same zeal in the last meeting he attended, being the day previous to his death. "With affecting energy he closely pressed Friends to faithfulness and diligence in attending the meetings for worship and discipline, saying the parable of the great supper had deeply impressed his mind, by which he was instructed to believe that no excuse, however plausible, would be taken for neglecting those important duties; for none, he thought could be more reasonable than were mentioned, wherein one having bought a piece of ground, it was but prudent for him to see it before paying for it—another, five yoke of oxen, which it was only reasonable he should be permitted to prove before paying the purchase-money—whilst a third had married a wife and could not come, having thereby necessarily undertaken to provide for a family, especially as he is declared to be worse than an infidel who provides not for his own." Then, mourning over those who were not sensible of their situation, and of the great salvation offered to all, he said, "I now again tell

you what I have so often declared, that 'another foundation can no man lay than that which is Jesus Christ.' Then waned all to be careful of neglecting calls from Heaven, and by the servants sent as messenger after messenger, testifying, 'Behold all things are ready;' for should they continue to do so, the children's seats at the Lord's table would be filled by others, who, he holding the Light, would flock as doves confined in a room to the windows; adding, he was made thankful in being assured that Light had already broken forth, and the day had dawned. And when about to resume his seat, he advanced and said, 'For thus having been permitted to live to see this day, I praise, honor, and magnify my God!'"—From the *Journal of John Conran*.

A recent letter from Beirut mentions the curious fact that a professor in the Liberian College at Monrovia is now at Beirut for the purpose of acquiring the Arabic language and purchasing Arabic books so as to act upon the Arabic-speaking tribes in the interior of Africa, who are now fast encroaching upon the borders of Liberia. He also proposes to send two young men from Liberia to the Syrian Protestant College in Beirut in order that they may acquire the same language. Native Africans studying Arabic in an American college on the coast of the Holy Land in order to combat the encroachment of Mohammedanism in the neighborhood of Liberia, is a remarkable illustration of the mode in which different systems and nationalities now operate on one another.—*Nation*.

#### THE VALE OF TEARS.

In visions which are not of night, a shadowy veil I see,  
The path of pilgrim tribes who are, who have been, or  
shall be;  
At either end are lowering clouds impervious to the  
sight,  
And frequent shadows veil, throughout, each gleam of  
passing light;  
A path it is of joys and griefs, of many hopes and fears,  
Gladden'd at times by sunny smiles, but often dimm'd  
by tears.

Green leaves are there, they quickly fade—bright  
flowers, but soon they die;  
Its banks are lav'd by pleasant streams, but soon their  
flood is dry;  
And some that roll on to the last with undiminished  
force,  
Have lost that limpid purity which graced their early  
source;  
They seem to borrow in their flow the tinge of dark'ning  
years,  
And 'on their mournful murm'ring sound befits the  
vale of tears.

Pleasant that valley's opening scenes appear to child-  
hood's view,  
The flowers are bright, the turf is green, the sky above  
is blue,  
A blast may blight, a beam may scorch, a cloud may  
intervene,  
But lightly marked, and soon forgot, they mar not such  
a scene;  
Fancy still paints the future bright, and hope the present  
cheers,  
Nor can we deem the path we tread leads through a vale  
of tears.

But soon, too soon, the flowers that decked our early  
pathway side,  
Have drooped and withered on their stalks, and one by  
one have died;  
The turf by noon's fierce heat is scard, the sky is over-  
cast,  
There's thunder in the torrent's tone, and tempest in the  
blast;  
Fancy is but a phantom found, and hope a dream ap-  
pears,  
And more and more our hearts confess this life a vale  
of tears.

Darker and darker seems the path! how sad to journey  
on,  
When hands and hearts which gladden'd ours app  
forever gone,  
Some cold in death, and some, alas! we fancied cou  
not chill,  
Living to self and to the world, to us seem colder st  
With mournful retrospective glance we look to bright  
years,  
And tread with solitary step the thorny vale of tea  
Then waiting pain and slow disease trace furrows  
the brow,  
The grasshopper, slowing down, is felt a burthen n  
The silver cord is loosening fast its feeble, slender b  
The fountain's pitcher soon must break, and bow  
purer gold;  
Oh! were it not for that blest hope which even de  
penders,  
How weary were our pilgrimage thro' this dark val  
tears.

I seek not summer days and sunny skies,  
Nor flowers, in life's rough wilderness to bloom;  
But let me in thy likeness, Lord, arise,  
Through the undreaded portals of the tomb,  
I'll ask no resting place, till I repose  
On the sweet pasture plains where life's pure river flo

#### Secret

#### Secret Uses of the Imagination.

The popular idea of imagination takes so high account of its every-day services that people supposed to be devoid of it unless they exert it in some marked and conspicuous manner.

It is not commonly perceived of what sterling service a clear imagination is in the household and the family, and how wrong things often for want of it. In fact, people often talk of reason and good sense, when this other faculty is doing really meant—imagination in its ordinary unconscious working. The ingenious arrangements and clever foresight which keep things going, make schemes answer, the grasp of new combinations, realizing all that is involved in apparently immaterial change, the fresh cement of small interests, the welcome of new ideas preserving most monotonous home from stagnation—these are rarely recognized for what they are. Still is the charm of a wide sympathy attributed to right sources—a power of picture-drawing, an comprehension of untried situations. Can sympathy, indeed, go beyond the power of imagining the condition that is to be felt for or imitated? We may relieve positive distress, we may pity mere faith; but we can scarcely feel for another or pity intelligently, without imagination. I think of this faculty as a stimulant; we could do it with the idea of excitement; but its passive side is fully as important in social life, who works as a preventive, a stender, and often as only effectual sedative against useless anxiety or perverted activity. Certain it is that no one is entirely agreeable without some share of imagination, but it often exists where it has not positive to show for itself—no particular redness, sparkle, or play of fancy. Its working is all in the way of check, in correcting the tricks of thought, saving its possessor alike from caring for what is not worth caring for, and from caring for nothing, repressing those defective conversation which spring from prosaic dulness—such as importunate persistence and talking self—and keeping him in harmony with his surroundings, and bright and interesting even in silence and passivity.

Most failures in the endeavor to please are due to this one deficiency. People with the best most amiable intentions, miss being pleasant to many if they cannot hit their friends' humor, let their own words and manner will them. The most awkward kindness has its power of appreciation; there are joys and sufferings

very good heart can sympathize with; but for the choicer moments of life, for the apprehension of the subtler emotions, imagination is indispensable. Practice, no doubt, will develop minute rods of sympathy into life, but the incorrigibly rosiest must submit to live amid the outsidings of things. It is painful sometimes to see how the best and most useful dispositions will fail of their all reward for want of tact, which is nothing else than imagination at close quarters, and put to social and possibly ignoble uses.

There are many people constitutionally incapable of believing in feelings unknown to themselves. They will not, and seem as if they could not credit likings and antipathies, pains and pleasures, of which they have no experience. They either set them down as pretence and affectation, or they take no count of them, treating them as empty words, devoid of all meaning for those who profess them; or perhaps they override these alien to their own tastes as a sort of vermin which it is their duty and a merit to crush. The strong will not believe in weakness, nor the healthy in sickness, nor the high-spirited in fervour nor depression, nor the methodical in the necessity for variety and change. Old persons of this temper will forget that they were ever young, and, following the system of their whole life, will regard their present estimate of pleasure and pain as not merely the only reasonable one, but the only one that can seriously be entertained—other notions being simple delusions.

We see people continually failing in their ends from the same deficiency. They cannot tell how to reach others; they have no selection of arguments; they have no delicate tools, but only such as will wrench and hammer. This is called ignorance of human nature or want of penetration; but, of course, whatever is not seen by the senses, must be seen if at all through the imagination. A very strong will dulls this faculty, or dulls it by its dissidial; it prefers getting its way through mere force.

A sense of power creates a desire to take the most direct way to its end. If there is power though it succeeds; but as often a dull or quenched imagination balks a strong will of its desire. There are a hundred things acceptable or repugnant to us, according to the method in which they are first presented to our consideration. If we think of critical times in our lives, occasions when a choice or alternative was presented to us, we very likely may find that the mode in which it was brought before us determined us. If the suggestion came with due consideration for our habits of thought, it was received and its bearings entered into; but put arbitrarily and defiantly, the idea failed of an entrance, made no way, and was never entertained at all, probably from some kindred inability in ourselves to seize the points of a new situation. The propounder could not or would not picture the mind to which he sought access so as to secure a primary reception. Of such this sort of picture-drawing has to be cultivated like any other talent, and necessity here, as elsewhere, is the great teacher; but whenever it is not possessed, either from incapacity or indifference, there will be a growing discrepancy of tastes and interests, for people cannot live in harmony without it. \* \* \*

What we are considering, is not the advantage or disadvantage of imagination to its possessor, but the debt social life owes it. Half mankind, it would seem, are afraid of imagination; the best service they give it credit for is the furnishing their leisure with agreeable reading. They never think of looking for imagination in their wives and families and servants.

What we say is, let men cultivate imagination in those about them if they would be comfortable, if they would enjoy life, if they would escape the petty forms of inconvenience, if they would avoid dull days and worrying hours. How many annoyances would a practical imagination arrest? Would people be ever tedious if they could picture the minds of their hearers? or would they be bored, if they could take a look out of themselves? Could they be habitually unpunctual and dilatory if their fancy pressed upon them the weariness and anxiety which those dependent on them must suffer? Could there be so many ungenerous tempers if they knew how to read the impressions their tantrums produce? Could there be so much mere profession and empty protestation in conjunction with the gift of realization? Above all, would there be so much dull talk?—for talk is really duller than it need be, considering the collective capacity of mankind. Few things that need be talked of at all need be interesting.

Reason and common sense are too apt to think many pleasant things nonsense, and to confine themselves to the edifying and the useful, to cold science and to grave moralities. The virtue of imagination is that it can utilize men materials and dignify trivial ones; and this by no conscious effort, but through its inherent power of assimilation and recognition of kindred qualities. Imagination of the domestic sort needs, indeed, to be unconscious and without design.

#### Sarah Cresson.

For "The Friend."

Extracts from her Letters and Diary.

(Continued from page 180.)

"2d mo. 22d, 1795. We had the company of J. Lindley at our meeting to-day. He came and dined with us; my spirit was a little animated. I went to meeting, desirous of preservation; something opened on my mind, but a fear took place that it was not clear enough for expression; weakness ensued, and my poor mind, my tossed and conflicting spirit, was encompassed with discouragement."

"3d mo. 6th. This was a hurrying morning to me, could I dwell deep enough, the necessary cares of life would not so much disturb. Unexpectedly this afternoon my dear cousin, S. Emlen, and P. Yarnall came and drank tea with us, which in some degree humbled my mind. Dear P. Y. has been made to me an eminent minister of consolation in days past, and my love for him continued strong, as well as for my dear cousin, who very often drops the persuasive language of tender encouragement. These dear friends had a religious opportunity with us in the evening, wherein the love of God in Christ Jesus our Lord was shed abroad, and my spirit witnessed some refreshment. The Lord alone receive the praise, saith my soul, I, M., and His precious wife, with E. P., were with us."

"24th. This has been to me a quiet, peaceful day. May my soul centre in holy resignation."

"26th. Our Fifth-day meeting. A favoured season it was. Dear Rebecca Wright appeared early in supplication, and dear N. W. in testimony and supplication. The Master of all rightly gathered assemblies was graciously near; my spirit preserved in a good degree of peaceful quiet, for which enjoyment, not by me to be commanded, I desire to be truly thankful."

"4th mo. 5th. I ventured to open my mouth this day in meeting, and had a degree of peace. Oh, I long to have my dwelling nearer to the inexhaustible Fountain of light, wisdom and strength."

"6th. This day I did not feel so much sisterly regard and charity as in my earnest desire, through unwatchfulness; this gave me fresh occasion for humble application to the "Healer of breaches, and Restorer of paths to dwell in."

"16th. Oh, what a trying day this has been to me! Oppression and want, spiritually, are often, of late months, my painful experience. May I possess my soul in patience, and increase in religious fervency."

"5th mo. 2d. Quarterly meeting of ministers and elders, which our dear I. E. attended, and was led in a very instructive manner to address some young in experience, and my mind seemed centred in a good degree in quiet. Towards evening dear P. Yarnall came to see us, gave some account of his dear wife's sickness and death. The account, though affecting, was truly comfortable, having cause to believe she is admitted to join the company of redeemed souls, in the holy and everlasting union, which, when animated in prospect, leads me to account other things measurably but as dross, that I may win Christ, and that when he appears, I may have a holy and unshaken confidence in Him, the great Author and Finisher of the saints' faith. After some conversation of this sort, in which I felt my mind comfortably settled, and a sweet solemnity covered it which is not at my command, dear P. Y. was much favoured in handing encouragement in a powerful living testimony. For this renewed favour my spirit bowed in adoration, and had to ascribe dominion and praise to the Father of mercies."

"6th. Oh, that I may be favoured with access to thee, O Lord, my God, and witness a dwelling in the Light, then the frequent changes of this life would not so interrupt my progress, as is the case sometimes through unwatchfulness. 'Thou that leadest Joseph like a flock, Thou that dwellest between the cherubims,' be graciously pleased still to shine forth, for without thy holy presence how doth darkness prevail over me, and my poor soul becomes tossed as from billow to billow."

"9th. I can set to my seal, that the Lord is good, hearing prayer. I have in various seasons, when favoured to ask in faith, known my prayers answered, having received that which I have asked for. Oh, may I adore the everlasting arm of power that is able to work wonders, and feelingly ascribe glory and honor, dominion and power, unto Him that remains worthy forever.

I cannot not my life dear, so that I may finish my course with joy.' Oh, the joy of the righteous! how has my spirit been animated of late in desire of finishing my course with joy."

"11th. This morning felt concerned that I am not deeper and more industrious in the cause of Truth. Lord, be pleased, I pray thee, to increase my faith and love in thee alone, thou great supreme and gracious Benefactor."

"18th. I felt my mind reducing this day, and if it is the reducing power of the Lord, let Him work, saith my soul. I have had to see the need and the efficacy of baptisms as into death, oft, and have rather desired it, if consistent with the Divine will thus to administer refining dispensations, so that His everlasting arm may be underneath to keep from despair; for therein we can suffer with the suffering seed, and 'count not Christ' in gratification dear, 'so that we may win life' and be found in Him, not having our own righteousness.' Oh, these seasons are more refining, I do believe, than joyous seasons, wherein the flesh can have no share. May I deepen in mind, and be found filling up my measure of suffering, desiring to know nothing but Jesus Christ

and Him crucified, in His resurrection and ascension." —

"19th. A meeting was appointed at Peter Yarnall's request and religious concern for the youth of this city, members of our Society; held at the North meeting house. A great number of young people attended. I desired to be in my proper allotment, so as not to be unfeeling. Oh, that improvement may be made of the many opportunities put into our hands. May not this language be taken up in consideration of the Lord's long forbearance and love. 'How shall I give thee up, Ephraim? How shall I make thee as Admah, or set thee as Zebouim?'"

"6th mo. This evening I went to take leave of Nicholas Waln, unto whom I trust my spirit has been measurably bound in a degree of purity; for years he has been near to me, and I hope I have laboured to sympathize with him in some of his deep and refining baptisms. I am afraid I am not clear of debt to him, which causes me to feel somewhat depressed at the thought of his being gone. Forgive, O Lord, I pray thee, my omissions and commissions, and blot them from before Thee if it stand good with Thy most perfect will. Baptize me yet more and more with Thy children, 'by the one Spirit into the one body,' that my drossy nature may be redeemed and removed, and my spirit become clearer and more refined. O Lord, the work is Thine, the power is Thine; and to me belongeth blushing and confusion of face. May the Lord go with him, and preserve him in heights and in depths; may the munition of rocks be his defence and his safe abode; may his bread and his water be made sure and blessed to him in every time of need, and may the glory of the Lord be his reward; and when favoured to return, his errand being fulfilled, may it be with peace and joy in the Holy Ghost. I also took leave of my dear friend, David Bacon, who has felt to me like a tender father in the church, and my heart craves his preservation, and that he may be replenished with every blessing consistent with the will of our Heavenly Father."

(To be continued.)

### The Story of Pocahontas.

Selected

An article in the January number of the *North American Review* calls general attention to an historical question relating to the early colonization of Virginia, which has been raised and discussed by Charles Deane in the introduction to his recent reprint of Captain John Smith's "True Relation of Virginia." Mr. Deane takes the ground that the story of Smith's deliverance by Pocahontas—by far the most romantic of our early legends—is entirely mythical. The argument is complicated, but rests chiefly on the basis of Smith's general want of veracity, and on no mention of the circumstance being made by Smith until sixteen years after, in the "General Historie," when Pocahontas herself was dead, and the story could hardly be refuted. The silence of contemporary writers is also of weight. In 1608, the very year of his escape from the Indians, Smith published in London the "True Relation," giving an account of his capture and release. In this he does not even mention Pocahontas, but speaks of being treated with great kindness by Powhatan and all the Indians. Wingfield, the first President of the Colony, circulated the same year a "Discourse of Virginia," in which he gives the dates and history of Smith's expedition up the Chickahominy, but does not allude to the romantic story. The next account is in 1612, when Smith published "A Map of

Virginia, with an account of his explorations." In this he speaks of his capture, but makes no mention of Pocahontas's part in his release. About the year 1615, William Strachey, late Secretary of the colony, wrote a history of travels in Virginia, printed by the Hakluyt Society in 1849, which contains accounts of Smith's adventures and some curious details about Pocahontas, but not a word of this story. In 1615, a small quarto volume appeared in London by Ralph Hamer, which gave a minute account of the capture of Pocahontas, of her conversion and subsequent marriage to Rolfe, and of a visit which Hainer paid to Powhatan, and the details of a conversation with him, and also Rolfe's letter to Sir Thomas Dale, justifying his marriage. The silence of all these books leads us inevitably to suppose that no one in Virginia then knew of the noble act of Pocahontas. In 1616, Pocahontas and her husband came to England, and were entertained at court. Purchas, who knew them and Smith well, and had many interviews with Tomocomo, an Indian of Powhatan's tribe, published in 1617 the third edition of his "Pilgrimage," in which he tells the stories of Smith and of Pocahontas, but makes no reference to the one great story. The same year Pocahontas died. The prominence which she had in England probably gave rise to various "romantic stories, and to this among them, which Smith may have adopted instead of invented. In 1622, in a pamphlet called "New England's Trials," he makes an allusion to it; and in 1624, in the "General Historie," he tells the story in full, with many exaggerations and changes from his narrative of 1608. The reasoning of Mr. Deane seems to show conclusively the falsity of the legend.—*Nation*.

### Two Kinds of Conceit.

For "The Friend."

One scarcely knows which to prefer, people who have a "pretty good conceit of themselves," and who, unconsciously it may be, lower others as they raise themselves, or those who are "out of conceit with themselves," and in their depression bring down others with them. 'Tis a pity, to be sure, that self-appreciation should get out of poise either way, and a pity, too, that we are so blind to our own characteristics as well as foibles. I think the victims of *in conceit* are less aware of it than those who are troubled with *out of conceit*; and in a thousand ways, unsuspected by themselves, they betray a sort of self-flattery. "Our ways," "our works," "our interests," are the standard, and those who differ are set down as ignorant or "queer." Sometimes "in conceit" is blandly patronizing, sometimes sharply supervisory; it is generally marked by limited sympathies and rather blunt sensibilities, and by a lack of delicate perceptions of other's feelings. It knows little of

"A heart at leisure from itself  
To soothe and sympathize."

"In conceit" is partly natural disposition, but it is wonderfully apt to grow with success, though I have known it to flourish amid trial and suffering, feeding its vanity with what seems the pure food of humility. But in success, that is apparently the result of wise foresight and labour, it is so natural to "hug one's self," that only those who have deeply learned the lesson, "In me—that is, in my flesh—dwelleth no good thing," can humbly pass on all praise, as well as all thanks, to Him whose blessing only can secure any good. "In conceit," in the young and amiable, if there is only the mildest possible flavour of it, and without any edge, is rather a

happy trait, for it finds a great many roses and misses some thorns; but if it forgets the injunction, "in honour preferring one another," it soon goes a step farther, and disregards the advice "not to think of himself more highly than he ought to think," and gradually grows opinionated, overbearing, quick to judge and slow to yield; and becomes either palpably vain and pompous, or narrow and censorious.

As to poor "out of conceit," it arouses pity more than blame, solicitude more than dislike. It seems all humility and lowliness, but I am sure but that self-love lurks under its extreme sensitiveness; but it is too wounded and sore for us to treat it harshly. We want to raise it up to rouse it, but it turns on itself in the most discouraging way, and we feel how it paralyzes power. We want to throw around it something like a waterproof cloak, to prevent annoyance from soaking in; for while its rival takes itself praise it cannot claim, it too often absorbs blame it does not deserve. While one does not receive good as a free gift, the other cannot but disappointment and untoward circumstance—merciful discipline. But if, through christian faith, a character thus naturally disposed do learn to keep the eye fixed away from its own discouraging weakness upon the Rock of strength it often unfolds the most beautiful and delicate traits of the christian life, "in all lowliness at meekness."

While every characteristic may touch wrong, right, according as it leans, so these two opposite traits may each have its peculiar strength or service. And as the strong bows in true humility and the weak rises in pure faith, these very traits by turning toward the Sun of Righteousness will, beyond doubt, ripen fruits to His praise.

If the young knew how hard it is to bend or wood, they would feel it more important to tend to the twigs of their character while they are tender. If those who are older knew how unattractive some branches appeared, they would prune, if they could not bend. Little scraggly protuberances, that never bear any fruit, may wound the eye or catch in the hair of the passer by, hurting, not helping forward. If we all can put out only "the sin," but the weakness "that do so easily beset," and just how it appeared to others, and how often we seem different from what we would be and long to become, surely it would feel forbearance toward every error, and sympathy with the erring; and it would be the quick impulse of kindly feeling, as well as a right principle, while we may note peculiarities of disposition, to rather "consider ourselves," we also be tempted."

First mo. 1867.

For "The Friend."

Extracts from Letters sent to the Friends' Free-men Association.

M. B. B. writes from Greensboro', 1st mo. 1867: "The condition of the coloured people here compares very favorably with that of the in Washington, and we were agreeably surprised by the amount of intelligence, self-reliance, a better culture, that we found here. I hope the none interested in this people will judge of the worth of these seen at the national capital. Constant scenes of poverty, starvation and suffering were there encountered; at least this is true of the who followed the army to Washington, coming to a state of destitution, and remaining so from lack of employment.

"Those living here, at Greensboro', are at home or near their old homes, some hiring houses on the old slave quarters of their former master,

and many owing homes of their own. It is thought that one hundred families were in possession of houses, earning them since the surrender, not two years ago. Will their enemies still say that they are lazy and imprudent? This has not been done without application to their business. Many have good trades, and the best boot and shoe makers are coloured men; and those that have not trades, find employment among their former owners, giving satisfaction, to all appearances. Indeed the state of feeling is much better between them than I would have thought possible. I most heartily approve the plan adopted by your association, viz: to help them to get homes for themselves by offering them at reasonable rates and by holding out other inducements; I seem anxious to avail themselves of this chance.

It is quite a theme of conversation among them, when two or three are together. I think I can see the future and rightful owners of the land in the South. They have, unlike the whites, been sedentary to labour, therefore have that which is as good as capital to commence their new life with. Instead of depending on us for every thing, they seem to feel responsibility resting upon them and fully appreciate freedom. Their faith and devotion should cause many a white professor to blush.

"The people living in the surrounding country struggle hard to educate their children. One very reliable coloured man told me that five school houses had been erected by themselves, in different places, and though they are quite poor, they have tried hard to support teachers, but in this they have not always succeeded. Most of the teachers they can hire are inefficient.

"I will cite an instance in illustration of their perseverance: a woman came here the other day with a book, as she expected to send four children to school, hiring out her fifth child, at a distance of one hundred miles, at five dollars per month, asking four dollars to pay for the education of the others. They frequently present us with chickens as a food of some kind, wishing for clothing to enable their children to attend school. There are many cases which we should relieve if it were in our power, but having no clothing, have been unable to do so. The Superintendent is very kind to us, granting all necessary requests, and with J. M. we are care extended to us, we are living very comfortably and pleasantly. The coloured people seem to exercise a care for our welfare, and are ready and capable of adding to our comfort in the school-room and elsewhere.

For "The Friend."

#### Mind the Context.

Many incorrect impressions of the meaning of a passage of Scripture, may arise from separating text from those adjacent, and not minding the context.

"I have been particularly struck with this when I carried the following text commented on, as if it had reference to the final safety of the righteous. If the righteous scarcely be saved, where shall the sinner and the ungodly appear?"—1 Pet. iv. 13. To think that the redeemed of the Lord were scarcely saved from future punishment could scarcely be very inconsistent with the teaching of the same inspired Apostle, when he says, "For so an entrance shall be ministered unto you abundantly into the everlasting kingdom of our Lord and Saviour, Jesus Christ." By reference to the text alluded to, we find the subject treated of in the latter part of the chapter, and to be the suffering and trial to be endured in this life. The time had come when judgment and tribulation was to begin at the house of God; and if they be scarcely saved from it, or able to

bear it, what was to be the end of those who obeyed not the gospel? To them it would be a consuming fire; to the christian church a fiery trial which was to try them—at which they were not to wonder, as though some strange thing had happened unto them. The concluding verse of the chapter, which immediately follows the one under consideration, shows that it refers to no future judgment: "Wherefore, let them that suffer according to the will of God, commit the keeping of their souls unto Him, in well doing, as unto a faithful Creator."

Philadelphia, 1st mo. 31st, 1867.

We have admitted the above into our columns, although, as a general rule, we think it better to exclude such commentaries, lest they give rise to unprofitable criticisms on texts of Scripture and their common acceptation.

In reference to the redeemed whom the beloved Apostle saw, he was told, "These are they which came out of great tribulation," and we apprehend it is to this great tribulation that Peter alludes in the text quoted, making it applicable to the true Church in all times as well as when he wrote.—ED. OF FRIEND.

## THE FRIEND.

SECOND MONTH 9, 1867.

The frequency of crimes of the gravest character throughout all parts of our country, and the almost daily record of the destruction of human life and property, have arrested the attention of most of those charged with the administration of the law, as well as the conductors of the public press. Murders of the most frightful character; incendiarism directed to the consumption of large portions of real estate, and often involving the loss of life; robberies of immense sums of money or its representatives; reckless gambling practised in open day, and by persons occupying respectable positions in society, are occurring so frequently, and are detailed so flippantly among the items of common news, as to give ground for fear lest the public ear may become so familiarized with the prevalence of these wicked deeds, as to cause the multitude to lose sight of the dreadful demoralization it indicates, and the fearful retribution that must follow, sooner or later, unless the dark flood is effectively stayed. The very frequency of these crimes acts as a strong stimulus in many, living in indifference to religion, to rush into acts of vice, into which once they would have thought they never could be betrayed.

We are glad to see most of the "religious journals" imputing this alarming increase of atrocious crime to the late war, and the disbanding of large bodies of men who have been engaged in its unchristian duties; not only because we believe it is fairly attributable to this prolific source of every vice, but because it gives reason to hope that those who edit those influential publications, however strong their prejudices, cannot be blind to the worse than folly, of palliating and defending a system which saps the foundations of morality, and educates its votaries in a low estimate of the life of their fellow men, and to disregard the restraints of civil law; and therefore that ere long they will be willing to denounce it and inculcate the principles of peace and goodwill enjoined by the gospel.

Our country at the present time, is strikingly exhibiting the folly and many of the deplorable results of resorting to the sword in order to settle questions of right and justice. It is not merely

in the wide diffusion of the moral poison generated in the camp, and its deadly fruits, wounding and alarming the whole community, but famine is following in the desolated track of the hostile armies in the South, inviting the inroads of pestilence, while endangering the lives of, and inflicting misery on thousands; and yet most of the questions which the war was to solve, are still exciting the angry passions of the people, and can be settled only by forbearance and compromise. We are living in an eventful day, one in which while there is much to dishearten the faithful disciple, there is also much to sustain the hope that the inestimable value of the principles of the christian religion, and their adaptation to the safety and elevation of the community, are being more fully recognized by the people and their leaders, in both civil and religious society. There is much to be removed, and much to be changed, before these principles will effect the blessed purpose for which they were promulgated by the Saviour of men. The responsibility is great that rests on all who have received the knowledge of the religion set forth in the Holy Scriptures, its privileges, its restraints, and its converting power; and great will be their condemnation, if by denying or compromising them they lose their own salvation, and retard the spread of the kingdom of our Lord throughout the earth.

We would impress on our Friends in the country, prompt attention to the subject mentioned in the following notice, received for publication in our Journal. We apprehend comparatively few are aware how great was the loss in grain, seeds, &c., inflicted by the drouth alluded to, throughout the large section of the southern States where it prevailed; or how scant was the supply of these indispensable products, in many parts where rain was more abundant. The want is great of beans, peas, onions, beets, turnips, and all other common kinds of esculents. Corn and potatoes are also wanted for seed, in not a few neighbourhoods.

As the mild weather begins early in Virginia and further South, it is desirable to forward supplies at once.

Friends in the country will please bear in mind that Garden Seeds are now much needed by the Freedmen, many of whom have suffered greatly by the long drouth which prevailed over a large portion of the South during the past summer. Those who may not feel able to contribute in cash, and have more seeds than they require for their own planting, may spare a portion to aid the destitute in providing for themselves and families, through the ensuing summer and winter. To such it is recommended to forward, without delay, what they are willing to contribute—as the season for planting is now near at hand in several of the Southern States. Send either to Caleb Wood, 524 South Second St.; or to the rooms of "The Pennsylvania Freedmen's Association," No. 711 Sanson St.

#### SUMMARY OF EVENTS.

FOREIGN.—The surveys for the new boundary line between the territories of Austria and Italy, have been fully completed.

The search of the baggage of foreign travellers in England and France will hereafter be merely nominal.

The latest reports from the East bring intelligence that the Porte has determined to make cession to the Cretans, and will soon appoint a christian governor for the island of Candia. The French government, acting for the great European Powers, is engaged in framing reforms favoring the interest of christianity in Turkey. The Russian government has addressed a note to the Porte, advising generosity towards the Greek subjects of the Ottoman empire, and the granting of reforms. The weather has been very severe throughout Europe,

Altamont, and William Hone.

Doubtless all who have been accustomed to the of Murray's Series of "Readers," can recall awfully impressive account of the last hours of the wretched Altamont. To many, I doubt it, it has been a life-moment of the justice of God, and the fearful peril of offending Him, and stepping the limits of His grace and forgiveness, and through His dear Son. Meeting with the following account of William Hone, it seemed to me a monument equally great, inscribed with the infinite mercy and long-suffering of redeeming love.

That part of the narrative in which his father's earnestness toward Wesley is noted, is indeed full warning to parents and to all; and perhaps had fitting place in many hearts among us, were critical comment too often closes the way that otherwise might have been most useful. Who of us has not learned how difficult it is, wholly to uproot this hateful plant—Christian prejudice? And shall we not be very careful to scatter no seeds of it on the winds, nor put any in hearts dear unto us,—and dear must be in the love of the gospel,—lest they take the ground and bear fruit, which is bitter and fatal in proportion to the nature impressed and influences used.

Oh, that all might be awakened to see the harm to young indiscriminating minds by unguarded comments in their presence! Without using any such expressions as that mentioned of William Hone's father, a similar impression may be given; and I recall now many instances where his impression was most unjust. Some of the opinions manifest toward those who differ from their accustomed views, albeit they were of meek walk and dedicated life and depth of religious experience immeasurably beyond their own, a bitterness and hardness of feeling that is astonishing to all who have been blessed with parents whose practical influence taught love to "all who love the Lord Jesus Christ in sincerity."

WILLIAM HONE.

Some thirty years ago, an American artist and lady, now residing in the city of New York, occupied a cottage in the suburbs of London. The adjoining cottage was occupied by a family whose habits soon attracted their attention and their respect. The garden attached to the

cottages were only separated by a trellis-work, so that the quiet inmates of the one cottage unavoidably heard much of the conversation of the large family occupying the other, who lived a great deal in the open air. The head of the family, somewhat advanced in years and evidently an invalid, could scarcely be seen without being observed as a man of extraordinary intellectual power and culture. But that which chiefly attracted attention was his piety, his devotion to the study of the Bible, and his earnest and constant endeavors to impress his children with the importance of the Gospel, and to instruct them in the truth. Every morning he might be seen seated in a little arbor, with a large Bible before him, in which he read much; at intervals walking up and down in the garden, apparently meditating on what he read, or gathering his children around him, willing and deeply interested hearers, while he opened up to them the wonderful things he learned in the blessed book.

"A certain intimacy gradually sprang up between the neighbors, and that only increased the admiration with which the character of the unknown simple-minded Christian and faithful father was regarded. A lady visitor one day informed the strangers, that the neighbor in whom they had become so much interested, was no other than William Hone, a celebrated political satirist, and equally celebrated, as the subject of a prosecution for blasphemy; a man so infamous as a reviler of all sacred things that the lady did not make the announcement without horror, and was amazed, when a Christian lady who was present, exclaimed: 'I am glad to hear it! He is, then, a brand plucked from the burning; for he is now a true Christian!'"

"Many of our readers are aware of the deluge of infidelity which swept over Europe in the beginning of this century. The labouring classes in England were instigated to sell their clothes in order to purchase the impious ravings of T. Paine; and these, and kindred writings, were distributed among the mechanics of Scotland with such fatal effect, that, in some places, they made a bonfire of their Bibles in honor of the new apostle of liberty. Of this infidel conspiracy William Hone had been one of the ablest leaders, who did not scruple to use the most sacred things as the instruments of his ribald satires. He was not merely an infidel, but an atheist—according to his own confession."

"According to his account subsequent to his conversion, his father was a pious and excellent man, but a zealous adherent of a small sect who were in the habit of speaking much and bitterly against John Wesley. They frequently called him a child of the devil, and I had," said W. Hone, "a most terrific idea of this child of the devil." While yet under six years of age, he was sent to a small select school, kept by a pious old lady, who, by her kind and gentle ways, won his affections, and exercised a happy influence over a very wayward nature. His greatest happiness was to be allowed to sit on a little stool by the side of her old carved, wooden arm-chair. His first great sorrow was when she fell sick, and he

could not go to school. The grief of it affected the child so, that on the third day, a servant was told to take him to see her. 'There,' he says, 'lay my old teacher; how altered! Death was on her face, but I loved her all the same. My little stool was placed near her bolster, and I sat down in silence. Presently she said to her attendant: 'Is he coming?' The servant went to the window, and said, 'No.' I sat in silence, overwaded, and wondering who it could be. Soon after a double knock was heard, and the attendant said; 'O madam! J. Wesley is come!' Then I was to see the child of the devil. I crept to the window, to watch; and could only see a pair of black legs, with great silver buckles. The door was opened, steps came down the kitchen-stairs, each step increasing my terror, then came in a venerable old man, with, it seemed to me, the countenance of an angel, shining silver hair waving on his shoulders, with a beautiful fair and fresh complexion, and the sweetest smile. This, then, was the child of the devil! He went up to the bed. I trembled for my poor teacher, but he took her hand and spoke so kindly to her, and she seemed so glad. After much talking, he uncovered the table, and I saw the bread and wine as I had often seen them at my father's chapel; and then he knelt down and prayed. After it was over he turned to me, laid his hand on my head, and said: 'God bless you, my child, and make you a good man.' Was this the child of the devil? I never saw J. Wesley again. My teacher died; but from that hour I never believed any thing my father said, or any thing I heard at chapel. I felt, though I could not have expressed it, how wretched such enmity was between Christians; and so I lost all confidence in my good father, and in all his religious friends, and so in all religion." It tended in the same direction that, in his father's discipline, the ordinary penance for a slight fault was to get by heart a chapter in the Bible. Sitting one day on the garret stairs, poring over the psalms, he threw the book down the whole flight, saying: 'When I am my own master, I will never open you.' And too well he kept his word; according to his own acknowledgment, for thirty years he never looked into it."

"Without attempting to trace the steps by which he reached his sad preëminence, it is enough to say that, though unsuccessful in his attempts to establish himself in London as a bookseller, he attained great popularity as a writer, and acquired an influence second to that of no other advocate of what was styled radical reform. Among other political satires, he published one in the form of a parody upon the Liturgy of the Church of England. The government saw an opportunity of crushing a dangerous opponent, or at least, of covering him with infamy, and prosecuted him for blasphemy. Hone resolved to defend himself, on his trial before Lord Ellenborough, and spoke for three successive days, alone and unsupported, in the presence of immense crowds of people, in defence of the liberty of the press. He was acquitted by a jury against the best efforts of the court to secure his conviction. The people testi-

fed their gratitude by a liberal subscription, which was soon squandered. His health also was permanently impaired by the excessive exertion and excitement of the trial. And soon after, a great change in all his views removed him from the political arena in which he had become famous.
